There is clearly some ground for the confidence with which this particular appeal to history is made. That Mr. Taft has been badly treated during the past four years, most discerning persons will agree. He has been misrepresented and vilified beyond the lot of most Presidents. It is certain that the considerate judgment of a coming generation will rectify much of this. The intemperate and unjustified attacks which Mr. Taft has suffered while in the Presidency will sink to their due proportions as the years pass, and the really memorable things in his Administration will bulk larger. This is the way in which historical judgments are usually formed, and Mr. Taft's case will be no exception. His reputation will, we are convinced, benefit by the lapse of time. But the most important question, from the moral and public point of view, is whether the historian, at whatever distance or in no matter what perspective he writes of President Taft, will differ from clear-eyed people to-day in their estimate of his fundamental qualities. It is these, in both their strength and their weakness, which have made or marred his fame, as the eyes of his fellow-countrymen have been upon him for the past four years; and what reason is there to think that the essentials of Mr. Taft's character will appear differently after forty years?

His warmest admirers and most regretful friends speak of him as one who has been a "victim." He came into a legacy of ills—a true *damnosa hereditas*. Unsolved and insoluble problems were heaped upon him. Impossibilities were demanded of him. He fell upon a time of huge discontent and ferment. His party split beneath his eyes. He was made the object of venomous calumny and treacherous betrayal. A veritable scandal-machine was set operating early in his Administration, with the deliberate purpose of discrediting him and breaking him down. Finally came the supreme disloyalty: first the hidden and insidious attack, then the open and vengeful assault, by Theodore Roosevelt. What man could have stood up before all this? What President but would have succumbed as Taft did?

Thus there is an appeal to pity, as well as to history. But such a thing carries with it fatal confessions. When we are talking not of a private life, but of a public career, it is a sorrowful thing to say of a man that he has been a "victim." It raises the doubt whether he has not been a victim of his own lack of foresight and of energy. Mr. Taft's friends explain deprecatingly that he is not a good politician. In this they refer to the smaller matters of appointments to office in such a way as to keep his party in good humor and to procure for himself expert advisers and hearty supporters. But there was a graver deficiency in Mr. Taft's political equipment. He has shown himself devoid of the higher imagination in public affairs, too little prescient, without the touch of quick sympathy and popular quality which would have enabled him to take arms against his sea of troubles. The great difficulty was that the storm broke upon him when he had persuaded himself that the sky was clear. A party rebellion rumbled under his feet, but he heard nothing till the earth actually fissured. Congress placed in his hands an unsatisfactory tariff bill, which was almost visibly labelled "dynamite," yet he played with it unconscious of danger. Political disaster after political disaster he failed to recognize in its beginnings. Too late, he acted the man's part, but again and again—as in the Ballinger imbroglio, as in the case of the Panama tolls—he would be got wrong at the beginning and then find it impossible to recover himself, even by heroic efforts. Such, in brief, has been the best contemporary explanation of Mr. Taft's chief failures as a President, and it is hard to see how time can show it to be radically wrong.

In many minor matters the judgment of history will very likely be much more favorable to Mr. Taft than is current opinion to-day. The tradition of his personal attractiveness will grow with the years. His simplicity, his kindliness, his keen sense of humor, will be remembered to his credit. And the long list of actual achievements under his Administration—laws passed, prosecutions conducted—will seem of more importance after the hurly-burly is done. Most honored of all will his name be for what he has done, and sought to do, in behalf of international arbitration; and his firm and wise refusal to be hurried into war with Mexico lends a dying glory to his Presidency. All this and more can be justly said in Mr. Taft's praise. If the break-up of the Republican party must be dated from his Administration, involving his own overwhelming defeat, this was because the higher reaches of statesmanship and the gifts of leadership in a great crisis were beyond him. It was his misfortune to fall upon an Iron Age; and he is not a man of iron.

THE INAUGURAL AND ITS POLICY.

Mr. Wilson long since took his place in the minds of the judicious as our best public speaker; and now, in his Inaugural address, the whole country has seen him rise to his full height. Never before has he packed such riches of thought and feeling into a little space; never found more adequate form for his ideas; never so fully displayed his power to interpret, to express, to speak with the voice of a leader of the people. If all this had burst without warning upon the American people, it would have been a revelation fitted to take their breath away. But President Wilson's previous speeches and letters had prepared us, in a measure, for so high a proof of his quality as he has now given. Even so, we are confident that his Inaugural will cause the hearts of his countrymen to burn within them as they read it. To its moving and solemn note of appeal they cannot turn deaf ears.

In his reading of the minds of his fellow-countrymen to-day, and of the duty of the Government in response to the mastering desires of the people, President Wilson shows himself moved by deep feeling. And its sincerity is transparent. No one could so body forth emotion in congruous words unless his soul had throbbed before his lips spoke. Yet

over the whole a clear and sagacious intelligence presides. It was plainly the President's intention not merely to make a great oration but to indicate a policy. And it is for this that his Inaugural address will be most eagerly searched. A detailed programme would have been out of place, and is, in fact, not to be found—though a few items of needed legislation are etched, with the just word said about each. But the new President's general hope and purpose are not left in the dark. The policy of the incoming Administration is frankly laid bare in the Inaugural.

We get from it, for example, what may be called the political strategy which President Wilson has determined to follow. What was his problem? He is a minority President. Above 6,000,000 votes were cast for him; but more than 8,000,000 were given to other candidates. In some way, if he is to succeed, he must rally to himself and his party a proportion of those 8,000,000 votes. Lincoln was somewhat similarly placed in 1861; but the struggle for the Union helped him to win the support of enough Democrats to make the Republican party secure in power. No such civic convulsion will come to Wilson's aid. The recourse of a foreign war would be abhorrent to him. Only by following lines of peaceful and domestic policy can he hope to consolidate his political strength. And the lines that he has decided to pursue are plainly laid down in the Inaugural. He means to make himself the leader of the progressive movement. He intends to deprive the Progressive party of any reason for separate and distinct existence. In other words, Wilson means to build up the Democratic party by means of recruits from the Progressives.

No attentive reader of the Inaugural can fail to see how it quietly accepts and assumes all the humane, all the really attainable, features of the Progressive programme. The President does not speak as a convert. He does not need so to speak. All that he says now he said many times during the campaign. But his present point of view is that political divisions and misunderstandings prevented thousands of voters from taking him and his party as the chosen instruments of progress, and that now he is in a position to summon patriotic and forward-looking men and women to his side, even if they had previously been distrustful of him. What they have been working for will be henceforth his desire and his labor. He declares his instant sympathy with the whole impulse to prevent the waste and repair the wreckage of human life, and offers himself and his Administration as at once the symbol and the power of the new day that has come. How can sincere Progressives repel these advances? Mr. Roosevelt certainly owes President Wilson an apology for having called him a reactionary. And the nominal head of the Progressive party must be fully aware by now that there is danger of his following breaking up more rapidly than it has been doing in the past few weeks. Some of them will continue to go back to the Republican party. More will be powerfully drawn to Woodrow Wilson and his policy of deep and wide social reform.

The results it will be of absorbing interest to study. They are certain to be big with political changes; they may mean the beginning of a wholly new epoch. What we are already sure of is that we have as President a man of leading intellect, with varied resources which long training has made apt to his hand; one whose courage has already been tried, and whose political sagacity is well approved. In his Inaugural he gives us the fruits of his long brooding over the present temper and the existing demands of the American people. Who will venture to say that he has read them wrong? Who will set any limits to the energizing of reform and the quickening of the humane spirit which may be wrought by such a man as Woodrow Wilson in the Presidency of the United States?

EASING A CHANGE OF ADMINISTRATION.

The *Nation* will not be thought to believe that Mr. Roosevelt's public career generally is a model, but he had one habit which deserves consideration by all men undertaking official duties. We refer to the way in which, from the day he became nationally prominent, he stepped into the place left vacant by his predecessor, and took up his task with the least practicable disturbance of the ongoing of public business.

When he became Civil Service Commissioner, he found his office in anything but an ideal condition. He might have been justified in making an immediate reorganization. Instead, he slipped into the same chair his predecessor had occupied, drew it up to the same table, and rang for the same confidential clerk to take his dictation. But for the new name-plate on the door, there was nothing to indicate that the room had changed masters. And what he did in that instance he did later, when he was Assistant Secretary of the Navy, Vice-President, and President. The current of affairs was not interrupted for an hour when somebody else retired from an office and Mr. Roosevelt assumed it; and, in the judgment of good observers, no one practice did more to enhance his efficiency as an Executive.

The logic of this is not far to seek. Critics who are watching for changes to condemn find themselves lacking ammunition. The self-seeking crew of supporters, on the other hand, who are advising drastic measures and prophesying all sorts of dire disaster if any but wearers of the orthodox uniform are left on guard, are soon discredited by the failure of their dismal predictions. The new chief, not having to undertake the making over of machinery at the outset, can give time and energy to the study of real problems, and begin his important work so much the sooner. The men he leaves undisturbed in their places, far from repaying his consideration with disloyalty, are put upon their mettle; for as old hands at their tasks, they have learned wisdom as well as deftness by experience. Every one of them, moreover, is the centre of a group of citizens outside of the Government service who are, consciously or unconsciously, influenced in their attitude towards the new Administration by such a manifest refutation of the warnings uttered by its enemies; and this circumstance goes much further than is generally imagined towards sweeping from the highway of progress mere factitious obstructions.

The whole country profits by the sensible conservatism of the man at the head of an important Federal office. If he can afford to look at the Government's business as something to be advanced as soon as possible from the point already reached, instead of applying himself first to undoing the work of his predecessor and starting afresh in order to monopolize the glory of achievement, the underlings can afford to do the same. So many tasks, of such and

such magnitude, are to be accomplished, and every official has his share to contribute towards one or more of them. This is obviously too big a joint enterprise to be halted by a change of chairman in the board of directors, and should not be crippled by the needless expulsion of one group of foremen and the tedious training of another in unfamiliar duties. This larger sense of the meaning of public service is bound to spread through the whole administrative organism, till it affects even the humbler workers who stand on its outer fringe. To them the Government presently ceases to be merely an automatic paymaster and becomes a vital thing and an object of human interest.

And the effect of such inspiration goes still further, and touches the relations of the individual workers to one another. When two of them, both painfully conscious of the insecurity of their tenure, and each therefore disposed to disparage the work of the other in order to emphasize the excellence of his own, have their minds set at rest as to their personal fortunes and turn to the contemplation of something larger and more worthy, they presently find themselves, in spite of past differences, pulling or pushing in the same direction. A spirit of friendly coöperation supplants in due course the spirit of envious rivalry, and the chief competition thereafter is as to who shall do the most for the Government, rather than who can make out of it the most for himself.

To the President who has just shouldered a heavy burden of new responsibilities, and must expect a broadside of advice concerning changes he ought to make before settling down to the serious study of his programme of action, we commend a thoughtful review of Mr. Roosevelt's beginnings.

THE PUJO REPORT.

It is not possible, in considering the report submitted to Congress last Friday by the Pujo Committee, to overlook the peculiar circumstances under which it was made. The task of inquiring into the existence of a "Money Trust" was referred by the House of Representatives to its Banking and Currency Committee. That body in turn referred it to a sub-committee, under whose auspices the hearings were conducted. The customary procedure is for such a sub-committee to report to the main committee, which then lays its own findings before the House. The present report, however, was completed only a few days before the final adjournment of Congress, and the main committee declined to take the responsibility of acting, on such notice, upon so important a series of recommendations. The sub-committee thereupon reported directly to the House. Its conclusions have not been passed upon at all by the regular committee. Indeed, there is doubt how far the report represents even the mature judgment of the sub-committee itself. It is stated to be wholly the work of the sub-committee's counsel, though the majority accept it without question. The minority dissents, as was to be expected, on many points; one of the minority makes the statement that "the method of the investigation has been of an unusual character, entirely different from anything that I have ever witnessed during my experience in Congress. I refer to the agreement under which no member of the Committee has been permitted to interrogate witnesses upon subjects material to the investigation."

These incidental facts are important not so much for their bearing on the report itself—which, so far as regards the public view of it, must stand or fall on its own merits—as for their possible effect on the attitude of Congress towards it. The majority, after stating that their investigations are not completed, add that they have "deemed it best to present this intermediate report." Since the life of the House to which the report was presented, its Banking Committee, and the Pujo sub-committee itself, ended by law on the 4th of March, this was an obvious appeal for the next House to resuscitate the sub-committee.

Apart from all this, the problems involved in the subject are such that its recommendations require careful examination. The findings of fact in the report, regarding concentration of credit or the so-called "Money Trust," are such as had been expected. As for legislation proposed, some of the projects are sound. One such is the suggestion that two or more national banks should not be allowed to consolidate except with the Controller of the Currency's approval. This does not and should not bar acquisition of a weak and ill-managed institution by a strong and well-conducted one, for the manifest purpose of removing a danger from the depositing public and the money market. At least some of the bank mergers, in New York and elsewhere, have been of that nature. It is to be presumed that a proper public supervisor of banks will be able to see where consolidation will serve the community's real interests. The recent revised corporation laws of New Jersey contain a substantially similar proviso regarding industrial corporations, and it has been generally approved. There is much to say also for the proposed prohibition of the engagement of national banks in promotions or underwritings, and their use of depositors' funds for that purpose. It is probable, indeed, that direct participations of the sort are repugnant to the National Bank law as it stands. That officers of a bank should be forbidden to borrow from their own bank is a principle which ought to be enforced. To forbid officers and directors to participate in underwritings to which their banks are committed, raises exactly the principle brought out by some of the recognized abuses of life insurance company finance before the new Insurance law of 1905.

From so much of the Pujo Committee's recommendations there is small reason to dissent. The matter of "interlocking directorates," on the other hand, is by no means so simple as the Committee would have us imagine. To ordain that "no person should be permitted to be a director in more than one national bank serving the same community or locality," might remove evils in one community and create them in another. No account seems here to be taken either of the question whether the man elected director of two banks thereby necessarily controls the policies of both, or of the other question whether, supposing he did control them, such control would be in the least affected by excluding him from actual occupancy of more than one. The evil, if evil there were, would arise from the control, not from the actual seat upon both boards. Again, the Committee's proposal to forbid interstate corporations to keep their funds on deposit with private bankers, is a sweeping provision conceived from a narrow basis of reasoning. Corporations thus patronize private bankers, on occasion, for precisely the reason that individuals do—namely, that they obtain thereby special facilities for their ordinary business opera-

tions, which may not be equally obtainable from a bank. The Committee, indeed, would in one bill require a company to limit its relations of this sort to national banks, while in another forbidding national banks to underwrite its new security issues. The truth is that these relations with private bankers, for such purposes, are as old as banking history; Governments themselves (our own included) have not disdained them when occasion rendered them advantageous.

It will be seen that some of the Committee's recommendations are merely supplementary to, if not already inherent in, the existing National Bank law. Others are proposals of such hasty and sweeping character that no prudent legislator would dream of acting on them, without a much more careful study of banking science and history itself than the Committee has made. The bill proposed by the Committee in regard to stock exchange regulation is a mass of mischievous absurdities. Beginning with the confession that "it is doubtful whether the Federal Government has power generally to regulate stock exchanges," it proceeds at once to propose that Congress "prohibit the transmission by the mails or by telegraph or by telephone" of buying or selling orders for an exchange which has not been incorporated. It ends by asking that a penalty of $1,000 fine, with imprisonment of two years for the first offence and of five for the second, be imposed on any one mailing, telegraphing, or telephoning any quotation, order, report, or information concerning transactions on such an exchange. It might have been supposed that the earlier rumor, according to which members of such a stock exchange were to be forbidden use of the mails, had reached the climax of possible foolishness in this sort of regulation. But the proposal actually made runs it close for the honor.

POPULARIZING GENIUS.

A great tradition is being killed by the newspapers. It is the tradition of genius starving in a garret, while waiting for recognition. Genius to-day would find it a very difficult task to go on starving while there is a single reporter abroad with a nose for the news. The author of the great, unpublished epic that throws "Paradise Lost" into the shade may be tempted to lash out at the degenerate mob that spends its time reading the newspapers instead of immortal literature. But he does the newspapers a great injustice. He fails to perceive that they are actually in the same business as himself. They, too, are anxious to give the world something new, something startling, something to make the staid and slippered citizen gasp, and read the item out aloud to Maria across the dining-room table. The press is the great befriender of the revolutionist in every sphere: in art, in literature, in music, in politics. The reason is obvious. The dreams of genius are the stuff headlines are made of. Your ordinary academic painter of pictures must win recognition by painful inches, but in the space of a few years the Cubists and Futurists have blazoned their name across the world. If the science of publicity had been as well developed in Richard Wagner's day as it is in our own, there would have been no bitter years of struggle. A few headlines—"Tinkling Tunes Grilled by Wagner" or "New Composer Throws Hat into Nibelungen Ring"—would have settled the business.

There are discriminating souls to whom the conquest of publicity by the geniuses will fail to give satisfaction. They are the rather unreasonable people who make it the world's shame that genius should be allowed to starve in a garret, and yet insist that starvation is the necessary hallmark of genius. Among thinkers of what one may call the Younger Set, there is even a disposition to regard material success, when it does come to the genius, as a blot on the 'scutcheon. The Richard Wagner whom the world accepts cannot, by definition, be the pure genius whom the world rejected. Perhaps there was a streak of the commonplace in him that accounts for his present vogue. At any rate, in all these restatements of the ancient case of Genius vs. the Contemporary Age, there is always a tendency to praise the genius and blame the age for doing exactly the same thing. If genius has the right and sacred duty to realize itself by throwing a brick at the complacent bourgeoisie of the times, the complacent bourgeois is entitled to live up to his own conceptions of the ideal by hurling the brick back with interest. The genius fulfils his mission by being out of gear with the world, but the world is expected to be in harmony with genius. That is to say, of two straight lines, the first must never be parallel to the second, but it is very disgraceful in the second not to be parallel to the first.

And yet here is where the newspaper man does step in to attempt a reconciliation between the genius and the world he spurns. To the thinkers of the Extreme Left who insist that genius is essentially an infinite capacity for giving pain to the mob, the reporter says: "My dear fellow, provided it is a novel, picturesque kind of pain you have to administer, I should be delighted to interview you." The spirit in which the reporter goes at his work may not at first sight be exactly one of acceptance and adoration. He approaches Matisse in very much the same mood that he approaches the Winsted hen which rings a bell every time it lays an egg; for he is after the story there is in it. But the true Futurist will be ready to admit that if the Winsted hen creates the same spiritual excitement, if it wrenches the soul out of the groove of the conventional, the hen, too, has fulfilled the great mission of art. There is force in the precept attributed to the elder Dana that a dog biting a man is not news, but that a man biting a dog is excellent news. "Man Biting Dog"—one feels that here is a ready-made title for a Futurist catalogue and a newspaper headline. A picture which shows a man walking down a staircase, if it receives newspaper notice at all, will get it in the obscure corner given over to the art reviewer. But when the picture, if it shows anything, shows a staircase walking down a man, it is front page matter. The genius that produced the second picture could not conceivably die in obscurity.

It is only one of the little ironies of life that the modern newspaper, apparently so devoted to the trivialities of the day, should turn out to be the protector of genius whose mission it is to protest against the trivial and the temporal. But that is only because we overlook the fact that, whether a thing is trivial or divine, the news test is that it must be novel, odd, calculated to make people sit up and take notice. Because genius is always preaching something new, it will always get a hearing from the press, provided, in theatrical phrase, it has the "wallop." To-day the Futurist and the Cubist are fascinating material for the reporter. Ages ago the reporter would have taken delight in chronicling the re-

markable six-day exhibition of anti-Futurist art, in which the light was divided from the darkness, and the waters from the dry land, and man was created male and female, and the beasts after their kind, and the cattle after their kind, and one could easily tell whether an object was a man or a cow or only the moon reflected in the waters under the firmament.

THE TYPEWRITER OR THE MUSE?

One more link with the past is almost severed. Literary inspiration, like religion, used to be sought from on high. The typewriter has changed all that. One author, sojourning at Lake Como, and desiring to write, remembered with chagrin, we learn, that he had no machine. When he procured one he was obliged to spend days in training himself in the Italian system. Then, and then only, did his thoughts begin to flow. Other authors approach the typewriter in different ways, but without it most of those who are before the public to-day would be quite helpless. To judge by data furnished by one publisher, writers sit down to this instrument with the confidence felt of old by a darling of the muses. But by the change literature has not been deprived of a presiding genius, and as our present-day faiths and beliefs have come to dwell directly in our midst and are largely man-made, it is fitting that whatever superior power the typewriter may possess has been bestowed by man's own ingenuity. Yet the outstanding fact is that this complicated little organism has assumed something of a personality. The unthinking will find in this a great come-down from the conditions of former times. What poetry resided in the simple quill, stolen, for aught we knew, from Jove's eagle! The reflection it caused was brought into relation with its high origin. The typewriter, by its completeness, becomes no mere intermediary. Within it reside, dumbly present, the ingredients of all the divine words ever uttered.

The gain has far exceeded any imaginary loss. Think of the hours of torture Walter Pater would have been spared if, instead of pacing up and down, jerking his hair, and groaning, he could have sat down cosily in front of a mechanical helpmeet! For some of us much of Schiller's work has been spoiled by the knowledge that it was done while his feet were plunged in cold water. Coleridge spoke feelingly of the "labor of composition." There is no such labor to-day. Keep your ribbon fresh, apply the oil can frequently, cultivate handiness with the screwdriver, and writing is a joy. Your slightest mental effort meets the response given by a spirited horse to an almost inaudible cluck. If you vainly fancy that you have nothing to say, hark for a moment to the music of your thoughts as they stutter along, striving after a stirring message. Under such almost human compulsion it is impossible to keep the fingers still. Best of all, there is little temptation to look back, which with writers of former generations often discouraged them from ever going on.

Perhaps the "mood" has become a different thing from what it used to be. Not that writers do not still seek out choice spots to visit. But their aim, as we understand it, if it is not to search for local color, is to foster their physical well-being. Inspiration they are not looking for; they know a handier place to find it. From the point of view of the present, it seems effeminate to wait for the mood to strike. We know what that led to in the case of De Quincey and Coleridge. For lack of a modern invention they were driven to opium. The mood was a pose from the stigma of which only recently has literature been able to free itself. Something was needed to prove that an author's methods could be as business-like as a successful merchant's. This revolution is apparently consummated. The late David Graham Phillips took care to explain that writing books was merely a question of sticking at your machine so many hours a day. The lean or fruitless days which former authors experienced have been wiped out by the typewriter. Man or woman sits down to work at a given hour, and at the end of an allotted time can almost invariably count upon a certain amount of work done. It is no small thing that the typewriter has replaced intermittent by steady inspiration.

The typewriter has also democratized literature enormously by undermining the position of the "man of letters." There was a deal of snobbery in that term. Just what it meant is hard now to say. Not wealth or birth, certainly. It seemed to give factitious honor to those who used a gold pen. So far has this condition been reversed that one young author, exulting in his success, puts into the class of freaks those who have not adopted the new manner. By the simple process of a mechanical device literature has become closely related to business letters, balance-sheets, and all those other documents of every-day existence which constitute real life. There is more in this than appears at first sight. Even a pencil and a piece of wrapping paper—to take the most modest case of former times—contributed a sentimental value to the situation which is impossible now. The typewriter symbolizes respectability, without fuss and feathers.

It is right, however, that a brief last honor be done to venerable survivors of the old order. We know a man of five and seventy who writes uphill on a sheet of foolscap. His sentences are sometimes long, are always sturdy, and often are as pointed as the hard little pen he uses. He has never, we believe, written on factory management, nor on the high cost of living. When it is said that he publishes essays without the accompaniment of either photographs or statistics, the reader will understand just where to place him. We have seen him sit for half an hour, the pen motionless, as he looked out of his window to a dozen fir trees up a hill. Poor fellow! he had only the muse to woo, and that takes time.

MEN OF LETTERS IN POLITICS.

LONDON, February 21.

The secession of G. K. Chesterton from the staff of the *Daily News* to that of a Labor paper is not quite the most important event of the week. Still, it is of interest as symptomatic of an ailment that is afflicting several men of letters just now. They are the victims of a violent antipathy to the organized political parties.

There is nothing inherently incompatible between literary and political eminence. It is enough to point to the fact that the present Cabinet includes Lord Morley, Augustine Birrell, and Winston Churchill. But when these men entered the party arena they brought with them a much more substantial equipment than is possessed by the mere man of letters. Lord Morley's reputation was gained not as a writer of fiction or belles-lettres, but as a philosophical thinker. Mr. Birrell's "Obiter Dicta" really were what he called them. They were the extra-professional utterances of a working

lawyer. And it was in personal adventure in the field that Mr. Churchill gained the material for the books which first made him known.

Now, when a novice in politics has already thought out for himself the leading issues of economics and philosophy, or has had enough experience of the world to teach him what is meant by co-operation for a common purpose, he is fit to approach the practical questions that occupy the attention of a legislature. But the writer, whose main asset is an instinct for the dramatic, or a strong æsthetic sense, or a brilliant style, usually makes a fool of himself when he meddles with public affairs. His political activities are not a deliberate attempt to carry out a definite and harmonious programme, but consist of a series of hysterical spasms. And when he is criticised for his futility, he generally gives fresh emphasis to the charge by indulging in a screaming tirade against parties.

Perhaps the most conspicuous instance of the political ineptitude of the mere *littérateur* is supplied by the career of Hilaire Belloc. Mr. Belloc is one of the most charming of essayists. "Instead of which," he insisted on becoming a Member of Parliament. By grace of the electors of South Salford, he sat in the House of Commons for nearly five years. At the end of that period his constituents heard with relief that he had had enough of it. Unfortunately, instead of recognizing his failure—and failure, under such circumstances, involved no discredit to a man whose real gifts lay in another direction—Mr. Belloc assumed the attitude of the soldier who declared that every other man in the regiment was out of step. Everybody was wrong and everything was wrong. The conflict between the parties was only a pretence. The Premier and the leader of the Opposition, though ostensibly attacking each other from public platforms and on the floor of the House, were in reality partners in a conspiracy to exploit the public and share the spoils. In fact, what Mr. Belloc alleged against the party leaders was the kind of understanding that is said to have existed between Boss Croker and Boss Platt.

There is no reason to doubt that Mr. Belloc honestly believed this absurdity. He believed it, indeed, so sincerely that he joined in the hazardous venture of founding a weekly newspaper to propagate the tale. This non-party, or rather anti-party, organ was at first called the *Eye-Witness*, but the name has lately been changed to the *New Witness*. The proprietors enlisted the aid of several of the cleverest literary men of the day, with the result that the paper soon became one of the most brilliant publications in London. It has also become, truth to tell, one of the most scurrilous. Its virulent anti-Semitism is only one of many unwholesome features. It has, of course, out-Heroded Herod—that is to say, out-Maxsed Maxse—in its abuse of the Government over the so-called Marconi scandal. Within a few weeks Mr. Belloc will probably be invited to appear before the same select committee which recently took in hand the chief propagator of these charges and turned him inside out.

It is lamentable that a man of the high qualities of Mr. Belloc should thus reduce himself to the level of a gutter journalist. But such a fate is a fit nemesis of the overweening conceit that spoils so many able literary craftsmen. The heads of writers of a certain type are easily turned by the compliments that are paid them for their vivid imagination and their exquisite style. They assume at once a "superior person" pose, looking down with infinite contempt on the commonplace bourgeois persons who do the every-day work of the world, whether in politics or outside. The system of party government has its evils, and serious ones, but the country is far better off in the hands of party politicians than it would be under the control of a Parliament composed of the unbalanced impressionists that Mr. Belloc and his friends would like to see at Westminster.

Maurice Hewlett, Laurence Housman, and Israel Zangwill are other distinguished men of letters whose recent incursions into political controversy add new point to the old warning that the cobbler should stick to his last. On two at least of these three the woman suffrage movement has acted like an irresistible magnet, pulling them away from any kind of mooring that may hitherto have attached them to the world of realities. As to Mr. Chesterton, whose latest somersault started these reflections, the more one ponders his change the more one is puzzled to understand it. He is leaving the *Daily News* because, he tells us, that paper has come to stand for nearly everything he disagrees with. And he has joined the *Daily Herald*. But the *Daily Herald* fights for Socialism with a flail. And Mr. Chesterton is an anti-Socialist. H. W. H.

SWISS NOTES.

NEUCHÂTEL, February 17.

Attendance at the Swiss universities, and at the Schools of Technology and Commerce, has been considerably diminished by the war in the Near East. From Geneva, Lausanne, Zürich, and Neuchâtel the exodus has been large in proportion to the total number of students matriculated. From a small centre like Neuchâtel, for example, forty Bulgarians went to the front. This is exclusive of Serbs, Rumanians, Turks, and Greeks who have been studying in the universities and schools of the Confederation.

An interesting contribution to the literature of Pacificism is a book which has just appeared, entitled "Sociologie de la paix." It is an introduction to "the philosophy of international law." The author is Dr. de Maday, professor of sociology in the University of Neuchâtel. By birth an Hungarian, he perfected his studies at Paris and Geneva, and has written voluminously in French and German on social subjects. Not content with a theoretical treatment of sociological problems, he has been engaged in personal investigations at Geneva and elsewhere, assisted by his wife and a staff of students. He is not only a pacificist, but also an ardent feminist. His work is not explicitly controversial; and his method is objective. He prefers to let the facts speak for themselves. He says he has studied "war and peace as natural phenomena in the scientific sense of the term, to discover what their relations are to the evolution of humanity." By tracing the history of this evolution, and anticipating its future, he is led to take an optimistic view of what is to come. Whatever opinion may be entertained of the author's treatment of the subject, the book may be recommended for its clear and vigorous style.

In these days when Nietzsche's idea of the Wille zur Macht has found its way into certain kinds of literature, it may be worth while to notice a new book in which a thesis contradictory to that of the German writer is defended. The author is not a professional theologian or philosopher. He is Jules Gaudard, an engineer, who holds an honorary chair in the University of Lausanne. In his work, "La Foi par l'humilité ou la force par l'infirmité," he contends that meekness, modesty, and humility are necessary not only to scientific progress, but to achieving any large results. "L'humble infirmité" is the most powerful force. He seeks to establish this paradox by citing many historical examples which are, he thinks, decisive.

Students of the psychology of religion will be interested in a work published by Professor Schroeder, of the free theological faculty at the University of Lausanne. The author is less conspicuous than the editor. His object is to throw light on the psychological conditions of the frequent revivals of religion during the first half of the nineteenth century. The most important part of the book consists of a correspondence between Louis Bonnard and certain of his friends, particularly the eminent theologian, Vinet. The letters of Vinet hitherto *inédites* go far to complete one's conception of a religious philosopher whose character and work have for more than a year been the theme of many Swiss and French writers.

Discussing the probability of Bernard Shaw's plays meeting with success in Swiss theatres, Guillermet, a Geneva

critic, makes this extraordinary statement:

The theatre at Geneva presents a singular spectacle when Ibsen, the precursor of Shaw, is played. The enthusiasts, mostly strangers in this country, applaud until their gloves are split. The "intellectuals" admire, either seriously or snobbishly, these northern productions; but the majority of the audience are ill at ease, and fearing to be behind the times, subscribe to all these dangerous and far-fetched Utopias.

Bridel of Lausanne has begun the publication of a collection of Vaudois genealogies, edited by the Genealogical Society of the canton. Among the family trees noted is that of Edouard Rod. His ancestry is traced to a notary in 1574, and members of his family have sat on the bench and have been active in civic affairs. Rod's own liking for legal questions and judicial trials is apparent to every reader of his novels.

Another book which has lately appeared at Lausanne will interest architects and antiquarians. It is entitled "Les Châteaux valaisans." The text is by A. Solandieu, whose descriptions are often almost poetical. The excellent illustrations, by the Société des Arts Graphiques, give a fine representation of the bold and hardly accessible strongholds in that mountainous canton. Unlike those of the plain, the châteaux of Valais were not built after the fashion of country houses. They were strongly fortified, and those that remain are forts rather than dwellings, built as they were on rocks high above surrounding precipices. If the exterior of these old buildings is rough and forbidding, the interior exhibits products of gentler arts, such as fine Italian columns and specimens of that wood carving for which Switzerland is famous. Fortunately, these historic remains in Valais are for the most part well protected. They are not like a certain thirteenth-century château in another canton, which was purchased by a Swiss captain of industry. The Salle des Chevaliers was converted into a billiard-room, the walls of which were decorated with pictorial advertisements of the parvenu's business. The ancient chapel was empty and undecorated. An old carved wooden image of the Virgin was put in the corner, like an umbrella.

A Berlin committee, among the members of which are Hofprediger Dryander and Professor Harnack, are raising 65,000 francs as a contribution to the international Monument of the Reformation which is to be erected at Geneva.

René de Weck, of the Secrétariat of Swiss workingmen, has issued a catalogue of publications edited by him since the creation of the institution in 1887, together with an alphabetical index of questions discussed in reports presented at all the Swiss labor congresses from 1887 to 1911.

M. Antonio Villari is the author of a work recently published at Lugano, entitled "Le Chiese cristiane." The author calls himself a "free believer," but not a "modernist." He endeavors to harmonize the differing doctrines of the Latin, Greek, and Protestant Churches. While he thinks that each of these has its own work to do, he criticises Rome for its enforced confession, for its insistence upon the celibacy of the clergy, and its discouragement of Bible study among the laity. He finds fault with Protestants for ignoring the doctrine of the communion of saints, living and dead, and their misunderstanding of confession. His sympathy seems to be rather with the Greek Church, although the book is moderate and fairly impartial.

Zürich is to have a new central library, in which the collections of the canton, as well as of the town, are to find a place. The old building near the Münster-Brücke is quite insufficient, and some interesting books and manuscripts are kept in the National Museum. The site of the new building is on the Amtshaus Platz. A. A.

NEWS FOR BIBLIOPHILES.

The George Routledge & Sons publishing house has recently issued "A Kipling Dictionary," compiled by W. Arthur Young, which thousands of libraries in America will buy and which will be quite useless to those possessing only the Outward Bound edition and inadequate for those possessing Doubleday, Page's edition.

The compiler has blandly ignored all of the American editions; it is evident, indeed, that he has never seen one, for in a note upon the Outward Bound edition he naïvely remarks that "the preface to this American edition . . . indicates that 'Bitters Neat' and 'Haunted Subalterns' are included in 'Plain Tales from the Hills'; 'Mrs. Hauksbee Sits Out' with 'Under the Deodars,' and 'The Enlightenments of Pagett, M. P.,' with 'In Black and White.'" The statement is quite correct and "indicates" is charming. Mr. Young might, however, have added that "The Pit That Digged Itself" and "The Track of a Lie" are included in "The Phantom 'Rickshaw," "The Tabu Tale" in "Just So Stories," and the "Wreck of the Visigoth" in "The Day's Work, Part II." This admitting of some of the facts and suppressing others seems hardly fair. In the notes upon the above titles, Mr. Young usually makes a statement to the effect that the story does not appear in the English edition, but is included in "some" American editions.

Any one who has had occasion to look for particular stories or poems of Mr. Kipling's has been baffled by the confusion of titles in the various editions. Thus, the English editions use the titles "Life's Handicap," "Many Inventions," and "Wee Willie Winkie," and the Doubleday edition uses "Life's Handicap," "Many Inventions," and "Abaft the Funnel," which are not used as volume titles in the Outward Bound edition, although the stories are included in that set. Also, different editions using the same titles do not include in their volumes exactly the same stories. It is these erratic customs that make a Kipling Dictionary especially desirable, and it is just these vagaries that Mr. Young ignores with an imperturbability that speaks well for his self-possession under trying circumstances. Considering the fact that the United States has been a large contributor to Mr. Kipling's success, it should seem that his bibliographer might have included the authorized American editions in his Dictionary without incurring the risk of being called unpatriotic. Mr. Young is evidently of a reticent disposition, for he nowhere confides in the public exactly what editions he has used as the basis of his work. He merely remarks in an obscure paragraph that "practically the whole of Mr. Kipling's publishing in Great Britain has been done through two houses; the stories and prose writings through Macmillan & Co. and the verse through Methuen & Co." From which we infer that he has used these editions, but he could not be convicted of the charge from any statement that he definitely makes.

Twenty-six titles assigned in the Dictionary to "Life's Handicap," fourteen to "Many Inventions," five to "Wee Willie Winkie," and two to "Plain Tales from the Hills," occur in the Outward Bound edition under the book titles, "In Black and White," "Phantom 'Rickshaw," "From Sea to Sea," "Soldiers Three, Pts. I and II," "The Day's Work," "Under the Deodars," and "The Jungle Book." This number of deviations (it may not be complete) is sufficient to cause much trouble to the reader, but not large enough to have added any appreciable amount to the work of the bibliographer had he made note of the American titles. Having done so much, it is to be regretted that Mr. Young did not do a little more.

Glaring as are these omissions in a work whose only excuse for being should be that it is comprehensive, they are yet not unaccountable when one makes allowance for the English point of view. But confusing errors in arrangement are inexcusable both on the part of the compiler and the publisher. Even an Englishman might be expected to know his alphabet. Mr. Young does not. With the articles and prepositions he is wholly at sea. When "the" occurs in the body of title, he usually disregards it entirely. The simple rule of alphabeting is this: the article which is the first word of a title or subject is disregarded, but otherwise alphabeting is done in exact accordance with the author's title. The indefinite article presents the same difficulties to Mr. Young as does the definite. For instance, "In Ambush" follows "In a land, etc." The prepositions are hopeless. "In Error" deserts the other "ins" and is found cozily wedged between "Independent Experimenter" and "Inexpressibles." In correct alphabeting, each word, irrespective of its length is an entity, and titles are arranged first by the initial word, then by the succeeding ones. We admit that the intricacies of alphabeting present difficulties to the uninitiated, but what excuses the following entries?

Mowgli the frog.
Mowgli's Wife.
Mowgli leaves the jungle.
Mowgli's brothers

Mutrics.
Muso among the motors.

Marklake Witches.
Marks of the Beast.
Mark Twain.

You may talk o' gin and beer,
Yoked with an unbeliever.

When it comes to "Mr." and "Mrs." and "Miss," our compiler gives up in despair, and, like the man who could not spell after words of one syllable, he "guesses." With hyphenated titles he uses an eclectic method quite his own.

Mr. Young must, however, have credit for an ingenuity that surpasses that of his critic. Doubtless he had a reason, inscrutable though it be, for placing ".007" between "N. G." and "Nabi Baksh." I succeeded in finding this entry (it is a puzzling one) only after collating more than half of the volume, page by page. This method of locating a title may be recommended on the score of accuracy, but it lacks expedition. However, Americans are proverbially in a hurry.

A careful examination of the volume would probably multiply examples of inaccuracy, but perhaps enough has been said to indicate that the compilation might be improved upon. INA FIRKINS.

Correspondence

WAR WITH MEXICO.

TO THE EDITOR OF THE NATION:

SIR: The eager souls who have denounced Mr. Taft's Administration for lack of vigor in dealing with the Mexican situation would do well to review their American history.

Only a series of fortunate incidents saved us from the annexation of the whole of Mexico at the close of the Mexican War. The war developed a stubborn defence on the part of the Mexicans. The conquest was at a terrible price in blood and money. The blood price roused "patriotism." The money price suggested a vast indemnity. The whole current of war and conquest carried us towards a "manifest destiny" in Mexico. Nobody of consequence thought of annexation at the beginning of the war, but events soon stirred the militant spirit of imperialism. Towards the close of the war there was a rising tide of sentiment eager for "the whole of Mexico." Public meetings passed resolutions favoring it. The Hunker Democrats in New York declared officially for it. Public journals, politicians, Congressmen, and even Cabinet members began to swing in the direction of the advancing sentiment. Senator Dickinson, of New York, at a public dinner, offered the following toast: "A More Perfect Union embracing the entire North American Continent." Senator Hannegan, of Indiana, offered the following resolution in the Senate: "That it may become necessary and proper, as it is within the constitutional capacity of this Government, for the United States to hold Mexico as a territorial appendage." Among the newspapers even the New York *Evening Post* caught the spirit of the times and spoke ringingly:

> Now we ask whether any man can coolly contemplate the idea of recalling our troops from the territory we at present occupy—from San Juan de Ulloa—from Monterey—from Puebla—and thus by one stroke of a secretary's pen, resign this beautiful country to the custody of the ignorant cowards and profligate ruffians who have ruled it the last twenty-five years.

In the President's Cabinet there were ardent expansionists. Attorney-General Clifford wanted a goodly slice of Mexico. Robert J. Walker, of the Treasury, wanted the whole loaf. Even Buchanan, the Secretary of State, who at the opening of the war was an outspoken anti-imperialist, heard the rumbling of the chariot wheels and faced about in obedience to "Vox Populi, Vox Dei." In November, 1847, Polk requested Buchanan to prepare a paragraph on our policy in Mexico for the forthcoming Presidential message. In his draft the Secretary declared that, in the event of continued resistance on the part of Mexico, "we must fulfil that destiny which Providence may have in store for both countries." Polk objected to such abject submission to "manifest destiny," but he had a long struggle with Buchanan and other Cabinet members before he could get the statement properly modified. (For the above facts see E. G. Bourne in *American Historical Review* V, 491-502. Same article in Bourne, "Essays in Historical Criticism," 227 ff.)

The point of the whole episode is that with the rising tide of war the spirit of imperialism grew as it always will under such circumstances. Only a kind fortune held us back. Polk, expansionist as he was, felt that he was publicly pledged against taking Mexico. The spectre of slavery extension frightened many people in the North. The Congress then in session had been elected a year earlier, before the conquests of 1847 had stirred the lust for territory.

What might not happen in a war of intervention at the present time, when our national mind, once so averse to the monster imperialism, has already become "familiar with her face"? The possibilities involved are enough to give pause to most of us, even though we were never frightened by Von Humboldt's prophecy uttered years ago: "Die Vereinigten Staaten werden ganz Mexico an sich reissen und dann selbst zerfallen."

THE GREAT NEED.

TO THE EDITOR OF THE NATION:

SIR: The letter in your issue of February 27 by Margaret Ladd Franklin suggests this inquiry:

Has there been an advance in the average intelligence of the citizens of the United States during the past 125 years, and is the government any better administered to-day than it was then? If so, has this advance been due to the broadening of the suffrage, or merely to the increase in the wealth of the country and the opportunities for free education—forces well under way of development in this country before the beginning of the last century?

Is not the need of the country to-day a higher moral sense of the obligations of individuals to society rather than more legislation or better government? If so, is it not to be procured by education in the arts and sciences rather than by an extension of the suffrage?

Does not the history of great reform movements show that, if successful at all, they are only partly so, and that each reform has the germs of evil as well as good?

An extended study of these questions, with the admission of the drawbacks to a liberal suffrage, will furnish a convincing answer to patriotic voters of the advisability of extending the suffrage to women.

MURRAY T. QUIGG.

Cambridge, Mass., February 27.

OVID AS A SOURCE.

TO THE EDITOR OF THE NATION:

SIR: The commentators on Shakespeare's "Antony and Cleopatra" have nothing to say about his allusions in II, vii, 29-31, and I, iii, 68-9, to the generative power attributed to the sun and the slime left by the overflow of the Nile. The passages are:

> Your serpent of Egypt is bred now of your mud by the operation of your sun: so is your crocodile.
>
> By the fire
> That quickens Nilus' slime.

Jonson refers to the same thing ("Catiline," V, i, 54-5):

> Poured on some inhabitable place,
> Where the hot sun and slime breeds nought but monsters.

And both are anticipated by Spenser ("F. Q.," I, i, 21), who, however, has nothing to say of the agency of the sun:

> As when old father Nilus gins to swell
> With timely pride above the Ægyptian vale,
> His fattie waves doe fertile slime outwell,
> And overflow each plaine and lowly dale:
> But, when his later spring gins to avale,
> Huge heapes of mudd he leaves, wherein there breed
> Ten thousand kindes of creatures, partly male
> And partly femall, of his fruitful seed;
> Such ugly monstrous shapes elswher may no man reed.

All these presumably derive from Ovid, "Met.," i, 416-440, thus translated by King:

> All other life in various shapes the Earth
> Spontaneous bare, soon as the Sun had kissed
> Her bosom yet undried, and mud and marsh
> Stirred into ferment:—and all seeds of things,
> As in some mother's womb, beneath the soil
> Nutritious warmed, waxed numberless, and rose
> Matured to shape. As, when the seven-mouthed Nile
> From the soaked fields withdraws his flood, and rolls
> Betwixt his wonted banks, and Summer's rays
> On the fresh slime beam kindling, countless forms
> Of life beneath his share the ploughman finds,
> Wondering—some scarce advanced beyond the stage
> Of first conception,—lacking some this limb
> Or that, imperfect;—while, in some, half lives,
> Half drags unborn, nor disengaged from earth.
> For Heat and Moisture, duly mixed, conceive
> And generate all things. Fire and Water, foes
> By nature, with concordant discord breed
> Embracing, all-creative vaporous warmth.
> And thus when Earth, yet with the recent flood
> From all her pores exuding, felt the glow
> Of Heaven's returning sun, nnnumbered kinds
> Of life she uttered—some in ancient form
> Renewed, and some in strange and monstrous shape.
> Then first—abhorrent of her fruit—she bore
> Huge Python, serpent-prodigy, the dread
> Of the new world, o'er half the mountain's side
> Enormous coiled.

The last lines will also serve to explain Milton, "Par. Lost," x, 529-31:

> Now Dragon grown, larger than whom the Sun
> Engendered in the Pythian vale on slime,
> Huge Python.

Certain earlier ones (427 ff.) may have

suggested the idea of Milton, "Par. Lost," vii, 463-9:

The grassy clods now calved; now half appeared
The tawny lion, pawing to get free
His hinder parts—then springs, as broke from bonds,
And rampant shakes his brinded mane; the ounce,
The libbard, and the tiger, as the mole
Rising, the crumbled earth above them threw
In hillocks.

There is no specific warrant in Ovid for the generation of the crocodile in the manner suggested by Shakespeare; but the latter (properly enough) associates the crocodile with the serpent, and Ovid's Python is expressly called a serpent. Moreover, we are told that the crocodile is hatched by the heat of the sun ("International Dictionary" and "Encyclopædia Britannica," 9th edition, *s. v.* Crocodile; Wiedemann, "Herodots Zweites Buch," p. 297).

Diodorus Siculus (i, 10) confirms Ovid. According to him, the Egyptians believed that at the subsidence of the Nile, when the sun parches the mud, animals come into being, some fully formed, while others are incomplete and adherent to the earth. The general notion is as early as Anaxagoras, who conceived the first animals to have originated from a combination of heat, moisture, and earthy matter.

ALBERT S. COOK.

Yale University, February 25.

JOAQUIN MILLER'S NAME.

TO THE EDITOR OF THE NATION:

SIR: Reviewers of the late Joaquin Miller almost invariably refer to him as Cincinnatus *Heine* Miller. Many years ago I had occasion to write his name, and followed that style. Miller crossed out the middle name and made it "Hiner." I asked his mother about it, and she said he was correct.

HOWARD V. SUTHERLAND.

Denver, Col., February 25.

AREN'T I?

TO THE EDITOR OF THE NATION:

SIR: It may also interest "L. M. P." (who in your last issue records that he first made the acquaintance of *Aren't I* from the lips of his children) to know that probably every parent in every section of the country is making the same acquaintance in the same way, and has been doing so for many years past. My boy used the expression apparently under the influence of *Aren't you* and *Aren't they*, and not through any conscious or unconscious modification of *Am not I*, as a means of finding the quickest route to the end of the sentence.

J. W. T.

Lafayette College, March 1.

TO THE EDITOR OF THE NATION:

SIR: "L. M. P.," writing from Boston to the *Nation*, says *Aren't I* has become rather common among Boston children. The expression is occasionally heard here, but its use is generally confined to recently arrived, half-educated English men and women. Plain Americans, that is to say, every-day, ordinary college graduates, in the privacy of their own homes—assuming there is no school-marm about—still say *Ain't I*, in primitive New England innocence. The Boston father welcomes such an expression in the mouths of his children as supplying "a long-felt need." Certain Chicago *patres familias* would not welcome such sophisticated innovations and would apply an instant correction—which also would undoubtedly be "long-felt."

HARVARD.

Chicago, March 1.

FOREIGNERS IN GERMAN UNIVERSITIES.

TO THE EDITOR OF THE NATION:

SIR: In view of the large number of Americans who complete their education in Germany, the growing dissatisfaction of the native students with the liberal terms on which foreigners are allowed to matriculate—a dissatisfaction which has been brought to notice by the student strike at the University of Halle—is a matter of vital interest to this country. It is more than possible that the German Government will sooner or later readjust the conditions of attendance for foreigners; and it should seem to an impartial observer that she would be perfectly justified in doing so.

The popularity of the German schools showed a marked increase from the period when Prussia's victories over Austria and France, and the establishment of the Empire, gave the country such a prestige as she had never enjoyed before. The Germans of the last two generations have attained remarkable success in technical and commercial lines, and their business and technical Hochschulen are crowded and besieged by foreigners. An article in a current German weekly is authority for the statement that the Handelshochschule of Leipzig enrolled last semester 60 per cent. of foreigners, and that the Berlin Handelshochschule has this semester, out of a total attendance of 509, as many as 178 from other countries, of whom 65 are Russians, 28 Rumanians, 7 Bulgarians, 7 Servians, and 69 Austrians, a large part of the last-named contingent being Slavs. It is against this Russian and Slavic element that student hostility is principally directed.

The middle or lower-class Russian is likely to be extremely primitive in his manners and his ways of living, so that his society is not always agreeable to a member of a race which has learned more refinement; and, worse than this, he is almost sure to be a revolutionist and to bring a disturbing influence into the decorous German state. The Russian Jews, in particular, dissatisfied with the rigorous limitations and other odious restrictions which surround them at home, flock to the German university cities for other reasons than a consuming thirst for knowledge, and often form a very undesirable element of the student population.

For all her rigor in her requirements from native candidates for matriculation, the regulations Germany has set for the admission of foreign students to her schools are so lax that almost any adult foreigner can enter one of her universities, without reference to his preparation. Thus Russians who would never in the world be able to procure admission to their own narrowly and rigidly supervised universities, cross the border and enter the German schools without difficulty; and much the same thing is true of students from other countries. Thus the foreign attendance lowers the scholarship standards; and in addition to the objections already mentioned, it often taxes the resources of the school and inconveniences the native attendance; it teaches the foreigner at Germany's expense—for none of these schools is self-supporting—to become a successful rival of the German in commerce, the trades, and the arts; and, last but not least, the aggressive feminine element from other countries—and here American girls are largely to blame—has caused native conservatism much uneasiness.

There is no doubt that the freedom with which students from abroad have entered the German schools has contributed not a little to Germany's excellent reputation throughout the world; but it would be easily possible to limit and sift the foreign element without excluding it. Suggestions looking towards more rigid entrance requirements as to preparation, much larger entrance and incidental fees from outsiders, and an earlier enrolment of natives in order to give them the preference, are all feasible and reasonable.

Literature

AMUNDSEN'S DISCOVERY.

The South Pole: An Account of the Norwegian Antarctic Expedition in the "Fram," 1910-1912. By Roald Amundsen. Translated from the Norwegian by A. G. Chater. With maps and illustrations. In two volumes. New York: Lee Keedick. $10 net.

To countless readers who have been wrought up to the point of wanting to get just as far away from the North Pole as circumstances will allow, here is a welcome opportunity. In Capt. Amundsen's attractively dressed volumes there are no contested claims to be defended, no hurling of railing accusations, no hasty and ill-considered pronunciamentos to be apologized for, no undue gloating over achievements won. This is the narrative of a modest, unassuming gentleman, bearing on its face the stamp of absolute sincerity. It is an evident pleasure to him to reflect that as many others as possible had a share in his achievement. When his party had reached a spot as near the actual pole as could be determined, the right hands of each of the five men present simultaneously grasped the staff of the Norwegian flag and put it in position to be left as a memorial, nor did the flag bear any caution to future explorers that Capt. Amundsen had "formally taken possession of the entire region, and adjacent, for and in the name of" King Haakon VII. And in addition to all these evidences of befitting modesty in his book, various American audiences during the past few weeks have heard him remark that the researches in oceanography, carried on with the Fram under First Officer Nilson, during

the interval between the landing of the polar party and its return from the Pole to open water, will take rank in the future as far the most important feature of the expedition. All of this is just what we have learned to expect from the quiet, persistent, and competent explorer who a few years ago wormed the little Gjöa through the northern ice from the Atlantic to the Pacific, adding much to our store of geographical knowledge, picking up the magnetic pole as he went along, and writing his name down in history as the first man to take a vessel from ocean to ocean north of Patagonia. And here we may appropriately mention the warm tribute which he pays to the services of Frederick A. Cook, during the terrible sufferings of the crew of the Belgica in Antarctic waters, in the winter of 1898-99. It will be remembered that the crew was attacked by both scurvy and insanity. "Cook's behavior at this time won the respect and devotion of all. It is not too much to say that Cook was the most popular man of the expedition, and he deserved it. From morning to night he was occupied with his many patients, and when the sun returned it happened not infrequently that, after a strenuous day's work, the doctor sacrificed his night's sleep to go hunting seals and penguins, in order to provide the fresh meat that was so greatly needed by all. . . . Upright, honorable, capable, and conscientious in the extreme—such is the memory we retain of Frederick A. Cook from those days." Will any one ever solve the psychological problem of Dr. Cook?

In his introductory chapter, Capt. Amundsen again raises the question of the validity of the reported Antarctic discoveries of Lieut. Charles Wilkes, in 1840, though not to the extent of denying that the Antarctic continent was seen at all. The cartography of Wilkes he regards as at least inexplicably inaccurate, since "Wilkes Land has subsequently been sailed over in many places, by several expeditions." Doubtless, the sensational subsequent career of Wilkes, with its various controversies and court-martials, has been more or less responsible for a certain quickness of heart to disbelieve in all that he reported. In its general outlines, however, the northern border of the Antarctic continent as now known is not fatally out of harmony with the claimed observations of Wilkes, through the long stretch from 95° to 155° east longitude; and as the land actually exists, it should seem to require more than inaccurate cartography on Wilkes's part to justify the harsh conclusion that he never saw it. It will be remembered that Gen. A. W. Greely, the *National Geographic Magazine*, and other authorities regarded Sir Ernest Shackleton's observations of 1908 and 1909 as removing the last ground of suspicion from the good faith of Wilkes.

The change of purpose that suddenly headed the Fram for the South Pole after she had been fitted up for a voyage in the Arctic basin was not known to the crew itself, with the exception of First Officer Nilson, until the vessel had reached Madeira. The sudden announcement that the North Pole had been discovered was, of course, the reason for the change. The adequate financing of the long northern voyage which Amundsen had planned was not yet complete, and with the best incentive to contributions now removed, the outlook, for the time being, was virtually hopeless. But out of the darkness there came to the resourceful mind of the leader the sudden inspiration to sail southward. In that direction he believed successes to be attainable which, while deferring the more expensive northern trip, could be so used as to put that enterprise firmly on its feet. The probable criticism that a voyage into the Antarctic just at that time would be a discourtesy to Capt. Scott, he did not regard as serious. The British expedition was organized primarily for extended scientific research, with the attainment of the Pole as only a very subordinate consideration. With Amundsen, on the other hand, penetration to the Pole was the main aim, with only such scientific research as others could accomplish, with very limited equipment, while he himself and the necessary assistants were pushing that aim to the speediest possible conclusion. Of course, he avoided Scott's previously announced route, by way of McMurdo Sound and the Beardmore Glacier. The Bay of Whales, chosen as his basis, lies 350 geographic miles east of Scott's winter quarters in McMurdo Sound. But in any case, the claim that one searcher after some desirable bit of scientific fact is bound to lie back and await the success or failure of another who has started previously on the quest is wholly inadmissible.

We need not linger over the details of the sledge journey. Readers have had no dearth of incidents of ice travel of late. The chief peculiarity in Amundsen's case lay in the necessity of travelling over ice-covered land, rather than water, and land of such conformation as to leave no escape from an ascent to a level of more than ten thousand feet. These mountain slopes Amundsen regards as in themselves sufficient to determine the question as between Eskimo dogs and the Manchurian ponies used by Shackleton and Scott. An ascent absolutely out of the question for ponies can readily be conquered by the dogs, and the problem of food for the latter is grewsomely simpler. One who has a fondness for these faithful animals will hardly enjoy the persistent realism with which this side of the sledge journey is related. There were above forty dogs when the top of the mountains was reached, a little south of the eighty-fifth parallel. Here twenty-four were killed and their flesh placed in store as food for the rest on the return journey. Let us quote a few words:

> There went the first shot. I am not a nervous man, but I must admit that I gave a start. Shot now followed upon shot. They had an uncanny sound over the great plain. A trusty servant lost his life each time. It was long before the first man reported that he had finished; they were all to open their dogs and take out the entrails to prevent the meat being contaminated. The entrails were for the most part devoured warm on the spot by the victims' comrades, so voracious were they all. Suggen, one of Wisting's dogs, was especially eager for warm entrails. After enjoying this luxury, he could be seen staggering about in a quite misshapen condition. . . . The holiday humor that ought to have prevailed in the tent that evening—our first on the plateau—did not make its appearance; there was depression and sadness in the air—we had grown so fond of our dogs. The place was named "the Butcher's Shop." It had been arranged that we should stop here two days to rest and eat dog.

More than half the second volume is taken up by collateral reports and appendices. Lieut. Prestrud writes of the eastern sledge journey to King Edward VII Land, made under his direction after Amundsen had left the Bay of Whales for the Pole. Scott's observations of 1902 were corroborated and geological specimens brought back from the heights which he had seen. Lieut. Nilsen writes at length of the voyage of the Fram, including the oceanographical cruise between the South American and African coasts, carried on during June, July, and August, 1911, while Amundsen and the polar party were in their cozy ice-bound quarters on the Ross Barrier, waiting for the winter to break sufficiently to justify the start southward with the sledges. The more scientific side of this cruise is treated in an appendix by Professors Björn Helland-Hansen and Fridtjof Nansen. The astronomical records were placed in the experienced hands of Anton Alexander, who had helped to work out the observations of Nansen's Fram expedition and has since handled the observations of Amundsen's Gjöa expedition and Capt. Isachsen's Spitzbergen expeditions. His conclusion is that Amundsen's "Polheim" must lie south of 89° 57′, and cannot lie south of 89° 59′; and, further, that the two of the party who walked southward four miles from "Polheim" probably passed within a few hundred metres of the actual Pole, and possibly much nearer. As to longitude, when Mr. Alexander states guardedly that the position must have been between 30° 75′ east, the reader's mind is carried back by contrast to those minute determinations of "longitude" which to the well-informed were so fatal to be-

lief in the validity of Dr. Cook's figures.

For the northward trip which Capt. Amundsen is planning every one will wish him the success which his pluck, good judgment, and experience presage, and safety from the deadly perils against which, as the sad fate of Capt. Scott too forcibly proves, even these can guarantee no certain immunity.

CURRENT FICTION.

Yonder. By E. H. Young. New York: George H. Doran Co.

Here is a writer who has something to say, and can say it with sincerity and with imaginative power. If, as the title-page suggests, "Yonder" is a first novel, it gives promise of great things. It defies classification. In its strange detachment from social backgrounds, and in the directness of its imaginative appeal, it suggests Charlotte Brontë. In its pregnancy of phrase and flashes of insight into character, it recalls Meredith. It conveys a remarkably intimate and vivid sense of outdoor nature, especially of mountains:

> He marched on until the hills drew more closely round him. . . . In the perfection of impulse they swept upwards from the valley, and it was amazing that the dark and stunted yews round the little church, the scattered houses and the grazing cattle should have been allowed to keep the places men had given them, for the curves of the mountain's mysterious sides had the fatality of a wave.

But the characters are not subdued to the natural background; they are not the playthings of fate. Alexander, the child of the mountains, threatened by an evil destiny, but strong enough to conquer it; Edward Webb, the mild little travelling salesman, with the heart of a poet; Theresa, his daughter, with her swift moods and vivid humanity, a girl to dream of; these are only the central figures in a group of real and living men and women.

The one serious weakness of the story is the conclusion: here are signs of crudity and immaturity. But it will be fairer to let the reader judge of that matter for himself.

The Port of Dreams. By Miriam Alexander. New York: G. P. Putnam's Sons.

While the action of this story is definitely assigned to the years 1744-47, the reader is not asked to march with Bonnie Prince Charlie from Edinburgh to Culloden, or otherwise to participate in the more decisive events of '45. Instead he is acquainted with certain Irish Jacobites in their efforts to secure to the depleted Stuart exchequer a diamond necklace of fabulous value. The casket containing this wondrous "bauble" has washed up on the Galway coast, a century and a half after it had gone down with a galleon of the Spanish Armada. From the moment of its discovery until its final inexplicable disappearance, its custodianship entails endless alarms and dangers. Official pursuit in Ireland, private intrigue in France, are equally unremitting. The chief sufferer on this account is a gentleman who, having grown gray in King James's service—a champion revered by the Pretender's young adherents and a shining mark for Hanoverian arrows—late in life, finds himself grievously embarrassed by the loss of his courage. An all but successful attempt at assassination, followed by an uncommonly painful recovery, had left John Clavering permanently incapacitated for facing sword play or the crack of firearms. From the disgrace of this singular mischance he is protected by the chivalry of his young comrade-in-arms, Denis O'Gara. This Irish Don Quixote surrenders to the disabled hero his own reputation for bravery, together with the hope of winning a certain fair lady to whom the Cause is more than any mere suitor, and finally goes to the scaffold in his stead, lest the public display of Clavering's weakness should shame them all.

Such a psychological complication as Clavering's incapacity introduces consorts rather oddly with the atmosphere and style of adventure prescribed by tradition for the Jacobite romance. The plot, glimmering and inconsecutive in its total impression, manages to include hairbreadth escapes and stately gallantries in about equal proportions. It even introduces as the young Pretender a puppet-like presence credited with much wanton perverseness and ingratitude behind the scenes. Better than the narrative one enjoys bits of Irish landscape rather poetically described, and the occasional passages in which the author turns from her story to plead the misfortunes and sing the general praises of the gallant Irish gentlemen of the eighteenth century.

The Dragoman. By George K. Stiles. New York: Harper & Bros.

Randall, Englishman and Egyptologist; Hilken, American dealer in second-hand rifles; Elizabeth, his daughter; Major Talbot, of the Upper Nile; Zanda Pasha, villanous Turk; a supposed dragoman, really a prince and "Mollah of Konia"; a dancing girl: these are the chief persons in this (we gather) thrilling romance. Randall is young, and even more handsome than learned. He has spent much time in native disguise, learning the manners and the tongues of Egypt and Islam. He has made the three pilgrimages of the faithful, and is initiate in the innermost mysteries of the Moslem cult. This is just as well, considering what Mr. Stiles expects of him. For he not only has to kill the Mollah of Konia, to embalm him, in the cabin of a Nile steamer, and to stow him away in a mummy-case which happens to be at hand: given an enemy and a mummy-case, this is what any spirited young Egyptologist might do. Randall's real feat is in impersonating the Mollah, the expected deliverer of Islam, putting himself at the head of the plot against British rule, and only disclosing his identity at the moment which is most convenient for Mr. Stiles. The Nile steamer in which the Mollah becomes a mummy is carrying rifles into the Blue Nile country, ostensibly for Abyssinia, but really for the followers of the Mollah. Randall is aboard not only on England's account, but on beautiful Elizabeth Hilken's. They make a sensational delivery of small-arms through the falls of the Blue Nile. There the faithful, with Zanda Pasha, the villanous Turk, await them. When we note that the Turk covets Elizabeth, that she loves Randall, and that Randall loves both Elizabeth and the dancing girl, it will be perceived that heart-interest is not stinted. However, a plague is introduced to kill off superfluous people, including the fatuous Hilken and the dancing girl, and Randall is free to rescue the other maiden of his heart. The eventual discovery that the man she loves is not a dragoman, or even a prince of Asiatic blood, but a fine young Englishman and budding Governor of Upper Egypt, is pleasant for Elizabeth.

Dew and Mildew: Semi-detached Stories from Karabad, India. By Percival Christopher Wren. New York: Longmans, Green & Co.

The author of these striking stories evidently is, or has been, connected with the British department of education in India. A fly-leaf credits him with several books on teaching in India, but the evidence is hardly needed. Throughout the tales which make up this volume runs a vein of comment on Indian school methods. The hero of the book, so far as it has one, is the English master of a school for natives in Karabad; and the villain is an ignorant M.P. who has come to India to make trouble, in the schools and elsewhere. This unspeakable person the author, in the end, joyfully hoists with his own petard—hoists not only out of India, but out of life altogether, to the great content of the reader. To the schoolmaster is awarded that grand prize of the Anglo-Indian, a legacy enabling him to turn his face towards Home.

But apart from this contrasted pair and the events and interests which concern them, an altogether distinct motive runs through these tales—two of them, in fact. One may call them the Phantom 'Rickshaw motive and the Wee Willie Winkie motive, without meaning to

imply that they have been lifted from Kipling. The clash of skeptical Occident with ghostly Orient, and the pathetic figure of the English child in unnatural and unwholesome surroundings, are themes which belong to all Anglo-Indian literature. They are effectively mingled here. Behind the happy activities of the members of the "Junior Curlton Club" of Karabad lies the waiting shadow of an Eastern curse which we know is not to be balked of its innocent victim. The scene of the ghostly action is known as "Sudden-Death Lodge." Under a certain pipal tree in Karabad an old fakir has sat and worshipped after his fashion for fifty years. A rich native dislodges him, uproots the tree, and builds a fine house on the spot. The fakir dies, cursing the house and all who may dwell in it. A series of fatalities follows, which the chronicler does not profess to explain—"Coincidence, no doubt: but coincidences are many—east of Suez." Sudden-Death Lodge changes hands many times; there is always some person, bold, or careless, or simply skeptical, to find advantage in its absurdly small rental—and, sooner or later, to pay the penalty. The grim, matter-of-fact manner of the story-teller intensifies the grewsomeness of his tale, which is fashioned for those who have hairs to stand and flesh to creep.

A GERMAN IN AMERICA.

Amerika—heute und morgen: Reiseerlebnisse von Arthur Holitscher. Berlin: S. Fischer & Co.

Some years ago the late Von Polenz visited America in a quiet, unheralded way and gave us a dignified and impartial account of American conditions and problems, in the volume entitled "Das Land der Zukunft." And now another German poet, going about his work in much the same way, has produced a notable book. The writing is delightfully unconventional and direct. The author is enthusiastic about the general spirit and atmosphere of the American democracy, but is indignant over practices and institutions which flatly contradict the original ideals of that democracy.

Among the cursory notes jotted down after his arrival in New York during the hot spell of the summer of 1911, is a protest against skyscrapers, against billboards and electrical signs. He resents having a cocoa-drinking baby of colossal proportions, the latest pugilistic sensation, or other equally elated images thrust at him from the sky. Deciding to forget all æsthetic standards for a while, he wisely reserves his opinion of New York until he can make its acquaintance at a more propitious season, and starts upon a round of visits. The first is to the George Junior Republic in Freeville, in whose founder he recognizes a noble American type, briefly characterizing him as "the right man to cherish a great sentiment in his heart and to realize it through an idea." He spends an afternoon at East Aurora, fails to find the founder of the famous Roycroft Shop, whose portrait, as he has known it from the magazines and bill-boards, struck him as a type, half-monk, half-Montmartrois, and decides that the enterprise itself combines the features of Angelico with those of Barnum.

Most surprising is Holitscher's account of Chautauqua. He attends an Old First Night in the great amphitheatre, and the eight thousand men and women who have come from all parts of the country to this great democratic summer college convey to him the meaning of Walt Whitman's pet phrase, "en masse." He is astonished at the quality of the lectures and the standing of the lecturers, and arrives at the conclusion that the work of Chautauqua, if thoroughly investigated, would be found to be doing something for the future which was not originally in the programme. In the porter and the liftman of the Athenæum Hotel, both college men, he welcomes a type exclusively limited to America and utterly impossible in Europe: the student working his way through the university.

Kansas City gave him the first unpleasant shock. A car-ride through the delta of the Blue River, with its sordid shanties, revealed to him features of that prosperous city with which the then uncompleted Child Welfare Exhibition did not reconcile him. He failed to find in it practical object-lessons on the horrors of child labor—a conclusion which was perhaps premature, though it did not detract from the humiliating truth of his remarks on the subject with which he is amazingly familiar.

Chicago, "the city of world-famous warehouses, stock-yards, wheat elevators, and brothels," is to Holitscher "the most horrible place on this globe." He briefly suggests its material and spiritual atmosphere: "Through one nostril you inhale coal dust, through the other the fumes of boiling glue. They combine into a paste which settles on the cerebral membranes, and lo! the Chicago conscience has come into existence." A visit to the stock-yards brings the author face to face with conditions of labor for which there is no parallel in any other country in the world, the age-limit, the artificial stimulation of individual energy, and other features, which fill him with horror at the inhuman exploitation and premature exhaustion of human vitality going on in the industrial life of this country. His condemnation of what he calls the "Taylor System" is likely to be largely quoted in the German press. The impressions are somewhat relieved by a visit to the parks, with their playgrounds, swimming-pools, gymnasiums, libraries, etc., which he is surprised to hear are open to everybody without the least formality. Hull House, however, leaves him in a somewhat skeptical attitude. Eliminating the personality of Miss Addams, he regards that enterprise as but a plaster upon a festering sore of the social organism. That the indirect social work done in and through that institution has called attention to urgent social reforms of a more radical nature seems to have escaped Holitscher's otherwise penetrative insight.

Among foreign writers on America this German author is probably the first to give unqualified praise to the American school-marm. He compares these women who bring so much "warmth, kindness, and beauty into the schoolroom" with the "horde of arrogant tyrants and self-righteous fools" who robbed him of his childhood. He sees only good in the far-reaching influence which education by women and co-education must have upon the American youth. "In the simplest manner the American boy learns to understand the word equality, for where should equality begin unless it be in the establishment of the same legal status for the two sexes of mankind?"

On the author's return to New York the skyscrapers no longer fill him with the horror they at first inspired—he begins to understand the reason for their being. This part of the book contains a very conscientious and judicious survey of the immigration problem on Ellis Island. While other foreign authors have nothing but severe censure for it, Holitscher judges it with comparative mildness. In spite of the human tragedies he witnessed at detention quarters, he gives the immigrant commission the benefit of the doubt. He admits that it is doing the best within its power, but thinks it should be recruited from men specially trained for their responsible duties. He seems likewise to have looked deeply into the color problem, which is interesting European countries. His acquaintance with intelligent negroes in New York has convinced him that this question is bound to be a menace to the democracy.

The Vaunt of Men, and Other Poems. By William Ellery Leonard. New York: B. W. Huebsch. $1.25 net.

Mr. Leonard has chosen a fitting title. Though taken from the first poem, it applies equally to almost the whole volume, through which run the boast and flourish of youth, a confidence in the insuperable power of the vision seen and held. When an editor failed to appreciate his proffered work

> As one reared
> Among the mountains, conscious of mine own,
> I bowed and went my ways without a word.

Possessed of an "inviolate will and fiery

dreams," he defies the world either to confute or harm him:

And I have that within me which shall build
Even from the fragments of dead hopes a house
Where I may dwell as I grow more a god.

Few will deny the gusto and eloquence with which Mr. Leonard asserts the valiancy of his message. Yet, except in a vague way, what the message means, even to the author, it is impossible to say. It would not be necessary to treat a small volume of verse so formally save for the fact that Mr. Leonard himself forces the issue. He pleads for the efficacy of the spiritual life, of dreams and ideals. But how shall one proceed?

fare
Out to blue ocean and the sun-bright air!
Hark! the deep voice: "Exult ye, and aspire!
As some god's festival on holy ground
Ye shall approach my universe afar,
Naked and swift as heroes, from all climes;
Thus ye shall fill an epos with new sound,
Thus ye shall yield new names from many a star,
And thus ye shall date the aftertimes."

Since the days of the Romanticists we recall no such insistent note upon primitive nature as a cure-all. The number of times which the word "primæval" occurs in the volume is in itself significant. The author is full of cosmic stirrings. One poem of considerable length is devoted to "Primordial Earth," which attempts in Miltonic fashion to visualize the creation of the world. As a *tour de force* it is excellent.

In certain instances such bigness of treatment eminently befits the theme chosen, and here Mr. Leonard's imagination does not falter. This is true of "New York in Sunset":

The island city of dominion stands,
Crowned with all turrets, o'er the water's crest,
Throned, like the bright Cybéle of the West,
And hailed with cymbals in a million hands
Around her; yet serenely she commands
The inland vision and the ocean quest,
The new-born mistress of the world's unrest,
The beauty and the terror of the lands.

She sees the fields of harvest sown for her,
And sees the fortress set beside her gate,
Her hosts, her ships, she sees through storm and fire;
And hers all gifts of gold and spice and myrrh,
And hers all hopes, all hills and shores of fate,
And hers the fame of Babylon and Tyre.

So, too, in "The Phantom Skater" he has caught the sweep and elusiveness of a shadow, and for the "man-bird" he was a predestined singer. But much of his poetry suffers from a quality which he himself simply and admirably describes:

I feel me near to some High Thing
That earth awaits from me,
But cannot find in all my journeying
What it may be.

If there is some courting of the grandiose mood in Mr. Leonard's work, his style is often direct, even colloquial. "What makes us wander?" is the informal beginning of a subtle poem. Time and again a charming vista, full of life and color and familiar to all, is called up by a single line. His outlook constantly is poetic and there is volume in the note he strikes. His verse shows variety and well-managed ingenuity. This is only another way of saying that he is well equipped to do significant work when once his aim and purpose gain sharpness. To judge by the few examples of light verse given, he might do well to devote more time to that species. He might properly forget for the nonce that he is more than a gay rhymer—for the reason that his little elf of the woods, so prettily drawn, will carry more conviction than can his undirected striving for oneness with the infinite.

The Heroic Age. By H. Munro Chadwick. Cambridge University Press. New York: G. P. Putnam's Sons. $4 net.

This book must arrest the attention of students alike of Greek and of Teutonic life and literature. Opinions will differ as to some of the conclusions reached, and, more especially, as to the emphasis laid upon certain contributory factors which may seem to apply equally well to the genesis of other literary phenomena. But this is a question of detail. Mr. Chadwick's comparative method amply justifies itself as a working hypothesis. Unfettered by *a priori* and conventional claims, drawn from chronologic sequence, he examines the actual antecedents and environment of the Heroic Age in Greece, about 1000 B. C., and also the sources of Teutonic poetry in the third to the sixth centuries of our era, with their stratification in subsequent centuries. He asserts that sufficiently similar conditions produced, with no suspicion of imitation, strikingly similar results. Passing over another millennium, Mr. Chadwick finds in Servian poetry, celebrating the battle of Kossovo, 1389 A. D., good grounds for speaking of a Slavonic Heroic Age, although he disclaims a thoroughgoing acquaintance with Slavonic literature. Other Heroic Ages, notably the Celtic, are suggested until an heroic vault seems to be arched overhead, sown with fixed stars apparently equidistant from the spectator. They are projected on a common background and, for the moment, we are concerned only with the angle converging at our point of observation. Mere chronologic sequence, in other words, is obliterated, and justly, if the writer has succeeded in making good his contentions. In chapter V, on Early Poetry and Minstrelsy, is contained the author's specific thesis. He would divide the history of heroic poetry into four stages:

To Stage I belong the court-poems of the Heroic Age itself; to Stage II the epic and narrative poems based on these; to Stage III the popular poetry of the eighth and following centuries; to Stage IV the German poems of the twelfth and following centuries, composed at a time when heroic subjects had again come into favor with the higher classes.

Brief criticism or illustration would be unfair. Much of the application throughout the book is suggestive and valuable. Some of it is new. Only occasionally, in the Homeric section, does the reader have an uneasy sense of a juggling with Procrustean formulæ. Here, while the author occasionally magnifies coincidences and minimizes divergences in the pursuit of illustrations, he shows continually an intimate acquaintance with Homer and Homeric questions. As quarry for the poems he assigns the Greek Heroic Age to the eleventh century B. C., and takes into due consideration the data gleaned from the Cretan and so-called "Mycenæan" yields. He might perhaps have reinforced more clearly a claim for independent prehistoric civilization from the north, if he could have seen the volume, since published, "Prehistoric Thessaly" (Wace & Thompson). He finds between the eleventh and ninth centuries leeway enough (though less than in the corresponding period in the Teutonic Age) for the application of his formulæ, and concludes that the Homeric poems, as composed, belong to Stage II and reflect the age of the kings as epics based on the court poems of the Heroic Age itself. The various anachronisms, linguistic and other, he disposes of in no more arbitrary fashion than is customary to surgeons operating upon the Homeric corpus. In treating the Æolic element he argues that the poems could not have been wholly written down and transmitted in Æolic, but were first adapted to the literary Ionic (made current by Archilochus) of Eubœa and the Cyclades. His description of the language of the Epics as "practically identical" with that of Solon's poems, seems somewhat unguarded, even with the Æolic elements left out. The "type" and much of the subject-matter of the Homeric poems, Mr. Chadwick concludes, must have been fixed by the tenth century, and they contained elements of still greater antiquity, but he refuses to believe that these earlier and later "elements" (not "portions"—he wisely differentiates) are separated by any wide interval. Continuing the examination of the Homeric with the Teutonic poetry, he feels able to draw many similar inferences. Many of these are of real interest and importance. In the chapter on Myth in the Homeric Poems especial attention may be called to his

maps (p. 288), illustrating the Catalogue of the Ships and the distribution of dialects. From these he argues ingeniously that virtually all of the chief personages of the Iliad represented the Achæan branch or, at any rate, the West Greek dialects.

In his résumé (chap. xv) of the points of resemblance between the two Heroic Ages, Mr. Chadwick occasionally emphasizes traits which might be claimed for other poetry. But many comparisons are suggestive; for instance, that for a modern analogy to the stories of Sigurd or Achilles we should turn to a romance or novel; whereas for those of Offa or Lycurgos analogy would be sought in the biography of a statesman. His point also seems well taken that the comparisons ordinarily made between Homer and a literary poem like the Æneid are not so illuminating as the comparison between the Homeric Age and similar conditions, such as those in the Teutonic. Homer, for example, emphasizes the personal motif as distinguished from the national. A change may be noted as early as the Spartan "Marseillaise" of Tyrtæus, and clearly in the national patriotism of the Æneid.

For the book as a whole, and for most of the details, students of literature have good reason to be grateful. But we feel bound in closing to protest against the implication contained in the concluding paragraph of the book. Mr. Chadwick has previously (p. 439) observed that "the real problem presented by the Homeric poems is one not of literature, but of anthropology." But even this hardly prepares us, so far as Homer is concerned, for his conclusion of the whole matter:

> It is [he says, p. 463, the italics are ours] not reasonable to regard the Anglo-Saxon poems, much less the Homeric poems, as products of barbarism. . . . The pictures presented to us are those of persons by no means ignorant of the pleasures and even the refinements of civilized life, yet dominated by the pride and passions which spring from an entirely reckless individualism and untrained by experience to exercise moderation. According to the view put forward above, the explanation of such features is to be found *not so much in any peculiarly fertile gift of the imagination* by which the conventional court poetry of these periods was inspired, but rather in the circumstances of the times and in the character of the courts which produced that poetry.

If it is here really implied that we are to content ourselves with so mechanical a conception of the genesis of great poetry, lovers of Homer at least will hardly acquiesce. The Iliad and Odyssey, with their entail to uncounted beneficiaries, cannot be ascribed to anything less vital than catholic imagination. Without it no facile stilus or rhapsodist could have responded successfully to the mere impacts of court life and circumstance. In the scientific jargon of to-day, we seem to have here eugenics displaced by the new-born etymological bastard "euthenics."

Notes

Houghton Mifflin Company announces the following publications for March 8: "The Candid Adventurer," by Anna Coleman Ladd; "Stephen March's Way," by Harry Herbert Knibbs; "Sinopah, the Indian Boy," by James Willard Schultz; "The Drift of Romanticism," by Paul Elmer More; "The Old Law and the New Order," by George W. Alger, and "The Making of Modern England," by Gilbert Slater.

Two interesting titles are announced by Fifield of London—"Henrik Ibsen: Poet, Mystic, and Moralist," by Henry Rose, and a new edition of Samuel Butler's "Alps and Sanctuaries of Piedmont and the Canton Ticino." The latter book will have the author's final revisions, besides illustrations, and annotations by the editor, R. A. Streatfeild.

"Out of the Blue" is a story of a man and a girl and a desert island, by R. Gorell Barnes; it will be published shortly by Longmans, Green & Company.

The Century Company is bringing out this month: "The Woman in Black," a mystery story by E. C. Bentley; "Finerty of the Sand-House," by Charles D. Stewart, and "The American Spirit," by Oscar S. Straus.

W. Trafford Taunton's "The Night Dancer" is in preparation by Dana Estes & Company.

Francis Grierson's "The Invisible Alliance and Other Essays, Political, Social, and Literary," originally announced as "The New Era," will be issued by John Lane Company at an early date.

The spring list of the John C. Winston Company includes: "Written in the Sand," a novel by Madame Raoul Duval; "The Reluctant Lover," by Stephen McKenna; "The Mystery of 31, New Inn," by R. Austin Freeman; "Monarchs and Men," by Maximilian Harden, editor of *Zukunft*, in an English translation, and "Foreordained, with Other Stories," by Everhardt Armstrong.

Among the announcements of Cassell & Co. are "Social Environment and Moral Progress," by Dr. Alfred Russel Wallace, and "Panama, and What it Means," by John Foster Fraser.

The following volumes are included in the list of spring fiction announced by L. C. Page & Co.: "The Hill of Venus," by Nathan Gallizier; "Pollyanna," by Eleanor H. Porter; "The What-Shall-I-Do Girl," by Isabel Woodman Waitt; "The Harbor Master," by Theodore Goodridge Roberts; "The Career of Dr. Weaver," by Mrs. Henry Backus, and "At the Sign of the Town Pump," by Helen M. Winslow.

Books announced for early publication by Putnams include: "The Knave of Diamonds," a new novel by Ethel M. Dell; "The Old-Fashioned Woman, Primitive Fancies about the Sex," by Elsie Clews Parsons; "Rahel Varnhagen," by Ellen Key; "The Panama Canal Conflict," by L. Oppenheim, and "The Pronunciation of English in Scotland," a Cambridge book by William Grant.

We have received from Prof. I. Gollancz, secretary of the British Academy, an announcement of the next International Congress of Historical Studies, which will be held, under the auspices of the British Academy in coöperation with British universities and learned societies, April 3-9, in London. A preliminary scheme of the sections of the Congress has been determined as follows: I. Oriental history, including Egyptology. II. Greek and Roman history, and Byzantine history. III. Mediæval history. IV. Modern history, and history of colonies and dependencies, including naval and military history. V. Religious and ecclesiastical history. VI. Legal and economic history. VII. History of mediæval and modern civilization. VIII. Archæology, with prehistoric studies and ancient art. IX. Related and auxiliary sciences. Proposals in respect to reading papers should be addressed as soon as possible to the secretary for papers—the Rev. Prof. J. P. Whitney, of Well Walk, Hampstead Heath, London.

The United States Lighthouse Service is described in the *National Geographic Magazine* for January by Mr. George R. Putnam, Commissioner of Lighthouses. Not only present conditions of the lights and other aids to navigation along 46,828 miles of coastline and river channels are treated, but virtually a history of the service is given, from the building of the old Boston Light, the first in North America. In an account of a recent journey to Aleppo, Mr. John D. Whiting dwells especially on the wonderful ruins of Baalbek, which have been cleared and excavated by a German expedition headed by Professor Puchstein. There is also a full report of the addresses at the annual banquet of the National Geographic Society (which now has 170,000 members), at which special honors were paid to Admiral Peary and Roald Amundsen, to the latter of whom was awarded a special gold medal for his discovery of the South Pole. Ambassador Bryce made a most interesting address in which, referring to Prof. Hiram Bingham's work in South America, he said: "He has cleared up some very long-standing and difficult problems in primitive Peruvian history . . . and has secured a mass of archæological material." The number contains 114 illustrations, some of great merit.

As a kind of supplement to "The Oxford Book of English Verse," we have now from Arthur Quiller-Couch "The Oxford Book of Victorian Verse" (Frowde), which, beginning with Landor, goes anthologizing down the century among dead and living poets even to our own day. It is a fat little volume of some thousand pages, but well printed on good paper. As the reader turns the pages, he will meet with many a poem he is surprised and glad to find in this select, but not snobbish, company—for instance, the beautiful but seldom-praised ballad of Barham's beginning "As I laye a-thynkynge." But it must be added that the book shows some curious inadvertences or failures of taste. A few of the older American poets are included, and, among these, the selection from Emerson is ad-

mirable and characteristic, but Longfellow is by no means shown at his best. An American might feel, also, that, having opened the door to these names, the editor, when he came to the writers of the present hour, might have found a number of pieces from this side of the water which are of better stuff than some very feeble specimens of British growth. And in the case of a few of the more modern Britons the principle of choice seems hard to understand. Why, for instance, was "The Hound of Heaven" omitted from the selection of Francis Thompson? The book is not impeccable from any canon of taste.

A better subject for a biography could scarcely be taken than "John Forster and His Friendships"; not only was Forster a man of interesting personality, wide intellectual attainments, and sturdy independence, but his friendships, beginning with Dickens, of whom he wrote the standard life, included most of the notable men of the age. It is with regret, therefore, that one is obliged to say that the book under this title, written by Richard Renton and published in this country by Scribners, totally misses its opportunities. It is diffuse without being sprightly, confused in composition, and careless in style. The biographical writing now produced in England is, with occasional exceptions, in the hands of deplorably incompetent writers, and the present volume is not an exception.

As might be expected, it is the disciplined qualities of the soldier which stand out in the picture of "Nogi" (Holt) drawn by Stanley Washburn, who was attached to his army as correspondent in the late war. Of Nogi's supreme devotion to duty the world knows, how with total forgetfulness of family ties he ordered his son to almost certain death at Port Arthur. Even his wife, it appears, received only official communications from him. When Mr. Washburn sent to the Baroness a remarkably good photograph of the General on the white horse presented to him at the fall of Port Arthur by Gen. Stoessel, she said:

> This is the first direct personal touch that has come from my dear husband since the war started. When he parted with me to go to the "front" months and months ago, he said that as a husband he would be dead to me until the war was successfully terminated, and that I would not hear from him before then, nor should I write him, for his life, his time, his thoughts belonged utterly to his sovereign and to his country; that there must be naught of personality to come between.

A remarkable example of Nogi's self-mastery in trying situations, of his inscrutability, was furnished one afternoon in May, 1905, when the war correspondents had dropped in for a chat with him. For nearly three-quarters of an hour they sipped tea and exchanged pleasantries. "Finally his face grew thoughtful, and he suddenly volunteered, with a deprecating little smile and a gesture half of regret and half of apology, 'You must excuse me now, for I am somewhat busy this afternoon, for the Russians under Mischenko are making a raid to cut off our communications.'" Considering the fact that the attempt was almost successful and that Nogi must have realized its seriousness, his display of stoicism was extraordinary. Yet he did not wholly conceal his human sympathies. He was fond of entering into the informal celebrations of the correspondents, and when he drank to the victory over the Baltic fleet, he remembered touchingly the reverses of the enemy. Withal, he appears to have cherished a great sorrow, though in an entirely undemonstrative way. Summer nights he used to sit on the roof of his cabin quite alone. Like other great men, Gen. Nogi had a weakness. It seems that he took the poetry he wrote very seriously. He would talk for hours with the correspondent of the London *Times*, who translated some of it into English metres.

The Tolstoy Museum, which has charge of Tolstoy's literary remains, has promised to publish in one of the Russian magazines during the current year a vast correspondence between Tolstoy and N. N. Strachov, which comprises two hundred and sixty-eight letters, extending over a quarter of a century (1870-1894). Nicholas N. Strachov, born the same year as Tolstoy (died 1896), was the son of a high priest, studied mathematics and natural sciences in St. Petersburg, and intended to become a professor of zoölogy, when his innate love of journalism forced him to give up his pedagogical plans and devote himself to critical work. Though in possession of wide erudition, enthusiastic love of literature, coupled with an æsthetically developed critical faculty, he never became a great critic, because he never allied himself to any school of thought. He was always shifting his point of view, never holding to one opinion, lacking straightforwardness and clearness. He always took care not to make any practical inferences from the theories he advocated. He tried to keep away from the joys and sorrows of actual life, and only a little while before his death admitted in his letters to Tolstoy how sorry he was that he had missed the real life while sitting in his study. Tolstoy was almost in love with Strachov. He was jealous when the latter delayed his correspondence; he continually demanded letters from Strachov. For example, he writes on November 16, 1880: "Do not write for magazines, and do not speak to anybody; only write to me and speak to me; that is what I should like to tell you." He yearned for "long, circumstantial letters"; he felt "lonesome" without them. "Whenever I wake up my first desire is to communicate with you," he writes to Strachov on November 23, 1878. Their correspondence touched on all the topics of the day, but was chiefly concerned with the problems of literature, philosophy, and religion, which were so important to Tolstoy. He was so fond of Strachov, because he trusted his critical appreciation and sincerity. Though Tolstoy has many times expressed a dislike of criticism, he repeatedly asked Strachov's criticism while writing "Anna Karenina" and other books. Tolstoy especially valued the correspondence during his spiritual struggle in the eighties. He appointed Strachov his literary executor in his first will, written in his diary on March 27, 1895, in which he says: "The diaries of my bachelor's life I ask you to destroy, not because I wish to conceal from people my wicked life—for my life was the usual gross life of unprincipled young people—but because my diaries, in which I expressed only the torments caused by the consciousness of my sins, produce a mistaken one-sided impression, and . . . No; after all, leave my diaries just as they are. One sees in them at least that in spite of the baseness and wickedness of my youth, I was not forsaken by God, and that at least when I grew older, I began to understand and love Him a bit."

"The Authoritative Life of General William Booth" (Doran), written by Commissioner G. S. Railton, is in many respects a disappointing volume, and one is glad to know from the preface by Gen. Bramwell Booth that it is not to be regarded as the final biography of his father. Commissioner Railton's book is intended primarily for members of the Salvation Army, and is too tractarian in character to command the interest of readers not in active association with that body. It is impossible not to be impressed with the zeal and earnestness of the author, but it is equally impossible, even if one overlooks certain inelegancies of style, not to be conscious that he lacks some of the essential qualities of the biographer. It is perhaps in being true to the principles of the Salvation Army that Commissioner Railton fails to be adequate to his task. Just as the funeral of Mrs. Booth, and afterwards of the late General himself, was seized upon as a heaven-sent opportunity for the dissemination of Salvationist propaganda, so this biography is regarded by its author as an occasion for reviewing the work and aims of the army rather than for presenting a life-like picture of its founder. It would naturally be impossible to separate the man from his work, and William Booth himself would have been the first to urge that the work was so much more than the man as to render the latter insignificant by comparison; but those who are outside the particular field of the Salvation Army, although sympathetic towards its aims, have an intense interest in the personality of the late General as one of the prominent figures of the world in the past half century, and they expect to find in his biography a picture of the man as well as of the inspired leader. This is what Commissioner Railton fails to give.

The sub-title of E. Alexander Powell's "The Last Frontier" (Scribner)—namely, "The White Man's War for Civilization in Africa"—gives an idea of the book's real character. The author was recently a member of the American consular service in Egypt. His American antecedents are evidenced by his comparisons, which are invariably with things and places already more or less well known to his cisatlantic readers. He is possessed of a pungent and vivacious style, and he has proved himself a keen observer. It must be that some of the information was derived from sources not open to the general reader or the casual traveller. In a book which is as fascinating as a novel, Mr. Powell shows much intimate knowledge of some of the countries which go to make up the "Dark Continent," particularly in its northern and eastern parts. Beginning with Morocco, Algiers, and Tunis, and tracing the progress, methods, and effects of the French occupation, the scene shifts to Sahara, and thence to the fields of the Italian venture in North African exploitation. The difficulties of the situation are clearly set forth, and the dim prospects of distant success are indicated. Egypt is passed over rather lightly, but

Zanzibar and the rest of the East African coast come in for much more detailed treatment. One of the most interesting chapters is called The Spiked Helmet in Africa. It recounts the German methods of extending the interests of the Fatherland beyond seas. The work of Cecil Rhodes in the acquisition of British territory below the equator finds an enthusiastic expounder and a spirited apologist in Mr. Powell. His account of scenes and conditions, and his clear statements of the political situation, reasons, and procedure go far towards making many of the things plain for which an explanation is sought in vain in the periodical press. The book is illustrated with nearly fifty half-tones, most of them good and all characteristic.

The long-delayed story of the Babylonian expedition of the University of Chicago in 1903 is at last being told. The field-director, Dr. E. J. Banks, has done his part well in "Bismya or the Lost City of Adab" (Putnam). Those who have seen in the museum at Constantinople the statue of Da-udu, with its enigmatically benevolent and most modern smile, can here read how it was found, put together, stolen, and found again, and how finally it ruined the expedition which had restored it to upper air and living men. Da-udu—ancientest statue as he is—cannot have been as benevolent and grateful as he looks. There are many other well-told adventures and experiences in Constantinople as well as Babylonia, and they make the book probably the most vivid and illuminating account yet written of all that goes to such an expedition. Plenty of character, too, appears—more than Dr. Banks can have enjoyed at the time—and the technical part is skilfully minimized and simplified. The illustrations are good.

With the publication of the sixth volume of the "Acts of the Privy Council, Colonial," an undertaking of much importance for students of colonial history has been brought to an end with unusual promptness, at the rate of about a volume a year (His Majesty's Stationery Office, London). Almost coincident with it has appeared the second volume, the first on the Public Record Office, of Professor Andrews's "Guide to the Materials in British Archives," relating to American history before 1783. Between these two works there is a certain connection, for the search in the Privy Council Office, conducted in behalf of the first volume of the guide, aroused the Clerk of the Council, Sir Almeric Fitz Roy, to urge upon the British Treasury the desirability of printing or calendaring those portions of the Register that related to the colonies. The value of this publication and the light which it has thrown upon important aspects of English and colonial history have stirred English historians to demand the printing of the remaining portions of the Register, thus continuing Dasent's series of the Acts of the Privy Council, which had been stopped at 1603. During the years devoted to the investigation of the material in the Public Record Office, the authorities there entered upon a thoroughgoing rearrangement of the papers forming the chief objects of the investigation. It is not unlikely that the interest taken by American scholars in these records and the prospective issue of a guide or index to them may have hastened the reclassification already planned. The result has been a reconstitution of all the state-paper groups and of nearly all the departmental groups. In consequence, Professor Andrews's volumes have been held up for four years and largely rewritten, and the volume by Professor Paxson and Dr. Paullin is even now delayed by a renumbering of the Foreign Office volumes.

Another important result deserves notice. The well-known "Calendar of State Papers, America and West Indies," which has been proceeding latterly at the leisurely rate of a volume for a single year of documents, has reached the year 1702. Dissatisfaction has been expressed by both American and English scholars at the slowness of the publication, and in 1911 a statement was presented by Professor Andrews to the Royal Commission on the Public Records, representing the opinion of twelve historical scholars in America, urging a change. Since the issue of the first Report of this Commission last autumn, a Record Office Publication Commission has been appointed with instructions to consider, among other things, the future of the "Calendar of State Papers, America and West Indies." A decision has already been reached not to continue the publication on the present scale; and to combine and coöperate with the Carnegie Institution, as far as the two volumes of the Guide to the Public Record Office are concerned. Whether the work will be continued in the form of a catalogue or index analytique, capable of rapid compilation and issue, or in the form already familiar, but on a briefer scale in order to embrace at least five years to a volume, has not yet been determined. Some English scholars would like to see the existing "Lists and Indexes," particularly of the departmental papers, replaced by adequate summary catalogues, and a decision in this regard is likely to affect the character of other issues by the Public Record Office.

Of the fifteen papers included in Volume IX of the "Papers of the Military Historical Society of Massachusetts" (1912), those of Gen. George H. Gordon on "Major Anderson at Fort Sumter," Col. Alfred P. Rockwell on "The Operations against Charleston," Col. William Lamb and Gen. Adelbert Ames on the defence and capture of Fort Fisher, and Col. William R. Livermore on "The Vicksburg Campaign," are of the widest interest. Gen. Gordon, viewing the political as well as the military elements in the Fort Sumter episode, justifies Anderson in withholding his fire until he was attacked. Had he opened fire on the morning of January 9, 1861, when an unarmed steamer bringing supplies was turned back by the South Carolina battery at Morris Island, he would, in Gen. Gordon's opinion, have inaugurated a war at a moment when he had every reason to believe that the Administration at Washington had determined upon a policy of peace. In "the play of Fort Sumter" as a whole, however, "as composed, mounted, and exhibited by the Administration," he finds "a masterpiece transcending in genius and in originality the worthiest conceptions of Gilbert and Sullivan" (p. 51). The story of the defence of Fort Fisher, as told by Col. Lamb, who conducted it, is a spirited piece of description, embodying, however, a severe but merited criticism of Bragg for his failure to send relief; while Gen. Ames, who led the Federal assault, seeks to apportion justly the honors of the victory. Col. Livermore's practiced hand works to advantage in his straightforward account of the Vicksburg campaign: a campaign "all the more praiseworthy," as he points out, "from a military standpoint, from the fact that the risk was a minimum." As for the operations against Charleston, Col. Rockwell reaches the conclusion that, while early in the war, the city might have been captured if taken by surprise, its possession, save as a base "for a strong movement into the interior," was not specially important from any military standpoint.

South American history has received so much attention since the first appearance of Charles Edmond Akers's "History of South America: 1854-1904" (Dutton), more than eight years ago, that the second edition, which has just appeared, finds itself confronted by a large shelf full of competitors. The first edition, reviewed in these columns on December 29, 1904, was at the time warmly welcomed, for it was virtually alone in its field. It is a pity that Mr. Akers did not take advantage of the present opportunity to recast the book and rewrite that generation of South American history which he knows better than almost any one else. To have been content with merely adding to his journalistic "history" a new chapter of 22 pages, "bringing up to date the political and economic conditions" since the first edition, was not enough. The title leads one to suppose that this is a history of fifty years. As a matter of fact, the work is a detailed account, by an eye-witness, of the most striking passages in an interesting period embracing about twenty-five years of revolutionary and international events, with very brief introductory remarks on South American history down to Mr. Akers's arrival. Mr. Akers has a brilliant memory, so biographically encyclopædic, in fact, that his full pages are the despair of the beginner. Scores of soldiers and politicians are mentioned once or twice, only to be quickly discarded as the kaleidoscopic history of the effervescent republics unfolds itself. To the advanced student, on the other hand, the book will continue to take high rank. In no other book do the details of the Paraguayan War of 1865-1870, the Chili-Peruvian War of 1879-1883, and the naval revolution in Brazil, 1891-1894, receive such elaborate treatment. The work of a skilful journalist who resided for fourteen years in South America, as correspondent of the London *Times*, the volume would much better have been called by some other name. And surely, in an expensive book of this kind (for which the publishers expect to receive $6 net), the misleading design on the cover, where the *Mexican* coat-of-arms proudly adorns the "History of South America," might have been corrected.

The index of economic material in documents of the State of Ohio, 1787-1904, compiled by Miss Adelalde R. Hasse and published by the Carnegie Institution of Washington, fills two ponderous volumes of more than eleven hundred pages, and this despite the fact that it does not embrace Constitutions, laws, legislative proceedings, or

court decisions. It lists all entries in printed reports of administrative officers, legislative committees, and special commissions of the States, with Governors' messages for the period since 1789. It also adds volume and page references to all material of economic importance contained in these documents, with the single exception of certain reports already indexed by the late Carroll D. Wright, when United States Commissioner of Labor, and published in 1902. The arrangement is alphabetical by topics, and within the topical groups it is chronological, with numerous cross-references. The topical headings are uniform in all the volumes, of which ten, devoted to an equal number of States, have already been issued, though new features have been introduced into the present issue. Among these new features, many of which will be incorporated in future numbers, are the references to topics from locality and the names of persons who have exercised an important influence on the development of the economic life of the State. There can be no doubt of the value of these innovations. The work as a whole is monumental in scope and has been carried forward under manifold difficulties, easily appreciated by any one familiar with enterprises of this character. When complete, it will furnish an index to the economic material in the reports and Governors' messages of all the States of the Union.

Science

An account of the Abor expedition on the northeastern frontier of India is given by Mr. A. Bentinck in the *Geographical Journal* for February. He did not refer to the great geographical problem of that region, whether the Tsang-po of Tibet and the Brahmaputra of India are the same river, but in the discussion following the reading of the paper before the Royal Geographical Society strong reasons were given for believing that the problem is still unsolved. Dr. Felix Oswald tells of explorations in the Nyanza Province of British East Africa, his aim being to examine the deposits in which had been found a fragment of a Dinotherium and some other fossils. It is interesting to note that in one place near the lake shore he found an American Mission of Seventh Day Adventists. The influence of the geographical features of Missouri on its growth in population and industries is shown, with the aid of nineteen diagrams, by Mr. F. V. Emerson, of the University of Missouri.

The human relations of geography furnish the topic of a suggestive article, by Prof. Jean Brunhes, of the College of France, in the *Annales de Géographie* for January. His aim is to show how history is explained by geography, how geography transforms itself into history, and to what degree and in what ways men are geographical factors. He supports his theories mainly by the study of Bosnia-Herzegovina, but also by illustrative facts drawn from all parts of the world. "One of the best trails indicated by nature for human circulation is the *transportation belt* which goes from New York to Lake Erie." Other subjects treated are the Sanjak of Novi-Bazar, the floods of the Niger, and the cotton industry of Alsace. The valuable bibliography of the geographical literature of 1911, which constitutes the number of the *Annales* for September, has just been issued. It is of exactly the same size as that of the previous year.

Petermann's Mitteilungen for January opens with a sketch of the decline of the Turkish power in Europe, by Prof. N. Jorga, of the University of Bucharest, accompanied by eight colored maps showing the boundaries from the seventeenth century to the present time. Among the other maps is one giving in thirteen different colors the distribution of the population of Europe by the square kilometre, with explanatory text by Dr. L. Weise, and two showing the boundaries of the French and Spanish zones in Morocco according to the agreement reached November 27, 1912. The military department contains a description from the strategic point of view of the Bulgarian-Rumanian theatre of war.

The sixty-seventh annual report of the director of Harvard College Observatory notes the retirement of Prof. Arthur Searle, after an effective service of forty-three years; also the untimely death of Prof. Lawrence Rotch, whose investigations of the laws of the atmosphere by means of kites and balloons have done much to rescue meteorology from the mere routine of observation, and impart the substance of a living science. The Blue Hill Observatory, of which he was founder and director, is continued by Mrs. Rotch until its formal transfer to Harvard. Observations with the fifteen-inch equatorial were continued by the late Prof. O. C. Wendell, above 9,000 photometric comparisons forming the chief work of this instrument, though the brightness of the nucleus of Brooks's comet and eclipses of Jupiter's satellites were investigated. The Henry Draper Memorial telescopes have now taken more than 56,000 photographs in all. In place of the late Mrs. Fleming, Miss Cannon has been appointed curator of astronomical photographs, and she is engaged on one of the largest works undertaken by the Observatory, a revision of the Draper Catalogue, to include the type of spectrum, with the photometric and photographic magnitude of more than 100,000 stars distributed over the entire sky. At the Arequipa station, in Peru, both the Boyden and Bache telescopes, as well as the twenty-four-inch Bruce telescope, are actively employed in photographing the Southern sky. Above 8,000 observations of variable stars have been procured through the coöperation of a large number of institutions and private observatories, among them Vassar and Mount Holyoke, with Amherst leading. The Harvard photographic charts provide a sequence of comparison stars on a uniform scale which renders this work of especial value. The larger Metcalf telescope has been used in fixing the position of the moon photographically.

A book on the "Himalayan States," which is the outcome of two official missions and fifteen years of exploration and residence, is sure to be useful and interesting, not only because Rudyard Kipling and the Durbar have prepared our curiosity, but for impending events along the entire frontier of British India in the reconstruction of the Chinese Empire. Charles-Eudes Bonin, the author of "Les Royaumes des Neiges" (Armand Colin), has been careful to supplement his own knowledge from the published work of others up to 1911; and his bibliographical lists are themselves of some value. He takes in succession—the Northwest frontier of India; the conquest of Little Tibet; unknown Bhutan; the jungle of Assam; the "Popess" of Lamas, and their slayer. By way of appendix, he explains the routes of Central Asia; the sources of the Ganges; the Mosso people of Eastern Tibet, whom he visited in their capital, which is a centre of Chinese commerce; and the ten ethnographic paintings of Li Long-Mien, who left these precious indications of the peoples known to Chinese commerce in our eleventh century. Thus, little by little, the independent progress of the other half of the world, which has at last come face to face with our own, enters into our historical consciousness. It was needed to complete our somewhat narrow geography, concealing from us the real extent of Humanity in the past. "Too easily do we judge Asia impassive and unchangeable—for it ceases not its agitation and effervescence and ebullition."

There should be a place in our college curricula for an elementary course in science in which the laws of nature are discussed in a general way; for this purpose, physics is the best fitted of all the sciences. We commonly teach each science as if the students expected to be specialists in that subject. The fact is just the contrary; most educated men wish to know the scientific method in its broad aspects, to learn how scientific laws express natural phenomena, and to understand what is going on about them. To meet this need, Prof. Daniel W. Hering has prepared his text-book, "The Essentials of Physics" (Van Nostrand). His treatment, on the whole, is good. The fundamental ideas of the science are given broadly, and a selection of important and of well-established phenomena and laws has been made. It will repay teachers of physics to examine the book, even if it be not suited for the more specialized courses they are giving.

"Elements and Electrons," by Sir William Ramsay, a recent addition to Harper's Library of Living Thought, is rather disappointing. While the separate chapters are well developed, there is a lack of continuity in the book as a whole. The Library is designed to keep the educated man abreast with modern thought; it is doubtful if such readers will profit much from the dry and complicated survey of experiments and formulæ which the author presents. As for the speculative portion, there is so much that is fascinating in the modern theories of matter and electricity that it was a pity to put the final emphasis on the transmutation of the elements, a question which has hardly been considered seriously by physicists.

Dr. Philip Hanson Hiss, jr., professor of bacteriology in the College of Physicians and Surgeons at Columbia University, died on Thursday of last week. He had been ill a year. Although Dr. Hiss was only forty-five years old, he had made himself famous by his methods of detecting typhoid bacilli and by the use of the leucocyte or white corpuscles extract as the cure for pneumonia and for erysipelas. Dr. Hiss died just as the results of his years of work were about to be published. He was born in Baltimore in 1868, graduated from Johns

Hopkins University in 1891, and received the degree of doctor of medicine at Columbia in 1895. He was appointed assistant in bacteriology at the College of Physicians and Surgeons in 1895, was instructor in hygiene and bacteriology, 1899-1903; adjunct professor in bacteriology, 1903-1906, and was made professor in bacteriology in 1906. He served as bacteriologist in the Health Department of New York from 1896 to 1899, and professor of hygiene in the Woman's Medical College, New York, 1898-1899. With Zinsser he was the author of a widely used text-book of bacteriology, and had published a valuable series of technical studies.

Sir William Henry White, chief constructor of the British navy, and designer of the modern Dreadnought, is dead, at the age of sixty-eight. He was born and bred in Devonport, England, a dockyard town, and entered the Government employ as an ordinary shipwright apprentice. Eventually he gained admission to the Royal School of Naval Architecture. He was appointed to the staff of chief constructor at Whitehall, and at the age of twenty-two became confidential assistant to Sir Edward Reed. At thirty-six he was promoted to the rank of chief constructor. After a brief period, during which he designed for a private firm, he returned to his old post and devoted his entire time to building up the British navy. He was the responsible designer of all the seventy ships of the Naval Defence act, which involved an expenditure of $115,000,000. The greatest tribute to his ability was the general acceptance by designers of his conception of a battleship. He was knighted in 1895, and, after his retirement, in 1902, on account of illness, Parliament voted him a grant of money.

Drama

Lady Gregory's "New Comedies" is promised shortly by Putnams.

Mr. Huebsch begs to announce that Hauptmann's "Gabriel Schillings Flucht," which has been produced at the Irving Place Theatre, New York, and about the appearance of which in English form many inquiries have been made, will be included in one of the later volumes of Hauptmann's dramas, which are now in preparation.

We have had occasion before to mention the special features of the Shakespeare published by the Oxford University Press (Frowde)—the general introduction by Swinburne, Theodore Watts-Dunton's introductory note, the Craig text, and introductions to the individual plays and to the poems by Edward Dowden. In addition to the six or eight small volumes in which the work has been issued, Mr. Frowde now offers it in a three-volume form, the divisions being made into Comedies, Tragedies, and Histories and Poems. Each volume, owing to the thin paper used, can easily be carried in the pocket.

The translation of Strindberg's plays goes on apace. We have received from John W. Luce & Co. a batch of four, translated by Edith and Warner Oland. Two of them, "Pariah" and "Easter," have been mentioned in these columns in reviewing another edition of Strindberg. The remaining two, "Comrades" and "Facing Death," are not significant works, both being written in the author's most cynical mood. "Comrades," the scene of which is laid in Paris, tells the story of two artists, man and wife, who have decided that their relation to each other shall be characterized first of all by friendliness and mutual assistance. What this plan degenerates into readers of Strindberg will readily guess. The wife, stirred by the woman movement in Sweden, for both characters are Swedish, becomes domineering and attempts to arrogate to herself the superior artistic talents of her husband. During most of the four acts there is nothing but wrangling, at which gentle art Strindberg may be conceded to be a past master. In the last act the husband asserts his greater strength, and by cowing his wife physically succeeds in winning her love, but not until he himself has lost every spark of feeling for her. Other characters, loosely connected with the main action, enforce the moral of woman's despicable motives. "Facing Death" is a one-act play wherein a Frenchman, with his three grown daughters, is the proprietor of a pension in Switzerland. Business has grown so dull that their small treasury is exhausted. The house has been mortgaged again and again, and their only hope is a bit of fire insurance. Here noble man steps in—he who had been so maligned by his deceitful wife that even after her death the reputation which she had given him lived in the minds of the daughters. The father, as the only way out, sets the house ablaze and poisons himself. He was a believer in ideals, and, according to the author, there is no place for such a one in married life.

"The Five Frankforters," which was produced in the Thirty-ninth Street Theatre on Monday evening, is identical in name only with the German comedy by Carl Rossler, which attracted so much attention in Europe. This is an adaptation by Basil Hood, which is in many ways a poor substitute for the original, although it retains the essential features of the domestic scenes which were among its chief attractions. As a study of the early Rothschilds, it has no value whatever, and the characters would have been to the full as interesting, and, possibly, somewhat more credible, under different surnames. The plot, briefly, turns upon the scheme of Solomon Rothschild to make the bankrupt Duke of Taunus marry his daughter Charlotte, in return for a heavy loan, and its defeat through the opposition of the girl herself—who is in love with her cousin Jacob—and his old mother, Gudula Rothschild, who denounces the proposed bargain as unnatural and unwise. In Mr. Hood's version the intrigue, the court negotiations, etc., all compressed into one brief chaotic act, amount to nothing and are often ridiculous. But the domestic episodes—with the prominent part played by Gudula—the love passages of the cousins, etc., are left unchanged and furnish a pretty, though conventional, story. The dominant feature in it is the old mother, who is most sympathetically and vitally drawn. With this admirable sketch Mr. Hood has not interfered, and it is filled in with something like inspiration and the most unquestionable artistic skill by Mathilde Cottrelly. A more realistic and fascinating study of a fond old woman—of feminine benevolence buttressed by shrewdness and integrity—has not been seen upon the stage for years. The impersonation completely dominated the play and was received with the heartiest appreciation by the audience. It was a memorable histrionic achievement.

Ibsen's "The Pretenders" has just been produced at the London Haymarket.

Charles Frohman has commissioned Richard Harding Davis to write a play for the Empire Theatre next season. The revival of "Liberty Hall" at this house, with John Mason in the principal male rôle, will take place on the 11th inst.

Sir Herbert Tree's next production at His Majesty's, in London, will be "The White Man's Burden," which is said to be a development, rather than an adaptation, by James Bernard Fagan, of the "Prophet Percival" of the Hungarian dramatist, Lengyel. The three chief characters will be played by Norman McKinnel, Sir Herbert Tree, and Phyllis Neilson Terry. Mr. Fagan is finishing a new comedy of modern life which he calls "A Conspiracy of Silence."

The "Ask Quesbury" of T. Herbert Lee, which has been produced in the Globe Theatre in London, is simply an irresponsible farce in which Weedon Grossmith plays the part of a bachelor, to whom a choice assortment of matrimonial irreconcilables apply for sympathy, advice, or aid.

Music

TWO OPERATIC NOVELTIES.

Before starting with his Philadelphia-Chicago Opera Company on a tour which will include Dallas, Los Angeles, San Diego, San Francisco, Portland, Seattle, Spokane, Butte, Denver, Omaha, Kansas City, St. Louis, Chicago, Minneapolis, and Cincinnati, Andreas Dippel produced another new opera at the Metropolitan in New York, the "Kuhreigen" by Wilhelm Kienzl. It proved to be a far more meritorious work than the preceding novelty, "Conchita," which was briefly commented on in this column two weeks ago. Kienzl began his career by worshipping at the shrine of Wagner, and his first opera, "Urvasi," which was produced in 1886, was quite in the Bayreuth style. Such direct imitations are seldom successful, and it was fortunate for Kienzl that his methods underwent a change into something resembling the opera as it was before Wagner. In 1895 he produced his "Evangelimann," which is compact of tuneful choruses, strophic songs, marches, dance pieces, and other features foreign to the most advanced type of the music-drama. It was an immediate and great success, and its record to-day includes performances in eleven languages at above two hundred opera houses.

"Kuhreigen," which was produced for the first time in 1911, at Vienna, is

constructed in similar fashion. The composer was fortunate in having for his librettist Richard Batka, Austria's best writer on musical topics, and a man who has had much experience as a collaborator, Dvorák, Poldoni, and Saint-Saëns being among the composers whom he has supplied with "opera books." In the present instance, he based his plot on a story called "Little Blanchefleur," by Hans Bartsch; the story of Thaller, an officer of the Swiss Guards, who, at the time of the French revolution, is condemned to death for singing, and permitting his soldiers to sing, the "Kuhreigen," which was strictly forbidden because it usually resulted in making the homesick soldiers desert and return to the mountains to hear once more the Ranz des Vaches—the strain blown on the Alpine-horn to call the cows to pasture. The King pardons him, and in the last act he tries to save from the guillotine the Marquise de Massimelle by offering her marriage; but she declares that their lives are too far apart and that she will die an aristocrat as she has lived.

As the Ranz des Vaches differs in the many Swiss valleys, Kienzl was at liberty to choose or invent any strain he liked for his leading motive. He has been successful in conjuring up the Alpine atmosphere. A good deal of the music, especially in the choruses, is what the Germans call "salbungsvoll"—an exalted mixture of religious, sentimental, and patriotic feelings, which insured the success of the opera in Germany. The second act is introduced by a delicious gavotte, of which much is made, and there are other quaint and pretty dances in the archaic French style. Though the music is not strikingly original in any part, it is tuneful, and agreeably free from the taint of cacophony for its own sake, which is the bane of most of the music of the present day. The performance of Kienzl's opera was far from being a great one, but it was sufficiently good to make it clear that the "Kuhreigen" was worth producing. It was sung in French, because Mr. Dippel's company does not include many singers who have mastered German.

The second operatic novelty of last week was Walter Damrosch's "Cyrano," a version of Rostand's famous play made for him by W. J. Henderson. As far back as 1896 an opera by Mr. Damrosch, "The Scarlet Letter," was sung in Boston and in New York. It was a rather amateurish production, little more than a gallery of Wagnerian echoes. A more mature and meritorious work from every point of view is "Cyrano." Although it was composed twelve years ago, Mr. Damrosch devoted last summer to rewriting entirely the final act and to rescoring the whole opera after it had been accepted for performance at the Metropolitan. In choosing a popular play to base his music on he wisely followed the example of Puccini. The libretto follows the action of the original play pretty closely, except that the last two acts are in the opera condensed into one, the parts being separated by a dark stage. It was also necessary to expand some of the situations to give opportunity for the introduction of sustained melodies. It cannot be said that these melodies are ingratiating or original; nor do the more declamatory parts show a special gift of writing for the voices. Far more satisfactory is the orchestration. Mr. Damrosch is an expert score reader, and his many years' experience as a concert conductor has made him familiar with the methods of the greatest masters in achieving ravishing color effects and constructing dramatic climaxes. His opera has benefited by this experience; there are moments when one forgives the lack of novelty or individuality in the enjoyment of a placid sketch or a stirring episode; but as a whole it is a dull score; it seems too long, although cuts were freely made, some of them to the detriment of the drama.

It was to be expected that so ardent an admirer of Wagner as Mr. Damrosch would make cunning use of the system of leading motives; yet he has done so sparingly, the only conspicuous instance being the employment of the abnormal whole-tone scale to characterize Cyrano's abnormal nose. It is much easier to write an opera in the pre-Wagnerian fashion, which does not necessitate the invention of themes that will stand frequent repetition and lend themselves to diverse transformations and combinations; and this easier method Mr. Damrosch has followed. For the rest, he is eclectic. While there are no flagrant instances of plagiarism, one is constantly reminded by melodic germs, harmonic modulations, and orchestral tints, of diverse German and French masters, sometimes in rapid kaleidoscopic succession. While often agreeable, the orchestration is on the whole too heavy, except in the tragic moments. Owing to this quality the singers—among whom were Alda, Martin, Amato, Reiss, and Griswold—found it difficult to project the words into the auditorium distinctly. Consequently, "Cyrano" did not serve as an argument in favor of those who clamor for opera in English. It is not likely that Mr. Damrosch's opera, any more than the operas of Mr. Converse and Mr. Parker, which preceded his, will survive the season.

At the Metropolitan Opera House hisses are occasionally heard mingled with the applause for a favorite singer. These hisses come from members of a claque who are not paid by that favorite singer. The audience proper in an opera house and our concert halls hardly ever hisses, unless it be to silence some one who is disturbing his neighbors by talking. What the British call "booing" is not heard in the musical or dramatic amusement places of New York.

Percy Grainger's British folk-music choral settings, which are dedicated to the memory of Edward Grieg, will be a novel feature of the next concert of Kurt Schindler's Schola Cantorum on March 12. These old English songs, which have recently been brought to light by the researches of scholars like Cecil Sharp and Mary Neal, and have been so attractively sung in New York by the Misses Fuller, are arranged for full chorus (six part) by Percy Grainger, a rising young composer of London, and have been the vogue in England for several years.

The death is announced, at the age of seventy-eight, in Dresden, of Felix Draeseke, who was for a number of years a special friend of Liszt, of whose orchestral works he was a vigorous champion. His own compositions, which for a time showed the influence of Liszt and Wagner, subsequently steered into classical waters. Among his compositions are three symphonies, several overtures, a mass, a requiem, and other choral works, two operas, and diverse chamber-music works. None of these is likely to survive him so long as his didactic works, which were the outcome of his teaching at the Dresden Conservatory.

Art

OLD AND NEW ART.

The Association of American Painters and Sculptors shows the work of its members and allies in a setting of what it deems the progressive art of recent years. By a simple miracle of good taste and good management the floor of the Sixty-ninth Regiment armory has been converted into fifteen galleries, with a spacious entrance hall. The light streams in from above, the hanging is effective. Even without the *succès de scandale* of the Post-Impressionists and Cubists, the show would justly have attracted public notice. Possibly its chief value is that it demonstrates how practicable it is to organize a comprehensive art exhibition in New York. The example may be commended to the Academy. If it really wishes to assume national significance as an exhibiting body, the way is pointed out.

It cannot be said that this is a representative exhibition of American painters and sculptors. We have virtually the old "Eight," with those whom they have encouraged to contribute. But representative quality was not sought after. The aim has been to procure painting of progressive and highly personal quality. In the selection of the retrospective exhibits and in the inclusion of the

Post-Impressionists and Cubists, a consistent principle has been followed. The American exhibits are a somewhat gorgeous family affair, but I see no reason for complaint. If the new Association gains sensational advantages from the presence of the latest revolutionaries, it also exposes the work of its members and contributors to the most trying comparisons with fine painting from Delacroix down. Indeed, there is a distinctly self-sacrificing and public-spirited willingness to centre the interest of the show in the foreign exhibits.

The retrospective exhibition is not notable, but sufficient as a reminder. Ingres, in Whistler's copy of the Andromeda, Delacroix, Corot, Daumier, Courbet, and Manet are adequately but not strikingly represented. For Puvis a delightful and comprehensive selection of a full dozen examples has been made. These run from the austere Beheading of the Baptist of 1869, and a delightful nude of probably earlier date, to color studies for the famous decorations at Amiens, Poitiers, and Paris. One misses Chasseauriau and Gustave Moreau, but their work is almost unprocurable. Among the veterans who have become classic in their lifetime, Monet is most prominent, in studies beginning with sober and dark canvases and ending with the air-swept lily pools of yesterday. The ballet and the race course appear in the discreet and learned emphasis of Degas. Renoir's full power is not suggested in the exhibition, but it would be hard to imagine painting more sensitively lovely than we find in a vase of crimson peonies and a seated portrait of a girl in Levantine costume. Pisarro and Toulouse-Lautrec, with Signac, chiefly represented by charming water colors, complete the group that grew out of the Luminist movement. Unless, indeed, we should here include Cézanne and Van Gogh, whose general affiliation with the Giverny group seems indisputable. The representation of these two much-talked-of artists is far from superlative; at least it is the fullest America has yet seen. I confess Cézanne reseen hardly measures up to the impressive figure of fifteen years ago. The Old Woman with the Beads is an extraordinary character study; so in a less degree is the vivid portrait of himself; but neither evokes strongly that immediate and primal sense of mass which was his main endeavor. His paler landscapes have for me the exquisite balance of John Twachtman's—the same fine economy of means. A little brown landscape, with its constructive planes sharp and simple, perhaps best represents the technical excellences to which he gave himself single-mindedly. But if merit is traditional, Rembrandt might almost have signed it. Van Gogh seems a Daumier projected into landscape through Luminism. He shares Daumier's capacity for powerful and rather sinister exaggeration of contour. None of the pictures illustrates the fervid polychromy which marked his latest work. As represented here, he quietly takes his place as a powerful and eccentric offshoot of the Luminists. Even the haggard and haunting portrait of himself recalls in its workmanship certain phases of the versatile Renoir. Gauguin plays more plausibly the part of precursor of the Post-Impressionists. We have several of his Tahitian studies—drastic sketching it is, rather brutally imposing—but we have none of those paintings in which, almost by accident, it appears, he won through to classic serenity and monumental effect. The savage emphasis of the color may at least prepare us for Matisse.

Topically, the Post-Impressionists and Cubists are the important feature of the show, yet I wish it were possible to ignore urgent tendencies and merely discuss good art. If that agreeable course were open to me, I should give much space to the gallery in which Odilon Redon's work is shown. Redon is a purposeful dreamer. His territory is that of the older gods and recent symbol. His color shifts from dense and hot through diaphanous iridescences to monochrome. All is conceived in the mood of the ivory tower. Apollo does not control his skyey horses; they drag him through mid-air. There is a study of shimmering butterflies hovering in a light that is a refinement on the illumination of some exotic opera. It is a fantastically beautiful art, very far from life, admirably true to its own vision. Ryder and Davies represent a similar mood with equal ability and perhaps with greater freedom from literary implication. I much regret that Mr Davies's self-renouncing conception of his office as president of the Association has deprived us of a one-man show that would have furnished an excellent complement for the Redon gallery.

It will be seen that I have been avoiding the main issue. On all hands I hear in the show the statement, At any rate, this new art is very living and interesting. So much may be said for much of the Post-Impressionist and Cubist work; and something like that might be one's feeling on first visiting a lunatic asylum. The inmates might well seem more vivid and fascinating than the every-day companions of home and office. Unquestionably, Matisse is more exciting than, say, George de Forest Brush; it doesn't at all follow that Matisse is the better artist. So is a vitriol-throwing suffragette more exciting than a lady. Yet feeling as I do that Post-Impressionism is mostly ignorant splurge, and Cubism merely an occult and curious pedantry, I feel also that the Association has done a valuable service in bringing over a full representation of this latest eccentric work. It was reaching us piecemeal in unimportant examples, or, worse, at second hand, in the deceptions of programmes and the sophistries of critical special pleading. Now we have the pictures and sculpture and may test ourselves by them. Indeed, if one's æsthetic reaction be slow or doubtful, be may have the aid of the Association's courteous and eloquent interpreters.

The platform of Post-Impressionism is a simple one—complete spontaneity independent of all images of outer nature; swift, succinct, and powerful execution of symbolic color—these are the chief tenets of the movement. Certain of William Blake's maxims prefigure this tendency: "Mere enthusiasm is the all in all," or, again, "Knowledge of ideal beauty is not to be acquired. It is born with us. The man who says we have no innate ideas must be a fool or a knave." At some risk, then, of falling into an undesirable category, I must approach the spontaneity of Matisse and Segonzac. Matisse is an original and powerful draughtsman. One has only to see his crayon drawings from the nude to be convinced of that. They are of quite extraordinary potency and simplicity. His pictorial ideas, innate ones perhaps, we may grant, are either trivial, monstrous, or totally lacking. The Portrait in Madras Red illustrates his power. The torso is swung in with a quite magnificent gesture that ignores all details; for the rest, a coarse emphasis of the intentness of the face, raw color, mean surfaces—a prodigal expenditure of violent means to achieve a passing and negligible effect. In Segonzac's big barnyard there is a similar brutality of assertion, though with some lingering regard for harmony of color. The more perverse expressions of Matisse's mode as expressed in bulbous nudes, empty schematic decoration, and blatantly inept still-life will merely reinforce a first impression based on the work that is relatively normal. Upon the ugliness of the surfaces I must insist at the risk of repetition. Everything tells of a studied brusqueness and violence. It is an art essentially epileptic. Sincere it may be, but its sincerity simply doesn't matter, except as it is pitiful to find a really talented draughtsman the organizer of a teapot tempest.

For this anti-realistic movement, of which so much is said, is merely the tardy coming into art of a tendency that has long since spent its literary force, namely, neurotic symbolism. The present revolutionaries are no more going to make art over than Mallarmé and Regnier made all things new in letters. And even as a revolt, Post-Impressionism has the fatal defect of misunderstanding its foe. Ostensibly, it is an escape into the imagination from the appalling dulness of recent painting, and

this dulness is laid to a too servile following of nature. Now, nature is perhaps the most ambiguous word in all language; and right here it may be asked if it is possible for the art of painting to sin from too much naturalness. It seems to me not. Since the pigment scale is far shorter than that of light, and since a plane surface must be made to give the sense of depth, any painting, however good or bad it be, is highly symbolic. It is no record of a thing seen, but a token to the intelligence. Moreover, no painting can possibly give seriously what is seen at a particular moment, just that and nothing more. Manet and Zorn may seem to approximate this, but they only seem. And nature, in any accurate sense, can merely mean what is seen at a particular instant. As soon as memory comes in, and more or less it does inevitably, nature is becoming, not an external fact, but a composite and shifting personal creation. All painters are symbolists; some dull, some sublime, more mediocre. Such symbolism may be conducted along lines of relative inhibition of the artist's personal and emotional attitude; such men we loosely call realists; or along lines of enhancement of the artist's emotional attitude, and such with almost equal looseness we call romanticists, Post-Impressionists, Expressionists, or what not. But all alike are seeking symbols for an emotional or observational experience, and the fundamental division of artists is into capable symbolists, incapable symbolists, or mere pretenders, who lack equally fundamental emotion and derived symbol. The trouble with pictorial art never has been and never can be too great devotion to nature; the trouble with art has been merely weak or undisciplined or dull personalities. The utmost degree of naturalistic representation possible to painting will always be, however limited, wholesome. It will at least celebrate the lovely variety of the world and the joy of the seeing eye, and it will ever serve as the firm base from which imagination may take its flights. For dull or faltering painters, and their feeble symbolism, it is no remedy to throw nature out of the window; public neglect may hasten reform, but the death of the dull artist is the only real remedy. One well-managed St. Bartholomew's would do more to set things right than a century of hothouse spontaneity.

Post-Impressionism, then, is the feeblest imaginable reform for real artistic evils deeply based in the hesitancy of the present social order. Whenever, out of the clash of democracy with socialism and anarchy, a central social tradition is attained, the artist will readily find his place. Especially the minor artist will then cease to be a dullard or a pretender, and will find a useful and respectable function in devotedly sustaining the central tradition. Because the minor artists of the past almost invariably did this, they are amiable and charming. Because the minor artist of the present is urged to cultivate that originality which is only the prerogative of the great, he is often a woful apparition. And so far as Post-Impressionism is setting hundreds of young painters to coddling their sacred impulses, so far as it accentuates an already exaggerated cult of the individual, it will work nothing but harm.

But some one will say, At least technical good must result from this feverish experimenting, at least we shall relearn the lost art of the great contour and of audacious decorative color. Here some advantage may be conceded, but most backhandedly and uneconomically attained. More may be learned about great contour by consulting any good Rembrandt sketch, and more about audacious decorative color from studying a fine Persian rug or Buddhist scroll, than can be gleaned from all the progressive painting of the past decade.

Upon the Cubist work of Picasso, Picabia, and Marcel Duchamp I cannot dwell. We seem to have to do either with a clever hoax or a negligible pedantry. I am told that these experimenters are working at the problem of mass, weight, and spatiality. Finding that these third-dimensional qualities are most vividly conveyed by the simpler geometric solids, they adopt these as units of expression. Picasso conceives a head as so many facets, leaving the junctures sharp. Frans Hals or Chase or Sargent would make much the same synthesis, but would soften the junctures as nature does. Picasso shows a bronze bust in conical forms. It has a sinister impressiveness, and looks like a badly carved Gothic thing. Picasso's early painting had much grim power and decorative balance; only a portrait represents him in this phase; his latest work, in which geometry dominates, is singularly dreary in color and morbid in expression. From this charnal suggestion Picabia is free. He has recently passed from a kind of Post-Impressionism to Cubism. He frames his figures and landscapes from cubes, hexagonal crystals, and the like. His color is interesting in a rather obvious and garish way. Both Picasso and Picabia mineralize their world and present it in terms of crystallography. The transposition is often ingenious; both men are evidently accomplished mechanical draughtsmen, but none of their work reveals to an eye that has honestly waited either spatial quality, mass, or handsome decorative effect. Marcel Duchamp, whose units of expression are slabs and shavings, is said to have out-geometrized the Cubists themselves. His pictures are monochromes in brown, with the general look of an elevation of a volcanic cliff. In the stratifications we are told by the catalogue to look for nudes, faces, and groups; but I advise no one to make the attempt. If any images there be, these are mental and symbolic. These paintings, so far as genuine, are merely expressions of anti-naturalism reduced to the absurd along ratiocinative lines, just as Post-Impressionism is merely the emotional reduction to the absurd of the same anti-naturalistic fallacy. The Futurists were invited to the exhibition, and declined. Their absence need not greatly be regretted. Their origins reek with charlatanry and shameless puffery, and this genesis their work has done nothing to belie.

And here the question of taste comes in. The trouble with the newest art and its critical champions is that fundamentally they have no real breadth of taste. These people are devoted to fanaticisms, catchwords, all manner of taking themselves too seriously. Where something like taste exists, the new brusque procedures are readily assimilated. The studies of Othon Friesz, for example, are tense and nervous, fine in color, discreetly exaggerated. Augustus John, who is very fully represented by paintings, silver-point drawings, and aquarelles, can go some way with Matisse because he never forgets Manet and Botticelli. John's drawings are exquisite, a sublimation of the familiar method of the Slade School. His water-color sketches achieve remarkable character and mass with the slightest means. His larger works tend to fall into affectations which are atoned for by austere and distinguished workmanship. It is as if Puvis and Degas had joined forces not quite amicably. John makes the high attempt to achieve fine decorative effect without the usual waiver of the characteristic and individual. The ambition marks him a remarkable personality. He may achieve where Besnard has rather splendidly failed. A glance at the coquettish sensual designs of the late Charles Conder, at the delightfully intimate landscapes with figures by George W. Russell, and at Jack Yeats's keen visions of Irish political humors will tend to efface the irresponsible nightmares of Matisse, and the calculated discomforts of the Cubists.

On the whole, the case calls for cheerfulness. Either these new movements are aberrations and will promptly vanish, or else there is to be henceforth no art as the world has formerly understood the word and the thing. But this, I am assured by a friend of the new art, is highly desirable. In the future every man is to see nature and his own soul with the artist's eye, and the artist and the work of art will naturally become superfluous. Humanity has merely to breed a race of little Post-Impressionists and Cubists, and the thing is done. Let common-sense hesitate to

thwart or defer so evidently desirable a consummation. F. J. M., JR.

Interesting details of the latest discoveries made during the excavations of the French Archæological Society in the island of Delos have been supplied by M. Homolle, director of the French School at Athens. The more recent researches relate to the Stadium, the Palæstra, the Theatre, and the shrines of Oriental divinities in the valley of Inopos. Excavations in the Stadium revealed the track, the seats of the judges and magistrates, and the starting point and goal of the competitors, these fixing the length of the course at 500 feet. Between the Stadium and the shore were found traces of houses, fronted by domestic altars decorated with paintings representing sacrificial scenes, combats, and the labors of Herakles. The report that Delos once possessed an important Jewish colony is borne out by the discovery of the remains of a synagogue, with its inscription "To the Most High."

The Palæstra has been entirely uncovered, revealing the dressing-rooms, anterooms, and the portico at the north which served to shield the spectators from the wind. Here too was found a wall, which, from an inscription, is shown to have been a military work constructed by Valerius Triarius, one of the generals in the Mithridatic war.

Great progress has been made in connection with the Theatre, which now stands fully displayed. Behind the stage was found a huge cistern, nearly 100 feet long by 18 feet wide, and having a depth of 21 feet. Near the Theatre stood a large building of three stories, which probably lodged the exponents of the Dionysian cult. Of the many temples which are known to have been erected in the valley of the Inopos, that of Aphrodite has been identified by the discovery of two bases of statues bearing dedications to that divinity, and that of Serapis by the finding of a column on which is inscribed a history of this Egyptian deity. The inscription shows that the worship of Serapis was introduced into Delos by an Egyptian named Apollonius, who had a son named Demetrius. The third priest of the family, called Apollonius after his grandfather, "received divine instructions to build a temple on the place revealed by the Deity," and this is the temple which has now been laid bare.

"English Homes of the Early Renaissance" (Scribner importation), edited by H. Avray Tipping, is one of those fully illustrated folios reprinted from *Country Life*. Dwellings built about the year 1600 or earlier are the theme. Few of these, of course, show Renaissance features in any proper sense of the word. They are in the main excellent survivals of the charming Tudor style, and many have kept their original fittings. Perhaps the most remarkable are Breccles Hall, Burford Priory, the Charterhouse, Cobham Hall. We may mention as well, besides Owlpen Manor and Stonyhurst College, those remarkable half-timbered structures Broughton Hall and Hall i' th' Wood, near Bolton. The text appeals to such as value the sentiment and picturesqueness of English country life. The abundant plates of large scale will be suggestive to architects and decorators.

Finance

THE MARKETS AND THE NEW ADMINISTRATION.

Probably the greater number of the regular visitors in Wall Street, if asked, when the stock market touched its lowest point last week, what the trouble was, would have replied, Uncertainty about the new Administration. This explanation (which was repeated in many circles of general business) might have been regarded in three different ways. It might have expressed genuine and grave apprehension—as a result of which prices had fallen. It might have represented an effort to utilize the most important event on the calendar to account for Stock Exchange depression due to entirely different causes. Or it might merely have embodied Wall Street's traditional habit of pinning its hopes or fears to some event which was near at hand, whose actual influence on finance was an uncertainty, and whose probable influence, therefore, was judged according to Wall Street's own mood of the moment.

As it happened, the fall in prices was succeeded by an abrupt and general recovery, almost a week before inauguration day, and the course of the stock market, in this reversal of attitude at the moment when the financial atmosphere was apparently darkest, was evidence of the hysterical nature of the preceding decline. The actual character of the situation should be clear enough. The money market is reasonably stringent all over the world; and it is so partly for quite artificial reasons, and partly because of legitimate demands of trade. Both here and in Europe there is and has been an active demand for capital in general business—with the difference, as between the two continents, that in Continental Europe the "trade boom" has been in large measure overdone, whereas in America its general basis seems to be entirely sound.

But in both continents, the absorption of capital in such quarters has been extensive, and in Europe this has occurred in the face of an international collision and of political misgivings which caused unusual withdrawal of personal resources from investment by the rich, and unusual hoarding of actual cash by people of small means. Very high money rates and very weak bank positions have, as a necessary result, prevailed throughout Europe. The relations of the great markets of the world being what they are, the soundest market of the moment was resorted to for relief, and New York has sent abroad, since the opening of the year, more gold than has ever before been exported in the corresponding weeks of any year.

Our own resultant situation was perfectly simple. A man of means, with his personal finances in an entirely sound condition, is appealed to by a business associate who is in serious embarrassment. He advances the necessary funds, knowing that he will get them back in time; but in doing so, he must deplete his private bank account and realize on some of his private investments. In the eyes of the uninformed observer, he is himself in trouble, and that is the conclusion which a good many people have appeared to draw regarding the American market, which has been putting its own resources into just that form to relieve the threatened embarrassments of Europe.

The inferences are naturally much exaggerated; with a market, however, as with an individual, such a condition of things creates a sensitive financial situation. It is not altogether strange, therefore, that the imaginative minds of people who surround our markets should picture all sorts of impending calamities, and should paint everything in the outlook in the darkest colors, and should begin to make unwarrantably dismal prophecies about our own business condition and prospect. But it is equally true that such a situation needs to be handled delicately, and this is where the new Administration will have its task set for it.

There has been much nonsense talked in Wall Street about Mr. Wilson's public utterances, but there have been some criticisms which, from the point of view of real conservatism and honest public spirit, were by no means nonsense. One of them is the criticism that a public man, in a position of high responsibility, should not only be sure he is right in his statements regarding matters of finance, but should be sure that the statements are so made as to be susceptible of no misunderstanding. An occasional failure to observe this second safeguard is responsible for such unfavorable view of the new President as may exist in financial circles. There is abundant time to repair misunderstandings of the sort, and it is highly important that they should be repaired. For, the financial state of mind being at the moment what it is, there are possibilities of needless disturbance, and it will hardly be denied that a national Administration, just beginning its career, needs peremptorily the atmosphere of financial confidence.

BOOKS OF THE WEEK.

JEAN-CHRISTOPHE;
JOURNEY'S END

Love and Friendship
The Burning Bush
The New Dawn

This completes the great trilogy about an imaginary German composer, and contains the three volumes of the French edition indicated in the sub-title. This volume, which is fairly complete in itself, shows Jean-Christophe fighting on the barricade in Paris, flying for his life to Switzerland, and there involved in an experience similar to Wagner's with Frau Wesendonck.

$1.50 *net;* by mail, $1.62.

The London Telegraph says, "The finale is like a passage from Beethoven translated into words," and *Current Opinion* says, "If a man wishes to understand those devious currents which make up the great, changing sea of modern life, there is hardly a single book more illustrative, more informing, and more inspiring."

Henry Holt & Co., 34 W. 33 St., New York

A. S. CLARK, Peekskill, N. Y. A new catalogue of second-hand Americana, now ready, and will be sent to any address.

Sleep and the Sleepless

Simple Rules for Overcoming Insomnia

By JOSEPH COLLINS, M.D.

Physician to the N. Y. Neurological Institute.

This book helps sleepless people to cure themselves, and tells them practically and specifically what should be done in the way of food, exercise, baths, dress, and mental attitude, that they may capture sleep. It is essentially practical and free from puzzling scientific terms. It sets forth what can be done by each for himself without the help of nurse or doctor. It constitutes a reliable handbook for insomniacs, who should get from it relief and ultimate cure.

12mo. $1.00 *net;* postpaid, $1.07.

ALONG THE ROAD

By A. C. Benson

Author of "The Upton Letters," "The Silent Isle," etc.

12mo. $1.50 *net.* *By mail,* $1.65.

Mr. Benson recalls some impressive incidents connected with the lives of great men of the past generation, many of whom were personally known to him. His volume is a kind of jaunt along life's highway, a pleasing stretch of thoughts and sentiments.

Views of Noted Educators

"It serves the interests of Professional Education better than any publication that has ever appeared in this country."—*Charles H. Judd, Univ. of Chicago.*

"Will go quite beyond anything that has yet been done in any language in summing up authoritatively what is established about education in all its varied phases."—*M. V. O'Shea, Univ. of Wisconsin.*

"Its great value and usefulness are immediately apparent. It will save a vast amount of labor by its concise and competent treatment of a large number of topics."—*Elmer E. Brown, U. S. Ex-Commissioner of Education.*

COMMENT FROM LEADING REVIEWS

New York Post

"There has been hitherto no encyclopedia of education in English. The present publication, therefore, meets a real need and will be heartily welcomed, especially since its merit entitles it to approval as a worthy companion of the German and French educational encyclopedias. The editors have shown discrimination in the selection of contributors, and have succeeded well in securing harmony and proportion."

The New York Sun

"The undertaking is of exceptional interest, and the work promises to be of great value. It addresses itself in fact not only to all teachers, from kindergarten to university, but to a large body of intelligent outsiders. The scheme is comprehensive, dealing both with history and present conditions. It includes biographies of educationally prominent men of all ages, notices of educational institutions, reviews of national systems of education, etc. Our warmest thanks are due for this 'open sesame,' this godsend to all educators."

The Outlook, New York

"In the present immense and varied literature of education—a subject now looming larger than ever in the public mind—not teachers only but the many who are either officially charged with, or attracted toward, an intelligent participation in the treatment of educational problems, are here furnished with the succinct and comprehensive information they require. This includes every aspect of education. Here is found, not only the information required in a handy reference book of cyclopedic range, but also an assemblage of systematic treatises on every phase of the subject."

Vol. I. A—CHU; Vol. II. CHU—FUS; Vol. III. GAI—LIB; Vol. IV. LIB—POL.

To be complete in five volumes, the set $25.00 (*Liberal terms to teachers.*)

History as Past Ethics

By PHILIP VAN NESS MYERS
Recently Professor of History and Political Economy in the University of Cincinnati.

8vo, cloth. 387 pages. $1.50

This work completes the series of historical textbooks begun by the author more than thirty years ago. It is designed as a brief introduction to the history of morals without trenching in the least upon the domain of the philosophy of morals. The book maintains that the philosophy of ethics, if it shall stimulate and guide social service and humanitarian effort, must be based on a knowledge of the facts of the race's moral life in the various stages of historic evolution, and that to gather and systematize these facts is the most important part of the historian's task.

Teachers of both history and ethics will find the book a stimulating and suggestive text, whether used as a basis of classroom discussion or of lecture exposition.

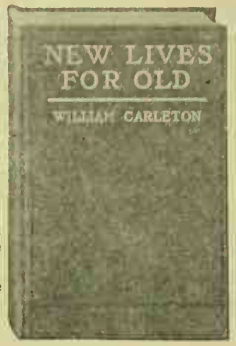
THOMAS Y. CROWELL COMPANY - NEW YORK

Important New Spring Books

The new book by the author of "ONE WAY OUT" (now in its seventh edition).



New Lives for Old. By WILLIAM CARLETON

Author of "One Way Out." $1.20 *net; by mail,* $1.35.

William Carleton, in "One Way Out," told only half his story. As his business prospered, he bought a farm, and in the country village ran up against another set of conditions which surprised him, but which he proceeded to tackle in the same spirit which won success for him as an emigrant to the slums. He found the town asleep, and began, as he expressed it, "to blow the resurrection trumpet." He made a live town of it and incidentally made it a big paying proposition.

Perhaps few books have appeared at what is so clearly the opportune time. Community coöperation, rural and urban, is the method by which the movement for efficiency in country life is expected to realize itself. "New Lives for Old" is the expression of the spirit and the practice of coöperation.

The director of the school of agriculture in an important American university calls the book "the most helpful contribution yet made to the revival of agricultural interest."

Empires of the Far East. By LANCELOT LAWTON

"The most important and valuable word in Far Eastern affairs published since the Russo-Japanese War; it cannot fail to remain a standard source of reference for the next decade. This may sound high praise, but it is not too high. We have been flooded with books about China and Japan in recent years, but there is not one among them of such practical value as this."—*Pall Mall Gazette* (London). 8vo. *Two volumes, with map. Boxed.* $8.50 *net; carriage additional.*

The Balkan War. By PHILIP GIBBS and BERNARD GRANT

A book which covers both sides, the first to be published. "This drama is unfolded before us with marvellous vividness."—*The Bellman. Illustrated.* $1.20 *net; by mail,* $1.35.

Our Book of Memories. By JUSTIN McCARTHY and Mrs. CAMPBELL PRAED

One of the most charming volumes ever published. Dealing in great part with the stirring events arising out of the Gladstone Home Rule Bills and with other moments of English history, it presents vivid pictures of political, social and literary life, and of personalities American as well as English. 8vo. *Illustrated.* $4.00 *net; by mail,* $4.25.

Republican France, 1870-1912. By ERNEST ALFRED VIZETELLY

The translator of Zola's works here gives us, as the fruit of fifty years' residence in France, a volume which the *London Chronicle* calls "our best account in English of the Third Republic." 8vo. *Illustrated.* $4.00 *net; by mail,* $4.25.

King Edward in His True Colours. By EDWARD LEGGE

An intimate account, anecdotal and amusing, and an illumination of a half century of English Society. 8vo. *Illustrated.* $4.00 *net; by mail,* $4.25.

English Literature, 1880-1905. By J. M. KENNEDY

The much discussed presentation of certain phases of the revolt against "Victorianism." 8vo. $2.50 *net; by mail,* $2.70.

Syndicalism and the General Strike. By ARTHUR D. LEWIS

A full discussion by a leading English authority. 8vo. $2.50 *net; by mail,* $2.70. *Ready March* 22.

A Modern History of the English People. By R. H. GRETTON

Vol. I: 1880-1898 (*Volume II will be published next fall*).

"This is a brilliant book. There is not a dull page in it; the author lives over again these thirty years in a spirit of vivacity and with a freshness of touch and comment which carries the reader along, and there are pages which belong to literature."—*London Times.*

"From every word that he has written one looks forward with the keenest anticipation to his second volume."—*London Daily News.* 8vo. *Per volume,* $2.50 *net; by mail,* $2.70. *Ready March* 22.

Zebedee V. By EDITH BARNARD DELANO

The story of the achievements of a natural-born promoter who turns a little country village near Baltimore upside down with his schemes, and incidentally marries a third wife whose acquaintance he makes through an advertisement. *Illustrated.* $1.20 *net; by mail,* $1.35.

Tommy Tregennis. A Story of Cornwall. By MARY E. PHILLIPS

"This is pure idyll, and persuades one of its reality. It is honest sentiment, without a trace of sentimentality. The time is ripe for the idyll to return. 'Tommy Tregennis' is fresh and fragrant as a cottage-garden, smelling of honesty and heart's-ease and love-in-idleness. The reviewer, fed upon clean and honest thoughts, is glad to say grace. The way to Arcady—a real Arcady—is not forgotten when there is a writer gifted with truth and beauty such as the writer of this delightful book."—*Pall Mall Gazette.* $1.20 *net; by mail,* $1.35. *Ready March* 22.

Uncharted Seas: A Novel. By ROBERT ADGER BOWEN

A rare novel, presenting a faithful picture of the South, and a group of people whose story will have an instant appeal to the cultivated and critical reader. *Frontispiece.* $1.35 *net; by mail,* $1.50.

SMALL, MAYNARD & COMPANY, Publishers, 15 Beacon St., BOSTON

The Nation

NEW YORK, THURSDAY, MARCH 13, 1913.

The Week

Not the least of the good omens attending the new Administration is the resolution adopted by the first Democratic caucus of the new House, directing the caucus chairman, Representative Palmer, of Pennsylvania, to appoint a special committee of seven to consider the wisdom of adopting a national budget, "to the end that the total of appropriations may the better be controlled, reductions in expenditures may be attained, and confusion in and duplication of appropriations avoided." The language of this resolution is a concise expression of the aims of the innovation for which President Taft fought in vain. To oppose them openly would require a higher degree of boldness than most public men possess, and yet to put them into practice under existing legislative conditions demands a breadth of view that few Congressmen have. Experience has proved absolutely that they are to be attained, if at all, only by some especially devised method that will ward off the attacks of local interests upon the defenceless Federal Treasury. The present move in the direction of a budget has the strategical advantage of coming from the Capitol.

The report that Mr. Wilson is to dispense with a uniformed aide and cut in half the military staff which now engages in the highly military duty of assisting at the social functions in the White House is welcome, and we trust accurate, news. To abolish all the uniforms would be but to return to the custom of the last Democratic Administration. Indeed, the bringing in of gold lace was a part of Mr. Roosevelt's desire for the spectacular. With his keen sense for doing the popular thing, he chose for White House service the sons or grandsons of distinguished officers, such as Grant, Sheridan, Fitzhugh Lee, Henry, Miles, etc. The White House needs no pomp to make it the most dignified and impressive of mansions; indeed, there is nothing more impressive than democratic simplicity. To rival the gorgeousness of European courts is not within our power, were it our desire, and even a dozen uniforms add but little lustre.

People were astonished to learn that among the very first official acts of Mr. Bryan as Secretary of State was the dispatch of a telegram of commendation to Ambassador Wilson in Mexico City. These are Mr. Wilson's own words as reported in the New York *Sun* on Saturday morning: "All the acts of this embassy during the trying days when American life and property were placed in jeopardy by the bombardment of this city from within and from without have been approved not only by Secretary Knox, but also by Secretary Bryan." To-day there is reason to believe that the Wilson dispatch was passed by Mr. Bryan without perusal in the confusion of his first days in office. Whatever may be the secret history of the telegram, the retention of Ambassador Wilson at his present post is unthinkable. Ever since the outbreak of revolutionary troubles in Mexico, Mr. Wilson has shown that, if not guilty of actual bias in favor of the Diaz régime, he has been certainly the victim of bad information. Again and again he has created panic at Washington by announcing imaginary catastrophes. Conditions under the Madero régime were painted by him in uniformly dark colors. The impression in this country is that Ambassador Wilson's attitude in Mexico was not what should be expected from an American representative towards a people struggling, however painfully, away from feudalism and oppression towards democracy.

Congressman McCall made a little parting address, before the expiration of the session, in which he expressed the opinion that the House might occupy a more powerful place than it does in our system of government. He thought that, given its special functions assigned by the Constitution, and also its democratic composition and popular character, it rested with the members themselves to decide whether the House of Representatives might not be made the "dominating organ." There was no express reference to the ups and downs, as between the influence of the Senate and that of the House, observable during a period of years. For a time, from 1874 on, the House appeared to be the more powerful body. But later the Senate distinctly gained the ascendency, which seemed to become fixed under McKinley and Roosevelt. Recently the turn of the House has seemed to come again. In its favor, if it now chose to assert itself, would be the great change of personnel in the Senate. Death and defeat have removed nearly all of the Old Guard, who used to be so potent not merely in party management, but in the control of public business. One remark made by Mr. McCall, in alluding to his twenty years of service in the House, was suggestive. He said that he had voted against a large number of measures that had become laws. This he did not lament, his only regret, in looking back, being that he had not voted against more of them. It was an effective way of stating his belief that too great facility in legislation is a curse.

By a vote of two to one, Vermont has taken herself out of the position of political barometer for the nation. Hereafter she will hold no election in September, and the forecasters will have to base their predictions for November upon the result in Maine alone. This change has been brought about by the carrying of an amendment to the State Constitution, concerning which only about one-fourth as many voters expressed an opinion as cast ballots for President last year. Thus a little above one-sixth of the State's "sovereigns" have been allowed to determine its policy in this respect; and not in this respect alone, for seven other amendments were adopted at the same time by about the same minority. The most important of these changes were one strengthening the power of the Governor by requiring a two-thirds instead of a majority vote of the Legislature to override a veto, and another conferring upon the Legislature authority to pass a Workingmen's Compensation act. The vote upon this last proposal was closer than that upon any of the others, although it was carried by a handsome margin.

In Charles F. Murphy's book of life, Friday, March 7, will, we are sure, always rank as a day of days. Never before was the majesty of Tammany Hall so well recognized, or his own preëminence as a leader. Was he not received at the White House with all pomp and ceremony? Did not the President of the United States grant him a special audience? Did not reporters and mere Cabinet members look on with awe and admiration? True, there are detractors no end who will cynically sneer and say that the interview was in no wise different from that granted to 2,000 visitors to the White House the day before, and quote from the ribald press the entire conversation: "I wish you success, Mr. President." "Thank you; I am glad to see you." To the uninitiated this means little, perhaps; those who know the ways of statesmen will understand better.

Gov. Colquitt, of Texas, has been attracting some attention, not to say arousing some apprehension, at Washington, by his statements and actions in reference to the Mexican revolution. He has let it be known that he at least stood ready to do all that might become a man and the commander-in-chief of the militia of Texas. A much more important and creditable thing, however, if less resounding, is a message he sent to the Legislature on the subject of education. This paper was by no means perfunctory in tone, but bore evidence throughout of the Governor's immediate interest in what he was talking about. Texas is recognizing the existence of the same problem that has been troubling States so distant from it as Iowa and Montana, namely, the scattering over the State of institutions which might be parts of a great university. There has been some jealousy among supporters of certain of these institutions, and in particular the charge that one or two of them were "rich men's" schools has had to be met. This charge Gov. Colquitt disposes of by the remark that of two thousand students at the University proper, more than six hundred, including both men and women, are earning their way. His message is the more forcible in that it merely urges the carrying out of the comprehensive plank on the subject in the last State Democratic platform.

It is becoming pointless to ask whether any good thing can come out of Harrisburg. All parties seem to be agreed that now is the time to do something that will not smack of partisanship. Thus, Gov. Tener, the Republican State leaders, the Flinn Republicans, and the independents are united in favor of a bill, just reported from committee, which provides for a non-partisan ballot for municipal and other local elections. Names of candidates are to be placed on the primary ballot by petition, as is done at present, but there is to be only one such ballot, instead of one for each organization. Twice as many candidates as are to be voted for at the general election will be taken from the list of candidates appearing at the primary, in the order of the votes they poll. A candidate receiving a majority of all the votes cast at the primary shall be regarded as elected, and his name alone will be printed on the final ballot for the office concerned. The party designation will appear after the candidate's name, in both primary and general elections. It is a shock to see Pennsylvania taking the lead in anything like ballot reform, but it is a kind of surprise which the rest of the country, along with those in the State itself who have been fighting for such a day, will welcome.

A resolution providing for the appropriation of $25,000,000 by the State of Pennsylvania for improvements at the Port of Philadelphia, is before the Legislature. It would so amend the Constitution as to permit Philadelphia to assume the entire burden of taxation resulting. In his argument for the measure, Senator Vare pointed out that Hamburg had lately spent $100,000,000 on its port, adding that Philadelphia is 85 miles nearer than New York to the Panama Canal, and more than 200 miles nearer than Boston. Boston, however, is not asleep. Joseph A. Conry, Director of the Port of Boston, has asked the Legislature for $50,000,000 for harbor improvements and the perfection of rail and water terminals. His project involves the development of the entire waterfront between North and South Stations and along the Charles and Mystic Rivers. Vast as these projects seem to Americans, they should remember that Liverpool is preparing to spend $16,000,000 on a dock system which has already cost $150,000,000.

From Galveston to Boston, the digging at Panama has stimulated interest in port improvements. New Orleans is one of the few deep-water cities which have retained control of the greater part of their waterfront, only San Francisco surpassing it in this respect. The sixteenth annual report of the New Orleans Dock Board shows that there are 41.4 miles of river frontage available for shipping, with five miles of wharves; 1,892 seagoing vessels, 1,596 river steamboats, and more than 2,100 smaller craft were reported as "arriving" during 1912. New Orleans does not begrudge Galveston its sudden growth in military population, due to that port's nearness to Mexico. New Orleans does feel, however, that Gen. Wood was right in calling attention to its importance as a military and naval base. The *Times-Democrat* urges that if troops stationed along the river or in the Mississippi Valley should be concentrated for foreign service, it would be wasteful to send them to Norfolk for an additional voyage of 700 or 800 miles, or to Cuba for transshipment. New Orleans is still safely the second port in the United States, the *Daily States* remarks, and that despite the artificial movement of Texas and Oklahoma cotton through Galveston.

Frank M. Ryan, president of the International Association of Ironworkers, sentenced last December to seven years in prison for complicity in the nation-wide dynamite conspiracy which had its culmination in the Los Angeles *Times* atrocity, and now out under $160,000 bail, has been reëlected president of the Ironworkers' Union. There are circumstances in which such an expression of confidence in a convicted prisoner is put forward as a vindication, as a reassertion by the man's friends and followers of a belief in his innocence. But there was no *cachet* of martyrdom in this action by the ironworkers. It is absurd to speak of Ryan's innocence in the face of the overwhelming nature of the evidence adduced at the trial. Ryan's reëlection is not a vindication, but a challenge and an act of defiance. It is a striking manifestation of that caste or class morality which the Socialists are so fond of throwing in the

face of "capitalist" society. Because the dynamite outrages were committed in the interest of labor, the murder of innocent men ceases to be murder, and takes on the dignity of warfare. The fact that the dynamiters did not work in the interests of labor, nor even of organized labor, but only in the interests of that small section of labor represented in the Ironworkers' Union, apparently does not matter. Frank M. Ryan is thus taken by his comrades to their bosom as a man who dynamited, perhaps not wisely, but too well.

The commutation of these sentences amounts to a direct interference with the administration of justice by the courts. Heike got a $25,000 salary and has escaped his imprisonment, but what about the six $18 a week checkers, who were sent to jail, one of them a man of more than sixty? It is cases like this that create discontent and anarchy.

It is impossible to deny the force of these remarks of W. Cleveland Runyon, Special Assistant Attorney in the Sugar Trust weighing-fraud cases. In the case of Gerbracht, the superintendent of the Williamsburgh refinery, no attempt whatever, he says, has been made to justify the commutation; in the case of Heike, the secretary of the Trust, the plea that he was likely to die if he went to jail was made use of. This sickness strike is getting to be almost as much of a stumbling block to the law here as the suffragettes' hunger strike is in England, and in our case there is no pretence of any principle being involved.

Some method might perhaps have been devised for bringing to a more immediate test the claim of Dr. Friedrich Franz Friedmann that he has found a cure for tuberculosis. But to say this is not to express condemnation, or even censure, of any of the medical authorities involved. There are certain orderly ways of going about things, in any profession, which have grown up as the result of ages of experience. Insistence upon them may go too far; they may often stand in the way of progress. But they are essential to the prevention of an infinite amount of charlatanry and mischief. The first impulse of many good people in New York was to blame the medical men for not giving Dr. Friedmann "a chance"; but the doctors were thinking not so much about giving chances as about taking chances. They know perfectly well that any censure they may invite by being slow to permit experiments upon human beings is a small thing in comparison with the storm of condemnation that would break out if they threw the door open with mischievous results. The question before them was, in the main, this: Did Dr. Friedmann's claim present so strong a presumption of merit as to make the refusal of medical authorities to depart from their regular ways a reprehensible act?

Viewed from the outside, this question admits of but one answer. Quite apart from any rules of the medical profession, the simple canons of ordinary human behavior and human judgment put Dr. Friedmann in a most unenviable position. He had been practicing his alleged cure in Germany, the very home of scientific research, for a considerable period, and he is in this dilemma: If the merit of his method has been established there, he ought to have a considerable body of trustworthy acknowledgment of it to show, whereas he has virtually none; and if it has not yet been established, manifestly the thing for him to do was to go on piling up the evidence of its value where he had already made a start, instead of beginning all over again in a foreign country. And he comes here not only without any such authoritative approval, but apparently without having taken the ordinary common-sense steps that any person with an important mission takes in going to a strange land. Was there nobody in all Germany who could give him a proper introduction to some person of standing here, some person who would have enabled him to enter upon his undertaking decently and in order?

A fearful new enemy of the Dreadnought appears to be looming on the horizon. It is not the super-Dreadnought, nor yet an oversuper-Dreadnought. According to a writer in an English engineering journal, the German Government is in possession of a means by which "a fleet of Dreadnoughts can be met and vanquished on the high seas at a cost of less than a single vessel." The nature of the destroyers that are so easily to annihilate a navy of mammoths is thus described:

A destroyer of this category is speedier than any Dreadnought. It lies low in the water, not much more than awash, and it fights end on. The only target it presents to the enemy's fire is a bow shield sloping backward and of such shape and thickness as to be virtually impenetrable. It serves as the carriage of a single gun of maximum power furnished with projectiles that play the part of aerial torpedoes, and the gun remains perpetually screened except at the moment of firing. The vessel can keep the sea in all weathers, and can fight effectively at the longest ranges. Twenty of these destroyers can be built for the cost of a single super-Dreadnought, and the German naval experts hold, with ample reason, that a super-Dreadnought must inevitably succumb if attacked by even five of such small craft.

According to the writer in the *Engineer*, an opportunity to get possession of the design for this terrific engine of war was first offered to the British Admiralty, which, however, declined to enter into the scheme.

Not altogether without influence on our own tariff policy will be the state of British trade and industry. Each successive twelvemonth surpasses all previous records in volume of foreign trade; and home trade and industry have recently also been making an excellent showing. The London *Economist's* careful summary of the commercial history of the year brings out the facts in a way that admits of no dispute. Since 1903, the year in which Mr. Chamberlain started on his unfortunate adventure of "tariff reform," based on the belief that British trade was going into a decline, the total value of the foreign trade of the United Kingdom has increased 49 per cent., a thing that the most hopeful free-trader would not have dared to look for. That total for 1912 reached the prodigious figure of £1,344,000,000—nearly seven billion dollars. This includes, however, the reexports, as well as foreign goods imported and British goods exported. But the imports were £745,000,000 and the exports £487,000,000, so that the total of the true import and export business was £1,132,000,000, or not far from six billion dollars. Since 1893, the imports have increased 36 per cent., and the exports by the enormous amount of 71 per cent. These figures, to be sure, give a somewhat false impression, since the scale of prices has risen, the world over; with due allowance for this factor, the increase in volume of trade has been 24 per cent. for imports and 49 per cent. for exports.

THE NEW ADMINISTRATION.

President Wilson begins his work at Washington under fair auspices. He has had a "good press," to use the French phrase. The exalted tone of his Inaugural has been fully recognized abroad as well as at home. Expressions of good will for him abound, even from his political opponents. But all this, as none knows better than he, is customary. New Presidents are usually received with great cordiality. Let not him that putteth on the harness boast as he that putteth it off. Mr. Taft could tell Wilson about that. It was with almost unexampled friendliness that a President was greeted four years ago. We know what happened to him later. And with President Wilson, too, inauguration acclaims will soon die away. The time will come swiftly when he must use what is said to be a favorite phrase with him: "Now let's get to business." That he intends to get to it in the speediest and most direct way possible was shown by his first announcement that he would not see any applicants for office except those whom he had asked to call upon him. Here is the dreamy idealist showing himself at the start a practical man of affairs. It is a great stroke of common-sense at the very beginning.

This impression that President Wilson means to be his own master will be heightened by his selections for the Cabinet. No one can allege that these appointments were dictated to him. There is not the faintest trail of a boss over them. Nor do any of them smell of political obligations assumed or bargains made. Inevitably, the President had to submit to certain limitations. He could not ignore the geography. He could not demand better material than existed. Bearing in mind the long exclusion of the Democratic party from power, and also the fact that Mr. Wilson decided not to weaken the narrow Democratic majority in the Senate by inviting any of the abler men there to a seat in his Cabinet, his final choice will, we think, be generally admitted to be as wise as he could have made. It is his own choice, at all events, and his own will be the responsibility for the success or failure of his Cabinet.

Its secret was extraordinarily well kept. With the exception of three or four names, the list was not really known until Wilson started for Washington. Apparently, it was not complete until about that time. The latest appointment to be fixed upon was that of the Secretary of War. To this post there had been strong rumors that the President would invite Col. Goethals. But to this there would have been solid objections. In the first place, Col. Goethals should be left to complete his great work at Panama. It would be both a wrong to him and an injury to the morale of the force under him to take him away. Furthermore, it would have been unfortunate to depart from the wholesome precedent that Secretaries of War and of the Navy in this country should be civilians. The principle of civil control over the military is too important to be waived even in appearance. Hence the general satisfaction that Col. Goethals was left undisturbed, and that the President put at the head of the War Department a man whose record has been made as a lawyer and a judge.

Mr. Bryan's appointment as Secretary of State was so plainly written on the political sky that everybody has long taken it for granted. The *Nation* has already expressed at length its opinion of this fated selection. We merely note now that even the Republican press receives it calmly. It is said by his friends that Mr. Bryan has a strong and laudable ambition to do something for the cause of international peace; and if he makes use of the State Department as a vantage-ground for this high work, the applause that he receives from his former political antagonists will not be stinted.

No Cabinet appointments that President Wilson had to make were more important than those of Secretary of the Treasury and Attorney-General. There is to be long overdue currency and banking legislation; and the labor piled upon the Department of Justice will be vast and critical. For both positions the President has made selections that command approval. Mr. McReynolds has already been an Assistant Attorney-General, and is well thought of for his legal knowledge and his vigor as a prosecutor. He should be able to take up Mr. Wickersham's work without a serious break. And Mr. McAdoo's designation as Secretary of the Treasury makes a good impression. Not specially trained in finance—as a matter of fact, the banker-Secretaries have not been successes—he is a good executive, has a wide knowledge of business, and should be in a position to give Wilson great practical help in getting through Congress sound legislation for currency reform. In naming Franklin Lane, of California, as Secretary of the Interior, the President has taken from the Interstate Commerce Commission what is perhaps the most vigorous personality. Another important appointment made solely with an eye to getting the best man available is that of President Houston, of Missouri, as Secretary of Agriculture. He has had a wide range of university activities, has been deeply interested in the cause of educational reform in the South, and is declared by his friends to be peculiarly competent for the work to which President Wilson has summoned him. But of all the appointees to the Cabinet, no more need be said at present than that they are men who come with a free hand to their tasks, that the country is disposed to give them full and fair opportunity, and that they will be judged every man according to his work.

DEMORALIZING TALK OF MORALS.

It surely seems as if, in Mr. Asquith's phrase, "we are getting on" in our theories about the causes of evil in this world. We have heard a great deal about the economic interpretation of history. But now we are to have the economic interpretation of morals. Why are the New York police dishonest? Because they are not paid enough to live on. What is the final and satisfactory explanation of the curse of prostitution, which has existed in all ages and in all lands? Why, the modern wage-system. Policemen are corrupt because a beginning salary of $800 a year is not enough to support a family. The fact that the large majority of the men are unmarried when they go on the force is one of the things that our hasty theorists do not mention. They seem never to have heard of a dishonest bachelor policeman. And from all parts of the country we are hearing just now that the great and almost the sole reason why women take up with a life of shame is that they cannot get a living wage in shops or offices.

It is not necessary to deny that there is a measure of truth in the contention that the pinch of poverty tends to break down the moral fibre of many. The economic argument has a certain force. It goes part way. If even a small proportion of working girls who now go wrong could be kept in virtuous paths by higher pay, then the question of the possibility of higher pay is one which employers and the entire community are bound to consider. No one would lift a finger to hinder any design to better the lot or brighten the outlook or reinforce the moral strength of any class or group of men and women. But sympathy must not be allowed to grow a cataract on our eyes. We are bound to look at all the facts and weigh all the consequences. Above all, we must cling to the fundamentals of character and the old moralities, come what will.

Just here, it seems to us, is the danger of those who see in the incidental hardships of our industrial system, with the rising pressure of population, the sufficient explanation of evils that lie deep in the heart of man. Never before have we seen the theory pushed to such absurd and, we must add, demoralizing lengths as in the inquiry conducted in Chicago by a committee of the Legislature presided over by Lieut.-Gov. O'Hara. Commendable as may be the aim, and useful as may prove to be some of the results attained, the methods of questioning and the entire mental and moral presuppositions of the chief examiner are such as to call for indignant protest. Asking a young girl if being "scolded" by a forewoman might not naturally lead to prostitution or even to suicide, was one sample. Another was Mr. O'Hara's question, put to a witness, whether if a woman were confronted with the alternative of starvation or surrendering her virtue, she would not choose the latter. The witness thought she would. "Thank you," thereupon said Lieut.-Gov. O'Hara. He had got a complete demonstration of his theory. Apparently, he did not stop to think that his test alternative does not, in fact, present itself once in 100,000 cases. It never occurred to him to ask if the temptation which breaks down weak wills is not very often, not the bare means of living, but the chance for a life of ease and excitement, with glitter and finery unattainable by mere work. And even if the dire alternative were as stated, we resent the implication that women would not starve sooner than give up what is dearer to them than life, and most of all do we resent the facile spreading abroad of such intimations that virtue is wholly a matter of food and clothes.

As against all this demoralizing talk about what must happen to men and women in circumstances of poverty, it is well to bring to mind what they have, in fact, done and are still doing with pecuniary means of the narrowest. We are asked to sigh over the policeman with only $800 to begin on. But think of the clergymen and physicians who have had no more than that sum, on the average, for years, yet have lived respectably and educated their children. Such cases, of course, have been oftenest met with in country towns, and at a time when the necessities of life did not cost what they do now. We would not measure salary by salary. But the main point is that there went with the small income a spirit of self-help and thrift and stout independence, with full co-operation. One reason why the family could live on so meagre a salary for its head was that the children were brought up to add their part. What they could save and what they could earn meant just so much for the domestic exchequer. And the boys had no prouder moment than when they brought home their $3 or $4 a week and gave it to their mother. But that sort of thing is nowadays regarded as well-nigh a social crime. What, take small wages just because you can live on them at home! This has, somehow, got to be an anti-social act. The head of one of the big Chicago department-houses testified that he began as an office-boy at $2 a week; and it was at once evident that the Committee looked upon him as a kind of unnatural monster.

We have no complaint to make of this whole series of inquiries. Let us by all means find out whatever we can. But in the process it is of the utmost importance not to put forth glib generalizations as if they were the absolute truth. And nothing, in our opinion, could be more harmful than to allow the idea to spread through the popular mind that morality is closely identified with wages, that there need be no such thing as enduring hardness as good soldiers of the spiritual life, and that you can redeem humanity from evil desires and bad living simply by filling its stomach and clothing it in purple and fine linen. After all, we have heard of well-to-do men and women who were not strictly moral.

EDITORIAL "PRIVILEGE."

John Burns's assertion last week that the English press would not so abuse public men unless it had become "Americanized," would hardly bear historical investigation, but gains whatever present point it has from the Parliamentary inquiry into the Marconi scandals. In that matter, English Ministers have been, not merely abused, but groundlessly defamed. The *Nation* has already dwelt upon the complete breakdown and ignominious withdrawal of the calumnious charges. But in the examination of Mr. L. J. Maxse, editor of the *National Review*, certain questions concerning the practice and the ethics of journalists were raised which go beyond the original issue. A new form of "privilege" was asserted. It was pretended that editors should be ranked with physicians and priests in being free from compulsion, under legal process, to reveal confidential communications.

The case was this. Mr. Maxse, in his *Review*, had written and published, and allowed others to publish, the grossest attacks upon the integrity of members of the Cabinet. Without mincing language, he had accused them of pecuniary corruption. Moreover, he had demanded a Parliamentary committee to go to the bottom of the whole affair. When it was appointed, he declared his belief that it was only a whitewashing move, and that it would not dare to uncover the facts. Yet when it summoned this gentleman himself and asked for *his* facts, he stated, first, that he had none to offer ("I do not pretend to have evidence," were his words), and, secondly, though all he had printed had been based upon rumors and allegations conveyed to him in private conversations and letters, that he would not give up the name of a single person who had spoken to him or written to him on the subject. That is, Mr. Maxse set up the plea of editorial "privilege." He took the ground that "an editor cannot give away confidential communications under

any circumstances." The committee held another view, and reported Mr. Maxse to the House of Commons for contumacy. Action in the case was deferred, however, till after the Parliamentary recess.

Mr. Maxse's position gave rise to sharp differences of opinion in the English press. The London *Times*, while disclaiming all sympathy with Mr. Maxse's intemperate and unfounded charges against Ministers, stood with him wholeheartedly on what it conceived to be his "point of principle." It said:

> Much information and criticism beneficial to the public will necessarily be suppressed if those who communicate with editors are no longer assured that the confidence reposed in them will in all circumstances be respected. The ordinary law of privilege has been formed mainly with reference to the position of the solicitor, who is not bound to divulge information, or to disclose documents obtained by him in performing his professional duties to a client. But good sense and the practice of honorable men have extended privilege further than the boundaries prescribed by the lawyer's books. Many a physician has received from patients communications which under no pressure would he reveal. Many a Roman Catholic priest—and probably not a few clergymen of other faiths—have been told secrets which they would not think of disclosing, so long as their silence did not further or conceal crime or fraud. It may be somewhat difficult to explain to a committee not acquainted with the conditions of production and working of a newspaper the necessity of respecting absolutely the confidence given to an editor by his correspondents.

A wholly different view was taken by other newspapers, such as the *Westminster Gazette* and the Manchester *Guardian*.

There could not, however, be any real dispute about the matter, unless things really differing were mixed up. All the difficulty arises from assuming editorial "privilege." There is no such thing. What does exist is editorial risk and editorial liability. If a newspaper is sued for flagrant libel, it is no defence for the editor to say that he was acting on private information which he could not reveal. He would have to give up the name of his informant, or else go to jail. That is precisely the alternative which confronted Mr. Kohlsaat in Chicago when his paper printed the new story of the Lorimer bribery fund. He took the risk of publishing it, and was quite ready to be imprisoned for contumacy in refusing to tell the source of his information. But the man himself promptly came forward, and Mr. Kohlsaat saved both his honor and his freedom. In his case we see the whole truth of the business in a nutshell. An editor will, of course, guard confidential communications. But if he publishes anything based upon them, and for it is called to answer either in court or before a Legislative or Congressional Committee, he knows that he must take the responsibility upon his own shoulders and, if necessary, go to jail for contempt. In that event, he will do so cheerfully, as facing one of the hazards of his *métier*, and will not pose as an injured man whose "privilege" has been violated.

If privilege could be maintained for newspapers it would next be claimed by barbers and waiters and brokers. This point was made before the Parliamentary Committee. Mr. Maxse had charged that Ministers had speculated in Marconi shares on the strength of official information. But suppose stock brokers were asked to testify; would they not say, with as good a right as Mr. Maxse, "Oh, this was given to me in confidence; it would be a breach of faith to disclose anything"? The thing for editors to keep in mind is not an absurd and impossible "privilege," but prudence, self-respect, honor. It is an extraordinary thing that the man who has come forward in England to stand up for what he calls the "honor of the profession" should be one who had just been shown to be guilty of the foulest and most baseless libels on men in public life. John Burns might overlook the "debased" American press for a moment and profitably give his attention to this moral phenomenon of English journalism.

UNIVERSITIES AND INTELLECT.

Thirty-seven years ago next autumn Johns Hopkins University was opened, upon an endowment estimated at less than $3,500,000. The other day, it was stated that the budget adopted by the trustees of Columbia University for the expenses of the coming academic year amounted to $3,450,000. The foundation of the University at Baltimore was widely acclaimed as an event of the highest importance and the most hopeful augury. Never before had the income of so large a fund been placed at the disposal of the trustees of any new American institution of learning; and the Johns Hopkins trustees had, in the choice of its president and in the announced plans of the institution, made it plain that their opportunity was to be profitably employed. The hope was entertained that the new university would be the means of introducing into America what had so long been vainly desired by scholars and scientists—the true university, in the European sense of the term. And that hope was not disappointed. The foundation of Johns Hopkins University marked the beginning of a distinctly new era in the history of higher education in America.

In compassing with what would now be regarded as small means so signal a result, there was one thing to which every effort was directed, every energy bent—the procuring of the highest possible quality in the professors. A small group of real intellectual leaders formed the nucleus of the faculty; and in adding to them younger men in the various departments the keenest interest was constantly maintained in the discovery of unusual talent or exceptional attainment. Those who were at the university in its early years testify unanimously to the extraordinary exhilaration and inspiration of the atmosphere thus created. The buildings were extremely modest, and in large part of a makeshift character, being old residences altered at slight expense; the warning given by Huxley, in his notable address at the opening, against putting into bricks and mortar what ought to be invested in brains, was rather by way of accentuating a policy already pursued than of advising its adoption. The revenue from the endowment proved to be even less than had been expected; much, it was felt, had to be done in the way of ordinary collegiate instruction to meet the needs of time and place; and if, with the means available for the distinctive purposes of the university, so great an impetus was given at Baltimore to the university idea in America, this must be ascribed, above all else, to the clear recognition of the prerogative of intellectual superiority as the one touchstone of university distinction.

The Columbia budget of $3,450,000 is typical of the present-day expenditures of our larger universities. That they accomplish great results, results of extensive and varied usefulness, no one

would deny. They cover a field much larger than that which formerly comprised the activities of our institutions of learning. They do much to promote civic enlightenment, and assist concretely in the solution of many problems of government. But we doubt whether any one would aver that the enormous enlargement of university expenditure has been attended with any such nourishment of high intellectual standards or ideals as might have been hoped. Indeed, many a man may be tempted to compare in this respect the big and rich universities of to-day with the struggling institutions of half a century ago to the decided disadvantage of the present. The roster of the Faculty becomes ever longer and longer; but how many of the names are such as it will thrill the students to recall thirty or forty years hence? There is always danger, in such matters, of the illusion of fond memory; the shining names of teachers under whom students were proud in after years to recall that they had sat were never very numerous. Still, it ought to be possible, out of the thick volume of professors' names in the catalogue of any of our leading universities, to single out a goodly list of those whose eminence is unmistakable and impressive, whose influence counts as a great intellectual or spiritual force, whose presence gives to the university significance and dignity, to the enjoyment of whose instruction or inspiration the student will look back in after years as a never-to-be-forgotten privilege. Some such there are; but, in comparison not merely with an ideal possibility, but with what is actually found in foreign universities, they are not many.

Beside this question, all matters of mere "management" are trivial. And it is for this reason, more than any other, that we have always regarded the magnifying of questions of administration in our American universities as so deplorable. To get men of real power into the professorships—that is the great problem. The question of salaries no doubt needs serious consideration; though even here the magnifying of administration adds to the difficulty, for a due recognition of the paramount importance of the professor would naturally tend to the making of such salaries as are needed to render professorships fairly attractive in a material sense. But important as this material side is, even more important are the less tangible elements that fix the character of the professorial life. These cannot be had, indeed, simply by taking thought; the slow growth of tradition, and the temper of the national life as a whole, are preponderating factors. But we may help the growth of the tradition; and we may modify the influence of the national temper on the subject, for better or worse. As far back as Tyndall's visit to this country, in the early seventies, the British scientist took occasion to exhort his American audiences to prevent the waste of scientific genius which he found going on here, as illustrated in the case of a Joseph Henry abandoning physical research for administrative duties. We must make the life of the scholar and scientist attractive not merely in point of salary, but in point of honor, of leisure, of sympathetic environment; and all other tasks of university presidents and university trustees are of small moment in comparison.

ON CLASSIC SOIL.

The Kaiser's feelings with regard to the Balkan War are not altogether the sentiments of the Kaiser's numerous professors of ancient history and classic philology. German scholars are, as a whole, good patriots. Oftentimes, in fact, German scholarship has been too patriotic and has wandered off into fantastic histories and ethnologies to bolster up Teutonic race-pride and the dreams of empire. Still, the Pan-Germanist does not always or altogether drive out the scholar. While the German War Office has been anxiously watching the progress of the Balkan allies as announcing the rise of a Slav Power in the Near East, inimical to German ambitions, many a German classicist, *ordinarius*, *extraordinarius*, or *privat dozent*, has probably been taking joy in the historic background against which the war has been fought. The cable dispatches bristle with names which carry the mind back 2,000 years and more to the time when Greeks and Romans and barbarians waged war in these places. And still further back the mind goes to the first traditions and mythologies whose homes were on the mountains and in the river valleys that are being daily spelled out—and sometimes erroneously—by the busy copy reader.

One need not even be a German professor to catch the thrill of that ancient world. It is sufficient to have made one's way through Professor Myers's Ancient History in preparation for the entrance examinations, to have struggled manfully through the thirty daily lines in the Iliad, to have memorized the dates for the Peloponnesian War, to have entered upon a mere bowing acquaintance with Alexander of Macedon, Cæsar, and Brutus. A Turkish army is now encamped on the plains of ancient Troy, in anticipation of a landing by the Greek forces. Can one blame the professor of classic philology at the University of Weissnichtwo, if, forgetting for the moment that his interest as a German subject demands the defeat of the Greeks by the Turks, he catches himself longing for a repetition of the good fight in which King Priam's Asiatic troops went down before King Agamemnon's men? Another Greek army is now in possession of Salonica, almost in the shadow of Mt. Olympus, whose radiant deities probably hold no appeal to the Slavicized, Saracenized, Normanized, and Wallachinized soldiers of the Greek Crown Prince, but do cast their magic spell on the bald and bespectacled scholar at Weissnichtwo. The Bulgarian cannon are at work on the banks of the Maritza, that River Hebrus whose shores echoed the magic notes of Orpheus's lyre, down whose waters floated the poet's dismembered body, a victim of the Thracian Mænads, frenzied practitioners of women's rites. The peninsula of Gallipoli is the Thracian Chersonesus. Not many miles from where Enver Bey's expeditionary force was routed and driven into the sea by the Bulgarians, Lysander and his Spartans rushed the Athenian fleet at Ægospotami, and the naval glory of the violet-crowned city was gone for ever.

Many of the old names have survived —Thrace, Macedonia, Rhodope, Bosphorus, Hellespont, and the entire galaxy of Ægean islands. Many of the names survive in mutilated form. Salonica is the Thessalonica of the Romans, with whose inhabitants Paul, the great letter-writer, was in active correspondence. The village of Filibijek is Philippi, another city whose interests Paul had close at heart, and not long

before his time the trysting place designated by Cæsar's vengeful ghost with Brutus. Scutari, where the Montenegrins are battling so desperately, is Scodra of the Illyrians, which succumbed to the Romans the same year that the Macedonian kingdom fell before them at Pydna. The river Struma is Strymon of the classic poets. Durazzo, which will be the principal port of the new Albania, is Dyrrhachium, and before that it was Epidamnus. Many great names have vanished altogether from the common eye, but the vision of the scholar at Weissnichtwo will have no difficulty in piercing beneath the Sea of Marmora to recall the Propontis, or in seeing beyond the Black Sea the Euxine on which Jason's ship fought its way to the golden East. The Argo had neither twin-turbines nor Ritz-Carlton restaurants, but its name in men's hearts will probably outlive the Lusitania.

Our professor of classic philology at Weissnichtwo, being only human, is not inaccessible to certain twinges of self-interest. He has read that the Balkan War is to have an effect on woman's fashions; the Parisian dressmakers have decreed the revival of the military style in walking gowns. Our professor finds himself wondering whether the Balkan War will not have its effect on college fashions, whether a revival of interest in that classic world which is so real to him is not among the possibilities of the time.

THE ADORATION OF THE MAGI.

Which one of the gospel scenes has been most prolific in art and in literature? Prolific, of course, not in the mere aggregate of written or pictorial work, but in variety of motif and treatment. The most learned of us might be at a loss for a confident answer. There is the Nativity proper, there is the Baptism, the Last Supper, Christ before Pilate, the Crucifixion, the Ascension, all themes which have inspired numberless writers and artists. Yet in breadth, in variety, in ingenuity of treatment, the Adoration of the Magi seems to me, after a careful study of Hugo Kehrer's recent work,* to head the list. A feeling of amazement, almost of awe, comes over me at thought of the contrast between the simple story in Matthew and the grand altar-painting by Rogier van der Weyden or the quaintly garrulous German legend of the fifteenth century.

To do justice to Kehrer's scholarship one should write three technical reviews: in comparative theology, in comparative literature, in comparative art. Within narrow limits I can proffer only a few salient points.

The King James version speaks of "wise men." This is a mere euphemism for the Greek-Latin "magi." The exact term is significant; from magus to magician is but a step. Throughout the entire history of the legend there is evidence that the mysterious visitors were regarded as wonder-workers, though only beneficent ones. Thus, St. Elizabeth of Schönau, in the twelfth century, invokes the aid of Melchior, Balthasar, and Caspar in her ailments. Especially against the mysterious disease epilepsy was their aid invoked.

How, then, did the magi become kings? Through the accretion of Isaiah lx, 6, and especially of Psalm lxxii, 10: "The Kings of Tarshish and of the isles shall bring presents: the Kings of Sheba and Seba shall offer gifts." Thus, in the antiphonary usually ascribed to Gregory the Great, the verse from Matt. ii, 2: "We have seen his star in the east," is immediately preceded by the passage from Isaiah and immediately followed by the passage from the Psalm. So thoroughly accepted was the kingship of the magi that the Kings of France, England, and Burgundy were wont to appear in person at the Epiphany celebration and to offer gifts of gold, frankincense, and myrrh. This symbolic act survived as late as Henry VII of England.

Matthew does not specify the number of magi. Prior to the fourth century we note frescoes with two worshippers or with four. On the black marble vase, about 300 A. D., in the Kircherianum at Rome, are two groups of three figures each, six in all. We are to bear in mind that in plastic art even numbers are easier to group. From the fourth century on the number became fixed at three. This fixing was due primarily to a strict interpretation of the three gifts, each of which presupposes an individual giver. Possibly, also, the doctrine of the Trinity played a part, and a desire to give a representative to each of the then known three continents.

In the full development of the legend the magi-kings have names, Melchior, Balthasar, Caspar, and their ages are kept different. Melchior is an old man, Caspar a beardless youth, Balthasar a full-bearded man of middle age. This difference in age is doubtless a mere invention of popular fancy; it is more graphic, more picturesque. But the names, what is their origin? Passing over the "Collectanea et Flores," once attributed to Bede, but assuredly not by him, and written much later, Kehrer finds the earliest record in the "Excerpta Latina Barbari," a crude translation—by a Merowing monk of the sixth century—from an Alexandrian Greek monkish chronicle of about 500 A. D. In these Excerpts the names are Bithisarea, Melichior, Gathaspa. Evidently, they are corruptions of Greek forms; one may indeed expect anything from a translator who renders Παῖδες Κασάνδρου by *pedes Casandrus!* Melchior is the Greek transliteration of a Hebrew name meaning "god of light." Bithisar, properly Baltasar, points to Belteshassar, the Chaldee name given to the Hebrew prophet in Daniel i, 7. The third name is more puzzling. Kehrer favors the explanation that Gathaspa is the mutilation of Godaphar, for Gundaphara, in Greek writing Γουνδαφόρος, the name of a king in northwestern India in the first century. Gundaphorus was an actual, not a mythical, king; his name occurs in inscriptions and on coins. His fabulous conversion to Christianity, however, forms the substance of one of the chapters in the apocryphal Acts of Thomas.

That the magi-kings did not travel to Palestine afoot is a safe inference, though Matthew is silent. In pictorial art they are usually riding on horses; sometimes, however, dromedaries or camels are introduced. This is not surprising in view of "the multitude of camels" and dromedaries in Isaiah lx, 6. In proportion as Christian art became more Occidental, more chivalric I might say, the horses became kingly chargers. This is strikingly manifest in a psalter in the royal print-cabinet at Berlin. To the left the kings approach on prancing steeds; to the left, but without any line of demarcation, the three dismounted confront the sitting Mother and Child.

In Germany the magi are popularly known as the Three Kings of Cologne. An unsophisticated English reader might well ask what connection there can be between Cologne and Bethlehem. The only historical evidence in our possession is this: In the year 1158, in Milan, were unearthed three sarcophagi, popularly supposed to contain the remains of the three kings, which had been brought to Milan from Constantinople by Eustorgius, a Greek bishop of Milan, in the fourth or in the sixth century. When, in 1162, Milan was surrendered to Frederick Barbarossa, the Emperor gave the sarcophagi to Reinald von Dassel, chancellor and archbishop of Cologne, who in 1164 transferred them to Cologne. They are now in a special chapel of the great cathedral. But how the remains got to Constantinople—tradition reports that the Empress Helen, mother of Constantine, deposited them in St. Sophia—and how they got from Constantinople to Milan, to all such questions there is no answer.

In the calendar the Adoration is celebrated on the sixth of January, Epiph-

Die Heiligen Drei Könige in Literatur und Kunst. Von Hugo Kehrer. Band I, Literarischer Teil; Band II, Kunstgeschichtlicher Teil. Leipzig: Seemann.

any. The Nativity, December 25, is, of course, a separate feast, and in the earlier Christian period the two were carefully distinguished. But later, both in art and in literature, the disposition grew stronger and stronger to amalgamate the two, at least in the sense that the Adoration absorbed certain features of the Nativity. In other words, the Matthew story borrowed certain incidents of the Luke story. In Luke we read of the apparition of the angels to the shepherds and of the shepherds visiting the child in the manger. Matthew does not represent the magi as worshipping Christ in a manger; rather in a "house." But later Christian art and literature do offer the combination. Thus, in Rogier's painting we see Mother and Child seated in a stable-like building, on their right an ox and an ass. To the question, Whence the two animals? the answer is easy enough; they are apocryphal. Pseudo-Matthew, ch. xiv, says:

> The most blessed Mary . . . put her child in a manger, and the ox and the ass adored Him. Then was fulfilled that which was spoken by Isaiah the prophet, who said, The ox doth know his owner, and the ass his master's crib. (See Isaiah i, 3.)

In a curious fourth-century sarcophagus relief in the Lateran Museum the child is not in the mother's lap, but lies in a basket over which stand the ox and the ass; behind these stand three magi, followed by a camel heavily laden. The mother is seated; but between her and the crib stands a shepherd. In another Lateran sarcophagus, also of the fourth century, there are two separate reliefs. One represents the child in the crib, over which lean the ox and the ass; the other represents three magi bringing gifts to the child seated in the mother's lap. In the background are the heads of three camels.

In vernacular literature the Adoration-theme did not at first spread rapidly. Old English poetry does not mention it, although we might have expected an allusion at least in Cynewulf's "Christ." Old German, however, is better off. The author of the "Heliand" tells of the star, *cunningstero*, and of the kings, *threa thegnos snello*. Also Otfrid tells of the magi, *thie uuisun man*. In the twelfth century Wernher of Tegernsee tells of the three Kings of Chaldea and their dromedaries. Also French poetry of the twelfth century introduces the story. Yet the chief literary impulse came from the Latin liturgical drama. By "liturgical drama" I do not imply that such dramatic movements, even in their earliest forms, were ever an integral part of the service. They were merely an outgrowth of the liturgy, acted in connection with it and acted by priests or other ecclesiastics. They were, in essence, "tropes," that is, expansions of a liturgical verse.

The best example is also the earliest. It is an Epiphany festival at the Church of St. Martin, Limoges, in the eleventh century. After the choir has sung the offertory, three clerics, attired in silk and wearing golden crowns and carrying golden beakers, enter by the main choir portal and sing the story of the three kings and the star. Each king in turn interprets his gift: gold, or frankincense, or myrrh. They greet the star, a light hanging by a chord, with the Epiphany antiphon: *Hoc est signum magni regis.* They then lay their offerings, the three beakers, upon the main altar. Thereupon a choir-boy, behind the altar, sings as angel the Nativity message: *Nuntium vobis fero de supernis, Natus est Christus dominator orbis, in Bethlehem Judæa; sic enim propheta dixerat ante.* The reader will note the blending of the two gospels.

In simple dignity this dramatic movement of Limoges is a worthy counterpart of the more celebrated Easter movement, *Quem quæritis in sepulchro*, which is justly regarded as the beginning of our mediæval drama. The simple three-kings drama, however, rapidly expanded until it became what is called a cyclical drama, presenting not only the Adoration and the Nativity, with the shepherds, but also Herod and the Innocents, and even distinctly apocryphal elements, *c. g.*, the *obstetrices* Zelomi and Salome mentioned in Pseudo-Matthew and the Gospel of James. Still later the three-kings drama was secularized, that is, withdrawn from the church building and service and written and acted in the vernacular. Thus it became a part of the general religious drama of the fourteenth and fifteenth centuries; it ceased to be a religious function and became a quasi-religious spectacle.

One feature of this secularization calls for special mention, namely, the disposition to represent the youngest of the kings, Caspar, as a Moor, that is, a negro, and to give him a more or less humorous cast. In fact, the German name Kasper, Kasperle, has long been a nickname for a person who makes himself ridiculous in one way or another. Thus the reverend magus has joined the company of Noah the patriarch and Herod the grim tyrant. In Mabuse's painting he is a full-blooded negro, but without suggestion of humor.

The theological features of the Adoration-story have been treated by Kehrer at great length; especially the relation between Nativity and Epiphany. That the story of the magi and the mysterious star is an interpolation, an Oriental myth or legend, will be readily admitted by all who are not slaves of the letter. To begin with, the star points to the remoter Orient, to Mesopotamia and Persia. The magi represent priests of Mithras, god of the sun, the composition of the legend reflects the establishment of the Mithras cult in the Hellenistic Roman world about 100 A. D. Possibly, the journey of the magi may be a dim echo of the tributary journey of Tiridates, King of Parthia, to the Emperor Nero, in 66 A. D. At any rate, the second chapter of Matthew is an attempt on the part of Christianity to adjust itself to a formidable Mithras cult; in fact, to overcome by assimilating. Church history is full of such adjustments. The language of Matthew is highly descriptive: "They fell down and worshipped him," a fair rendering of πεσόντες προσεκύνησαν αὐτῷ. So the magi *prostrate* themselves. Now, it is highly significant that the earliest Christian art does not depict the magi as prostrate. The earliest catacomb fresco, from the beginning of the third century, depicts two youngish men standing one on each side of the seated mother. Another catacomb fresco, from the end of the third century, depicts four men, two on a side, all standing. The Kircherianum marble vase, about 300 A. D., depicts six standing figures, three on a side. Clearly, then, nascent Christian art did not attempt προσκύνησις. The explanation is that Christian art followed the usage of pagan art, and depicted the magi in the attitude of Mithras priests bringing gifts to their god. In such offerings the priest stands, for the giving is free, spontaneous; whereas prostration is servile, is a sign of defeat, the attitude of the conquered towards the conqueror. On this point we need only contrast the three priests standing before their sun-god (on a Babylonian cylinder), or the Heddernheimer Mithras relief, with the Theodosian obelisk (Constantinople), on which we see conquered barbarians kneeling and offering war-tribute to the Emperor.

To one unfamiliar with the evolution of Catholic doctrine, the prominence of Epiphany will be puzzling. Certainly to most Protestants the mere adoration of unknown magi must have less significance than the actual birth of Christ. Yet the Epiphany rite is justified, both in logic and in psychology. The Eastern church always kept it in the foreground; yet to the Western church belongs the credit of its full justification. And in speaking of the Western church one should always have in mind Augustine. The bishop of Hippo it was whose unerring instinct and clear vision fastened upon the essentials of every question and formulated them for coming generations. Augustine's doctrine is to be found in his sermon on the Epiphany:

> This festival, which we celebrate to-day, my brethren, is called Epiphany, that is, Apparition or Manifestation, because on it Christ was manifested, under the guidance of the star, to the Gentiles, and on this day was baptized by John, and on this day, by the power of God, turned the water into wine.

In other words, the magi *symbolized the Gentiles*, and Christ's manifestation to them, rather than his mere incarnation, is the main thing; his baptism is the dedication to this *world-mission;* his first miracle is the *evidence* of divine consecration. No doctrine could be formulated more succinctly yet more comprehensively.

Many other issues are touched upon by Kehrer. Yet I must pass them over for want of space. Still less can I afford to discuss with him points on which there might be some difference of opinion. In one place only have I detected what seems to be an obvious error. In Volume I, p. 49, he remarks that the diminutive 'Fanny, for Epiphany, is common folk-usage in England. There is no such form cited in the Oxford Dictionary or in the Dialect Dictionary. Such clipping would be contrary to the phonology of our folk-speech. Epiphany could yield only 'Piphany, or 'Piffany, in analogy with 'pistle, 'postle. Volume II is a monumental specimen of iconography. Apart from the Rogier frontispiece, there are 348 text-illustrations, ranging in size from medallion to half-page, and even full-page. For the work as a whole one can scarcely render adequate thanks to author and to publisher.

In taking leave of the Adoration, I venture upon one general remark. We hear much at the present day of "comparative literature," yet no one seems able to define the term. Certainly I have not the courage for a definition. Yet Kehrer's work seems to me an admirable exhibition of the thing itself. Starting with the simplest conceivable theme, the author leads his reader century by century through the ramifications of literature and art and makes him see, almost feel, the theme growing from generation to generation. The reader journeys from Orient to Occident and back again, meeting on the way pagan priests and Christian priests and even popes. And when the reader closes at the last page he knows that he has mastered a mighty chapter in the world's history. This, I judge, is real comparative literature. J. M. Hart.

NEWS FOR BIBLIOPHILES.

New volumes of Mr. Charles Evans's "American Bibliography" continue to come steadily from the press, Vol. VII, covering the books of four years only, 1786 to 1789 inclusive, having just been delivered to subscribers. The total number of items described thus far is 22,298, of which 2,849 are issues of these four years and are included in the present volume. All seventeenth-century North American imprints are without exception of value and interest to the collector, as are many of the issues of the earlier years of the eighteenth century. But as we approach more recent dates, with the number of printers and the output of their presses increasing so rapidly, the comparative value and interest of the books decrease. The number of collectors' books of great value described in the present volume are very few, the first New York Directory (1786) being the only one which could be put in the first class. And we may here note that, though the Hoe copy of this little book brought $2,275 at auction in 1911, Mr. Evans gives the "auction value" of the book as $100! In the few cases in which auction values are given, the records are generally those of thirty years or so ago. It is as well, perhaps, that in most cases this column has been left unfilled.

The list of editions of the Constitution given by Mr. Evans is the longest, we believe, ever compiled. It contains some fourteen editions of 1787 which were not known to Paul Leicester Ford when he compiled his "Bibliography of the Constitution" in 1896. The Constitution in its first printed form was on seven leaves, printed on one side only. It represented the conclusions of the "committee of five" brought in on August 6, 1787. Instead of the familiar "We, the People of the United States," the preamble reads: "We the People of the States of New-Hampshire, Massachusetts, Rhode-Island and Providence Plantations, Connecticut, New-York, New-Jersey, Pennsylvania, Delaware, Maryland, Virginia, North-Carolina, South-Carolina, and Georgia, do ordain, declare, and establish the following Constitution for the government of ourselves and our posterity." Only a few copies (probably sixty) were printed for the use of members of the Convention.

The second printing, being the document as brought in by "the committee on style and arrangement" on September 13, has the final preamble, with the exception of a single word. It reads: "union, to establish justice," the "to" being struck out later.

After its adoption by the Convention, the Constitution was promptly reprinted, either as a folio sheet of one or two leaves, or as a small pamphlet, generally of eight leaves, by various enterprising printers throughout the country. Official editions, for the use of the members of the State conventions, were printed by some of the States. Folio, or broadside, editions were within a few months printed in Philadelphia, New York, Boston, Providence, New Haven, Portsmouth, N. H.; Carlisle, Pa.; Norfolk, Va., and Alexandria, Va. Pamphlet editions were printed in Philadelphia, New York, Boston, Hartford, Richmond, Poughkeepsie, and New Brunswick, N. J. Two editions in Dutch were printed in Albany and one in German in Frederickstown, Md.

An increasing number of newspapers made their appearance during the period covered by this volume, and in many cases Mr. Evans has given us interesting information about them, which, as it is in a comparatively new field, could not have been easily come by.

Of the eighteenth annual volume of "American Book-Prices Current" (Dodd & Livingston), 540 copies have been printed. The edition is kept down to virtually the number of advance subscribers, and recent volumes have been out of print almost upon publication. This is a compilation which is of little or no use to the ordinary reader, but which the buyer of out-of-print books, whether he be collector, agent, or librarian, keeps constantly within reach of his hand. The present volume, covering the season of 1911 and 1912, contains records of sales of 15,471 lots. The bulk of the volume is made up of records of the second and third Hoe sales. It is unfortunate that the records of the sale of this great library should be distributed throughout three volumes of the "Prices Current."

The series of articles by J. H. Hessels which have appeared at intervals during the last three years in the English monthly, the *Library*, have now been reprinted as a volume, with the title, "The Gutenberg Fiction: A Critical Examination of the Documents Relating to Gutenberg, Showing that He Was Not the Inventor of Printing." Mr. Hessels has been a frequent writer on the Gutenberg question; in 1882 he published "Gutenberg: Was He the Inventor of Printing?" and, in 1887, "Haarlem: The Birthplace of Printing, Not Mentz." He is easily the greatest living exponent of the Coster legend, so-called, and the chief opponent of the claims that printing with movable types was invented, or first practiced, by John Gutenberg. It is hard to believe that the eminent Dr. Karl Dziatzko, Gottfried Zedler, Dr. Paul Schwenke, and other German bibliographers, who during the last quarter-century have been making such minute studies of every scrap of early printing, have been so influenced by patriotism as emphatically to acknowledge the claims of Gutenberg and Mentz against the evidence. No one can pass understandingly upon Mr. Hessels's statements without first going over the work of the German students. We leave his book to the consideration of the specialists, only saying that here is a good presentation of the other side of the question. Mr. Hessels will have to make many more converts before the honors which have been piled upon John Gutenberg are stripped from his shoulders.

The list of broadsides and books from the Gutenberg types, which was drawn up from Schwenke and other German bibliographers, and which fills pages 82 to 96, is, we believe, the most extensive so far printed in any English book. The volume, 230 pages, has apparently been printed from the types of the *Library* at different times, as it is on at least three different kinds of paper. It is published in London by Alexander Moring.

Correspondence

PROGRESSIVES AND REPUBLICANS IN MICHIGAN.

To the Editor of The Nation:

Sir: My attention has been called to an editorial paragraph in the issue of the *Nation* of February 20, in which you say:

A State that gave the Roosevelt electors a plurality of 60,000 last November would seem to be one that was particularly without excuse for harboring any dickering or deals between the saints and sinners, yet Michigan actually leads the way in a reuniting of the Republicans and the Progressives. The latter made the platform, which is so mediæval as to except judges from its proposal for the adoption of the recall, and the former have the satisfaction of marching under the same old banner which, up to June 18 last year, even the Colonel held sacred. This unholy alliance proves that, however it may be in New York, former Chairman Hotchkiss's recent statement at Albany is not of universal application. The Progressive leader

remarked: "I am safe in saying that the Progressives would not enter the same room with the Republican leaders." He, or at least his chief, will be constrained to revise this assertion, however, when they give due consideration to the battle-cry of the Michigan Republicans. "Get together and fight the Democrats" was the heaven-sent word that dispelled all anger and threw brother once more into brother's arms.

There is and was absolutely no justification in fact for such a statement. I have taken the trouble to examine in a number of newspapers the press reports of both the Republican and the Progressive State Conventions of Michigan. They were held on separate dates, one week apart. Approximately 1,000 delegates attended the Progressive Convention, which was held at Battle Creek—a larger number than attended the Republican Convention, which was held at Lansing.

The Republican Convention was held on February 11. Previous to the assembling of the delegates there had been a good deal of newspaper talk of strife between the regular and the so-called "progressive" Republican factions. It was a strife entirely within the party and had no reference whatever to or connection with the Progressive party. Certain members of the Republican party in Michigan, as elsewhere, are merely seeking to procure political benefit to themselves by calling themselves "progressives," while they in fact continue to act with the hide-bound reactionary Republican party. It is a palpable hypocritical pretence for political revenue only and is not entitled to credit or trust from straightforward persons anywhere.

In full accord with their previous performances, many Republican and other reactionary newspapers in their reports of the Republican State Convention in Michigan contrived to create the impression, chiefly through headlines, that there had been a readjustment between the Progressives and the Republicans.

The Progressive State Convention was held at Battle Creek on February 18. It was marked by harmony and enthusiasm throughout. It nominated candidates for the nine State offices to be filled at the spring election, adopted a platform, and adopted rules for party procedure in Michigan aimed at making the party at all times responsive to the will of the voters themselves. In a few minutes of one session devoted to providing funds for the campaign, more than $4,000 was subscribed for that purpose.

These facts show the entire lack of foundation for your editorial quoted above.

O. K. Davis,
Secretary of the Progressive National Committee.

Washington, D. C., March 7.

[Both the news dispatches printed in the New York papers and the comment in the Michigan press were such as to produce a confusion between the Progressives and the progressive faction of the Republican party. We are glad to print this authoritative correction.—Ed. Nation.]

ALLEGORY IN THE "VITA NUOVA."

To the Editor of The Nation:

Sir: The theory that Dante's "Vita Nuova" is an allegory of some sort is remarkably tenacious of life. It is no kitten, but a battle-scarred veteran of defeats, with many lives, whose nature it is to come back. "Many," indeed, have not only "suspected allegorical intent in the 'New Life,'" (to quote the article by Professor Fletcher in the *Nation* of January 30), but have valiantly struggled to prove it. In recent times its most able advocate has been E. V. Zappia in his "Studi sulla Vita Nuova di Dante" (Rome, 1904), a book to which Michele Barbi devoted more than eighteen pages of destructive criticism in the *Bullettino d. Società Dantesca* (XII, 204 ss.).

One gathers the misleading impression that the theory proposed has some novelty in that the reality of Beatrice is not denied; but that was also the position of H. Cochin in the Introduction to his translation of the "Vita Nuova" (Paris, 1908), and he also held, as does Mr. Fletcher, that the "gentle lady" of §36 is a symbol of "active life." Cochin's theory has been gently disposed of by Francesco Flamini in the *Rassegna Bibliografica* (XVII, 6-13).

The objections to his theory, which are raised by Mr. Fletcher himself, in order to destroy them, are easily overcome. Of a very different constitution are those made by Barbi and Flamini, which he does not mention.

Aside from the plausibility of the allegory proposed—which is the main argument—positive arguments favoring the theory are: First, that the religious cult of a mortal woman is impossible in Dante, because of his scholastic training. This contention has been effectively answered by Professor Wilkins (*Nation*, February 13), who points out that the worship of an idealized woman is not only a Provençal and Sicilian tradition, but is exemplified in that poem of Guinicelli, the confessed master of Dante, which is directly referred to in the "Vita Nuova." It is true that the interpretation based on Casini's imperfect text, which Mr. Wilkins adopts, is open to criticism, but that does not affect his reasoning.

Secondly, Mr. Fletcher reminds us that Dante says in the "Convivio," which is an allegorical work, that he does not intend, by the different manner of this book, to throw any slight upon the "Vita Nuova," but to "strengthen it" ("giovare"). The passage in question should, however, be taken in connection with the latter part of the same sentence: "seeing that the former [the 'Vita Nuova'] must reasonably be fervid and passionate, the latter [the 'Convivio'] temperate and virile." And the poet continues explaining that the "Vita Nuova" was written during his adolescence, and that what is suitable to one age is unsuitable to another. The "Convivio," as he had planned it, was to be a monumental work of adult reason, and so could not but add dignity to a small, youthful, unallegorical work by the same author; it would, in fact, confirm what he had said at the beginning of the latter book, that at no time had love ruled him "without the faithful counsel of reason."

But the true test of the credibility of the allegory lies, we are told, in its plausibility, and accordingly it is explained that Beatrice symbolizes blessedness, earthly while she is on earth, heavenly after her death. To the possession of first one and then the other kind of blessedness, Dante is led by love, which symbolizes "holy love or charity towards men and God," in spite of "those pleasing ladies, screens of his blessed lady," who are symbols of earthly pleasures, and lastly in spite of the "consoling lady" (the "gentil donna" of section 36) who represents "active life."

The degree of plausibility claimed by the "allegorist" must be left to the judgment of the reader, but as one reads this interpretation, which lies so close to the evident, literal meaning of the story, a doubt arises as to whether Mr. Fletcher has not after all confused allegory with idealization, especially as he has already called Cavalcanti's scientific treatise on love "an allegorical ode"! Nevertheless, if Beatrice, love, the ladies of the screen, and the "gentle lady" are symbols of something else, he must mean real allegory, threadbare though it may be.

No theory of allegory, however, can be established until many questions asked years ago have first been answered. Some of them are as follows: In the "Convivio" the "gentle lady" is declared to have been an allegorical figure representing philosophy, but nothing is said as to an allegorical meaning of Beatrice, who, in this work, takes a secondary place. Are heavenly and earthly blessedness inferior to philosophy? If the "Vita Nuova" is an allegory representing Dante led to the possession of earthly blessedness, and Beatrice a symbol of earthly (as well as heavenly) blessedness, should not Dante, at some time in the story, possess Beatrice? If the work were an allegory, would Dante devote so much space in section 25 to defending himself for having personified love? Lastly, is it not Dante's doctrine (Conv. II, 1) that the literal sense of an allegory is an artistic fiction, and if so, how could real events be used by him as the literal sense of an allegorical narrative?

This is not the place for detailed argument, but it seems to me that the ghost of allegory in the "Vita Nuova" ought not to be allowed to walk again, or, if it be, its past record should be cleared, so that it may appear as a respectable spook with good references.

PHONETIC SPELLING.

To the Editor of The Nation:

Sir: The following letter, received by the College of Agriculture at the University of Wisconsin, may interest your readers. Not unnaturally, it was at first regarded as having been written in some strange European dialect, and was passed on to my polyglot colleague, Professor Prokosch, who takes the writer to be a Czech living among German-American farmers. I transcribe literally:

juplis Sintmi lidlbet som kajn sit cum trajn tobaku sit Cebic sit Anjens sit tomitos sit bic sit persin sit klober sit svit Corn sit Begi sit Flat tenap sit Cjun Cumbrist sit.

jer (?) Trulli
Anton Roth
Black River Falls
R 7 Viss

The translation offers only slight difficulties as soon as one has grasped the fact that the letter is supposed to be English, transliterated by means of European vowels:

You please send me little bit some kinds seed can try [*i. e.*, for instance, perhaps] tobacco seed cabbage seed onion seed tomato seed beet seed parsnip seed clover seed sweet corn seed [ruta] baga seed flat turnip seed cucumber seed yours [the only word illegibly written, perhaps indicating, as Professor Prokosch suggests, that in this case he was willing to admit a little uncertainty about his English!] truly.

Phonetically interesting are "trajn" and "cjun," in both of which the *n* represents his attempt to convey the strong nasal of the American pronunciation; further, "lidl," as it is frequently spoken in these parts, "bet" for *bit*, because our *i* is open, and "Begi" for *baga*, also an unfamiliar sound to him. B. Q. MORGAN.

University of Wisconsin, March 6.

"NEVER LESS ALONE THAN WHEN ALONE."

TO THE EDITOR OF THE NATION:

SIR: Prof. Lane Cooper, in *Modern Language Notes* (26, 7, 232), quotes Cowley to the effect that the thought expressed in the line quoted above was "now become a very vulgar saying," and "every Man and almost every Boy for these seventeen hundred years, has had it in his mouth." Such being the case, it is no surprise to find that Shakespeare has the thought clearly in mind in the first quarto version of "Romeo and Juliet" (1, i, 134):

I, measuring his affections by my own,
That most are busied, when they're most alone,
. . . . . .
Pursued my humour. . . .

The same apothegm is at the bottom of a much-discussed passage in the "Tempest" (III, i, 17):

I forget:
But these sweet thoughts, doe euen refresh my labours,
Most busie lest [=least], when I doe it.

As Dr. Furness pointed out, this passage staggers under a heavier weight of comment than any other in Shakespeare. Yet Ache (*Notes and Queries*, 1S, III, 229) is the one among the interpreters of this passage to connect the thought of the italicized line with Cicero's words (De Off., 3, 1), "numquam se minus otiosum esse quam quum otiosus, nec minus solum quam quum solus esset." Evidently, what is not clear in this passage to our day, was obvious to Cowley's age with its knowledge of the "vulgar saying" quoted above. No word of explanation was needed then to make clear that Ferdinand's "sweet thoughts" were so engrossing, that when he appeared least busy, he was in reality most busy.

Further evidence of the popularity of this apothegm is found in "A Cure for a Cuckold," (I, i, p. 290, Dyce Edition of J. Webster), where it is quoted:

I have heard some say,
Men are ne'er less alone than when alone,
Such power hath meditation.

M. P. TILLEY.

University of Michigan, March 5.

A FRIEND OF THACKERAY'S.

TO THE EDITOR OF THE NATION:

SIR: I have in my possession a manuscript letter of Thackeray, which has no address or date. It begins as follows:

You got Sporus's letter from the Reform Club last night? He received your gilded volumes this morning. He has 2 on 'em now. I also think I perceive likenesses of myself in the Standard Footman, in Sir Oswald Moody, in the Plausible Man, in Felix Flutter, and the Link boy. Cruel woman! Why do you take off our likenesses in that way?

There is more of the letter, but nothing to show to whom it was written. It is signed: "Yours with a considerable sincerity, W. M. T."

Who is the authoress, a friend of Thackeray, who wrote of the "Standard Footman," "Sir Oswald Moody," "Felix Flutter," etc ?

Lady Ritchie, who has seen her father's letter, does not know; and so far all efforts to determine the person have been futile. Can any of your readers throw light on the subject? THOMAS M. OSBORNE.

Auburn, N. Y., March 8.

Literature

GEORGE GISSING.

The Private Life of Henry Maitland. By Morley Roberts. New York: George H. Doran Co. $1.25 net.

George Gissing: A Critical Study. By Frank Swinnerton. New York: Mitchell Kennerley. $2.50 net.

Unfortunate in his life, it seems as if Gissing were destined to be unfortunate also in death. His friends and quasi-friends have taken pains to let us know that there is a certain amount of error, if not downright humbug, in the legend of his extreme poverty, at least after his first years in London. But in all conscience there remains enough of hardship in his career, for much of which he was no doubt responsible in a way, to exact pity from the most unfeeling. Nor will this feeling be diminished by the patronizing and unsavory biography just published by Mr. Roberts under the thin disguise of fiction. There is no attempt to conceal the fact that "Henry Maitland" is George Gissing, and other persons, some of them, like Mr. H. G. Wells, still living, are plainly indicated under their false names. The procedure is a bit offensive. If Mr. Roberts could not relate the facts as frank biography, he should have kept silence; to approach them in this oblique fashion gives the impression that he is ashamed of the man whose friend he proclaims himself to be. The fame of Gissing suffers from the fact that some of his best novels are out of print and extremely difficult to obtain. It seems unnecessary that his personal reputation should also suffer from distortion.

Mr. Roberts was for a number of years the most intimate acquaintance of Gissing in London, and it may be assumed that the broad outlines of his narrative are substantially correct, although in one important matter there is at least a conflicting tradition. According to Mr. Roberts, who was at school with Gissing, the latter became entangled with a girl of the street, stole money from the coat-room of the school, was caught, and sent to jail for three months, and, on release, married the girl. The story in the main is true, and has been known to a number of people, but some of those who have a right to speak on the subject give a different color to the motives, maintaining that Gissing, then a young and ardent idealist, was led to pilfer for the girl for the purest reasons of charity. The story is distressing under any form, and there is no reason in the world, save a novelist's prurient conscience, why it should ever have been made public. From that mishap flowed most of the misery of Gissing's life, and much, no doubt, of his estrangement from society. He could not after a while live with the woman, who became a besotted drunkard, but until her death he cared for her at a great sacrifice. If he erred, he nobly atoned.

It is unnecessary to follow the events of Gissing's career as they are unfolded by Mr. Roberts. But of his mind and character a word must be said. He is represented as utterly unpractical, and this weakness cannot be denied. But other friends, since Mr. Roberts's revelations, have stepped forward to say that, though the portrait is in a certain sense accurately drawn, it nevertheless gives in the end a false impression. Gissing comes out of the ordeal of his friend's analysis, a weakling, rather repulsive in his intellectual snobbishness, rather unclean in his habits; we have reason to believe he was none of these things, though he was undoubtedly erratic.

So, too, the biography shows us a literary man, toiling at his desk eight or nine hours a day; and we hear Mr. Roberts complain that, because he cannot work in that way, therefore Gissing "had no earthly business to be writing novels and spinning things largely out of his subjective mind, when he ought to have been dealing with the objective world, or with books." No doubt Gissing was an exacting worker; but so was Balzac, yet we do not hear the French writer criticised therefor, as not "dealing with the objective world." Furthermore, such days of long labor at the desk were broken by intervals of different kinds of activity. Gissing, for one thing, was a lover of books, and among the best-read men in the classics in the history of English letters; he was one of the men to whom the British Museum was a second home. But he read the world also. He had the seeing eye

and the understanding brain, and, though some phases of society were unknown to him, he had passed through strange and deep personal experiences, and, altogether, he had probably more direct acquaintance with "life," in the sense in which Mr. Roberts's school uses that mystic word, than had Thackeray.

Again, in "Henry Maitland" we see Gissing in his hilarious rhapsodies over Greek metres, and here the biographer is at his best—but why the slurring comment: "Anything which broke up his little semi-classic universe, the literary hut which he had built for himself as a shelter from the pitiless storm of cosmic influences, made him angry and uncasy for days and weeks"? The fact is—and this impression which one may get from Gissing's books is confirmed by the report of various people who had personal knowledge of the man—the intellectual temperament of Mr. Roberts is so radically different from Gissing's that the friendship between the two men must have been always intellectually and morally superficial. We are warned against "The Private Papers of Henry Ryecroft" as a misleading picture of the writer. That book, written in Gissing's later years, somewhat idealizes, or rather misrepresents by selection, the trials of the earlier London days, but in the more essential things, in its portrayal of the author's mental and artistic moods and processes, it is amply veracious, and a far safer characterization to read than "The Private Life of Henry Maitland."

Something of the same sort must be said of Mr. Swinnerton's critical study. Let it be admitted at the outset and emphatically that Mr. Swinnerton is no commonplace writer, and that his pages contain many clever *aperçus* and many penetrating literary distinctions. We must insist also that whatever reservation we have in our admiration of his treatise is not due to the fact that his criticism follows the judicial rather than the sympathetic method.

The gist of Mr. Swinnerton's criticism comes about to this: Here is a powerful and distinguished writer, but I do not like him. Naturally, Mr. Swinnerton merely hints here and there at the elements in Gissing's work which give it power and distinction, and tells us with a good deal of repetition why he does not approve of that work. The counts of the charge are found in these scattered utterances:

> He [Gissing] was an essayist, a writer upon moral themes; and he began to write novels (p. 36).
>
> It was ambition—at conflict with itself, often varying, never defined by any instinct other than that of feverish application—that poisoned Gissing's life (p. 39).
>
> In the books about the lower classes there is a lack of knowledge, due to his own temperamental lack of sympathy with the life he is describing (p. 45).
>
> If we compare such an attitude with that of a supreme novelist of our time, Mr. Arnold Bennett, who is continually, as he expresses it, "savoring life," we shall see how little of the modern spirit of inquiry into phenomena Gissing possessed. He was, according to Mr. Morley Roberts, "an inverted idealist. He looks back" (p. 84).
>
> His imagination had been stultified by much reading, and his experience was so small and so shrinking as to bo useless when it stood up to his ambitions (p. 114).

Now, one of these charges, repeated from Mr. Roberts, we may again repudiate as simply contrary to facts. Gissing's experience of life was indeed limited—what novelist's is not?—but by his own errors and by what he endured with his first wife, and to a less extent with his second wife, he had probably a deeper and more immediate knowledge of the "underworld" than any other distinguished novelist of England; yet it is in just those stories of "the lower classes" that Mr. Swinnerton again and again finds "lack of knowledge." As for saying his imagination was stultified by reading, that is merely a judgment born from the conceit of an unreading generation. By the same token we should find stultification in Dante and Spenser and Milton and Goethe and others of the great creators and interpreters of life.

By looking beneath the surface of Mr. Swinnerton's criticism, we find that his discontent—and the discontent of Mr. Roberts and others of their class—springs from certain fundamental limitations of the critic. In the first place, so far at least as we may judge from this book, he has no sense of the sheer charm of good writing. You may read through his pages without becoming acquainted with the fact that Gissing possessed one of the finest, purest, simplest, most sinuous styles of the later nineteenth century. Gissing's English in itself ought to give pleasure to those who can savor good craftsmanship. That Mr. Swinnerton apparently misses this savor, is due to a defect in his training or temperament. But his profounder divergence from Gissing is of another sort. Gissing carries in his imagination a large brooding sense of antiquity; his concern with the past is not displayed by pedantic allusions, but it colors and governs his whole emotional attitude towards the present. Mr. Swinnerton is a modernist quite cut off from this source of Gissing's inner emotional life. He therefore finds Gissing for the most part failing in sympathetic emotion. Gissing wrote of the underworld with a passionate understanding of its tragic and, at times, idyllic aspects, with alternating disgust and compassion for the life he knew, but with unfailing sense of personal responsibility and no tincture of the modern humanitarian confusion of the individual and the mass. Again, to a critic like Mr. Swinnerton he simply spoke from a world of unknown moral and artistic perceptions.

Some irritation is justifiable at the peculiar tone of Mr. Roberts and Mr. Swinnerton towards a novelist who has had more than his portion of adversity. But no sane admirer of Gissing would, on the other hand, wish to see him set critically beside the very greatest novelists; it is possible to appreciate and enjoy his work—or, if not enjoy, at least feel its veracity and power—without undue exaggeration. To the present writer Gissing seems likely in the end to take a place by the side of Hardy and above Meredith, but never by the side of Fielding or Thackeray or Dickens. He will miss that highest place, not because he read Roman history, or was greatly ambitious, or toiled at his desk, or was without the peculiar emotion of the modern sentimentalist, but for the good and simple reason that his genius was not quite of the highest order.

CURRENT FICTION.

The Frontiers of the Heart. By Victor Margueritte. Translated by Frederic Lees. New York: F. A. Stokes & Co.

The conflict between love and patriotism had been a favorite theme in our post-bellum fiction. A reader whose knowledge of the Civil War period was based entirely on novels might be led to suppose that a considerable proportion of the younger and handsomer officers in the Union army fell in love with fair rebels, and, after some natural tears had been shed, lived happy with them ever after. This we do not take to be the truth. But the frequency with which the situation has been employed by light-hearted romancers shows that there was nothing inherently unnatural or displeasing about it. There was no barrier of race or of ancestral enmity to be overcome by the lovers. However fierce a loyalty the Cause might exact, the simple human heart, North or South, was aware of no impassable frontiers. Hence the strange spectacle of political and military foes pausing in battle to chaff each other, to swap canteens and tobacco-pouches and stories, like neighborhood youngsters in the pauses of a game. And hence the internecine bolts of Cupid, and their value to the romancer.

M. Margueritte has a very different problem, and does not profess to bring it to a happy solution. His scene is Paris in the late sixties. His persons are the Ellangés, a typical French family of the better class, and Otto Rudheimer, a young physician of Hesse. Rudheimer and Marthe Ellangé, the one daughter of the family, love each other, and, against the strong opposition of

her father, are married. For a time she is happy with her husband in his German home, but the war-cloud rises, and his position as surgeon in the army assumes meaning. While Marthe is visiting her parents in Paris, war breaks out. Two of her brothers fight for France: one is killed, and the other crippled for life. Marthe's feeling of race asserts itself, her passion turns from husband to fatherland. Rudheimer becomes an enemy in her eyes—a conquering and insolent enemy. The child who is born to her cannot draw them together, and becomes a bone of contention. Shall the boy be reared as a Frenchman or a German? Is he an Ellangé or a Rudheimer? Otto has the law on his side, of course; and the most favorable end which can be attained is a compromise due to his generosity. The frontiers of the heart cannot be crossed. The tale is told with simplicity and force, under the disadvantage here of an awkward translation.

The Browns. By J. E. Buckrose. New York: George H. Doran Co.

Another pleasant but not especially notable story by the author of "Down Our Street." The Browns are a large family connection descended from a well-to-do shipowner of Flodmouth. The mainspring of the action is the burning of a will under conditions which, to be sure, lend even that feat a touch of freshness. A spinster of the Browns is expected to leave her money to her niece, Margaret. Margaret is a nice girl, but covets the legacy for the sake of her mother, who has never been able to gratify her natural taste for "going it." So when the spinster aunt changes her mind, and shows Margaret a new will which leaves everything to a cousin, Gerald Brown, that young lady loses her temper and throws the will into the fireplace. The aunt, instead of calling for the police, smiles amiably, says that it will be easy enough to draw up another, and dies in the night. Thence the plot: Margaret decides to take the legacy secured to her by an earlier will. Young Gerald does not need the money, and her mother and she do. But young Gerald proves to be poor, comes to Flodmouth, embarks in the jam trade, falls in love with Margaret. She hates him because she has injured him, but finally, according to the ideas of justice prevalent in a certain type of fiction, determines that the only way to make up for her fault is to marry him. After a great deal of backing and filling, in the course of which Margaret discovers the startling fact that she loves Gerald, they stand on the brink of marriage, when Margaret finds that she must tell him all. She does.

"I don't care!" cries Gerald, coming up to the scratch like a man. "Whatever you did, I should still love you. If you murdered anybody—I should hate it—but I should still love *you*."

This, in a sterner sort of fiction, might be the starting-place of the real action. We should be shown how Gerald's faith in Margaret had been sapped—how, after the first blush of married experience, the foundations of their life began to give way—and so on. Mrs. Buckrose is content to "leave it at that."

Mrs. Mahoney of the Tenement. By Louise Montgomery. Boston: Pilgrim Press.

There are fashions in titles, and Mrs. Proper-name of the Wherever-you-like seems now to have made itself secure as a formula beside The Abstract-noun of Whomever-you-please. The one fashion was as plainly set by The Incarnation of Krishna Mulvaney and The Courting of Dinah Shadd, as the other was by Mrs. Wiggs of the Cabbage Patch. Mrs. Mahoney is a pleasant addition to the tribe of missuses. The tenements among which she moves a goddess by virtue of her stalwart and humorous philosophy are her fit setting. And one is grateful for the restraint which protects her humor and sentiment from the grotesque exaggeration with which others of her kind have been handled for the popular market.

Left in Charge. By Victor L. Whitechurch. New York: Doubleday, Page & Co.

Mr. Whitechurch's way of diversifying his contributions to vicarage tea-table literature is to admit an occasional rumor or even personage from the great world—that wicked world so closely bound up with the Flesh and the Devil in the minds of all good churchmen—into some provincial stronghold of ecclesiastical propriety. The daring of this method can be properly appreciated only by those who have been closely confined to the said tea-table by their social and literary tastes. In this instance the intruder is the clergyman who takes charge of a country parish while its elderly vicar enjoys a much-needed vacation. The substitute does not look the parson in the least, being a vigorous middle-aged Englishman of the adventurous, empire-building type. He is explained as having been ordained in Australia, and it is some time before he is identified by an inquisitive rural dean as a man of some social celebrity who years ago had taken off to the colonies a reputation badly damaged in the divorce court. Meanwhile he has established himself in the esteem of his parishioners. Village prejudice has vanished before his practical knowledge and direct, unconventional methods. Over poachers and incorrigible bad boys his influence is markedly beneficent. Even the vicar's daughter, who had expected to manage the parish herself during her father's absence, has come to regard the usurper with admiring confidence. Moreover, there has been a highly mysterious piece of private detective work which saved the vicar's son from wrecking his diplomatic career. As no one but the reader has been admitted into this deep, dark secret, he alone can possibly foresee how little difficulty will attend the explaining away of the rural dean's horrid charge, and the persuasion of the vicar's daughter to accept promotion to the proud rank of clergyman's wife.

Whatever humor inheres in the incongruities of such a situation, the reader will have to extract it for himself. Mr. Whitechurch's style is simple and matter-of-fact beyond the point of virtue. As Gissing said of Trollope, "An admirable writer of the pedestrian school."

ECONOMIC SLAVERY.

The Servile State. By Hilaire Belloc. London: T. N. Foulis.

Substituting "capitalism" for "bourgeoisie," this book reads, in many of its passages, like the "Communist Manifesto" which Marx and Engels published in 1848. Eighty-five years ago it was written:

> The bourgeoisie, wherever it has got the upper hand, has put an end to all feudal, patriarchal, idyllic relations. It has pitilessly torn asunder the motley feudal ties that bound man to his "natural superiors," and has left remaining no other nexus between man and man than naked self-interest, than callous "cash payment." It has drowned the most heavenly ecstasies of religious fervor, of chivalrous enthusiasm, of philistine sentimentalism, in icy waters of egotistical calculation. It has resolved personal worth into exchange value, and in place of the numberless indefeasible chartered freedoms has set up that single unconscionable freedom—Free Trade. In a word, for exploitation, veiled by religious and political illusions, it has substituted naked, shameless, direct, brutal exploitation.

Marx and Engels were here speaking of the decline of the guilds and of the rise of the manufacturing system.

Contrasting the present situation with that under the guilds, Mr. Belloc says:

> For a society in which the determinant mass of families were owners of capital and of land; for one in which production was regulated by self-governing corporations of small owners, and for one in which the misery and insecurity of a proletariat was unknown, there came to be substituted the dreadful moral anarchy against which all moral effort is now turned, and which goes by the name of "Capitalism."

Karl Marx's utterance is more inclusive than Hilaire Belloc's, but not more frank. Marx never made a bolder statement than the one with which the work before us begins. This book is written, declares Mr. Belloc, to prove that our

modern free society, in which the means of production are owned by a few, being necessarily in unstable condition, is tending to reach a condition of stable equilibrium by the establishment of compulsory labor legally enforceable upon those who do not own the means of production for the advantage of those who do. With this principle of compulsion applied against the non-owners, there must also come a difference in their status; and in the eyes of society and of its positive law men will be divided into two sets: the first economically free and politically free, possessed of the means of production, and securely confirmed in that possession; the second economically unfree and politically unfree, but at first secured by their very lack of freedom in certain necessaries of life and in a minimum of well-being beneath which they shall not fall.

Two thousand years ago, we are told, the whole of society reposed upon one fundamental institution—slavery. This institution was everywhere present; nowhere disputed. To the end the pagan world remained a world of free proprietors possessed, in various degrees, of the land and of the capital whereby wealth may be produced, and applying to that land and capital, for the purpose of producing wealth, *compulsory* labor.

There was no pronouncement against slavery as an institution during the early Christian centuries, though it was none the less disappearing. The disappearance begins with the establishment, as the fundamental unit of production in Western Europe, of those great landed estates, commonly lying in the hands of a single proprietor, and generally known as Villæ. By the eleventh century the slave had been converted into the *serf*. He is then nearly a peasant. Among the institutions contributing to the death of the old slavery were the guilds. At the end of this period the state was an agglomeration of families of varying wealth, but by far the greater number owners of the means of production. The restraints upon liberty were restraints designed for the preservation of liberty; and every action of mediæval society was directed towards the establishment of a state in which men should be economically free through the possession of capital and of land. So much, as Mr. Belloc deduces from the rather scanty documents of those times, had ten Christian centuries accomplished. His dictum is that the Middle Ages had instinctively conceived and brought into existence the distributive state.

That excellent consummation, particularly in Britain, was destroyed. In its place arose the "moral anarchy" of capitalism. How did such a catastrophe come about? What turned an England economically free into the England which we know to-day, "of which nineteen-twentieths are dispossessed of capital and of land, and of which the whole industry and national life is controlled upon its economic side by a few chance directors of millions, a few masters of unsocial and irresponsible monopolies"?

The answer to this question constitutes the most interesting and curious portion of the work before us. The answer most usually given, and the one most readily accepted, is that this misfortune came about through the material process known as the Industrial Revolution. Not so, says Mr. Belloc: the explanation is wholly false. It was the deliberate action of men, evil will in a few, and apathy among the many, which produced a "catastrophe as human in its causes and inception as in its vile effect." The industrial system was a growth proceeding from capitalism, not its cause. Capitalism was in England before the industrial system came into being; before the use of coal and of the new expensive machinery, and of the concentration of the implements of production in the great towns. Had capitalism not been present before the industrial revolution, that revolution might have proved as beneficent to Englishmen as it has proved mischievous.

At this point the reader is eager to hear of the event that wrought the greatest catastrophe in the social life of the Anglo-Saxon race. This event was the mishandling of the expropriated wealth of the monasteries in the sixteenth century. The lands and accumulated wealth of the monasteries were taken out of the hands of their old possessors with the intention of vesting them in the Crown—but they passed, as a fact, not into the hands of the Crown, but into the hands of an already wealthy section of the community, who, after the change was complete, became in the succeeding hundred years the governing power of England. Briefly, the monastic lands, at least a fifth of the wealth of the country, were transferred to the great land-owners, and this transference tipped the scale over entirely in their favor, as against the peasantry. By the year 1700 England had already become capitalist.

Yet, after all, we are confronted by a condition rather than a theory. What chiefly interests us is not whether Mr. Belloc is right or wrong with reference to the monastic lands, but what is going to be the outcome of the situation in which the Anglo-Saxon world finds itself to-day. Our author declares that the capitalist state is unstable, that it is a transitory phase lying between two permanent and stable states of society. There are but three social arrangements which can replace capitalism: slavery, socialism, and property. A direct and conscious establishment of slavery as a solution of the problem of capitalism, the surviving Christian tradition of our civilization compels men to reject. All theories of a reformed society will therefore attempt, at first, to leave untouched the factor of *freedom* among the elements which make up capitalism, and will concern themselves with some change in the factor of *property*, signifying, of course, property as the means of production. If you are suffering because property is restricted to a few, you can alter that factor in the problem either by putting property into the hands of many, or by putting it into the hands of none. The first plan is rejected as impracticable by our existing capitalist society. The second plan, which is that of the collectivist state, is the one preferred by reformers. But Mr. Belloc proceeds to show that at its first inception all collectivist reform is necessarily deflected and evolves, in the place of what it had intended, a new thing: a society wherein the owners remain few and wherein the proletarian mass accepts security at the expense of servitude. In short, he deduces for us the economically Servile State.

Yet in conclusion Mr. Belloc declares that his conviction of the reëstablishment of the Servile State as actually upon us does not lead him to any meagre and mechanical prophecy. The force of which he has been speaking is not the only force in the field. "There is a complex knot of forces underlying any nation once Christian; a smouldering of old fires." The example of the free peasantry of Ireland and France may eventually save England and Prussia. And our author is also hopeful that the Faith (meaning thereby Roman Catholicism) will recover its intimate and guiding place in the heart of Europe, and is inclined to believe that this sinking back into our original paganism (for the tendency to the Servile State is nothing less) will in due time be halted and reversed.

Is not this analogous to obtaining money under false pretences? The first chapter of this volume "is written to maintain and prove" the Servile State; the last to disabuse our minds of any fear of such an eventuality. Yet the book is such interesting reading, so novel in its conceptions, so picturesque in its presentations, that we feel that, though the author has not lived up to the precise terms of his contract, he has nevertheless given us an exceptionally valuable consideration for our time and attention.

Chivalry in English Literature: Chaucer, Malory, Spenser, and Shakespeare. By William Henry Schofield. Cambridge: Harvard University (Harvard Studies in Comparative Literature. Vol. II). $1.50 net.

Chaucer's attitude towards chivalry one may define as pragmatic, Malory's as ro-

mantic, Spenser's as esoteric, and Shakespeare's as historic (p. 7.).

Chaucer's chivalry appears innate, an instinctive, ever-present check on growing worldliness, like the religious idealism implanted in a youth by a pious mother, which never ceases to control his life, even after he may have abandoned the beliefs of his boyhood. It is not single-eyed, but steadily prevails in mature judgment, and is always tender and real.

Malory's chivalry reveals more emphasis on outer things. It delights in ritual; it demands adherence to a creed; it is sacerdotal, Anglican. Though it may be rigid and narrow, it stimulates earnest aspiration.

Spenser's chivalry is directed mostly towards the learned and polite. It is combined with book education, intellectual and complex. Albeit too subtle for the common run of men, it appeals persistently to the poetic, imaginative few.

Shakespeare's chivalry is retrospective; but in his works we find the ideals of the Middle Ages reproduced with full comprehension and glorified as guiding stars to human excellence. Shakespeare, with unique genius, widens their sphere, and makes them universal in application, meet for highest or lowest, for keenest or dullest, in this majestic world.

Chaucer presents a standard of conduct for the knight, Malory for the noble, Spenser for the courtier, and Shakespeare for the man. Their pattern figures are contrasted respectively with the coarse churl, the vulgar parvenu, the rude rustic, the common brute. Chaucer exalts worthiness, determining acts; Malory, nobility, accepting obligations; Spenser, worth, procured by self-discipline; Shakespeare, high nature, transforming character. Chaucer says "do"; Malory, "avoid"; Spenser, "study"; Shakespeare, "be" (pp. 262-263).

The foregoing generalizations, clear and apparently true, together with the "Conclusion" that, while French chivalry is exclusive and aristocratic, English chivalry, though largely derived from French, tends to be inclusive and democratic (pp. 267-273)—these in themselves justify the existence of this book. If it contained nothing else, indeed, it would be distinctly more valuable. For it is not so constructed as to support and lead up to its conclusions. (Those about Malory, in particular, are quite unsubstantiated by the chapter on Malory.) Large portions of the book have nothing to do with these generalizations, or with chivalry at all, and are simply padding. But even the relevant portions are so lax and invertebrate that the book as a whole is a weariness. Paragraph after paragraph reads like Newman's schoolboy's essay on Fortune.

The beginning of the book prepares the way for studied irrelevancy. Laying down in the Introduction a definition of chivalry which almost identifies it with Christianity—a concept broad enough, it might be supposed—the author in practice slips, we can hardly think unawares, into concepts still broader, and identifies chivalry with anything that pleases—with truth, for example, or with a lady's agreeable personality, or with a man's way of making himself beloved by his contemporaries. Consequently, nothing in the domain of manners and morals is deemed alien; salutary distinctions are thrown away; and the door is opened to every sort of digression and conjecture. The article on Chaucer is checkered with pointless biographical detail, with avowed guesses, and with irrelevant documents, such as the Balade "Truth" ("Flee fro the prees, and dwelle with sothfastnesse"), which has no connection whatever with chivalry, but belongs with a large class of exhortations to the life contemplative. The article on Spenser exhibits utter lack of sympathy with the poet, and inadequate recognition of the Renaissance elements in his work—the elements that are not chivalric.

Within the limits of a review it is impossible to exemplify further these vagaries, or their parent laxity of structure and concept; the elements involved are too bulky for quotation. We may, however, exhibit a few of the author's minor elegancies:

> [Malory's King Mark] was false, mendacious, mean, a "self-loved personage" with a flowing tongue, a contemptible coward, who ran away from opponents with whom he feared to joust, one of whom all the world spoke shame . . . (p. 165).

> [Posthumus] is strongly contrasted to miserable Cloten, a wrathy, profane, boastful, contemptuous "ass" (p. 233).

> Furthermore, while Chaucer willingly lived all the time in reality, Spenser, it is evident, preferred to roam musingly in pleasing pastures of fantasy (p. 139).

> Before, no one had thought of the courtier as the most likely individual to be ideally all-round (p. 154).

> It shows a strange misunderstanding of Shakespeare's purpose in picturing Falstaff in this light [*i. e.*, as a genuine reprobate] to have critics worry because Prince Hal, when he became king, banished [Falstaff] from court (p. 217).

> Spenser was not the poet of the careless brook or wayward mountain stream. He praised above all the springs of Helicon, while admitting the value of a moral millrace and a gentle moat (p. 159).

And this is a Harvard book, in authorship, and auspices, and imprint. "If gold rust, what shall iron do?"

Henrietta Maria, Queen of England. By Henrietta Haynes. New York: G. P. Putnam's Sons. $3.50 net.

The unusual degree of political prominence attained by women in the sixteenth and seventeenth centuries has resulted in the composition of a multitude of biographies of the queens, princesses, and royal mistresses of that period. The wife of Charles I of England, however, has hitherto received comparatively scant attention, in view of her charming personality, and of the interest that attaches to her tragic career. The "dread unspeakable" with which Catholics and Catholic plots were regarded in the England in which she and her sons lived, has procured for her a verdict less favorable than she has merited in the land of her adoption. In France, she was partly overshadowed by her sister-in-law, Anne of Austria. She missed the historical felicity of a violent death, such as that of Mary Stuart, to whom it is natural to compare her. The author of the present volume attempts to make amends for this comparative neglect, and has produced a work which, in addition to being very readable, is far more sane and scholarly than the vast majority of the lives of royal ladies which have poured forth from the presses of England and America in such wanton profusion during the past ten years. Miss Haynes's political judgments are unusually sound; and she has successfully resisted the temptation to magnify and exalt her heroine:

> Had she [Henrietta] been a Protestant, and a woman of profound sagacity, she might have saved her husband. As it was, by her reckless defiance of forces whose strength she was unable to appreciate, she hurried him to his doom. She lived at a great moment, and had no greatness to meet it. Herein alone is her condemnation. She has received more than her fair share of blame, for she has been made the scapegoat of Charles's faults.

This is sane and sensible; and there are remarkably few minor slips. One cannot but regret the appearance in the preface of that increasingly frequent solecism, "a bibliography of the sources." One wonders how the "Parliament ships" could be "shelling" a Yorkshire village in 1643 (p. 203). It was on Charles's way *to* Madrid, not on the "return journey," that he first saw Henrietta. Errors like these, however, do not seriously detract from the value of the work as a whole.

Henrietta Maria became the bride of Charles I of England at the age of fifteen. The first few years of her wedded life were unhappy, owing chiefly to the impossibility of fulfilling the conditions contained in the marriage contract; but afterwards the young Queen succeeded in completely winning the heart of her very difficult husband; the earlier troubles were forgotten, and the royal pair passed on through the ten years previous to the outbreak of the Civil War, for the most part blissfully unconscious of the gathering storm. Up to the opening of the struggle Henrietta had advised Charles to conciliate the popular party; she even urged him to summon the Long Parliament. But when the first doings of that memorable assembly aroused her to a true appreciation of the state of affairs, she changed her tune, and became thenceforth an advocate of no compromise. "Go, poltroon, and pull the ears of these

rogues, or never see me again," she scornfully called after her husband, when he departed on his ill-fated attempt to arrest the five members; and from that time onward she became one of the most active and energetic of the royal party. The tragedy of Whitehall terminated her efforts. "He perished for lack of knowing the truth," as Henrietta, with a rare flash of insight, once said of her husband.

From that time onward Henrietta Maria virtually disappears from the political scene. The last twenty-five years of her life were spent for the most part in France; and the purchase and furnishing of a new home for the Nuns of the Order of the Visitation—the beautiful mansion of Chaillot—were her chief occupation and delight during this period. The end came in September, 1669, while the glories of her nephew, Louis XIV, were still untarnished by defeat; before the clouds which were soon to settle about the throne of her English sons were visible to the world at large. She was doubtless happy in being spared the humiliations of the houses of Bourbon and Stuart which the near future was to bring with it.

The Story of the Renaissance. By William Henry Hudson. New York: Cassell & Co. $1.50 net.

In this short book a vast and complicated subject is, in the best sense, popularized: a very large number of scattered phenomena are marshalled under a few easily comprehensible generalizations. These, naturally, were for the most part made long ago by Michelet, Burckhardt, Pater, and others; nevertheless, the present work has the air less of a compilation than of a synthesis. The time-honored generalizations about the Renaissance have here passed through a studious and thoughtful mind possessed of a strong historical sense, and out at the point of a pen uncommonly skilled in presenting complex material in simply constructed and well massed paragraphs. In the process the old ideas and the old facts have gained new interest and suggestiveness.

Strong on the historical side—the chapter on the Reformation in particular is an extraordinary piece of illuminating condensation—the book still needs strengthening at several points lying chiefly in the domain of literature and the fine arts. It fails to give the impression that the author has been in immediate contact with the books and pictures of which he writes: in appreciation, and in all that depends upon appreciation rather than upon plain history, it is thus inadequate. It fails also to employ certain important and perfectly accessible facts and generalizations supplementary to the old ideas: thus it omits not only matter of interest to the specialist, but matter essential to a general introduction.

For example, though emphasis is continually laid upon the "emergence of the individual" as one of the characteristic phenomena of the Renaissance, yet some of the most significant phases of this emergence are totally neglected. Machiavelli is mentioned only *apropos* of religious corruption (pp. 84, 86), and of his "Mandragola" (p. 227). Nothing is said of "The Prince"! Nothing is said of that Machiavellian theory of personality (*virtù*) which so powerfully affected Marlowe and Shakespeare. Marlowe, indeed, appears only as introducing blank verse into the "romantic drama" (p. 245) and as personally erratic (p. 257). Castiglione's "Courtier" is mentioned (p. 71), but without a hint that it has any significance in the history of the novel; or that it is only the most distinguished of a long international line of courtesy-books, all bent upon the cultivation of the individual; or that this whole tendency is part of the change from the decentralized hierarchy of feudalism, in which the knight was sunk, to the centralized despotism of the court, from which the courtier emerged.

So Du Bellay's "Deffence et Illustration de la Langue Françoyse" appears (p. 235) as an isolated phenomenon, whereas it was part of an international movement for the cultivation of the vernacular tongues—a movement begun by Dante's "De Vulgari Eloquentia," and merely continued by the Pléiade and the Areopagus.

Again, though emphasis is likewise laid upon the *secularization* of human activities—the rediscovery of this world and of man—nothing whatever is said of one of the most striking innovations that it brought about: the re-introduction of the pagan idea of Fame, or immortality on earth, in the place of spiritual immortality in a world hereafter. It would be difficult to overestimate the effects, upon morals both theoretical and practical, and upon art and literature, of this change to a purely human or social sanction for conduct. Certainly no general introduction to the Renaissance should omit all consideration of these effects.

It is Mr. Hudson's too close adherence to this very doctrine of secularization that deadens his treatment of the fine arts. Here he apparently follows Symonds, who also professed to be chiefly interested in the relations of the arts to the expression of religious feeling or dogma, and more particularly in "their gradual emancipation from ecclesiastical control" (Symonds, "The Fine Arts," Preface). But Symonds's work was that of an enthusiast writing face to face with an object, and kindling with its beauty. Mr. Hudson's present work looks merely doctrinaire. Can one who writes of Fra Angelico, "He has no dramatic instinct or power of characterization" (p. 182), have beheld with his own eyes the Crucifixion in San Marco (Florence) or St. Laurence and the Jailer in the chapel of Nicholas V in the Vatican? Can one who writes of Giotto, "We do not value his work for . . . constructive skill, nor for ideal beauty" (p. 178), have looked for an instant upon the Funeral of St. Francis or the Apparition of St. Francis to St. Anthony of Padua, or the panel of St. Louis of France, in Santa Croce, or upon the Angel at the Tomb in the Arena Chapel? Can one who writes that in Ghirlandajo "genuine religious feeling has vanished or is fast vanishing" (p. 190), ever have made pilgrimage to the shrine of the little Santa Fina at San Gimignano? Perugino's later religious paintings are "all alike steeped in the spirit of vapid emotionalism" (p. 201); Michelangelo's David is "simply a splendid type of Greek athlete," "his formidable Moses . . . 'half prize-fighter, half-Jupiter Tonans'" (p. 200); and so on. The explanation of this obtuseness is apparent in Mr. Hudson's *parti pris*, that as art grew great it grew irreligious. "The thought of the artist is now concerned primarily, not with the doctrinal bearings of his subject, but with its pictorial effects" (p. 190). As if "doctrinal bearings" were the same as religious content; and as if religious content were impaired by the painter's attention to "pictorial effects." On the whole, that stimulating and suggestive quality which has been noticed in other parts of the book, quite fails in the domain of art—the very domain in which the Renaissance made its greatest gift to posterity.

Finally, this over-emphasis upon the secularization of art is but part of a general over-emphasis upon the differences between the Middle Ages and the Renaissance. When space is limited, a clear distinction between two periods cannot easily be drawn without some exaggeration. Here the tendency has been to insist too much upon the ways in which the Renaissance cut loose from tradition. As the Middle Ages were *par excellence* the ages of binding tradition, the temptation was strong to exaggerate what the Renaissance accomplished by discarding tradition. The other side of the case is the weightier. Humanism itself is precisely an active interest in "whatever has interested mankind," an interest which respects and studies tradition, follows it, adds to it, transmits it. Certainly, no general account of the Renaissance can afford to underestimate what the Renaissance accomplished by working within tradition, especially in art, where tradition is of paramount importance. The point need not be labored here. Mr. Hudson's neg-

lect of it renders his book seriously misleading, and, no less than the *blasé* and patronizing tone of the chapter on art, decidedly impairs its value for the student. For the student, too, there should have been added a comprehensive bibliography; which should on no account be omitted from a second edition.

Notes

Alfred Noyes's poetical "Tales of the Mermaid Tavern" is promised for next month by Stokes.

The same house will bring out shortly "Pedagogical Anthropology," by Maria Montessori, and "The Kingdom," a story by Harold Elsdale Goad.

Henry Holt & Co. are issuing at once "A Downland Corner," by Victor L. Whitechurch.

March 15 is the date set by Houghton Mifflin for the publication of the following: "The Invaders," a novel by Frances N. S. Allen; "The Story of my Boyhood and Youth," by John Muir; "The American Child," by Elizabeth McCracken; "In Beaver World," by Enos A. Mills, and "Youth and Life," essays by Randolph S. Bourne.

The same house announces for early publication the following educational books: "Preparing for Citizenship," an elementary text-book in civics by William Backus Guitteau; "Representative Cities of the United States," a geographical reader by Caroline W. Hotchkiss; "The Japanese Twins," by Lucy Fitch Perkins; "Problems of Educational Readjustment," by David Snedden; "The Kindergarten," by Susan Blow, Patty Hill, and Elizabeth Harrison; "The Second Book of Stories for the Story-Teller," by Fanny E. Coe; "Newspaper Writing and Editing," by W. G. Bleyer; and the following additions to the Riverside Literature series: "Selected Lyrics from Wordsworth, Keats, and Shelley," edited by Charles Swain Thomas; "Selected Lyrics from Dryden, Collins, Gray, Cowper, and Burns," the same editor; "Two Speeches on Copyright," by Thomas Babington, Lord Macaulay; "The Address at Cooper Union by Abraham Lincoln," edited by Edwin L. Miller; "Southern Poems," edited by Charles W. Kent; "College Life," by Le Baron Russell Briggs, and "Selections from the Prose Works of Matthew Arnold," edited by William S. Johnson.

Forthcoming fiction in the list of Doubleday, Page & Co. includes: "Laddie," by Gene Stratton-Porter; "Virginia," by Ellen Glasgow, "The Mating of Lydia," by Mrs. Humphry Ward; "An Affair of State," by J. C. Snaith; "The Joy Bringer," by Grace MacGowan Cooke; "Port of Adventure," by C. N. and A. M. Williamson; "The Legend of Jerry Ladd," by Roy Rolfe Gilson; "Ever After," by Juliet Wilbor Tompkins; "Mrs. Red Pepper," by Grace S. Richmond; "The Dream Girl," by Ethel Gertrude Hart; "Pete Crowther, Salesman," by Elmer E. Ferris, and "Addison Broadhurst, Master Merchant," by Edward Mott Woolley.

Included in Doubleday, Page's non-fiction announcements are the following: "Letters to Unknown Friends," by Lyman Abbott; "Retrospections of an Active Life," by John Bigelow, the concluding volumes, IV and V; "Crowds," essays by Gerald Stanley Lee, and "Our World: New World-Life," by Dr. Josiah Strong.

F. G. Browne & Co., of Chicago, have in press: "Bugles of Gettysburg," by Mrs. George Pickett; "East and West," by Mrs. Conger; "Our Neighbors—The Japanese," by Joseph King Goodrich, and a reissue of Francis Fisher Browne's "Everyday Life of Abraham Lincoln."

The Albanians, who, more than a million strong, are now struggling for their independence, differ in one respect from all other European peoples, according to Dr. Hugo Grothe. After describing in *Die Erde* for February the different races of which they are composed and their habitat, with much of their history, he calls attention to the fact that they have no written language and that attempts even to make an alphabet acceptable to all have been unsuccessful. The language with which the northern races communicate with the outside world is mainly Servian; that in the south is Grecian. As most of the instruction is given in Greek, this will probably be the language adopted by the coming principality.

Four out of the five volumes given to fiction in the latest instalment of Everyman's Library are devoted to the Russians—Tolstoy with "Anna Karenina" in two volumes, and Dostoievsky with "Crime and Punishment" and "The House of the Dead." "Don Quixote" appears in Motteux's version. Other volumes are Eugene Mason's translations from the "Lays of Marie de France," three comedies from the Norwegian of Björnstjerne Björnson, the Anglo-Saxon "Chronicle" translated by J. Ingram, and Irving's "Sketch Book." Of travel and history there are Edward William Lane's "Manners and Customs of the Modern Egyptians," and George Dennis's "Cities and Cemeteries of Etruria" in two volumes. The "Politics of Aristotle" has been translated by William Ellis.

Some of the most striking events of the nineteenth century are recalled by the reissue of two books by the late Henry M. Stanley (Scribner). The Centenary Edition of "How I Found Livingstone" contains an introduction by Robert E. Speer, reviewing the work of Livingstone and Stanley, and what has followed in Africa since they so dramatically centred the attention of the civilized world upon that continent. The present edition of "In Darkest Africa" combines the original two volumes into one. The result is a rather bulky book. Both works are profusely illustrated. Being planned as a day-by-day account, each of them is enormously overloaded with detail, and this feature is made worse by verbosity. Self-consciousness also stands out unmistakably. Nevertheless, as the authoritative records of the expeditions sent out in behalf of Livingstone and Emin Pasha, they have an undeniable place in the literature of exploration, and an interest which their present form will make available to an enlarged audience.

The Clarendon Press has done well to issue in English form "Keble's Lectures on Poetry, 1832-1841," in two volumes. John Keble brought to his post of professor of poetry at Oxford something of the chastened high-mindedness which Milton thought essential to all true poets. He constantly gives the impression of regarding the study of great literature as an inspired function. We need not bother to weigh anew the truth of his theory of *vis medica poeticæ*—used as a point of departure for the lectures—namely, that poetry is "a kind of medicine divinely bestowed upon man: which gives healing relief to secret mental emotion, yet without detriment to modest reserve; and, while giving scope to enthusiasm, yet rules it with order and due control." It does not impair for the modern reader the author's very genuine appreciations. What is particularly striking to-day is Keble's large grasp of literature, as well as his ingenuity in extracting a probable meaning from difficult details. One will look far to find other studies of classical literature containing quite Keble's steady enthusiasm and exalted purpose. Mr. Edward Kershaw Francis, who has made the translation from the Latin, has succeeded, if our few comparisons with the original text are typical, in attaining literal accuracy without endangering the English idiom. In the case of Keble's quotations from Greek and Latin poetry, Mr. Francis has sought out the best available English translations.

Perhaps too many books about the Panama Canal have been written by people who spent only a brief period in the vicinity of the great enterprise. "The Story of Panama" (Silver, Burdett), by Frank A. Gause and Charles Carl Carr, is noteworthy inasmuch as it is the work of men who live in the Canal Zone as Government school teachers, and have a share in the work of the canal builders. Their story is a straightforward description of the principal features of construction, and an account of the administrative organization which Col. Goethals and his assistants have brought to so high a state of efficiency. They give a brief history of the canal project, and do not omit the romantic tale of old Panama, where Spanish adventurers and English buccaneers fought for gold and the love of fighting. The book is generously illustrated, and there are several diagrams of construction problems.

When Dr. F. C. S. Schiller is not writing new books, he is busy getting out new editions of old ones. The third edition of "Riddles of the Sphinx" appeared in 1910, the second edition of "Studies in Humanism" followed it not long ago, and now we have a second edition of "Humanism" (Macmillan). The only important change made in the book consists of the addition of four essays which appeared in various periodicals some five or six years after the publication of the first edition. Of these the two most significant are an admirable paper on "Freedom and Responsibility" and an interesting discussion of "Solipsism," the chief effort of which is to show that the New Realists are the true Solipsists, an attempt which may remind the reader of the remark said to have been made by the pot to the kettle.

When the first edition of "Humanism" was published, ten years ago, the pragmatic movement was in the full strength of its young life. It was the one absorbing topic of discussion in the philosophic world; many of its opponents saw in it nothing but evil, and many of its adherents hailed it as the key to most of the mysteries. As is so often the case with new movements in philosophy and elsewhere, neither the

disciples nor the foes have been completely vindicated by time. Pragmatism, humanism, experimentalism (call it what you like), has fallen into its appropriate place in the background and no longer occupies the centre of the stage. Doubtless, this is in part due to the death of William James, but the chief cause is the fact that the pragmatic movement has done its work and that its ideas, though of real value, have not proved so fruitful as its first apostles prophesied. It is, perhaps, significant that at the last meeting of the American Philosophical Association pragmatism was scarcely mentioned. But the fact that the centre of interest has shifted to other fields does not mean that pragmatism and humanism have altogether failed. They have succeeded in making philosophers reexamine their problems. They have broken down the cocksureness and self-satisfaction of the monism and intellectualism that ruled in pre-pragmatic days. And they have furnished a concrete method of criticism which philosophy will probably always value. Their contribution is thus largely negative, but is none the less real.

It is rather unfortunate that a movement which has after all no great superfluity of positive ideas should insist on having such a superfluity of names. Possibly "pragmatism" was not in all respects ideal, but it was at least very preferable to "humanism," which (to paraphrase what James said of pragmatism) might be called an old name for some new ways of thinking. Humanism would have been suitable enough if the term had not been for centuries in common use as the accepted designation for a philosophical movement which resembles in no respect Dr. Schiller's discovery. And to appropriate this good old word to a new use and so make it quite ambiguous adds needlessly to the already sad muddle of our philosophical terminology.

The usual collection of Indian myths, stories, and folk-lore published for the general reader shows the hand of the sympathetic gatherer and reflects the idealizing quality of his, usually her, work. This is happily not so with Jeremiah Curtin's posthumous book, "Myths of the Modocs" (Little, Brown). The scientific folk-lorist will find here a valuable mine of material on these Oregon Indians, and the general reader will gain a true picture of the vigor, the realism, the simplicity, and the charm of the mythical beliefs as told by the Indians themselves. The myths form a complete cycle, giving the native explanation of the creation of the world and the birds, the beasts, and the fish in it, together with the origin of virtually all the natural phenomena within the Indian's range of observation. Mr. Curtin has performed a valuable service in rescuing before it was too late this valuable store of aboriginal beliefs. This collection could not be duplicated at the present time among the Modocs. The year is fast approaching when it will be impossible to gather such a collection of myths among any of the Indian tribes.

Putnams publish in attractive form "Indian Pages and Pictures," a lively account by Mr. M. M. Shoemaker of his recent journey through India and Kashmir. The writer, an observant traveller, has given us a book well worth reading for its sympathetic rendering of the local atmosphere. Much of the ground he traversed, lying along the customary tourist route, has already been frequently described. Here he adds but little beyond the casual remarks of a keen-eyed American. In the Vale of Kashmir, however, he enters upon a field but slightly touched to gather and relate much that is interesting. While very successful in the general effect of his pen pictures, done with a bold, free hand, he is, at times, inaccurate in details. Did he really see "red-coats" in the Khyber Pass, which is guarded by khaki-clad natives of the Khyber Rifles? What authority has he for stating that "Under the Hindu kings these [Kashmiris] were more prosperous and hence happier than they have ever been"? Despite his strictures, the dredging of the Jhelum River at Baramula, ably conceived and admirably executed, saved the Vale of Kashmir this last summer from the disasters of the annual flood. The worst famine ever known in Kashmir was due to this cause, now forever a thing of the past. Moreover, electric lighting is common throughout the European quarter of Srinagar, thanks to the American plant at Mohara, which he so utterly and unjustly condemns as "graft." Those who contemplate following in Mr. Shoemaker's footsteps can do no better than to study his narrative, together with the photographic illustrations, to obtain a faithful general view and numberless helpful suggestions. A good index is provided.

"The Social Policy of Bismarck" (Longmans), by Annie Ashley, is a critical study of the origin and social character of the three great German measures for workingman's insurance against sickness, accident, and old age and invalidity. It is a thesis presented to W. J. Ashley in connection with a sensible course in Public and Social Service at the University of Birmingham, which combines theoretical instruction in the university with practical training in the city. The author traces the development of Bismarck's opinions, and shows, from a psychological point of view, how he became such a strenuous and successful advocate of the ideas of the "Socialists of the Chair." She also recalls the curious fact that, almost immediately after his retirement, Bismarck turned around and attacked the very acts which owed their existence chiefly to his own insistence; he even denied his personal responsibility, professing to have given only a lukewarm adherence to the insurance measures which he had forced through the Bundesrat and Reichstag. This change of face was, however, rather a sign of the chagrin and pessimism which were perhaps the not unnatural consequence of his dismissal from office than a well-reasoned judgment based upon observation of the workings of the measures. After explaining briefly the main provisions of each of the three insurance acts, Miss Ashley considers their good and bad features from a sociological point of view (so far as the experience of quarter of a century permits the drawing of conclusions), and finds that the advantages have greatly outweighed the disadvantages. She also draws some interesting comparisons between the German and the recent English insurance legislation, emphasizing in the English measures the English dislike of bureaucratic interference and the consequent larger scope for individual initiative in the administration of the funds provided for in the English act. Being her father's daughter, Miss Ashley brings to her study a somewhat philosophic turn of mind and some power of literary presentation.

"The Holy Christian Church from its Remote Origins to the Present Day" (Houghton Mifflin), by R. M. Johnston, is an interesting attempt on the part of a secular historian to recount in brief and summary fashion the rise and development of the Christian Church and to estimate its place in the history of the Western world. The following passage from the introduction indicates the purpose and at the same time some of the inevitable limitations of the book:

> The object of this book is chiefly to attempt coördination, to seize the proportions, the relations, the movement, the essential facts of Christianity as seen over a period of more than two thousand years over nations that stretch from Kashmir to California, over civilizations as wide apart as those of the age of Pericles and of Napoleon, of Gnosticism and of the Trusts. As these words are written, the effort seems almost foolhardy.

The author's own attitude towards the church whose history he recounts is perhaps sufficiently revealed by the closing sentences of the volume:

> From that day [the Protestant Reformation] to our own the generations are not many, yet they have witnessed changes so momentous that to-day we have reached a point whence we can look backward and trace with reasonable accuracy and charity the birth, rise, height, and decline of the Christian Church. Precisely what stage that decline has reached it is not yet possible to estimate.

The book is vigorously and dramatically written, the positions taken are often fresh and suggestive, and many of the author's judgments are sound enough, but unfortunately the pages are disfigured by frequent blunders and inaccuracies, for which even the disarming passage quoted above hardly prepares the reader. The errors are due in part to a lack of familiarity with the subject in hand, perhaps not unnatural in one whose studies have lain chiefly in another field altogether, in part to a dependence upon antiquated authorities against whom it should seem the author might easily have guarded himself. The Synoptic Gospels, we are told, are now referred by most scholars to the authorship of Luke! The Emperor Constantine is said to have adopted Christianity in the year 312, and to have proclaimed it the state religion in 324. The Arian controversy is misinterpreted, and the origin of the Nicene and Athanasian creeds is incorrectly stated. The explanation of the spread of Christianity within the Roman Empire is quite inadequate, while the Imperial persecutions are over-emphasized and receive a significance that did not attach to them. Decidedly too much is made of the millennial expectations of the Christian world in the year 1000. The later mediæval church is painted in colors too uniformly black, and the impression is left that moral considerations had a great deal more to do with the Protestant Reformation than was really the case. Undue weight is given to the recent denial of the historical reality of Jesus, when it is said that present-day scholarship appears to be inclining in that direction; but the author assumes for himself, though doubtfully and "with some reluctance," that the Jesus of

Christian tradition really existed, and singularly enough gives a far more intelligent account of his teaching and work than of Paul's, whose Christian beliefs he entirely misunderstands. His treatment of pre-Christian Judaism and Hellenism seems disproportionately long, and in his effort to show the influence of outside cults upon Christianity, he has given an unwarrantable amount of space to them. The tendency is not unnatural, in view of the widespread neglect of such factors in most books on church history, but it has been somewhat overdone in the present case.

Interesting material for a study of the curious psychology of one of the beautiful butterfly creatures of the Ancien Régime who lived on through the French Revolution and Empire is contained in "The Memoirs of Delphine de Sabran, Marquise de Custine" (Doran). Married at seventeen to the son of the great Custine, twice a mother at twenty, and deprived of most of her relatives by the guillotine or by emigration shortly afterwards, Delphine de Custine nevertheless preserved for many years a charming beauty, and a naïveté and lightness of heart, which continued to win her a multitude of admirers from all ranks of society. When she pleaded with the judge for the life of her noble father-in-law and was in danger of being torn to pieces as an aristocrat by a sans-culottic mob, she saved herself by the pretty way she kissed and held the babe of a fishwife. She was cast into prison as a "suspect," but escaped condemnation owing to the devoted admiration of a clerk in the Revolutionary Tribunal; every day for weeks he carefully placed the papers relating to her case at the bottom of the pile so that Fouquier-Tinville never called her case for trial. With natural simplicity and goodness of heart, whether in sorrow or pleasure, she continued to pour out her heart in long letters to her mother and brother who had emigrated to Prussia. These letters, extending over more than a quarter of a century, from the opening of the Revolution until after the fall of Napoleon, have been largely preserved, and, under the good editorship of M. Gaston Maugras, constitute the main part of these "memoirs." They are singularly silent about all the great political events which crowd these years, but are full of the doings and feelings of the pretty heroine of a novel such as she imagined herself to be. Among the more notable of her admirers were Fouché, who extended to her his protection while he was Minister of Police, and Chateaubriand, who visited her many times both in Paris and at her country estate, but who cast her into the depths of despair because his attachment did not rise to the level of her romantic love for him.

An English version of Professor Legouis's "Chaucer," accurately made by L. Lailavoix, is most welcome (Dutton). In its original form, published about two years ago, the book provided, with the least possible scholarly apparatus, an engaging and lucid introduction to the whole works of the poet. Its analyses were delicate and its criticisms penetrating; not the least among its merits was the striking way in which Chaucer was set off against the background of the French poetry of the fourteenth century, to which his indebtedness becomes daily more apparent. The fault of the book lay in its neglect of many recent important, chiefly American, contributions to the subject. But for this Professor Legouis has amply atoned in the present translation, which, by reason of his additions and revisions, becomes more useful and authoritative than its original. Specimens of Professor Legouis's felicitous renderings of Chaucer's verse into French are printed in an appendix, and a preface by the translator seeks to justify French literature against the charge of having neglected Chaucer.

The fact that the "Mémoires de Fouché" are not Fouché's—as a result of a suit instituted by the family soon after the first publication of the memoirs in 1824, they were judicially determined to have been composed by one Alphonse de Beauchamp—does not seriously detract from their interest or value. For Beauchamp, who had held a subordinate position under Napoleon's crafty and almost omnipotent Minister of Police, unquestionably based his suppositious memoirs upon Fouché's own notes and authentic papers to which he had had official access. Under the more accurate title of "Memoirs Relating to Fouché," they have been published in an English translation, good except for the annoyingly frequent use of the split infinitive, in the Court Series of French Memoirs (Sturgis & Walton).

The voluble Mr. Edward Hutton's latest book on Italy is "The Cities of Lombardy" (Macmillan), one of those combinations of guide book and impressions of travel of which the late A. J. C. Hare set the fashion and was so much the best compiler. Mr. Hutton gives a short historical survey of Lombardy and of each of the chief cities, among which he includes Milan, Pavia, Monza, Bergamo, Mantua, Cremona, Piacenza, Parma, Reggio, and Modena. He writes with more restraint than in some of his earlier volumes, but we do not feel that he is really well grounded in either history or the arts. Even in writing, he is not careful—witness his frequent application of the epithet "virile" to Bergamo, which, nevertheless, he persists in calling "she." His lusty hatred of the Germans leads him to speak of Radetzky's "truly German nature"; whereas the doughty marshal was in fact a Slav, born of a noble Bohemian family. Mr. Hutton's criticism of painters is erratic, as this suggests: "Luini, the subtle sensualist whose eyes are brimming with tears, who smiles and smiles at himself, considering his likeness to Leonardo, who has tried to express everything pretty in self-admiration and self-pity." The last "who" ought, grammatically, to refer to Leonardo, but Mr. Hutton probably intended it for Luini. After all, however, travellers who like this sort of a book will find it wonderfully adapted to their taste and intelligence. Mr. Hutton closes with Canossa, for the evident purpose of describing the humiliation of the Emperor by the Pope, "the most perfect expression of that Europe out of which we are come and to which we shall return." In mistaking the past for the future, and in identifying his private religious zeal with that of all Europe, Mr. Hutton simply imitates certain perfervid English converts to Romanism. So the Three Tailors of Tooley Street imagined themselves to be "We, the people of England." The book has two dozen half-tone and three-color illustrations.

Science

Field Days in California. By Bradford Torrey. Boston: Houghton Mifflin Co. $1.50 net.

The author of this book, who died at Santa Barbara, California, last October, will long be remembered as the most genial of American writers on nature. Shortly before his death he had prepared for publication what was to prove his final book—a volume of essays dealing mainly with bird-life in California, but including also a chapter on the Grand Cañon and a delightful essay on "Reading a Check-List." It is by no means a superfluous addition to Mr. Torrey's work; though inferior to some of his earlier books in firmness of style, it is at the same time clearly superior in vivacity and mellow wisdom. Here is a man who spent his days in bringing his "twelve-power glass" to bear on birds that most of us have never seen and never shall see, who has related his ornithological experiences, however trivial, with unflagging persistence—admitting few landscapes and fewer human beings—and who has yet contrived to give us entertainment of an unusual quality.

As in the case of Gilbert White's letters, Mr. Torrey's essays derive their chief value from the writer's agreeable personality. "With a pleasing mixture of humanity and ornithology, which really go well together, a fact that speaks well for both of them," he takes the reader along a California beach, or under the redwoods, or into the Yosemite, and gossips intimately with an unerring perception of the significant and diverting. Here, for instance, is his water-ouzel:

> A dark-colored bird flew from under the bridge close to the water, anon dropped into it, swam, or was carried by it, a yard or two, took wing again, again dropped into the current, and then came to rest upon a rock on the water's edge. There it stood for half an hour, a great part of the time on one leg, preening its feathers, yawning, and, what was worth all the rest, winking, till its eye looked like the revolving lamp of a lighthouse, I said to myself.

When he has been privileged to the extent of beholding a condor—"If there had been nobody near, I believe I should have shouted." In the Grand Cañon, which reminds him, properly enough, of the land of Kubla Khan, his eye is attracted by a strange bird—"and in one moment the cañon was a thousand miles off." Yet he is ready to assert that "after all, a man, if he be half-way decent and reasonable, is of more value than many sparrows."

Throughout the book, Mr. Torrey's na-

tive New England is mentioned parenthetically: "Dear old New England! say I. Dear old New England! For me there can never be any other part of the world to compare with it." When he eats a Carmel apple, he has a "hankering for a tart New England russet"; the manzanita bushes remind him of the mayflower, "sweetest of all blossoms"; California needs "one dear Massachusetts brook, to make the charm complete." In the concluding essay—"A Bird-Gazer at the Cañon"—are some casual remarks which suggest that the author's affection for the quiet countrysides of the East is not merely a matter of sentiment. Like many others who have sought to live on intimate terms with nature, Mr. Torrey feels a sense of alienation in the presence of the stupendous. After giving the Grand Cañon a fair trial, he questions "whether it lay within the power of this barbaric display of shape and color ever to evoke those deeper, tenderer, more serene and blissful moods of rapturous contemplation, such as, ever and anon, when the time is right, descend upon the waiting soul, responsive to the still, small voice of the commonest and most familiar of humble landscapes."

Mr. Torrey's experience thus points once more to the fact that nature, if she speaks at all, speaks when she pacifies, not when she excites. Wordsworth, Thoreau, Mr. Burroughs, and others who have sought to win from companionship with external nature an answer to inward questioning, have usually preferred gentle landscapes to the somewhat repellent austerity of high mountains, and have uniformly found illumination only in serenity of spirit. The romantic love of nature in her more savage aspects has ordinarily brought intoxication rather than insight; only the lifelong dweller among lofty mountains has found their sublimities fruitful, and he has found them so because they enveloped him in tranquillity, not because they evoked a passionate and nameless desire.

A total eclipse of the moon occurs in the night of Good Friday, March 21, extending into Saturday morning, still Friday to the astronomer; and with dawn in the Eastern States the eclipsed moon is setting due west. It is a curiously appropriate time for such a darkening, on the saddest date in the church calendar, and the coincidence will not happen again until 1978. Easter being the Sunday immediately following the ecclesiastical full moon of, or next after, March 21, this festival falls the present year on the 23d, the earliest day but one possible. In 1818 it actually occurred on the 22d, but has never been so early since, and will not come either then or on the 23d again in this century. A moon's eclipse is caused by the entrance of our satellite into earth's shadow, whose breadth where the moon passes through is nearly three times that of the moon herself. Her motion round the earth is such as to carry her through a space of 2,000 miles, nearly equal to her own diameter, in about an hour. When travelling centrally through the shadow, the moon will consume rather more than an hour in becoming immersed, and will then remain nearly two hours totally eclipsed before she begins to emerge. Towards the end of the fourth hour she will again be entirely clear of the shadow, shining as full moon again. Many superstitions cluster about lunar eclipses, though fewer than pertain to darkenings of the sun. To the ancients lunar obscurations were vastly more interesting than solar eclipses, as may be inferred from Plutarch's "De Facie," a quaint dialogue which could have been attributed only to believers in Luna's close connection with life and death, and with the spirits thought to watch over human destinies. Savage tribes are greatly terrified at both lunar and solar eclipses. The former are not so valuable scientifically as those of the sun, but from them much is learned about the motion of the moon, and her size, shape, and distance from us. Also they have been of use to historians in fixing dates of important occurrences hundreds and even thousands of years ago, because it is quite as simple to calculate backward to long-past eclipses as it is to compute those of the future. Thus the lunar eclipse of March 13, B. C. 4, settles the date of Christ's birth, which preceded the death of Herod by a few weeks, and that occurred soon after a lunar eclipse identified by chronologists.

Oscar Dana Allen, professor of metallurgy and analytical chemistry at Yale University from 1871 to 1887, died last week at his home at Ashford, Wash. He had written extensively on the flora of Mount Tacoma.

Alfred-Maurice Picard, formerly Minister of Marine in the French Cabinet and a member of the Academy of Sciences, died in Paris on Saturday, aged sixty-eight. He was the delegate of the French Government to the World's Fair at St. Louis. During the Franco-Prussian War, he was the chief of the Engineer Corps at Verdun. Later he was appointed Inspector-General of Bridges and Roadways, and received the cross of grand officer of the Legion of Honor.

Drama

The Commedia dell' arte: A Study in Italian Popular Comedy. By Winifred Smith, Ph.D. (Columbia University Studies in English and Comparative Literature.) The Columbia University Press. New York: Lemcke & Buechner. $2 net.

Miss Smith's thesis is a comprehensive discussion of the most picturesque and the most widely interesting of the minor dramatic *genres:* the special type of comedy developed by the Italian professional actors of the sixteenth century, and marked by improvisation on the basis of a *scenario*, by the recurring presence of various masked stock characters, and by an inordinate amount of *lazzi*, or rough comic business. Though always popular, the Commedia dell' arte was too merry an outlaw in the dramatic world to win a place in serious literary records. Very little is known about its origin and early development, and the documents of its Italian vigor and its foreign expeditions are scanty and irregular. Studies of particular phases of the difficult subject, though multiplying, have not yet brought knowledge to such a point that the writing of a formal history is possible; but Miss Smith's book is of great value as a more critical and a far more complete survey of the whole field than had previously been made.

Her own most important contribution is her emphasis on the part played by the mountebanks in the formation of the Commedia dell' arte. She notes the enrolment in professional companies of certain men who had been mountebanks, and traces verbal and physical tricks of the old trade in the new comedy. She refers to this relationship repeatedly, but does not organize the material in a single argument: a monograph on just this subject would be well worth while. Indeed, the whole problem of the early development of Italian professional acting still awaits systematic investigation.

The chapter on the influence of the Commedia dell' arte in England, with its corresponding bibliographical appendix, and such other English references as the quotation of Coryat's long passage on Venetian mountebanks, will be particularly welcome to Italian scholars, and Englishmen will find new light on the mountebank scene in "Volpone," and many similar matters. With regard to particular "influences," however, Miss Smith is commendably cautious.

The work is very accurate. The only error of any consequence detected by the reviewer is the assigning of Ariosto's "Cassaria," evidently through a confusion of notes, to 1488, with the related statement that Italian plays modelled on the Latin comedies were represented in the latter part of the fifteenth century. The "Cassaria" is of 1508, and none of the other Latinizing comedies can be regarded with certainty as earlier.

Miss Smith's definition of the Commedia dell' arte by form alone, on the basis that improvisation is its most essential characteristic, is not entirely satisfactory. The Masks are excluded from the definition because they appear also in written comedies, and the *lazzi* because they are to be found on almost any stage of the same grade. But it may be doubted whether the Masks appear in written comedies except as direct importations from the Commedia dell' arte; moreover, the same principle of exclusion would disqualify improvisa-

tion itself, for Miss Smith finds it necessary to admit, in the course of her work, that "improvisation, especially of sharp repartee, topical allusion, and comic *lazzi*, is a universal characteristic of any really popular stage."

The clearness of the presentation is somewhat injured, here and there, by a desire to avoid the appearance of mechanism in order and statement. The gain is more than the loss, however, for the style has a grace and a vivacity that one does not associate with doctoral theses. The book is carefully printed and contains several good illustrations.

Granville Barker is rapidly maturing his plans for his autumn Shakespearean season. As already reported, he begins with a revival of "Macbeth," in which the title-part will be sustained by Henry Ainley and that of Lady Macbeth by Lillah McCarthy. As in the case of his "Twelfth Night" and "The Winter's Tale," "decoration" will take the place of realistic scenery. The designs have been entrusted to Duncan Grant and Norman Wilkinson. "The character of Hecate," Mr. Barker declares, "is spurious and will be eliminated; that of the English doctor, also an interpolation, although probably by Shakespeare himself, may or may not be retained. Apart from this, not a line is to be cut; the tragedy will be presented exactly as it was written."

"Macbeth" Mr. Barker intends to follow with "A Midsummer Night's Dream," staged on the same simple lines. The scenes will be virtually limited to two—a glade in the wood and the palace of Theseus.

The Shakespeare festival at Stratford-upon-Avon will extend from April 21 to May 14. For the twenty-fifth time the performances will be under the direction of F. R. Benson. The birthday revival play will be "Henry IV" (Part II), in which Mrs. Benson will appear.

The veteran Robert McWade died in New York on Wednesday of last week. He was seventy-eight years old, and had been on the stage for sixty years. Never a great performer, he was exceedingly well trained and versatile, and won credit in almost every department of drama. Many years ago he achieved much popularity throughout the country in the part of Rip Van Winkle, but not in the larger cities, from which he was excluded by the greater fame and more exquisite art of Joseph Jefferson.

Music

Mozart's Operas. By Edward J. Dent. London: Chatto & Windus.

Wagner's Master-singers. By Oliver Huckel. New York: Thomas Y. Crowell Company. 75 cents net.

Thirty years ago, if any one had written that the three giants of musical drama were Mozart, Wagner, and Verdi, he would have been hooted at. Mr. Dent does it now with impunity, though there are some, including the reviewer of his book, who would place Bizet, with his "Carmen," on the same level, and who would claim for Weber also the highest rank as an originator; for while his operas do not now appeal to us as deeply as they did to our ancestors, there can be no doubt that he was the father of the modern music drama, Wagnerism having its roots deep down in Weber's soil. Wagner and Verdi are now accepted calmly and universally as immortals, although this verdict was slowly forced on the majority of the professionals by the *vox populi*. As for Mozart, the aged, in the words of Mr. Dent, "think of him as a respected classic, the elderly as a classic much overrated, while the present generation has rediscovered him with a whole-hearted enthusiasm." In Germany there has always been a reverential Mozart cult. In England, and to some extent in France, too, "there certainly is now beginning to flourish an intense and genuine delight in those masterpieces of musical drama which our elders in their first reverential adoration of Bach and Brahms regarded as trivial and insincere."

The only works of Mozart designed for the stage (there are nearly a score of them) that have remained regular "repertory operas," as the Germans say, are "Don Giovanni," "Figaro," and "The Magic Flute." Once in a while, however, a Mozart cycle is given in one of the larger German cities, and this includes, generally, besides the three operas named, "Idomeneo," "Die Entführung," "Cosi Fan Tutti," and "Clemenza di Tito." It is to these seven operas that Mr. Dent devotes most of his 432 pages. Mozart's compositions in other branches of music are referred to casually only, and it is refreshing to find that the author's enthusiasm for the operas does not make him overrate these other productions. He admits frankly, for instance, that the few chamber songs that Mozart produced "represent an even less important side of his activity than the pianoforte sonatas." Some will think he overrates the first two of the operas he discusses, "Idomeneo" and "Die Entführung"; but he gives so many good reasons for his enthusiasm that one ends by believing with him that were these operas properly performed by artists able to bring out all their delicate and expressive details, they would become popular. It has recently been found possible to stage the operas of Gluck in such a way as to hold the attention of modern listeners, and the style of the two works mentioned "is not so utterly different from that of 'Alceste' and 'Armide' as to make it impossible for us to appreciate." Incidentally, the author discusses some of the things which stand in the way of our being affected by these operas just as were Mozart's contemporaries. We are accustomed, for instance, to hearing trombones in almost every piece of music. In Mozart's time trombones were regarded as being outside the ordinary orchestra, and generally suitable only for the expression of ideas connected with the supernatural. When he used them, therefore, as in "Idomeneo" to accompany the oracle, or in "Don Giovanni" when the ghostly stoneman walks on the stage, the hearers were thrilled as we never can be, although the impression made on us, too, is deepened by the fact that the trombones are silent the rest of the time.

But Mr. Dent's volume will be welcomed chiefly for its elaborate analyses of "Figaro," "Don Giovanni," and "The Magic Flute." What distinguishes his analyses from ordinary ones is that he intersperses a multitude of observations and comparisons which emphasize salient points of contrast between Mozart's methods and those of our day. Thus, in commenting on musical scene painting, he says, with reference to "The Magic Flute": "Weber, let alone Wagner, could never have thrown away the opportunities that were offered by the ordeals of fire and water. Mozart prefers to concentrate our attention solely on the psychological aspect of the drama. In this he shows his unerring instinct for the stage." The last line is ridiculous. Mozart had anything but an unerring instinct for the stage; he often went astray almost as widely as Rossini or Donizetti; but we may let this pass as being one of the few instances in the book in which the author follows the custom in vogue among enthusiasts of trying to make weaknesses appear as virtues.

Two of the three "giants of the musical drama" were born just a century ago, and the presses are busy with articles and books relating to them. The latest contribution to the Wagnerian library is Oliver Huckel's curious paraphrase of "Die Meistersinger." It is not a translation of the text, but a free rendering, mostly in blank verse. Not only are the dialogues and the lyrics thus reshaped, but the stage directions also are versified. To those who are familiar with Wagner's poem—which has been adopted as a "reader" in many German schools—some of these changes come as a shock; others may find in this dramatic narrative a welcome introduction to the mediæval German atmosphere.

For the first time in six years Caruso will be a member of the Covent Garden Opera Company the coming season. Melba also will be heard.

Theodore Thomas was the greatest musical educator this country has had, and his

orchestral performances gave comfort and pleasure to thousands. Chicago, in particular, owes him a debt of gratitude which can never be paid. Yet the trustees of the Theodore Thomas Orchestra have decided to change its name to "Chicago Orchestra, Founded by Theodore Thomas." The decision was not revoked when Mrs. Theodore Thomas sent a protest, in which she called attention to the fact that the great leader's orchestral library, the largest in the world, and representing four-fifths of his estate, had been given by his family in the belief that, as a matter of course, the institution would preserve his name and his art standards to future generations. In the programme for the twentieth concert it was explained that the main object in changing the name was "to forestall and prevent the adoption by any other musical organization of the name 'Chicago Symphony Orchestra,' as this would involve endless embarrassment and complication and possibly serious financial loss to the Orchestral Association."

It is interesting to learn that Theodore Thomas's plans for the best kind of a concert hall—which are fully described in Mrs. Thomas's book on her husband's career—proved to be so successful. With the exception of the twenty-five-cent seats in the gallery, the tickets for the Friday afternoon concerts are all sold for the season, and every week there is a demand for single admissions which cannot be supplied. It has not been necessary to advance the price of tickets—although the orchestra's salary list is now $20,000 larger for the season than it was eight years ago.

Art

THE ARMORY EXHIBITION.—II.

The Armory Exhibition shifts bewilderingly day by day through changes of hanging and admission of new pictures. This keeps the interest up, but adds to the difficulties of a critic. In considering the American contributions only the most general treatment is possible. The show is representative only of the extreme left of our art. A mere geographical survey will tell what may be expected. The entrance hall is dominated by George Barnard's colossal group, The Prodigal Son, while on the wall Robert Chanler's clever zoömorphic screens afford a piquant background for the sculpture exhibits. Nervously drawn, fancifully colored, composed on formulas skilfully adapted from the Japanese, these screens are the most novel and interesting feature of the American display. In certain larger screens Mr. Chanler sinks to mere jumboism in design and mere prettiness in color. Jo Davidson's adroit and charming sculpture shares the honor of the floor with Solon Borglum, Aitken, Beach, and a newcomer, Arthur Lee, whose work shows that combination of youthful freshness with archaism which is the present mode. Behind the entrance hall is a gallery containing no less than a dozen Albert Ryders, a fine snow scene by John Twachtman, and a couple of minor pieces by Theodore Robinson. Two nocturnes by Ryder, with the Diana and the Interior of a Stable, represent about the best America has produced in purely imaginative painting. The glamour of this sort of thing is unearthly and exquisite. Arthur B. Davies, who is rather slightly represented in the exhibition by two of the Grecian series, cultivates this vein with more versatility and executive capacity. Without such dreamers an art is poor indeed; with them alone it is not quite rich. These secluded and highly individualized talents refresh, but in the nature of the case cannot provide leadership. Some principle of leadership appears in the tenuously firm work of John Twachtman. It is an austere and fastidious art, refusing the customary compromises. To fill a space with air and not sacrifice significant line and mass, to procure depth without forcing contrast—these were the problems that Cézanne and Twachtman were working at simultaneously in Provence and Connecticut. It was possibly only the chance of too early death that prevented Twachtman from reaching the level of his French colleague. The defect of both is a kind of impersonality, a proud withdrawal of the painter behind his work. It is the ungenerous attitude of Flaubert in letters. How definitely the tense and aristocratic landscape of Twachtman was symptomatic, let the work of Ernest Lawson and James Preston in the present show attest. They are entirely representative talents as regards both the qualities and the defects of our American impressionism.

As you pass to the right from the entrance, successive halls are dominated by George Luks and Lawson, George Bellows and Prendergast, Childe Hassam, Alden Weir, and D. Putnam Brinley, whose Emerald Pool, a stirring vision of a snow gorge, is again a fine example of what we may roughly call the Twachtman tradition. Weir and Hassam, both well represented by retrospective groups, shine with old masterly serenity amid the strident new work. Except Ryder, they are the only older men honored by a group exhibition. In fact, C. H. Davis, Edward Rook, H. D. Murphy, and Reuterdahl are about the only other regular exhibitors at the Academy who have seemed progressive enough to hold their own in the militant atmosphere of the Armory of the gallant Sixty-ninth. Upon Weir and Hassam I long ago exhausted my vocabulary of praise, which I could only repeat here with emphasis. Both are marvellous eyes and fine hands. Weir is as well a brooding spirit which invests its creations with an especial significance. He paints as in better days Henry James used to write.

George Luks, with a large double portrait and two character sketches, shows his usual competence. There is trenchancy in his brush stroke, as if he were not merely representing something, but sweeping the nonsense from it. None of his three paintings represents the full impact of his gusto, but a lot of little sketches of men and beasts, observed with an impartial relish, amply make amends. Luks is a powerful humorist as the word was used by Ben Jonson, and practiced by a rare line running through Hogarth and Rowlandson to Charles Keene and Phil May. Of the same tribe, but a shade more superior and sardonic, are John Sloan and Guy Dubois. Although I have known Dubois's work for a matter of ten years, its characterfulness and discretion struck me the other day like a new discovery. In the room where Luks and Lawson lord it we have the Prestons, Elmer McCrae, Philip Hale, and Jonas Lie in a rather flimsy decorative vein which I hope will prove transient. With Luks, George Bellows is a fount of gusto, but he seems to have nerves, with the corresponding impatience. His apostolic descent from St. Francis Rabelais is by no means so clear. In the Polo Crowd, the Circus, and the Docks restlessness is pushed nearly to the breaking point. Such spectacles are restless, and yet it may possibly be the business of the artist to see the turmoil in some calming eternal aspect. Something of this clarifying quality there is, for example, in the misanthropy of Degas, and occasionally in the frank sensuousness of Renoir. Bellows's portrait of a dancer has the sober excellences which his big illustrations often lack. His talent is great, and evidently has not yet found itself.

Prendergast has had the odd fate to be a Neo-Impressionist and a Post-Impressionist without knowing it. He splits the world up into a coarse mosaic of the primaries and recombines it in brusque and animated suggestions. It is not an art for slow eyes. There is plenty of sunlight and joy of life in it, and enough keen observation of men and women in any one of his three big pictures to fit out an Academy show and leave a surplus. Jerome Myers's swiftly caught visions of toil and play in New York are almost equally summary and more reflective. He is not bound by formulas and his grasp of the eloquence of the body, which is great, does not, as in Prendergast's case, imply sacrifice of the eloquence of the face. In his grimmer vein Myers has done nothing better than the benchful of sleepers on a sweltering roof which hangs in the gallery to the right of the entrance. Glackens and Henri are the greater gods of

this particular Olympus. Both are fitful painters somewhat after the type of the heroine of Longfellow's best-known poem. The petulance which makes and limits the art of Henri is well expressed in a nude, which at a certain peril I must call an Academy, and a more engaging head of a lad. The portrait of a gypsy, intensely conceived and worked out firmly in saturated browns and rose, is one of the best Henris I have ever seen. Glackens too often paints with the chip from his shoulder, instead of the palette-knife of commercialized art. A large group of young women done in the colors of Renoir, which, of course, may also have been those of the thing itself, is more ambitious than satisfactory. The figures lack relation and tend to fall out of the frame. Starting from the tempered blacks of Manet, Glackens has been making a resolute and interesting attempt to reform his style along lines of frank color, with results as yet uncertain. There could be no better rebuke to some particularly blatant and dreary Post-Impressionism which disfigures this hall, than the real expressiveness of the drawing of Myers and Dubois. The next gallery gathers about the charming Boy Playing with Goat of Karl Anderson a number of canvases chiefly representing the luministic idea. A mountain scene by Catherine N. Rhoades is spacious and rich in color. Beyond, towards the Cubists, are several galleries of sketches in color and black-and-white, something of a refuge from the intermittent blare of color in the painting halls. In fact, the whole arrangement of the exhibition is exemplary in avoiding the monotony of most big shows.

Remaining impressions must reduce themselves to bare mention. The crepuscular Bolton Brown and the nocturnal Leon Dabo are agreeably represented. Charles Hopkinson shows a delightful group of children, all tea-rose and pale blue. Cimiotti's landscapes are decorative and colorful beyond the common. Allen Tucker's portraits and landscapes have a quiet distinction; one would gladly see them in non-competitive conditions. John Marin's watercolors of the Woolworth building are attractive in color, but there seems an odd immodesty in depicting to its ultimate stages the vertigo or worse that the giant tower produces in his sensorium. Kenneth Hayes Miller is decoratively effective in a fashion that equally recalls Blake, Ryder, and the first manner of Pablo Picasso. Margaret Wendell Huntington achieves a remarkable effect of solidity and just placing in her Torquay cliffs and a powerful impression of the landward run of long waves below.

I have left myself no space to do justice to the sculpture, which presents assured excellence in the figurines of Bessie Potter Vonnoh and Abestemia St. Eberle, and a piquant novelty in the tiny caricatures of current modes and their feminine victims by Mrs. Myers. In general, the exhibition gives a sense of alertness and youthful vim. There is nothing of the somewhat funereal and dutiful atmosphere that habitually rules in our large stated shows. In the Armory people fall into talk, wrangle amiably, readily exchange enthusiasms. To a critic who has been accustomed to see his ministrations accepted with the resignation appropriate to those of the undertaker, all this is inspiring. And it can only be for the good of art among us that the public begins to realize that the artist is not displaying an elegant accomplishment with apologies, but trying to say something that he really wants to be heard. I do not wish to say anything too old-fashionedly distrustful of the numerous young talents who are treading the gaudy primrose path of Henri Matisse. Nor am I even prepared to insist that there are merely fireworks and disillusion at the end. My business is not with artists, who, I assume, know their own affairs; but with the public, which in this matter emphatically doesn't. And I wish to warn open-minded people against certain persistent sophistries which are urged in favor of the strident color schemes of the Post-Impressionists. You will be told that the color of the new work puts down everything older. Concede that immediately, and say it doesn't necessarily matter. So can a stentorian fool put down a company of well-bred people, or the mere drums the entire orchestra. Ask your tempter if he is Ruskinian, believing the primary colors to be intrinsically holy. Or ask him if he thinks Velasquez a feeble painter because he found a palette of black, white, and red entirely adequate for portraiture. Or, better yet, go from Matisse and Segonzac to Ryder, or Davies, or Hassam, or Weir, to Renoir's peonies or the lily pool of Monet. Or pass directly from the insistent blare of the Post-Impressionist gallery to some pale sketch of Augustus John's, austerely executed in cool blues and grays. If after such comparisons you honestly feel that the older painting is in any sense put down, and find you crave the new, why, you are entirely welcome to it.

F. J. M., JR.

Henry R. Poore is bringing out, through Doubleday, Page & Co., a book on "The Conception of Art."

Maurice W. Brockwell's "Adoration of the Magi, by Jan Mabuse" (Athenæum Press) has some value for its illustrations. To a study of the magi-story it contributes nothing. Seven of the plates reproduce Mabuse. No. 1 gives the painting as a whole; the remaining six present certain parts on a larger scale. As uncolored photographic prints they are admirable, most clear and expressive; they are a pleasure to the eye. There are, however, four more plates, quite unconnected with the Mabuse. No. x, it is true, is a Spanish Adoration by a son of Mestre Roderigo de Osona, good and interesting in itself, but remote from Mabuse. No. viii is a nude recumbent Venus by Velasquez; No. ix is a portrait by Holbein of Princess Christina of Denmark; No. xi is the famous, we might say the notorious, Windmill of Rembrandt. The justification for these plates and for much of the printed matter is evidently the author's desire to praise the efforts of the National Art Collections Fund in aiding the National Gallery. The Windmill, everybody knows, was diverted to Philadelphia; but it ought to have gone, was on the point of going, to the National! Now, we can afford to sympathize with the generous efforts of the Fund and applaud their success. Only, we should prefer to see them treated separately and systematically. As presented here they are mere padding. Concerning the artistic merits of Mabuse's painting, there can be no doubt. It is a noble work. Still, it scarcely equals Rogier's. It gives evidence of Rogier's influence, though it is not directly imitative. Background and grouping are less good than Rogier's, and the hovering angels are not effective. The most striking figure is that of the Moorish Caspar.

Joseph Lyman, a New York artist, who died last week at the age of sixty-nine, was born at Ravenna, O., and was educated in Cleveland. He first exhibited at the National Academy in 1876 and was made an associate member of that institution ten years later. He received a bronze medal at the St. Louis exhibition, 1904. His best-known paintings are Summer Night, Evening, Percé Rock, Waiting for the Tide, Street in St. Augustine, Florida, and Under Her Own Fig Tree.

Louis Saint Gaudens, sculptor, and brother of the late Augustus Saint Gaudens, died on Saturday at Cornish, N. H. He was born in New York, in 1854, and studied sculpture at the Ecole des Beaux Arts, in 1879 and 1880. He assisted his more famous brother in several works. One of his last commissions was the design of the arch at the new railway station in Washington.

Finance

THE STORM CENTRE.

On a financial market already sufficiently disturbed, for other causes, there came in the past week such urgent demands for capital from Europe that $6,000,000 gold went out by Saturday's steamers, making $35,000,000 exported since the beginning of the year, or $6,400,000 more than has been shipped in the corresponding weeks of any preceding year. Until last week, Paris and Buenos Ayres had stood alone as consignees of our gold exports of 1913. Shipments of $750,000, made in the past few days to Berlin, marked the beginning of exports to that market, after an

interval of nearly five years in which we have sent no gold whatever to that destination.

For this there was an obvious cause. It will hardly be doubted that the present storm centre of the financial world is Berlin. Until last week's closing days, the position in that community was easy to understand. Germany had long been conducting a movement of ambitious trade expansion and an extensive Stock Exchange speculation on the basis of inadequate domestic capital resources. Its Government, whose ideas of the country's economic situation have always been singularly dense, had seen fit to play with fire in its international relations during the footless Morocco dispute. Emerging from that experiment with somewhat damaged diplomatic prestige and with its relations in international finance impaired, it presently found itself confronted, on the Balkan explosion, with a real diplomatic crisis which it had not invited, which it did not like, but from which it could not escape.

Last Thursday's news of acute money stringency at Berlin, with the German bankers bidding hurriedly for gold at London, offering a 6½ per cent. rate in New York, and apparently endeavoring to import some considerable amount of gold from our own reserves, did not therefore take the world's markets altogether by surprise. It had been expected all along that Berlin, under its system of quarterly settlements on a large scale of the community's financial and industrial obligations, would be subjected to a troublesome strain around April 1.

The weak side of the German financial position was disclosed as long ago as September, 1911, when the Paris bankers, either because of the Franco-German dispute over Morocco or because of their own home requirements, recalled great sums of capital previously lent in the German market. The result was a day of outright panic on the Berlin Stock Exchange. The situation was relieved by advance of capital from New York, estimated by the end of 1911 to have reached $150,000,000. When our own trade activity revived, six months later, and New York had to call back the loans, the strain returned, and last year's "April settlement" brought short loans in the Berlin market up to 8 and 9 per cent. Some financial liquidation again eased the strain, until, last October, the Balkan War threw the German market into renewed confusion. At the "year-end settlement," two months ago, 12 per cent. had to be paid in Berlin for one-month loans. The Imperial Bank of Germany last week reported a cash reserve $25,000,000 less than a year ago, a loan account $49,000,000 larger, and an outstanding note circulation greater by $83,000,000, and last year's statement was regarded as none too strong.

This series of incidents shows why Berlin is at present watched more closely than any other of the world's great markets. How far last week's disturbances were a result of the German Government's extraordinary proposals for new taxation, is a reasonable question. To suggest for purposes of new armament, on top of the German taxpayer's already very heavy burden, the piling of a special requisition of 5 per cent. on every citizen's private fortune—the total levy to reach $250,000,000—would cause consternation in any market. To do this at the moment when the Government was asking the markets for a loan of $137,000,000, was to invite the failure even of the loan—and the event has shown that result to be a possibility. The case can hardly have been helped by this tactful utterance, a few days ago, by the German Emperor: "The year 1813 was a sacrifice. Let 1913 also be so for every one, for the time is scarcely less critical than 1813."

It was in 1813 that Prussia, crushed under Napoleon's heel, rose suddenly, armed its whole people, and joined in the attack of the Allies on the French invader. It remains to see how the frequently insubordinate Reichstag will accept the Kaiser's not wholly convincing historical analogies, and will respond to his modest requisition. It also remains to be determined what will happen on the German markets.

A Study of the Short Story

By HENRY SEIDEL CANBY, Assistant Professor in the Sheffield Scientific School of Yale University. iv+273 pp. 12mo. $1.00.

An historical and critical account of the development of the short story in English and American literature, the general plan of which is the same as in the author's previous "The Short Story in English." The reference to short-story literature is narrowed, however, and the bibliographical details are restricted.

Eleven illustrative stories are included, which have been chosen, not as the "eleven best," but as striking examples of the progress, the structure, and the excellences of the short story. The authors represented are Chaucer, Addison, Samuel Johnson, Scott, Poe, Hawthorne, John Brown, Stevenson, and Kipling.

LIEUTENANT HERMENEGILD WAGNER'S

With the Victorious Bulgarians

With an Introduction by M. Gueshoff, Prime Minister of Bulgaria

PRESS OPINIONS

"The best book on the Balkan War that has come to hand. The author is well acquainted with Balkan conditions, and his book contains many evidences of sound military judgment."—*Boston Transcript.*

"The reader of Lieutenant Wagner's book cannot but be convinced and reconvinced, the more he reads, of the Lieutenant's accuracy, of his strong intention to be just and free from all extremeness and of his success in acting on that same intention."—*Chicago Inter-Ocean.*

"Assuredly Lieut. Wagner has performed almost as remarkable a feat from the point of view of the historian in preparing at such short notice as complete a survey of the course and cause of the fighting as he did as a newspaper correspondent."—*New York Times.*

"Wagner, well on the inside and up at the front, knew something of the victors' hopes and achievements, and has a real war story to tell . . . the only record that can be made outside of inaccessible state documents."—*Philadelphia North American.*

With 55 illustrations and 6 maps. $3.00 *net.* Postage 20 cents.

Pan-Germanism

By ROLAND G. USHER. "An excellent presentation of the subject . . . should be of interest to the general reader, as well as the student of politics and finance and the statesman." —*Richmond Times-Dispatch.* $1.75 *net.* Postage 13 cents.

The Old Law and the New Order

By GEORGE W. ALGER. An important contribution to one of the most discussed topics of the day by the author of "Moral Overstrain." $1.25 *net.* Postage 10 cents.

The Fall of the Dutch Republic

By H. W. VAN LOON. The story of the Dutch Republic from the height of prosperity toward the end of the seventeenth century to the final fall of the Republic early in the Napoleonic Wars a century later. Fully illustrated. $3.00 *net.* Postage 18 cents.

The Drift of Romanticism

By PAUL ELMER MORE. Admirable papers upon such authors as William Beckford, Cardinal Newman, Walter Pater, Fiona Macleod, Nietzsche, and other leaders of the romantic movement. $1.25 *net.* Postage 12 cents.

The English Lyric

By FELIX E. SCHELLING. This latest addition to the Types of English Literature Series is at once of interest to scholars and intelligent general readers. $1.50 *net.* Postage 10 cents.

California Coast Trails

By J. SMEATON CHASE. "Mr. Chase's volume of impressions and experiences gained through a couple of leisurely horseback journeys through the coast regions of the Golden State is a travel book of the best type."—*Detroit Free Press.* 16 illustrations. $2.00 *net.* Postage 15 cents.

In Beaver World

By ENOS A. MILLS. A fascinating book about one of the most interesting animals in all nature by the author of "Wild Life in the Rockies," etc. Illustrated. $1.75 *net.* Postage 13 cents.

The American Child

By ELIZABETH McCRACKEN. In this delightful and instructive book, the author considers the various phases of child life as they are seen at home, at play, among actual children in the schoolroom, the library, and the church. $1.25 *net.* Postage 9 cents.

Youth and Life

By RANDOLPH S. BOURNE. Fresh and brilliant papers that will be read by both young and old with deep and stimulating interest. Among the topics discussed are "The Two Generations," "The Handicapped," "The College: an Undergraduate View," "Youth." $1.50 *net.* Postage 12 cents.

The Reasonableness of the Religion of Jesus

By W. S. RAINSFORD. "Entire frankness, genuine sympathy with the average man, broad views upon matters of dogma characterize this book."—*Syracuse Post-Standard.* $1.25 *net.* Postage 11 cents.

Swedish Song Games
By Valborg Kastman and Greta Köhler
8vo, *cloth*, 95 *pages, illustrated.*
75 cents.

This convenient manual provides a book of song games, such as are already famous in Sweden. The Swedish system of gymnastics, now so commonly taught in the United States, has prepared the way for a collection of this kind, which may be used in school or on the playground, indoors or out, with children of all ages.

These games give an opportunity not only for imitation but also for initiative, and hence are both recreative and educational. The music has the ilit of all folk songs, and the words will be intelligible to even the youngest players.

Many of the games are so simple that they may be played in the kindergarten. A few are played in Sweden by pupils of high-school age and even by older people. So explicit are the directions that a teacher should be able to use the book with any group of children. Its possibilities for playground and home are obvious.

LETTERS AND MEMORIALS
OF
Wendell Phillips Garrison
Editor of The Nation, 1865-1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

The Story of the Civil War

By JOHN CODMAN ROPES and WILLIAM ROSCOE LIVERMORE

A Concise Account of the War in the United States of America Between 1861 - 1865

Now Ready— **Part III. The Campaigns of 1863 to July 10**

Together with the Operations on the Mississippi from April, 1862.

By WILLIAM ROSCOE LIVERMORE, Colonel U. S. A.

In two Vols. **Book I.—Chancellorsville, Operations against Vicksburg, etc. Book II.—Vicksburg, Port Hudson, Tullahoma, and Gettysburg.**

8°. Two volumes with 70 maps and plans. $5.00 net, carriage 50 cts.

The operations described in this volume include an account of the First, Second, and Third Advances on Vicksburg; the Military Situation in January, 1863; the Bayou Expeditions; the Campaign behind Vicksburg; the Campaign of Chancellorsville; the Campaign of Gettysburg; the Campaign of Vicksburg.

Previously issued: **By JOHN CODMAN ROPES**

Part I.—**Narrative of Events to the Opening of Campaigns of 1862.** With 5 maps. 8°. $2.00 net; by mail, $2.20.

Part II.—**The Campaign of 1863.** With 13 maps. $2.50 net; by mail, $2.70.

"The most complete, comprehensive, and interesting account of the Civil War which has ever been published."—*New Haven Evening Leader.*

PUBLISHED TO-DAY

The Immigrant Invasion

By FRANK JULIAN WARNE, Ph.D.

Formerly Secretary of the Immigration Department of the National Civic Federation, Secretary of the New York State Immigration Commission, and special expert of the United States Census Bureau on our foreign-born population. Author of "The Slav Invasion and the Mine Workers," "The Coal Mine Workers," etc. With illustrations from photographs, numerous diagrams, maps, charts, etc.

One out of every seven of the 91,000,000 population of the United States was born in some foreign country. This book tells where this great foreign population of more than 13,000,000 came from, the conditions under which it has moved to the United States, its racial composition, and how it has distributed itself in this country. It points out some of the innumerable national problems, which its presence here has given rise to. Immigration of the present, which continues to make large additions to our foreign-born population, is contrasted with that of the past, and the differences in economic conditions pointed out. The newer immigration and its characteristics are also distinguished as to races from the older immigration. The conclusions of the author are not superficial opinions, but have been reached after fourteen years of study and investigation and are supported by an army of convincing facts.

"WHY I AM OPPOSED TO SOCIALISM." Original papers by 70 leading men and women, 50c. E. SILVIN, Box 963, Sacramento, Cal.

Just Published.
THE FRANCO-PRUSSIAN WAR
AND ITS HIDDEN CAUSES
By EMILE OLLIVIER
Translated with introduction and notes by George Burnham Ives.

The real causes of the Franco-Prussian War as set forth by the head of Louis Napoleon's so-called Liberal ministry. *With 8 portraits.* xxxvii+520 pp. $2.50 *net; by mail* $2.65.

Little, Brown & Co., Publishers, Boston

A CATALOGUE of books and pamphlets on economic, social and political science now ready. H. WILLIAMS, 105 E. 22d St., N. Y.

Important New Macmillan Books

Volume IV., LIB-POL., Just Published

A CYCLOPEDIA OF EDUCATION

Edited by PAUL MONROE, Ph.D.

(Columbia University)

Assisted by over one thousand editors and contributors. Now Ready—Vols. 1 to 4. To be completed in five volumes. *The set,* $25.

TRAINING THE BOY

By WILLIAM A. McKEEVER

Author of "Farm Boys and Girls"

"Train the boy and not merely a part of him." That is Professor McKeever's slogan. The book is an outline of a practical method to accomplish this. *Illustrated.* $1.50 *net.*

'TIS SIXTY YEARS SINCE

By CHARLES FRANCIS ADAMS

Author of "Studies, Military and Diplomatic"

A contemporaneous survey of men and events of historical value. *Ready shortly.*

MIND AND HEALTH

By EDWARD E. WEAVER, Ph.D.

Introduction by G. Stanley Hall, Ph.D., LL.D.

A thorough and painstaking examination of some systems of divine healing embodying the latest results of psychological study. $2.00 *net.*

GENETICS

An Introduction to the Study of Heredity

By HERBERT EUGENE WALTER, Ph.D.

A forceful account of the most recent biological discoveries for the general reader interested in evolution, breeding, eugenics, and heredity. $1.50 *net.*

AMERICAN SYNDICALISM THE I. W. W.

By JOHN GRAHAM BROOKS

Author of "As Others See Us," "The Social Unrest"

An illuminating work on the self-helping problems of the Industrial Workers of the World. $1.50 *net.*

ESSAYS IN TAXATION

By Professor EDWIN R. A. SELIGMAN

(Columbia University)

Author of "The Income Tax," etc.

A new book by this well-known expert on taxation and its most recent problems. $3.50 *net.*

PRINCIPLES of PRUSSIAN ADMINISTRATION

By HERMAN GERLACH JAMES, J.D., Ph.D.

A scholarly insight into the internal administration of Prussia and its development to the present system. $1.50 *net.*

THE FITNESS OF THE ENVIRONMENT

By LAWRENCE J. HENDERSON, A.B., M.D.

The physical and chemical characteristics of life and cosmogony and of the properties of matter in their biological relations. $1.50 *net.*

MALARIA

Cause and Control

By WILLIAM B. HERMS, M.A.

The interesting results of four years of practical study of malaria in California by a recognized expert on this disease.

Illustrated. $1.50 *net.*

The Nation

NEW YORK, THURSDAY, MARCH 20, 1913.

The Week

Democrats and Republicans in Congress agree upon the record-breaking size of the appropriations during the last two years, but upon the question of responsibility they are divided sharply. The Republicans point the accusing finger at the majority party; the Democrats refer the country to the Republican Executive. Ex-Speaker Cannon, who for many years was chairman of the Appropriations Committee, is shocked at the sight of any but a Republican House and Senate incurring the stigma of being a billion-dollar Congress, and is sure that we shall go from bad to worse until the Speaker has back his old power of naming the committees, and the supply bills in the House are in the hands of a single committee. A budget committee he sees no place for in our system of government. Yet it is just such a body that many persons will think is the plain inference to be drawn from the scattering of responsibility now possible, and indeed almost unavoidable, in our way of raising and spending money. Whatever is to be said in favor of a single committee in the House to look after the supply bills, applies to the more comprehensive matter of a single body to supervise the entire list of appropriations and expenditures. When Congress really desires such a committee, it will not find the difficulties in the way insurmountable.

The creation of a Senate Committee on Banking and Currency is most significant, in the light of many references made by President Wilson to the urgent need of a thorough revision of our banking and currency system. The Committee on Finance included this subject, along with the whole domain of fiscal questions in general; in making a departure from this long-established plan, there is clear indication of businesslike purpose. That Mr. Wilson has been giving to the subject earnest attention is evident not only from a number of speeches before and since the campaign, but especially from the prominence he gave to it in his inaugural address.

We trust that the Government at Washington will make short work of the plan to grab the Isle of Pines, which comes up every few years, and for which its promoters apparently think that the coming in of a new Administration affords a favorable opportunity. With Mr. Bryan as Secretary of State, the expediting of this scheme to limbo ought to be peculiarly easy, for he has an unbroken record of firm opposition to any policy of "criminal aggression." That is what the annexation of the Isle of Pines would be, or, if one prefers, it might be described by a shorter, though uglier, word. Apart from the merits of the case, the Democratic party could not countenance this petty larceny without making itself ridiculous, and reducing its repeated denunciations of the landgrabbing policy in the Philippines to an absurdity.

New Hampshire did herself proud by electing Henry F. Hollis to the United States Senate, and the Democratic party throughout the nation may well rejoice. But forty-two years old, Mr. Hollis has won for himself an enviable reputation as a lawyer of ability who has not sold himself to corporations, and as a powerful and courageous speaker. The cause of freedom for the Filipinos wins another strong advocate by his election, for Mr. Hollis has stood for their independence from the days when to do so was to subject one's self to ridicule, or abuse, as a "little American." Indeed, every liberal and enlightened movement will enlist his hearty sympathy. President Wilson will find in him a sincere and earnest supporter of his policies, and a man wholly above the ordinary conception of politics, just as he was head and shoulders above the average in his scholarship at Harvard. It is a cause for encouragement everywhere that men of this type are coming to the front in the Democratic party. McAdoo, Redfield, Houston, Lane, Franklin Roosevelt, John Skelton Williams—if there is one thing to be said of these men whom Mr. Wilson has brought to the front, it is that they are as far as possible removed from the old idea that politics is a game to be played for the benefit of the player and his friends and his party.

The abandonment of the Union Pacific plan for rearranging relations with the Southern Pacific and of selling the $126,650,000 Southern Pacific stock, has many interesting aspects. The Supreme Court decided last December that Union Pacific's ownership of this stock (which was a controlling interest) involved restraint of trade under the Sherman act, and ordered the company to dispose of it within a period terminating May 12. The company arranged, with the approval of the Federal Attorney-General, that the stock should be offered, at a price amounting to slightly less than par, to the existing shareholders of the Union and Southern Pacific. A strong international syndicate was then formed, which agreed to take such of the $126,650,000 stock as the shareholders did not subscribe for. But the company's plan also contemplated readjustment of relations between the two companies, whereby Southern Pacific should sell for $104,000,000, to the Union Pacific, the Central Pacific property which was owned by the first-named company, but whose main line was a natural Westward continuation of Union Pacific's main transcontinental line. This readjustment involved new arrangements regarding the other California lines of the Central Pacific, which had of late years been virtually absorbed by Union Pacific. To some of these arrangements, regarded by the company as essential, the California Railway Commission objected. Since the assent of that body was necessary, and since the underwriting syndicate's contract had been conditioned on that assent, this action terminated the plan.

Questions of unusual interest arise, now that preparations must again be made in the next eight weeks for disposing of the $126,650,000 Southern Pacific stock. The property is now highly prosperous, earning and paying 6 per cent. in dividends, and it can undoubtedly command a market. The one real difficulty has been the raising of so great a sum of cash in the face of considerable money stringency throughout the

world. But that problem would probably have been quite as awkward if the plan abandoned on Saturday had been carried out. It has seemed to be a general impression, in the financial district, that the underwriting bankers, both home and foreign, have felt individually relieved at being released from that present responsibility. In one way or another, however, the same requisition must be made later on; just as the actual relations between Union and Southern Pacific must be readjusted on the basis of independent ownership and operation. Whatever troublesome effects the episode as a whole may have involved, or may hereafter involve, to the companies concerned, no actually disastrous effects are possible. The Union Pacific bought its Southern Pacific holdings, fourteen years ago, at the price of 50, and the Southern Pacific property is not dependent for its prosperity on connection with Union Pacific.

Violence in labor warfare has unfortunately made martial law familiar. But that, under stress of necessity, is one thing, and trial by court-martial after order is restored is another. In West Virginia several labor leaders are to be put on trial before a court-martial. The defendants obtained a writ of prohibition from a circuit judge, who afterwards ordered its cancellation. In rendering decision, Judge Littlepage declares:

> When this writ was applied for, I did, with the greatest interest, sympathy, and deep-set determination, readily consent to grant it under the firm conviction that neither the court-martial court sitting at Cabin Creek nor any other tribunal known to the American law had any authority whatever to deprive a human being of life, liberty, or property, without a trial by jury of twelve men.

The decision then goes on to say that, after the most thorough investigation into the law of the question, with the assistance of the ablest members of the West Virginia bar, the conclusion is inescapable that the Circuit Court has no authority to interfere with a duly organized court-martial under the laws of the State. This may be legally sound. But the sentiment of the public at large will be exactly what Judge Littlepage's feelings were when he first approached the question—one of abhorrence at the thought of civilians being tried for their lives in time of peace by court-martial.

An analysis of the acts and joint resolutions adopted at this year's session of the Legislature of South Carolina shows how local is the great bulk of business considered by a supposedly "General" Assembly. Of the 256 enactments, only four can be called general. One of these established a uniform standard of weights and measures, and another provided for inspection of oil and gasolene. The largest group was concerned with school matters, which were responsible for thirty-eight bills, such as "An Act to require and compel school attendance within the city of Spartanburg, South Carolina," and an act to reduce the salary of the Superintendent of Education of Jasper County to $400. County government called forth 32 bills, besides 25 that are listed as pertaining to county offices and officers; roads and road taxes were attended to in 24 acts; municipal matters in 23; courts in 18; bond issues in 15; claims in 14; rural police in 10, and so on. Anglo-Saxon ideas of local government are hardly preserved in such an exhibition as this, yet it could be paralleled in almost if not quite every State in the Union.

Any man might be proud of the opportunity that has come to Professor Goodnow, whom the Chinese Government has summoned as its adviser in the work of constitutional reconstruction. To have a share in building the political framework for a nation of four hundred millions is a task which appeals powerfully to the imagination. It is a task which undoubtedly calls for special knowledge, but for something more than that. Professor Goodnow is trained in the theory of constitutional government as the Western world has practiced it. The application of the fundamental principles of Western democracy under the vastly different conditions that obtain in China involves the broadest kind of historical imagination and insight, in addition to special knowledge. Professor Goodnow's appointment is in line with the recent tendency on the part of China's governing classes to avail themselves of the services of experts from abroad. The selection of Dr. Morrison, the well-known English correspondent at Peking, as political adviser to the Chinese Government, is an instance in point. Several years ago, while China was still under the Manchus, Professor Jenks was called in to deal with the Government's financial problems. The college professor is very evidently having his innings to-day.

It would be invidious, even if it were possible, to dispute the statement in William Allen White's newspaper, that "Kansas has more able, sensible, brilliant editors than any State in the bunch." But how are we to credit the accompanying remark that they do not stick to their proper task, but when a political campaign warms up, "spend all their time whooping it up in the market-place for such cheap skates as may be nominated for 2-cent offices"? As every Congressman knows, it is the metropolitan journals that are under the control of unnamed and unnamable interests, and the smaller newspapers could not in any way be influenced by fear or favor. To suggest that any editor in the entire State of Kansas, or anywhere else outside of New York city and possibly Chicago, ever whooped it up for a cheap skate who had happened to be nominated for a 2-cent office, is to do violence to one of the most useful traditions that ever served the political purposes of a dignified member of the United States Senate.

The raid of colored Democrats upon the White House last week, with the demand that every negro Republican be turned out and the offices be given to them and their friends, shows that these members of the emancipated race have patterned after the practical politicians among the whites. Twenty years ago such a demand would have seemed reasonable, if not proper; to-day we are decades away from this brutal spoilsman's attitude. That the Wilson Administration will be in the least degree influenced by such a demand we have not the slightest belief. In the whole matter of office-holding by negroes Mr. Wilson has yet to define his attitude, but he has already made it clear that he is not going to turn over the offices to the spoilsmen.

Philadelphia, March 14. — "The outstanding infamy of certain of our modern industries is the linking to the belts of factories and mills of two million children," was the declaration made to-day by William B. Patterson, of this city, at the forenoon session of the first annual Progressive Conference of Pennsylvania.

No, Mr. Patterson, there is a greater infamy than this. It is the infamy of the United States Census, which deliberately lends itself to the falsification of the facts. According to that lying institution, the total number of wage-earners in all the manufacturing industries of the United States is, indeed, admitted to be 6,615,046; but instead of honestly confessing that 2,000,000 of these are children, the number under sixteen years of age is brazenly set down as 161,493. It is true that the Government's statisticians admit that there may be a considerable error in their figures, owing to the difficulty of getting truthful statements of age. Clearly the time has come for a summary recall of the Director of the Census, and if this does not suffice, there should be a revision, by popular vote, of the mediæval rules of arithmetic which fossilized statisticians persist in keeping unaltered.

The Comic Spirit, we think, must find material in the outcry of the Tory press in London over Mr. Bryan's "indiscreet" speech on St. Patrick's Day. He congratulated his hearers on the bright prospects of Home Rule for Ireland, and made some remarks about the speedy disappearance of "the hereditary principle" in government. For this he is severely taken to task by the *Morning Post*. It declares that his speech will be regarded with "keen resentment" in England, and accuses him of want both of tact and of propriety as a responsible Cabinet member. To clinch this point, the *Morning Post* says:

> We should very much like to know what Mr. Bryan would have said if at the time of his last defeat for the Presidency the English Secretary of State for Foreign Affairs had publicly expressed his gratification that the people of the United States had crushed the pretensions of a dangerous demagogue.

Well, the joke of this is that an English Foreign Minister once did precisely that—except that it was on the occasion of Bryan's first defeat. He was beaten for the Presidency on November 3, 1896. On November 9 following, Lord Salisbury made a speech at the Guildhall, in which, after referring to the presence of Ambassador Bayard, he said: "Though contrary to practice to remark upon the internal politics of other states, I may be permitted without impertinence to congratulate him upon the splendid pronouncement the great people he represents have made in behalf of the *principles which lie at the base of all human society*." Not simply, observe, that Bryan had advocated financial whimsies; he had attacked the basal principles of society. Yet the *Morning Post*, so soon forgetting its former political chief, puts it as the extreme of impossibility that an English Foreign Minister should have spoken of Bryan as "a dangerous demagogue."

The announcement last week by the English Ministry that it intends to submit at the next session of Parliament a plan for the reform of the House of Lords does not mean that it will or can be made law. If it passed the Commons, the Lords could block it for two years, and by that time the present Parliament would have come to an end. When the upper house is ready to kill Irish Home Rule and Welsh Disestablishment, it certainly would not hesitate to take the life of a bill doing away entirely with the hereditary principle in the House of Lords. All that the Liberals could accomplish by their proposals would be to meet the taunts of their opponents. The Conservatives have long been demanding the production of the promised Liberal scheme for reforming the Lords. They have challengingly cited Mr. Asquith's words about the necessity of following up the abolition of the veto of the Lords with a measure reconstituting the second chamber. Well, they have now got the Government's project in outline, and it is safe to say that they will not like it. Nor was it intended that they should. The whole amounts, at present, to no more than a bit of political by-play.

Among the educational signs of the times in England is the selection of a site for a new engineering science laboratory at Oxford. In the words of the London *Times:* "Where classics and theology once reigned alone, or only admitted mathematics to an equal and law to a subsidiary and incidental place beside them, one after another subject has vindicated its claim to a share in the studies proper to a university." Yet it does not regard the whole field of learning as necessarily the ideal for every university. "It will be sufficient if it realizes and recognizes that learning is a whole." Along with this expansion in the field of recognized studies has gone another important development, and that is the intensive cultivation of the traditional subjects. Not only have specialized courses, like those in archæology and anthropology, been introduced, but "history, art, economics, religion, the whole social structure and organism of life, are studied in and have light thrown on them by the classics." The significance of that last phrase cannot be overlooked. However Oxford and Cambridge expand, it will be some time before the classics lose their favored position in the curriculum.

It may have been the fear of financial and industrial panic that has brought from the German Government a prompt disavowal of the highly provocative article in the *Kölnische Zeitung* in which France was assailed as a menace to the peace of Europe. But even if the Berlin Stock Exchange had not developed a bad attack of nerves, the Cologne newspaper's challenge would have had to be repudiated, so patently false was the charge that the French Government has been looking for trouble, so plainly has the change in the spirit of the French nation since 1905 been only the reaction against German menace and intimidation. The Paris *Temps* of a fortnight ago, foreseeing just such an attack as was launched in the *Kölnische Zeitung*, offers pretty complete proof of the fact that the French military programme since 1905, instead of being provocative in nature, has refrained from increasing the armed strength of the nation or has actually countenanced a decline. The *Temps* enters into a minute chronology which shows that only ten days after the law reducing the term of military service from three years to two had gone into effect, came the Kaiser's voyage to Tangier and the first Morocco crisis of 1905. Again and again Morocco brought about a state of Franco-German tension, but the French Government did nothing to increase the effective strength of the army. In 1911 and 1912 the German army was increased by more than fifty thousand men, and still France did nothing. It was only in face of the latest German move, designed to add nearly 150,000 men to the army, that France has been stirred to something like a counter-policy.

A FAR-REACHING QUESTION.

The agitation started at Chicago over the question of a minimum wage for women has been attracting attention throughout the country. In a number of States, movements of the same character have been initiated. The newspapers have everywhere devoted ample space and great prominence to the proceedings of the Illinois Senate investigating committee. A certain amount of criticism has been passed upon the attitude of Lieut.-Gov. O'Hara and the committee, and upon the proposals which they apparently have in contemplation; and some of these criticisms have been very much to the point. It remains to be seen whether, in the other States which seem ready to follow in the footsteps of Illinois, the question at issue will be taken up in a manner more appropriate to its importance and difficulty.

The Illinois committee does not appear to have the faintest realization of the fact that any interposition in this matter must take into account the whole situation of society, and must reckon consequences other than those which immediately affect the comfort of the particular girls whom it is desired to place in a better position. Questions are asked, again and again, which show the attitude of a yellow journalist rather than of a sober legislator or investigator. One after another of the heads of colossal business establishments, after having stated his estimate of what is required for the needs of a woman worker—say, $8 a week—has been asked, "Could you live on that?" or "What is your income?" The committee seems quite unaware that if the fact of gross inequality of fortune, the fact that the rich might easily part with their superfluity and give it to the poor, were to be accepted as a reason for compelling such redistribution, the process could not stop with a little thing like a pitiful minimum wage for women. It would necessarily mean a complete reconstruction of the whole economic and social system. With those who deliberately and seriously work for such an end we have here no fault to find; but with those who are so soft-headed that they don't know when they are meddling with a great question we confess we have little patience.

Even if one does not enter upon this larger subject, there are many considerations, lying close to the immediate question, which must thrust themselves forward imperatively as soon as it is considered in a spirit of sober responsibility. There are hundreds of thousands, indeed millions, of families—whole families—living, some way or other, upon incomes not much larger than the amount which it is urged should be made the least that shall be permitted as the pay of the youngest and most inexpert girl beginning to work in a shop or factory; upon what principle of democratic government are these families to be left in that condition when the law declares it an intolerable one? Or take a thing coming still closer to the immediate problem. The girls who are to be particularly protected against immorality by the proposed law are the girls who do not live at home. These girls, in a great city like Chicago, are in very large measure girls who have been attracted by the allurement of the metropolis from farms and little towns and villages. When all the country girls learn that to come to Chicago means a sure income of five or six hundred dollars a year, who shall say by what an enormous amount the number drawn to the city will be increased? Yet the number of places for them will not be increased, but, as Mr. Siegel pointed out in an interview last week, in all probability greatly diminished. Finally, to mention only one more point, what about the little shops, whose name is legion, which together afford employment to thousands of girls, and whose figures of income and outgo are of a totally different nature from those of Marshall Field or of Sears, Roebuck & Co.? Are we to have a minimum wage law for the big shops and none for the little ones?

The question of a minimum wage for women is one that demands consideration. There is already a strong body of sober and competent opinion in favor of such a measure. But, unless we are headed for a career of thoughtless and dangerous legislation on subjects of the most vital import, we must consider the question with the utmost care, and act on it not upon an emotional impulse, but in full consideration of all its economic consequences and all its moral bearings. Of thought of the former there has thus far been in the Illinois proceedings no indication whatever; and as to the latter, the committee's goings-on have been of a most pernicious character. That insufficient wages for girls are in many instances a cause of immorality, few will deny; but the spread of the notion that they not only may be a cause, but are in point of fact a justification, for a girl embracing a life of shame is calculated to cause an amount of demoralization alongside of which that caused by low wages would be quite insignificant. And the notion is no less false than it is pernicious. It implies not only a general want of character which is a gross libel on the vast majority of women, but is contrary to the obvious facts of life. To choose a life of shame in preference to living on six dollars a week means not only want of virtue, but want of sense. It is inconceivable that many girls deliberately make such a choice. With those that do make it, it is a result of many causes, in character and environment, of which the matter of wages is only one. And life upon $8 a week, or $12 a week, is not so delightful as to remove the influence of these temptations and weaknesses. To admit that these may be yielded to without turpitude is to remove a defence of virtue which has been built up through ages of effort and aspiration and discipline and self-sacrifice, and for which no minimum-wage law can supply a substitute.

OBSESSIONS OF THE SPECIALIST.

"I say that it is an open question of morals whether a girl should starve herself respectably on an insufficient wage, or should go on the streets. They are selling their bodies, putting them into their work, in either case." This statement was made, for publication, not by a yellow journalist, not by a sensational preacher, or a notoriety-seeking novelist or playwright or actress. It was made by a young woman of high character and purposes, and of good intelligence, who has been doing valuable work, in the service of the State, upon the subject of the improvement of labor conditions. How does it come that a person like that can talk such reprehensible folly? How does it come that she can believe what is not only utterly repugnant to the moral instincts of normal human beings in general, but manifestly

flics in the face of the most familiar facts of human experience?

We are seeing the same sort of thing nowadays in many forms. In whatever way such a mental state may be explained, it cannot be looked upon without serious misgiving. But there is one consideration that goes far towards accounting for it, and which shows it to be less grave than it might otherwise appear. Looking at each successive manifestation, and gathering the cumulative effect of them all, one might almost get the impression that the world was cutting loose from its moral and mental moorings altogether. But that impression would be misleading. The wild cries that one hears, now from this quarter, now from that, are not the voices of so many representatives of broad or general thought. They are in large measure the shrill notes emitted by particular persons who have fixed their thought on some one aspect of life and have lost not only their sense of proportion, but their capacity to see that the different parts of life form a connected whole. The phenomenon is by no means confined to the domain of humanitarianism or of social reform. While it is true that in this field the element of emotional hysteria is likely to enter in a particularly malignant form, the want of balance, of sound and comprehensive judgment, is largely attributable to that intellectual one-sidedness which is the besetting sin of the specialist generally, and which, if unchecked, may become a downright obsession.

From the intellectual standpoint, the dictum of the young woman we have quoted is no worse than many a present-day utterance coming from what are regarded as high scientific quarters. Mr. Charles B. Davenport, for instance, is the director of the department of experimental evolution of the Carnegie Institution. In the opening paragraph of his book on "Heredity in Relation to Eugenics," after stating that the laws of improvement of racehorses hold for man, he declares: "Unless people accept this simple truth, and let it influence marriage selection, human progress will cease." The same gentleman, in a recent article, asserted with great emphasis and vehemence that the money cost of maintaining the imbecile and insane in public institutions was placing such a burden on the better elements of the population that they were prevented from reproducing their kind. Any intelligent youth, writing a college essay, might feel that, before declaring that progress will cease unless the principles of eugenics be made the guide to marriage, it was incumbent on him to reconcile this statement with the fact of human progress in the past. The veriest hack writer, in any respectable newspaper or magazine, ought to feel that, before he was entitled to say that the cost of institutions for the imbecile and the insane is the cause of "race suicide," he must make some kind of calculation of the amount of that burden, as affecting the classes among whom race suicide is prevalent. Not so the infatuated eugenist. Between "progress will cease" and "progress will not be as great as it might conceivably be" he does not feel required to make a distinction; and the fact that it would take ten times or twenty times the actual cost of the hospitals and asylums to produce any appreciable effect upon even the economic—let alone the other—causes of the limitation of families among the well-to-do, does not for a moment stop the rush of his irresponsible pen.

Taken in itself, the specialist's exaggeration of the particular evil which is the constant subject of his own thoughts does no great harm, and often, indeed, may do good. The dentist who thinks that nine-tenths of the ills of mankind are due to defective teeth may be multiplying the truth many times; but, after all, it is a good thing that children's teeth be examined and attended to, and it matters little in just what way we are frightened into having it done. The relation between filth and disease may not be quite what it is sometimes represented; still no one can object to any amount of zeal and efficiency that may be devoted to keeping streets and tenements clean. But the specialist who attacks the universe on the basis of his particular prepossession opens up possibilities of infinite mischief. The "social worker" may know somewhat more about the relation between wages and prostitution than the rest of us do; by all means let him enlighten us as to the facts, and let us all consider what is best to be done about them. But his somewhat greater knowledge on this particular point is but one little element in that great total of human experience, inherited and acquired, which is the possession of the whole race of man. Even in the little region in which he has some title to speak with authority, his claim to confidence must be measured by the evidence he gives of care and conscientiousness in his statements. When he recklessly adventures outside of his field, he should not be classed as of any school,

> But that where blind and naked Ignorance
> Delivers brawling judgments unashamed
> On all things, all day long.

SINCERITY.

It may still be true that the world is governed with little wisdom, but it cannot be governed at all without certain political virtues. Chief among these we should be inclined to reckon sincerity. This gives public men power while they are alive, and causes their fame to grow after they are dead. We are just now seeing this truth illustrated in connection with the memory of Grover Cleveland. His birthday is celebrated, and the house in which he was born was this week acquired and dedicated as a permanent memorial to him. Now, he was one of the most sincere men that ever lived; and it is this quality in him which most impressed his own generation and which largely accounts for the heightening of his reputation as the years pass. Without great intellectual attainments, with few gifts of personal charm, Mr. Cleveland had a large endowment of the brave old wisdom of simplicity. Direct, earnest, vigorous, he never left any one in doubt where he stood. When he was Governor of New York, there was never any mystification about his attitude in any important matter. It was not open to question whether he was genuine against the Tammany boss, or was merely playing a little game with him. And as President, it was by his robust sincerity, displayed in dealing with question after question, that he brought the country to believe it had a real man in the White House. Right or wrong, there he stood, clear and entire, never evasive or tricky, always to be depended upon.

And if we ask why it is that his latest successor in the Presidency has in two weeks' time made so excellent a beginning in impressing his fellow-citizens favorably, we are again shown that it

is the moral element which counts most in politics. President Wilson has not done anything startling. He has not given the country a single sensation. But he has already managed to convince even those who disliked and distrusted him that he is a stanch and determined Executive. There is a marked feeling that he is going to be found thoroughly consistent. As President, he holds the same tone as when candidate and when Governor. He betrays no thought of eating his own words or forgetting his pledges. And he exhibits a steadfast purpose to devote himself completely to the high business of his office, with a grip on himself and on the situation, that has won him instant and general approval. Once more we have a manifestation of the homely quality of sincerity, but how all-conquering it appears!

By contrast, the present posture of affairs in New York State is unhappy. No clear lead is given. The people are uncertain whether there is a clean-cut and honest issue between Gov. Sulzer and Boss Murphy. Is it a fight? Is it a farce? The shrewdest correspondents at Albany confess themselves puzzled. Even those of them who are closest to the Governor are unable to say whether he has made up his mind to defy Murphy, whether he really has the stomach for a fight. The chance is there. The provocation exists. The appeal is strong. But the doubt persists whether Gov. Sulzer has the mental grasp and the moral equipment to take up Murphy's challenge. And the most harassing part of the doubt has to do with just this thing of perfect sincerity. If the State were wholly sure that Sulzer had it, there would already have been a rising to him like that which hastened to hold up the hands of Grover Cleveland and Charles E. Hughes.

Many of Gov. Sulzer's public declarations commend themselves. His announced purpose to cut out graft and to run down thieves in the State Administration, and some of his acts in execution of that policy, are excellent. Nor is there anything but praise to be given to his confession of faith in home rule for the counties and cities of the State, and his promise neither to do nor to permit anything, as Governor, to infringe upon that principle. But when all this is admitted, there remains a great deal of confusion and uncertainty. Is the Governor altogether sincere? Will he, when the time comes, back up his theatrical words by matter-of-fact deeds? Such are the questions which the people are asking. They are ready to follow an honest leader, but it is pretty hard to leave them in perplexity on the question whether they have such a man at Albany. The hesitation does not arise on account of Mr. Sulzer's past. That could speedily be forgotten. His long subservience to Tammany, his vacillations and posturings and unconcealed vanity and ambition—all this would be overlooked were he to come out boldly and strip himself for an open fight with Murphy and call upon the State to bear witness to his entire sincerity. There's the rub: could he make people believe him?

As to the party of the second part, there is no doubt whatever. Murphy is sincere—sincerely determined to get every scrap of spoils, every opportunity for plunder, upon which he can lay his hands. No man in the State or the country has a moment's uncertainty on that point. Gov. Sulzer would not have to argue that. Nor would he need to explain the attitude of President Wilson towards Murphy. He could, indeed, count upon an immediate response and a great support if he would boldly proclaim a truceless war upon Murphy. But so long as his trumpet gives an uncertain sound, he must not expect the people to prepare themselves for battle.

THE TRIBE OF BARNUM.

It would be unfair to saddle the wraith of the late P. T. Barnum with responsibility for all the humbug now flourishing, or even with that portion of it which exists for a purely commercial end. At the same time, his famous observation about the willingness of the public to be deceived has given operations in that line a kind of warrant, if it has not actually invested them with a sort of sanctity. Even Lincoln admitted the possibility of fooling some people at every attempt, so that a really enterprising person might not unreasonably feel that not to take advantage of so well recognized a condition would be to fly in the face of an inscrutable Providence. However this may be, it is certain that there are men and women who do not propose to let the profession of humbug die for want of practitioners. How many of these generous souls the world can boast must be a matter of the merest guesswork, but that they are not a negligible group in point of number is sufficiently proved from the size of *Truth's* "Cautionary List" for 1913. This "List," we may add, is a book of above a hundred pages, containing the names of more than seven hundred persons.

A patriotic American would not like to think that his own country could be outdone by any other in a field that so evidently can be made to yield large returns. It is gratifying, therefore, to come upon indications that we are at least holding our own in the humbug business, and thus leaving foreigners without excuse for working the rich vein of our credulity. Can England, for example, exhibit a single Soothsayer Trust? How many we have, nobody has yet discovered, but the one that has been unearthed in Chicago has a balance-sheet that must make us all a bit prouder of our commercial and financial achievements. The annual business of the Soothsayer Trust apparently amounts to a quarter of a million dollars, and it is credited with a yearly appropriation of twenty thousand dollars for a "slush fund." As one of its victims parted with as much as ten thousand dollars, this sum does not seem inordinately large. Doubtless its managers are not unfamiliar with the principles of efficiency.

To be sure, a Soothsayer Trust is not an absolutely new thing. The augurs of Rome, like the priests of Memphis, would inevitably have drawn down upon themselves the wrath of the Department of Justice, if there had been any such meddling institution and if they had not been so securely intrenched as to make interference with them dangerous. In the absence of a Roman or Egyptian Wickersham, all that Julius Cæsar himself could do was to interpret adverse omens as subtly meant for favorable ones, and proceed to act as he had already determined. Dissolution of the Trust would have provoked a healthful rivalry, in which the humblest citizen would have been able to find somewhere in the Eternal City a soothsayer who would have advised him in accordance with his desires. The situation in Greece in reference to oracles was much better.

If the representative of Zeus at Dodona was unsatisfactory, either in his charges or in his deliverances, one could go to the representative of Apollo at Delphi, not to mention any of the smaller "independents."

But it would be doing scant justice to the profession to intimate that it is not progressive. While some of its members continue to furnish hints of the future and love-potions and revelations of hidden treasure, others will supply you with more modern wares. There is "mind maturity," for instance. At first, this may not appeal to you, but before you have read half a dozen paragraphs, you are fully convinced that mind maturity is a thing that you must have at any cost. You learn that there are some 250,000,000 tiny cells in your brain, or at all events in the ordinary brain, and you are faced with the problem of how, for all their number, they are going to help you without being trained, just as your muscles would be in a sad state if you had never done anything for them. Does it not stand to reason that you are not likely to get anywhere without the power of "ideation," which is yours for a little work and less money?

There crops out now and then, in various quarters, a spirit of hostility to charlatans. But is this justifiable? If one is eager for infallible tips on horse-races, or a few shares of stock that will begin to double and quadruple in value as soon as one has them in his possession, or a course of study that will make one a scholar overnight, is it grateful to assail those who take the trouble to supply these things? How are we to get great quick if we allow no one to show us the way?

HALIFAX.

There is no material in the Oxford edition of Halifax* which was not already accessible in Miss Foxcroft's well-known life of the Marquis, but his writings in this separate and beautifully printed book have produced on me, and I suspect will produce on others, quite a different effect from that which came from reading them when relegated to a kind of appendix at the end of two bulky volumes of history. "We are much beholden," says Bacon, "to Machiavel and others that wrote what men do, and not what they ought to do"; and to that small group of writers in English who kept their eyes steadily on the reality of things, Halifax must be added. He has not the gravity and imaginative sweep of Bacon in the philosophical treatises, nor just the subtle insinuation into human nature displayed in such an essay as that "Of Marriage and Single Life"; he has not the dogmatic energy of Hobbes, nor the mordant elegance of Chesterfield; but in the sum of his views he is truer and profounder than any one of them. He would scarcely have held it an honor to be regarded primarily as an author, and he has no place among the great artists and critics of letters; but, when all is considered, I doubt if there is in our tongue a wiser book than this which contains the experience of the statesman of the Revolution.

**The Complete Works of George Savile, First Marquess of Halifax.* Edited with an Introduction by Walter Raleigh. New York: Henry Frowde.

I.

The only writing of Halifax that obtained wide popularity was "The Advice to a Daughter," which was composed as a New Year's gift for his daughter Elizabeth, afterwards wife of the third Earl of Chesterfield, and mother of one who was to become famous, or infamous, for his letters of advice to a son. A copy of Savile's little *étrenne* was obtained surreptitiously from a scrivener, and, published first without the author's name in 1687-8, ran through many editions down to the end of the eighteenth century. The counsel is not without a tinge of melancholy submission to the facts of life as the Marquis saw them; its manner may seem a bit demoded today, and its rules of conduct for wife and mother and lady would probably be indignantly scouted by any woman of our present world who should chance upon its pages. Yet I gravely suspect that it speaks the shrewd truth, and that a young woman who looks for substantial happiness may still profit by the clear and unflinching counsel of this anxious father.

More important in some ways is the "Character of King Charles II." That monarch, he says, "was so good at finding out other men's weak sides that it made him less intent to cure his own: that generally happeneth. It may be called a treacherous talent, for it betrayeth a man to forget to judge himself, by being so eager to censure others. This doth so misguide men the first part of their lives, that the habit of it is not easily recovered when the greater ripeness of their judgment inclineth them to look more into themselves than into other men." Certainly our analyst shows no such treachery of talent; one might say on the contrary that his lucid leniency towards that erring master proved that he had looked well into his own heart before undertaking to judge one whose opportunities so often took the form of temptations. In this sketch more than anywhere else in his works he displays his kinship with Montaigne, whose "Essays" he calls, in a letter to Charles Cotton, the translator, "the book in the world I am the best entertained with."

And from this sketch we may conjecture the great loss to literature from his failure to take himself seriously as author. Had he deigned in his later years to compose an account of the reigns of Charles II and James II we should have had such a work as is absolutely without equivalent in the English language. It would have been something very different from the clever but coarsely conceived History of the pragmatical Bishop Burnet, of whom, it is said, the Marquis in private always spoke "with the utmost contempt, as a factious, turbulent, busy man." It is amusing to read in contrast Burnet's portrait of Halifax as one who "went backwards and forwards, and changed sides so often, that in conclusion no one trusted him." And he continues: "The liveliness of his imagination was always too hard for his judgment. A severe jest was preferred by him to all arguments whatsoever. And he was endless in consultations."

The picture as a whole is clever and specious, but misleading. Halifax was vivacious indeed, but certainly there was no lack of judgment in a man (to confine ourselves for the moment to his literary work) who could write so clearly of the place and needs of the navy as he has done in his "Rough Draft of a New Model at Sea," or who could give such prudent and persuasive advice to the Nonconformists, in those days of their trial by flattery, as he offered in "The Anatomy of an Equivalent" and "A Letter to a Dissenter." He would sacrifice himself and everything else to raise the credit of his wit, says the Bishop. Doubtless he entertained the unpardonable notion that Convocations and Parliaments have no such tremendous weight in the economy of the universe as prelates and legislators are wont to assume, and this may have led him on occasion into ill-considered levity. But it must be remembered that in Charles II England had a master who responded more readily to an equivoke than to a sermon, and that there are times when the passion of party runs so high as to leave no argument to the moderate man save a "severe jest." There is a sense in which it is true that "in conclusion no side trusted him"; not, however, because "he went backwards and forwards and changed sides so often," but because he never surrendered his judgment to either side. And though indeed he belonged to that rare class of men who think it better to be right than to be efficient, it would be an error to suppose that in the longer view his life was a failure

or his policy unpractical. Macaulay, who by temperament had no great love for the non-partisan, was yet clear-eyed enough to be just when he came to sum up the career of Halifax:

> What distinguishes him from all other English statesmen is this, that, through a long public life, and through frequent and violent revolutions of public feeling, he almost invariably took that view of the great questions of his time which history has finally adopted.

His place is with those moderates who in the noise of tumultuous times often seem to be jostled about as weaklings, yet in the end, somehow, when sanity returns, appear to have had the stars and the forces of nature with them. When Falkland lost his life at Newbury —deliberately threw his life away, said some, in black despair—it may have looked as if his temporizing course between King and Parliament had been as futile as it was perilous. Yet after Charles and Cromwell had played their parts, it was at the last the policy of Falkland and his kind which became the government of the nation, and, on the monument raised where he fell in battle, we now read with commendation the inscription taken from Burke: "The rest is vanity, the rest is crime." And so, when Halifax died in retirement, it may have seemed, despite the titles and decorations which were mocked by the Bishop of Salisbury, that his powers had been spent in a career of vain protest against the forces of the age; yet in the longer event England of the eighteenth century can be seen to have owed its strength mainly to the balancing policy of him and the few men with him who resisted the current of the day. Without the health and vigor due to their temperance it is scarcely conceivable that Walpole should have so nourished the resources of the land, or Chatham so extended its empire, or Burke formulated the philosophy of its Constitution.

II.

As a matter of fact, Burke himself, though a writer of far wider sweep and more gorgeous eloquence, never wrote a sounder exposition of that philosophy than Halifax had already given in the tract which, anonymously and half-disdainfully, he made public in defence of "The Character of a Trimmer." On December 3 and 4, 1684, Roger l'Estrange, in two issues of the *Observator*, had uttered a savage attack on the Trimmer as a man who was neither Whig nor Tory, but "a hundred thousand things" as circumstances and lack of conscience moved him; and Miss Foxcroft conjectures, very plausibly, that this was the occasion of Halifax's apology. "This innocent word Trimmer," he replies, in behalf of himself and his policies, "signifieth no more than this, that if men are together in a boat, and one part of the company would weigh it down on one side, another would make it lean as much to the contrary; it happeneth there is a third opinion of those who conceive it would do as well if the boat went even, without endangering the passengers." This third opinion of those who would trim ship took the form in Halifax's days of an attempt to find a *via media* between the extreme monarchical theories on the one side of Hobbes and Filmer and the non-resistance men, and on the other side the views of those who would deprive monarchy of real authority by the Exclusion Act and other Parliamentary encroachments, or would set up an actual commonwealth.

> We think [says Halifax] that a wise mean between these barbarous extremes is that which self-preservation ought to dictate to our wishes; and we may say we have attained to this mean in a greater measure than any nation now in being or perhaps any we have read of, though never so much celebrated for the wisdom or felicity of their Constitutions. We take from one the too great power of doing hurt, and yet leave enough to govern and protect us; we take from the other the confusion, the parity, the animosities, the license, and yet reserve a due care of such a liberty as may consist with men's allegiance. But it being hard, if not impossible, to be exactly even, our Government hath much the stronger bias towards monarchy, which by the general consent and practice of mankind seemeth to have the advantage in dispute against a commonwealth. The rules of a commonwealth are too hard for the bulk of mankind to come up to; that form of government requireth such a spirit to carry it on as doth not dwell in great numbers, but is restrained to so very few, especially in this age, that, let the methods appear never so reasonable in paper, they must fail in practice, which will ever be suited more to men's nature as it is than as it should be.

The question was settled for the time by the Revolution—but not finally. Give but a slight change to the terms and the dispute is again as active and rancorous in the twentieth century here in America as it was two hundred years ago in the England of the Stuarts. For the prerogative of the Crown substitute only the privilege of property, and for the commonwealth substitute the initiative, the referendum, and the recall, and you have a situation in which the Trimmer is represented by the abhorred Reactionary, who, like Halifax, but haply not with his success, would stand against the tides of emotional drifting.

As the sovereign power behind the government, whether that were to be called limited monarchy or limited democracy, Halifax saw the majesty of Law. His idealization of Law as the firm and slowly changing reason of a nation contrasted with the inconsiderate impulse of the moment was, of course, no new thing. It was distinctly the lesson of the long and grave experience of Rome in governing the world, and it had received, so far as I know, its earliest and still its noblest expression on the lips of Socrates in the jail of Athens, when, to the offer of his rich friends to bribe his way into liberty, he couched his reply in the personified voice of his city. This same mystic voice whose sound so murmured in the ears of Socrates that he could listen to no other, though speaking now in a different tongue and to different ends, may be heard in the superb exordium of the Trimmer's apology:

> Our Trimmer, as he hath a great veneration for Laws in general, so he hath a more particular for our own. He looketh upon them as the chains that tie up our unruly passions, which else, like wild beasts let loose, would reduce the world into its first state of barbarism and hostility. The good things we enjoy we owe to them; and all the ill things we are freed from is by their protection. . . .
>
> They are to mankind that which the sun is to plants, whilst it cherisheth and preserveth them. Where they have their force and are not clouded or suppressed, everything smileth and flourisheth; but where they are darkened and not suffered to shine out, it maketh everything to wither and decay.
>
> They secure men, not only against one another, but against themselves, too. They are a sanctuary to which the Crown hath occasion to resort as often as the people, so that it is an interest as well as a duty to preserve them.

Such is the majestic idea of Law which Halifax really had in mind to set up as the true sovereign, in place of Hobbes's notion of the universal will of the people concentrated by mutual bargain and concession in the person of the monarch, or in place of the benevolent despot which was to be formulated by Bolingbroke and disastrously imitated by George III. It rested on a supreme "passion for liberty," which the Trimmer held "to be the foundation of all virtue and the only seasoning that giveth a relish to life." And equally, in the last resort, it rested on the conviction that "there is a soul in that great body of the people," and that, "when all is said, there is a natural reason of state, an undefinable thing grounded upon the common good of mankind, which is immortal, and in all changes and revolutions still preserveth its original right of saving a nation, when the letter of the law perhaps would destroy it; and by whatsoever means it moveth, carrieth a power with it that admitteth of no opposition, being supported by Nature, which inspireth an immediate consent at some critical times into every individual member to that which visibly tendeth to preservation of the whole." But if Law, as thus conceived by Halifax, depends in the final test for efficacy on the consent of the governed, it implies also a settled mistrust of the first motions of human nature. It is

the experience of time against the desires of the present, a restraining force imposed upon the action of the nation comparable to the habits grafted upon the individual man in childhood. As the Trimmer says, Law is a security for men not only against one another, but against themselves.

III.

How deep this mistrust of human nature extended in the case of Halifax can be better learned from the three little groups of "Thoughts and Reflections" published posthumously from his papers in 1750. For models in English Halifax had the "Essays" of Bacon, the "Leviathan" and "Behemoth" of Hobbes, and the "Table Talk" of John Selden, the last-named like himself a Trimmer. In French he had the "Maxims" of La Rochefoucauld and, more particularly, the "Characters" of La Bruyère, to which his work approaches most nearly in style and ideas. In compass and minuteness of observation he no doubt falls behind his French model; nor has he the literary neatness due as much to the finer resources of the language of the "Characters" as to the conscientious labor of their author. But he possesses in compensation a certain honesty of his own, and a memorable gravity born of practical experience. What he learned from the business of life is pretty well summed up in the brief chapter entitled Of the World:

It is from the Shortness of Thought, that Men imagine there is any great Variety in the World.

Time hath thrown a Vail upon the Faults of former Ages, or else we should see the same Deformities we condemn in the present Times.

When a man looketh upon the Rules that are made, he will think there can be no Faults in the World; and when he looketh upon the Faults, there are so many he will be tempted to think there are no Rules.

They are not to be reconciled, otherwise than by concluding that which is called *Frailty* is the incurable *Nature* of Mankind.

A Man that understandeth the World must be weary of it; and a Man who doth not, for that Reason ought not to be pleased with it.

The Uncertainty of what is to come, is such a dark Cloud, that neither Reason nor Religion can quite break through it; and the Condition of Mankind is to be weary of what we do know, and afraid of what we do not.

The World is beholden to *generous Mistakes* for the greatest Part of the Good that is done in it.

Our *Vices* and *Virtues* couple with one another, and get Children that resemble their Parents.

If a Man can hardly inquire into a Thing he undervalueth, how can a Man of good Sense take pains to understand the World?

To understand the World, and to like it, are two things not easily to be reconciled.

That which is called an *Able Man* is a great Over-valuer of the World, and all that belongeth to it. [True, no doubt of the ordinary efficient, successful man, but scarcely true of the great practical genius, such as a Cæsar or a Napoleon.]

All that can be said of him is, that he maketh the best of the General Mistake.

It is the Fools and the Knaves that make the Wheels of the World turn. *They* are *the World;* those few who have Sense or Honesty sneak up and down single, but never go in Herds.

To be too much *troubled* is a worse way of over-valuing the World than the being too much *pleased.*

A Man that steps aside from the World, and hath leisure to observe it without Interest or Design, thinks all Mankind as mad as they think him, for not agreeing with them in their Mistakes.

First of all, one is struck in these aphorisms by the writer's feeling of superiority to the common interests of life. "The Government of the World is a great thing," he declares elsewhere; "but it is a very coarse one too, compared with the Fineness of Speculative Knowledge." And this is the view of La Bruyère: "Je ne mets au-dessus d'un grand politique que celui qui néglige de le devenir, et qui se persuade de plus en plus que le monde ne mérite point qu'on s'en occupe." Something of this rather chilly aloofness in our English statesman, which was felt and resented by his contemporaries, was due to philosophy, something of it also sprang from foiled vanity no doubt. But, lest we ascribe too much weight to his personal pique, it must be remembered that he has, in "The Trimmer," written one of the most magnanimous passages in the English tongue on the passion of patriotism and one of the noblest encomiums of his native land. If pressed, he might, perhaps, have admitted cynically that such a passion was to be included among the "generous mistakes" to which the world is beholden for its good, but at least no man of his age made of it a purer call to the patient performance of duty. And it is to be remembered also that in the most admired words he ever wrote, the peroration in praise of Truth, he represents that goddess as no indifferent idol of the schools but as the active, though long-suffering, judge of righteousness. Altogether he would have subscribed, in his softer moments, to that other *Jugement* of La Bruyère: "Il y a une philosophie qui nous élève au-dessus de l'ambition et de la fortune . . . Il y a une autre philosophie qui nous soumet et nous assujétit à toutes ces choses en faveur de nos proches ou de nos amis: c'est la meilleure."

With the memory of these things in mind we shall not go astray in interpreting his chapter Of the World in some such way as this: Life at bottom is a vain and endless repetition of things that have no outcome. Men are but frail creatures, forever reforming and correcting themselves, yet never cured of their weakness. They are divided in the mass into fools and knaves, and only by the malleability of the former and by the selfish practices of the latter is the common business of society kept in motion. Even the knave is a fool in a way, for he is deceived in his valuation of the things he seeks, whereas the man who really knows the world must be weary of its emptiness. From such a dilemma there is only one escape for wisdom, and that is into a higher folly, as human speech must call it, a folly which acts without illusion and without attachment, waiting serenely for the approbation of the everlasting Truth.

We shall not be wrong, I am sure, in giving this slightly mystical turn to what might be called the active aloofness of our statesman; but, withal, we must acknowledge that such a philosophy is more implicit than explicit in his writings, as it no doubt was in his mind and acts. The flavor of his aphorisms as a whole gives, let us admit, something of the bitterness of a man who, having accomplished much, yet retires from the world a little disappointed, and who takes a private revenge on society by anatomizing the secret motives of its activity.

IV.

The question remains how far this Savilian philosophy is peculiar to the writer and his age, and how far it is applicable to other times, even to our own. It cannot be gainsaid that public life in England in the Revolutionary years following the Rebellion, the life from which Halifax drew his knowledge of human nature, was in some respects abnormal. For historical reasons which we need not here analyze the game of politics was more than usually acrid: personal ambitions were entangled with views of the state in a way to bewilder the conscience of actors and observers, and the changes and uncertainty of allegiance, to a certain extent necessary under the confusion of government, obscured the boundary between honorable prudence and treachery and so placed an almost intolerable burden on the integrity of the individual. Certainly the conditions of public life have changed since then, and a philosophy drawn from those conditions will seem at least out of proportion in more normal times. Yet we shall deceive ourselves if we imagine the change to have been radical. A close observer of political life as it was exhibited only last year in our own Presidential campaign must have seen in the behavior of party leaders an aspect of human nature not unlike that which inspired the Savilian philosophy—the same confusion of ethical standards, the same mingling of personal malice and public service, the same underlying vanities.

The alteration from Halifax's day to ours will be found, after all, a matter

of degree only, and not of kind. The value of studying the acts of politicians lies for the moralist in the magnifying effect, so to speak, of public life; the motives by which they are guided and the goals for which they strive are not different from those of private men, but larger and stronger and clearer. And so, for the student of human nature, the age of Halifax will have a peculiar significance because of the very exaggeration of political conditions and the consequent upwelling into the light of day of those deeper sources of human conduct which in other ages are more or less obscured and repudiated. What seemed to the statesman under Charles and James the Second the ruling impulse of mankind may be learned from his aphorisms:

Malice may be sometimes out of Breath, Envy never. A Man may make Peace with Hatred, but never with Envy.

Envy taketh the Shape of *Flattery*, and that maketh Men hug it so close, that they cannot part with it.

Men often *mistake* themselves, but they never *forget* themselves.

Envy is a harsh word and may be out of favor in a softened society; Halifax himself, were he writing to-day, would probably change it for a gentler equivalent. He would acknowledge in the hearts of men moments of finer impulse and higher vision, as he acknowledged them in the hearts of the men he actually knew; he would see that conduct is largely the result of no conscious moral sense at all, but the mere result of a social compulsion or habit; but if he remained true to his philosophy he would say that, in an age when the sharp distinctions between friend and foe are for the most part obliterated, the perpetual moving force in the relations of man to man is a kind of dull jealousy. It would be supremely interesting to know how he would modify the language of his philosophy in developing this milder and, in a way, diminished ruling passion. As it is, we see the fibres of human nature magnified in his Reflections as under a microscope, perhaps also a little distorted.

P. E. M.

NEWS FOR BIBLIOPHILES.

The content of a blank page may be of interest, and not alone from the angle of view of the metaphysician among bibliophiles. That famous blank page in the first series of "The Ingoldsby Legends" may be held for demonstration. When Bentley brought out the first issue of this work it was discovered that page 236 was without letters, and a text (in black-letter) was hurried into the forms for the complement of the edition. It is, however, blank-page 236 in the Harry Elkins Widener copy of this first issue, which bears an autographed quatrain of Barham's, in ink, by no means unworthy to be stressed in type. The Widener "Ingoldsby" is a presentation copy to Edward Raleigh Moran, and the verses in question are addressed to this friend:

By a blunder for which I have only to thank
Myself here's a page has been somehow left blank.
Aha! my friend Moran, I have you—you'll look
In vain for a fault in *one* page of my book.

The second series of "Ingoldsby" also presents a "first of first issues" situation, interesting and refreshing to those who prize negligible things. The illustrations in this second series, executed by Cruikshank and Leech, preface the several pieces they embellish in the earliest issues of the series. The copy in my possession has this arrangement of the plates, which was rescinded for subsequent issues; and I have further the autograph letter in which Barham handed his publisher authorization for the change. The original publication of "Ingoldsby" in *Bentley's Miscellany* envisaged both the frontispiece scheme for the plates, and that absorption of the plates by the text which Barham, in the letter cited, adopts definitively and exclusively for the book. Whether this pagination had been prescribed by the author, and had been defeated through inadvertence, does not appear from the letter; nor could any one save Elisha record how many numbers of this "first of first issues" escaped the press of Elijah. Ingoldsby's letter:

My dear sir:
The illustrations should *face:*

Black Mousquetaire	page 28
Merchant of Venice	page 58
Auto da Fé	page 82
Dead Drummer	page 200
St. Cuthbert, or Devil's dinner	page 228
Old Woman in grey	page 258
St. Medard	page 284

Will you be good enough to return the enclosed to Mr. Bentley with my best thanks.

Yours very sincerely,
R. H. Barham.

By such rushlights is the *mise en scène* of book-collecting enlightened.

STANLEY KIDDER WILSON.

Correspondence

THE PROPOSED CONSTITUTIONAL AMENDMENT AND EX-PRESIDENTS.

TO THE EDITOR OF THE NATION:

SIR: In your characterization of the proposed Constitutional amendment relative to the Presidential term, as unfair to Mr. Roosevelt and "virtually *ex-post-facto* legislation" (*Nation*, February 6), does not your anxiety to be entirely fair to Mr. Roosevelt influence you unduly and cause you to lean backward? If it is true that "the people will be quick to grasp the fact that the amendment in its present form is virtually *ex-post-facto* legislation," they will be thereby grasping at shadow rather than substance. There is no such thing as *ex-post-facto* legislation, virtual or other, outside the domain of criminal law. Retroactive legislation (of which *ex-post-facto* legislation is a very small part) there is in abundance, and necessarily so, because a very large part of legislation is, in some sense or degree, necessarily retroactive, *i. e.*, attaches further or other results to acts already done or facts already existing; but such legislation is not for that reason necessarily objectionable either legally or morally. It is only where the retroactive effect attaches new or additional criminal penalties to acts already done (technically called *ex-post-facto* effect), or violates contract obligations or vested property rights that it is objectionable either in law or morals.

The retroactive effect (if it can be called such) involved in this instance does neither of these things. It consists in the fact that in disqualifying everybody from holding the Presidential office for more than one term, it incidentally and necessarily takes away from living ex-Presidents the chance of again holding the office. Now this chance is something to which ex-Presidents have no vested or other right. Their situation to which the amendment, if adopted, would apply, is something of their own choosing and making. In accepting the Presidential term which they have already held they acted (just as everybody under Government acts and must act) with full knowledge and understanding that the sovereign power is perfectly free at all times to enact any laws that it chooses, and thereby to attach to their acceptance of the office any further or other results that it sees fit. The chances which they thereby took are no different essentially from those which all of us are constantly taking with reference to possible future action of the sovereign power. And as those chances were of their own choosing they would not have even as good ground for complaint of unfairness as a man who had lost an arm or leg would have to complain of a law requiring all candidates for the constabulary to be free from such defects. The latter law would deprive the cripple of an eligibility which he once had, but nobody would think of objecting to the law for that reason.

There is, therefore, no valid objection to the amendment on the ground that ex-Presidents now living are included in its operation. Nevertheless, it might be wiser to change the form of the amendment as you suggest. Your prediction that, if submitted in its present form, the question of barring Roosevelt from another term would be the dominant issue, is well within the probabilities. If the amendment were submitted to popular vote, that prediction would be a certainty. The air would be filled for months with mingled denunciations and laudations of Mr. Roosevelt and the real issue would be lost from sight or hopelessly obscured.

Detroit, March 11.

THE MEXICAN PEOPLE.

TO THE EDITOR OF THE NATION:

SIR: American newspapers in commenting on events in Mexico almost always speak of the "Mexican people" doing this or that, holding these or those opinions and aspirations. That sort of thing sounds very plausible and probable to those of us who have never lived in Mexico, but it hardly appeals to Americans familiar with the actual political conditions of our Southern neighbor.

The Mexican "people" consists of a small class of intelligent patriots, a larger class of indolent hacendados (owners of vast tracts of land), and finally a very large class of peons, decent and industrious in the main, but absolute children so far as political, social, commercial, and indus-

trial education is concerned. The hacendado lives on the land in patriarchal style, raises cattle, is virtually lord and master of the neighborhood. His interest in the country is often confined to a demand that there shall be no brigandage and that land taxes shall be kept low. He is often immensely rich without the slightest idea how to use his money to any advantage. He will buy a magnificent threshing machine for cash, try it for a year, and then return to the mediæval style of beating out his grain with colts running over a hard floor—simply to give his horses exercise, señor. He will take a notion to go to Europe with his family, mortgage his land, fail to pay interest, and cannot get it into his head why he has lost the property. Spanish by descent, he has the ancient Spanish conception of absolutism in government and religion. The modern idea of a democracy is as unfamiliar and incomprehensible to him as would be the nebular hypothesis. Brave as a lion, hospitable to a fault, a friend to his friends, and an enemy to his enemies—through thick and thin—he is distinctly not modern in habits of life or mode of thought. Withal he is a most amiable and admirable person, as any one who has ever known a typical Mexican hacendado will admit, but he certainly is not the kind of man from which modern democracies are fashioned.

The third class is the professional and business people—a very small part of the population of Mexico. Many of these, like Madero, for example, have been educated abroad, and have acquired a set of ideas that originated from European conditions. Importing these ideas of government and social conditions into their own country, they fail lamentably to carry the great mass of people with them. Foreigners often mistake them and their ideas as the ideas of the Mexican people. Indeed, the true Mexican sociological product that assimilates foreign culture to home conditions has been men like Diaz and Juárez—Oaxaca Indians, and not Mexicans of European descent. They come the nearest to representing the Mexican people; and yet events show very clearly that numerically they do nothing of the sort. The peon is entirely without civic consciousness; the land-owner, living in patriarchal seclusion, is out of touch with national life; the foreigner who built the railways, introduced drainage and sanitation, and equipped electric plants, is without political influence. A numerically small class of lawyers, engineers, newspaper men, and soldiers govern the country. E. L. C. Morse.

TRIALS OF A HOUSEKEEPER IN 1400.

To the Editor of The Nation:

Sir: One of the very practical, though often neglected, advantages of literary study is that it enables us better to know ourselves and our own times. Men who seem heroic and movements which seem unparalleled assume their proper proportions when made to take their place in the tale of the centuries. With a deep background of human history in literature to correct our perspective, we shall be guarded from two errors dangerous to nation and citizen alike: we shall not bemoan our lot in having fallen upon the worst days that ever were, and we shall be delivered from the equally erroneous conviction that we are the people and that wisdom will die with us.

While reading John Gower's French didactic poem, "Mirour de l'omme," discovered in 1895, I had quite unexpectedly one of those curious experiences in which one is carried back through the ages only to find the same sort of men saying about other men the same things that we hear on all sides to-day. The poem to which I refer opens with a long account of the origin of the divers vices and virtues, and of their struggle for the possession of man. This part is thoroughly mediæval and is heavy reading, unless one's appetite be whetted for allegory. But there follows a pessimistic view of the state of society which, in spite of its depressing intent, makes one feel unaccountably elated, and which is exceedingly profitable as an antidote for pessimism in our own day.

Gower's remarks at the expense of the clergy, lawyers, and doctors have lost none of their piquancy. But his judgment of "the butcher and baker and candlestick maker" falls most pat, and will interest the members of our modern Housekeepers' Leagues with their pure-food slogans and servant problems. I may summarize Gower's more pertinent observations in the following free translation (vv. 25981-26604):

Man is so constituted as to require above all else food and drink. So it is no wonder if I speak of victualers, whose principle it is to deceive and to practice fraud. I will begin, as an instance, with the tavern-keeper and his wine-cellar. . . . If his red or white wine loses its proper color, he mixes it freely to procure the proper shade. . . . If I stop in to fill my flask, he gives me of his best wine to taste, and then fills my flask with some cheap stuff. He pretends to have any foreign vintage that one desires, but under divers names he draws ten kinds from the same barrel. . . . The poor people complain with reason that their beer is made from an inferior quality of grain, while good beer is almost as dear as wine. If you give an order for beer to be delivered at the house, the inn-keeper will send a good quality once or twice until he gets your trade, and then he sends worse at the same price. . . . Every one in the city is complaining of the short-weight loaves the bakers sell, and wheat is stored with the intention to boost the price of bread. . . . Whether you buy at wholesale or retail, you have to pay the butcher twice the right price for beef and lamb. Lean beef is fattened by larding it, but the skewers are left in and ruin the carver's knife. . . . To fetch their price, butchers often hold back meat until it is bad, when they try to sell it rather than cast it to the dogs. . . . Poulterers sell as fresh game what has been killed ten days before(!). . . . For my own part, I can dispense with partridges, pheasants, and plovers. But capons and geese are almost as high nowadays as hens.

Yet, if all those of whom I have spoken agreed to be fair and just, there would still be unfairness in the world. For even laborers are unfair, and will not willingly subject themselves to what is reasonable, claiming high wages for little work; they want five or six shillings for the work they formerly did for two. In old times workingmen did not expect to eat wheat bread, but were satisfied with coarser bread and with water to drink, regarding cheese and milk as a treat. I cannot find one servant of that sort now in the market (*i. e.*, intelligence office!). They are all extravagant in their dress, and it would be easier to satisfy two gentlemen than one such ill-bred servant. They are neither faithful, polite, nor well-behaved. Many are too proud to serve like their fathers. . . . The fault lies with the lethargy of the gentry, who pay no heed to this folly of the lower classes; but, unless care be taken, these tares will soon spring up, and the insurgence of these classes is to be feared like a flood or a fire.

The trouble is that no one is satisfied with his own estate: lord, prelate, commoner—each accuses the other. The lower classes blame the gentleman and the townsman, and the upper classes blame the lower, and all is in confusion. . . . The days prophesied by Hosea are come to pass, when there shall be no wisdom in the earth. I know not if the fault lie with laymen or churchmen, but all unite in the common cry: "the times are bad, the times are bad."

W. W. Comfort.

Ithaca, N. Y., March 13.

A DOCTOR ON POST-IMPRESSIONISM.

To the Editor of The Nation:

Sir: A couple of us plain folks have just been taking notes on Futurist paintings and sculpture at the International Exhibition of Modern Art. One could easily recognize the germ of value which had been forced into performing capricious pranks by instigators with ocular aberrations and hallucinatory obsessions.

The salient color key was conspicuously at the lassitude end of the spectrum (violet end). Whenever the red end of the spectrum had been employed, a garish effect was the result. The staring presentment of drawing was of the sort done by children and Indians, whose response to impressions finds a primitive sort of expression in crude outline drawings. There was none of the simplicity of great art, but rather the simplicity of arrested development, or of the infantile type of consciousness.

I had always supposed that the poetry of art held mathematics to be a sort of hereditary enemy, yet here, right upon the very escutcheon of the Post-Impressionist, we find emblazoned cubes, higher curves, and conic, or comic, sections.

We saw the Futurist sculpture. It left as much to the imagination as would have been left by wooden idols. This idea of suggestion through the influence of symbols has fundamental *raison d'être*, but it leads the sculptor to sell the stock of an unworked mine. It allows him to shift responsibility to the intellectual apprehension of his public, and thereby to avoid the trouble and expense of any long artistic training. I would call it a sort of labor-saving sculpture, representing the simplicity of artistic indolence.

An editorial note on page 172 of the March number of *Arts and Decoration* states that "Post-Impressionism, consciously or unconsciously, is being felt in every phase of expression." Alas! 'tis true, 'tis pity, and pity 'tis, 'tis true! It began first in the business world some years ago, with extensive sales of post-impressionist mining stock to widows and orphans and to me.

The text following the quoted editorial note brings forward information that the new movement is to extend into literature, and states that a certain authoress is doing with words what Picasso is doing with paint. She gives us these lines:

It is a gnarled division, that which is not any obstruction, and the forgotten swelling is certainly attracting. It is attracting the whiter division, it is not sinking to be growing, it is not darkening to be disappearing, it is not aged to be annoying.

There cannot be sighing. This is this bliss.

Now, wait a minute—if you can. Is this now? To me it sounds much like the words of a man who is suddenly called upon to make an after-dinner speech. Such a post-prandial speaker will often give a post-impressionist display of things which he has in mind, while leaving the matter of coherence in idea to an audience which is presumably sober, if not serious. What a speaker does hurriedly and with more or less valid excuse, the post-impressionist writer does deliberately with malcoherence aforethought, transcending the conditions of useful activity of the mind.

ROBERT T. MORRIS.

SEDGWICK'S ITALY IN THE THIRTEENTH CENTURY.

Italy in the Thirteenth Century. By Henry Dwight Sedgwick. Boston: Houghton Mifflin Co. 2 vols. $5 net.

Thirty years ago Leo XIII declared that mankind must go back to the thirteenth century, if it would recover peace, faith, and the way of salvation. Speaking from the Vatican, he was perfectly logical, for the thirteenth century witnessed the culmination of the mediæval Roman Church. Then it was that Hildebrand's dream of Papal supremacy seemed for a moment about to be realized by Innocent III; then it was that St. Francis and St. Dominic founded orders which served, by different means, to extend the authority of the hierarchical institution, while St. Thomas formulated its theology, and Dante wrote its epic. No wonder, therefore, that Catholic writers have recently lauded the thirteenth as the greatest of their centuries.

To a still larger number of persons, whom we may call "intellectuals," having neither sectarian nor partisan interests in it, this period appeals strongly by its variety, its range, and its profound significance. If you approach it through the earlier mediæval history, it appears to be the clearing-house of many of the forces and tendencies of the preceding four hundred years; if you look back upon it from the standpoint of to-day, you see that it was also the seed-time of the Renaissance and of many of the products which we regard as peculiarly modern.

The thirteenth century attracts still another group, sentimentalists or æsthetes, who find in it a soothing antithesis to the present. They accept it as an age unharassed by religious or philosophic doubts, unpolluted by industrialism, undisturbed by a sullen proletariat. Determined to know only what is beautiful and to sense only what is pleasurable, they betake themselves to an imaginary thirteenth century: like the Pre-Raphaelites of sixty years ago, who supposed that their over-sophistication and spiritual anæmia could reproduce the naïveté and enthusiasm of their fifteenth century models.

Although Mr. Sedgwick has manifestly much sympathy for the æsthetic aspects of his subject, he treats his subject as an intellectual. He has set himself an encyclopædic task: for he undertakes to describe not merely the political evolution, but the ecclesiastical polity, the theological dogmas, the manners and customs, the architecture, sculpture, painting and poetry, and even the Latin literature of the century; and he has evidently devoted himself with intelligent industry to acquire a knowledge of these diverse themes. His volumes are a guide-book—the best in English—to the period; popular, but not shallow; a series of agreeable and often sprightly essays; a storehouse of quaint or pertinent information.

The work shows plainly that Mr. Sedgwick's forte lies in the essay, or brief monograph, rather than in historical composition. He lacks the architectonic talent without which no man can shine as an historian. He has assembled ample material, but instead of building it into one symmetrical edifice, he puts up a dozen small ones, somewhat artificially connected by porticos. Now, to write narrative history is to tell a story; and this story should move forward as a stream or a river moves. The historian must not pause from time to time, mid-current, and strike off into the country to show us a lake amid the hills, or to visit a monastery or a distant city.

Let us illustrate: The historical significance of the thirteenth century springs from the death-struggle which it witnessed between the Papacy and the Empire—a struggle which ended in the collapse of both institutions. Accordingly, a properly constructed history should make that contest its central object, and should trace it, with as few digressions as possible, from start to finish. Mr. Sedgwick, however, after giving us two interesting chapters about Innocent III as priest and as preacher, turns aside to Joachim, then takes up Innocent again in two more chapters, then devotes two chapters to St. Francis and the first disciples, and finally, in his ninth chapter, reaches Frederick II—the protagonist of the Empire. With chapter 10 the drama between Frederick and Gregory IX opens; but the action is soon halted in order to introduce essays on Provençal and Sicilian poetry, on Bologna University and some of its professors, on early art, painting and mosaic, and the decorative arts—nine chapters.

Interspersed among these is an essay on the Lombard Communes, and another on the Nobles of the North, in which Frederick's affairs are incidentally touched upon. Only when we come to chapter 22 does the central story emerge again into the foreground—none too soon, indeed, for Frederick dies in chapter 23. Similar breaks in continuity recur throughout the second volume, which covers the latter half of the century—a period in which it is obviously much more difficult to find and keep a central, unifying plot—but to master such difficulties is the historian's business. The result is that only persons with a tenacious memory can hope to piece together the course of political development as Mr. Sedgwick has drawn it.

Before issuing a second edition of his book, Mr. Sedgwick ought to rearrange his material so as to make the political history consecutive, and to bind together the chapters on other subjects—St. Francis and his followers, for instance—which are now dispersed. The reader whose attention is so flaccid that it requires to be stimulated by a change of topic every twenty minutes, may well be neglected. Mr. Sedgwick has obtained variety, but at the expense of much more important qualities. This is to be regretted all the more, because his introductory chapter, the best in the book, and the intrinsic value of much of his material, lead us to expect a higher achievement than we find.

He has furnished an excellent substructure for the career of Innocent III, whom he regards as the greatest political figure in Europe between Charlemagne and Napoleon, and he does full justice to that other masterful Pope, Gregory IX. But in respect to the Emperor Frederick II, "the Wonder of the World," he is less satisfactory. He holds Frederick's talents as mediocre, and his failure as a retribution for incompetence:

> Frederick II was less a man ahead of his time than out of sympathy with it. The main impulses of the awakening world were economic, and the main need of economic development was the need of peace and order. . . . He should have accepted the communal spirit, he should have encouraged the growth of trade, and the development of local self-government. His course was plain enough. . . . [But] he looked back and not forward (II, 335-37).

This criticism hardly harmonizes with opinions which Mr. Sedgwick expresses elsewhere—opinions in which he recognizes that the paramount issue was not the rise of the communes and the expansion of trade, but the conflict between the Empire and the Papacy. The causes that made one city Ghibelline and the other Guelf were not uniform; in many cases, the economic factor exerted little influence; and sometimes there was a sudden overturn, from Guelf to Ghibelline, or the reverse, like a modern political "landslide." Frederick failed, not because of mediocrity, but because the Imperial ideal for which he stood had lost its hold on the imagination and allegiance of men. He failed, just as the Popes failed in establishing the ideal of universal Papal supremacy, that twin

product of Charlemagne's time. Innocent III caused that Papal ideal to be respected by the sovereigns of Western Christendom; but before a century had elapsed Nogaret and Sciarra Colonna laid violent hands on Boniface VIII at Anagni for proposing to put his Papal authority into practice by excommunicating the French King.

After all, failure does not necessarily imply incompetence. Cæsar and Napoleon failed; and yet they have sometimes been reckoned men of more than middling parts; Lee failed, and yet he is fairly ranked among the great modern captains. We prefer to concur in the general verdict of the best judges of the past seven centuries as to Frederick's greatness. He failed to establish his Empire, but he shattered forever the mediæval Papacy; that should suffice for his fame.

We have not space to criticise in detail Mr. Sedgwick's many chapters on the literature and arts of the thirteenth century. They reveal careful study of the leading authorities, and first-hand impressions as well. They are wholesomely popular, and will be especially useful to travellers. Occasionally, Mr. Sedgwick, after the fashion of most art critics, seems to read into a painting or sculpture more than is warranted—witness his speculation on the inherited traits of Innocent III as revealed by two portraits—but this does no harm, and often displays ingenuity. He has an enthusiastic account of St. Francis, two companion sketches of Thomas Aquinas and Bonaventure, and an entertaining description of mediæval manners and customs.

Mr. Sedgwick writes fluently. His bent is bookish. His style would have more firmness of tissue, however, if he would refrain from interlarding it with trite quotations (e. g., "the best laid schemes o' mice and men"), which add nothing to the text. He is also somewhat prone to amateurish touches of thought or of phrase. But, on the whole, his work ought to commend itself to cultivated readers. It is not so good for its epoch as Symonds is for the Renaissance, but it is the best in its field in English. We have noted few errata. One of the most obvious is in translating "Evangile," in the title of Joachim's treatise, "Evangile" instead of "Evangel." The illustrations are well-chosen, but we miss footnote references to the many quotations from mediæval sources.

CURRENT FICTION.

Sónnica. By Vicente Blasco Ibáñez. New York: Duffield & Co.

The historical novel is a *genre* little cultivated in Spain since the romantic movement, which produced many mediocre imitations of Walter Scott. "Sónnica la cortesana," a tale of Saguntum in the days of Hannibal, is easily the best novel of its kind which recent Spanish fiction has brought forth. Oddly enough, it is not the work of an antiquarian or a classical scholar, but rather of one whose thoughts have ordinarily been directed towards the future rather than towards the past—a former revolutionary leader whose present-day Republicanism is but a thin disguise for Socialism of the most extreme sort. Yet in this instance the reason for his choice of subject is not hard to discover. Valencians regard themselves as the kinsmen of the men of Saguntum; and just as Cervantes's "Numancia" was acted in Saragossa during the siege of 1809 to revive the flagging spirits of the defenders, so Blasco Ibáñez would have his followers in the cause of social revolution emulate the fortitude of the ancient Saguntines, their spiritual ancestors.

"Sónnica" was inspired partly by Flaubert's "Salammbô," partly by the "Aphrodite" of Pierre Louys; but to compare it with these works is mainly to suggest differences. Blasco Ibáñez, like Flaubert, has sought to apply the realistic method to the description of pagan antiquity. Though he is vastly inferior to Flaubert as an artist, his descriptions are less labored and fanciful, and he succeeds in painting a far more convincing picture than that of the French master. He agrees with Louys in exalting Greek ideals at the expense of Hebraic or Christian standards. But where Louys seeks to find in paganism the justification of viciousness, Blasco Ibáñez merely speaks as a life-long opponent of clericalism, who in his youth more than once suffered imprisonment as a result of controversies with church and state. His old enemy, the *cura*, must be attacked whenever an opportunity is offered. In "Sónnica" there is no trace of the degeneracy to be noted in "Aphrodite"; there is instead a robust virility, often crude, occasionally offensive, but wholesome by comparison.

Sónnica, the courtesan from Athens, an Aspasia in exile, has introduced an exotic culture into the little trading town. She and the hero, Actæon, a wandering Greek whom she makes her lover, represent Hellas, with its joyous life and cult of beauty. The scene changes to Rome, and the reader is introduced to Cato the Censor, Fabius the Cunctator, the youthful Scipio Africanus, and the slave Plautus grinding in his mill. Nowhere is the author more happy than in his description of Republican Rome, that nation of austere husbandmen and soldiers, poor and simple, but conscious of a great destiny. Hannibal is represented as a savage dreamer, a man of destiny, scorning art and refinement, wholly consumed with his great ambition. The novel culminates with the epic events narrated by Livy. The discordant elements are fused into solidarity in the presence of the foe. A common patriotism stirs them all. The voluptuous Sónnica sets the example of self-sacrifice by burning all her costly possessions. The victorious Carthaginians finally enter only to find a city of ruins and of corpses.

The translator has acquitted herself creditably. She has succeeded, without emasculating the book, in modifying the more shocking audacities of the original.

Witching Hill. By E. W. Hornung. New York: Charles Scribner's Sons.

The inventor of "Raffles" has written fiction of a more serious order, but has doubtless found his "lay," commercially, in the tale of mystery. He has by no means exhausted his ingenuity in that field. These stories of enchanted ground are novel and amusing. "Witching Hill" is not under a curse; it is haunted by no visible ghost; but every inch of it is under the malign influence of a wicked old lord who has made its acres infamous long before it came to be cut up into villa sites and promoted to an elegant suburban quarter. The young land agent who lives on the premises and has the care of them, tells the tales. His duties bring him into official contact with all the villa-dwellers, and the fact that he is a gentleman makes for friendly relations with some of them. One, Ugo Delavoye, is the exponent and, in a sense, the patron of the mystery. He is a descendant of the wicked lord, knows every detail of his unsavory story, and reads the events of the hour in the light of the past. He has barely taken quarters in a Witching Hill villa when his suspicions are roused. Strange things happen: one by one the new incumbents of the land pay tribute to the old. The pious old baronet who has bought the manor house becomes a secret debauchee. One tenant commits suicide, another takes to drink, a third goes mad, and so on. Delavoye himself barely escapes with honor, and by "standing up to" the dead old scoundrel and beating him on his own ground finally lays the ghost, and makes of Witching Hill a more comfortable if less romantic dwelling place for well-meaning persons. The tales are what the editors of the cheap magazines call "top-notchers," in their kind.

King-Errant. By Flora Annie Steel. New York: Frederick A. Stokes Co.

This narrative, says the writer, is not a novel or a history, but "the life-story of a man taken from his own memoirs." The man is an unlikely choice as hero of Western romance, being none other than Zahir-ud-din Mahomed, called Babar, Emperor of India, and first of the "Great Moghuls." Of this personage Mrs. Steel holds not only that he was remarkable as "poet, painter, soldier, athlete, gentleman, musician, beggar,

and king," but that he "lived the most adventurous life a man ever lived—and kept a record of it." The present chronicler has studied that record and sought to interpret it, to convey its spirit, for English readers. The more salient episodes in the career of Babar are chosen and enlarged upon. The picturesque aspects of the adventurer and his shifting *milieu* are made the most of. His feats and sufferings are described with the enthusiasm of a confessed hero-worshipper. That the effect of the performance as a whole is inadequate and confused is due, we fancy, to the error of method. It is the fashion just now for historical romancers to try to impress us with the humanity of the great men of the past by presenting them with a modern sense of humor and a modern vernacular. The thing is to emphasize their points of likeness to the man in the Strand, or the man in Broadway, rather than their points of difference. Let us make Cæsar human even if he ceases to be Roman; let us bring Cleopatra home to men's bosoms in a straight-front, if necessary, or a hobble skirt. This mode of procedure is particularly risky when the romancer is dealing with Oriental materials. A Western sense of humor, Western turns of phrase, obscure the effect. Mrs. Steel would have been more discreet in modelling her style on the Arabian Nights' Enchantment, in frankly relying upon the glamour of Eastern costume and atmosphere—instead of trying to present her Babar in terms of the current novel.

THE ROMANTIC RENAISSANCE.

A Survey of English Literature, 1780-1830. By Oliver Elton. Two volumes. New York: Longmans, Green & Co. $6 net.

As Professor Elton proclaims in his preface, the present work is not a history, but "a review, a direct criticism, of everything I can find in the literature of fifty years that speaks to me with any sound of living voice." The usual characteristics of the historical treatment are accordingly absent—the history of the evolution of literary *genres*, the study of tendencies (dealt with summarily, however, in the first and last chapters) and of the influence of foreign literatures, etc. Moreover, the book contains virtually no analyses of works and only the minimum of biographical detail. It is primarily then "a series of judgments upon works of art." Nevertheless, it is one of the author's great merits that incidentally he traces in the style of the principal writers of the Romantic Era, with a precision that no one has ever attempted before, those elements which descended to them from the eighteenth century, and that he has a keen eye also for mutual influences among these writers themselves. Such an analysis brings, of course, into clearer relief what is truly characteristic in the style of the new movement, as a whole, and of its individual representatives. Not everything of this kind, of course, finds a record in Professor Elton's pages—as, for instance, the influence of Shelley's "Alastor" in certain poems of Keats, which Prof. A. C. Bradley has noted—but the attention which he has given to these matters is calculated to stimulate others to follow up this very suggestive line of inquiry.

Two large volumes of criticism, almost completely divorced from history, would seem to afford a pretty severe test of one's capacity for continuous reading, but we pronounce the best encomium on Professor Elton's treatise when we affirm that we have not found a dull page in the work. This result is due to a happy combination of gifts in the author: catholicity of taste, sanity of judgment, sense of proportion, and, lastly, a style marked by strength and movement and at the same time by careful phrasing. One consequence of the writer's varied sympathies is that the execution of the book is singularly even. He does not betray a bias towards any particular school, and his appreciations of Burke and Cobbett, of Blake and Byron, of Wordsworth and Scott are equally effective. We regard it as an especial service of this book that Professor Elton has done so much to restore the balance of criticism in favor of Byron and Scott. The chapters on Blake and Coleridge show that he is fully sensitive to the subtler qualities of mind and style; but he sees also that energy, passion, a clear vision of life, and an intense sympathy with concrete humanity may in no inconsiderable degree atone for imperfections of style, and that these characteristics may even in some important respects link the writers who exhibit them more closely with the great literary traditions of the past than is the case with their contemporaries whose style is less open to criticism. In the perennial dispute as to how far the Byronic melancholy was mere posturing, Professor Elton takes the more favorable view and justly remarks on the degree to which this egoism—"nearer to us all than Wordsworth's by the virtue of the suffering involved in it"—"gave a noticeable and still unexhausted impulse by the enlargement of the European spirit." It is needless, perhaps, to say that our author, like the rest of the world, regards "Don Juan," along with the letters, as the most perfect expression of Byron's genius. It seems to us, indeed, that Professor Elton does not make sufficient distinction between the first six cantos and the later ones in which the trick of digression has grown beyond bounds.

As with Byron, so with Scott, and in reply to the charge against the latter of merely drawing the surface, Professor Elton points out how rare is the power of depicting in this masterly way the pageant of life. He lays stress, too, on the mass and excellence of such art as is embodied in the Waverley Novels and the way in which the world of these novels evades formulæ and summary treatment. And behind it all, too, is Scott's noble nature, with its strong stamp of individuality.

It is rare that the writer's judgment seems to us to go wrong. We find it harder to follow him in his estimate of Shelley's longer poems than in any other part of the book. There is no indication here that "Alastor" is weakened by diffuseness, or that, even when taken as a series of dissolving views, "The Revolt of Islam" is, save for some beautiful passages, barely readable. Least defensible of all, however, is the almost unrestricted praise of "Prometheus Unbound." No one will deny the beauty of individual passages in this drama, especially of the greater lyrics, but an unreality and lyrical incontinence here beset Shelley's genius, as in the fourth act—a thin though radiant vapor of words—and what interest can one feel in an action which is carried on by shadows or even shadows of shadows? Turn to the corresponding play of Æschylus, and the difference is at once apparent. In a somewhat similar spirit it seems to us that the writer takes too seriously the prophetic outpourings of Blake.

In his excellent chapter on Crabbe, Professor Elton fails to note that the rather Coleridge-like coloring of "Sir Eustace Grey" and "The World of Dreams" is due to the fact that their author, like the greater poet, was addicted to opium at the time he composed them. Crabbe's genius, however, is essentially undramatic, and to perceive, how faintly, after all, the language of "Sir Eustace Grey," fine poem though it is, reflects the wild fancies of a diseased mind, one has merely to compare with it the production of a genuine madman, Cowper's sapphic stanzas, written during a period of religious insanity. We think, too, that our author exaggerates somewhat the influence of Pope 'on the character-drawing in Crabbe's earlier tales. From the first Crabbe felt a scientific interest in psychological detail *per se*. In this essential he was a man of the nineteenth century, old-fashioned though he seems in so many respects, and it is not merely fanciful to connect him, in some degree, with a contemporary across the Channel, who, at first sight, seems worlds apart from him—namely, Stendhal.

We have no space to dwell at length on the many excellent points of criticism to be found in Professor Elton's book—for example, the relation of Burke to the romantic movement, the limitations of Scott's insight into the Middle

Ages, and the discussion of his style. The work, moreover, contains a valuation of every production of any importance that falls within the period of the survey. Nothing quite like this—on so extended a scale—has been done for any other period of our literature, and the treatise should obtain for its author a high place among living critics.

Attention should be called, in conclusion, to the extremely valuable bibliographical notes at the end of each volume. It is worthy of remark that, unlike most of his countrymen, Professor Elton shows a thorough familiarity with the work of research which has been done outside of Great Britain.

Economic Beginnings of the Far West: How We Won the Land Beyond the Mississippi. By Katherine Coman. 2 vols. New York: The Macmillan Co. $4.

Being "a mere economist," the author informs us in her preface that her "province is rather to suggest the underlying economic conditions that determined the outcome of war and treaty and race competition, and to reveal the bread-and-butter struggle that must ever result in the survival of the fittest—the ablest to utilize the resources of a virgin territory." As a mere historian the present writer has no criticism of the attempt, and, in fact, would be the first to welcome a work which successfully interpreted the economic forces which have made the West; but as an historian he would have hesitated to undertake the work, knowing that there was not a single trustworthy history of any of the numerous States included in the vast area, and only a few good monographs on any of the fundamental topics which it would be necessary to treat; in short, very little preliminary work upon which to base conclusions. Yet this danger has never in the past been a deterrent to economic historians; and Miss Coman leaps lightly to the task and brings to it the superadded ardor of her sex.

As might have been expected, the two volumes are not a contribution to science; but they will be read with interest by uncritical readers seeking information more or less correct concerning the history of the Far West, for they present in acceptable form the main facts as far as they have been established. For convenience, the territory has been considered as falling into subdivisions, and each treated as a unit, with the result that there is much overlapping both territorially and chronologically; but this was unavoidable. These volumes contain, however, many chronological surprises. In the first sixty-six pages is the story of the Southwest, beginning with the Spanish explorations and ending with those of the Americans. Section ii begins on page 66 with the statement, "Meantime great changes had been taking place along the Espiritu Santo"; and the reader is somewhat amazed to find that the "meantime" covers the years from about 1669 to 1840, and the topic to be discussed is the enterprise of La Salle. Such chronological jumbles, and they are surprisingly frequent, rob the reader of that pleasure derived from the continuity of thought.

The narrative itself contains other surprises for the mere historian. Upon examination of any particular topic, it appears that Miss Coman has devoted most of her attention to what historians regard as strictly political history. In fact, the purely economic descriptions do not occupy any more space than would have been allotted to them by a modern historian. For instance, fifteen pages are devoted to the activities of La Salle, the last ten of which tell the story of his ill-starred expedition to settle the mouth of the Mississippi. The story as here related can be found in any history of the expedition, and there is in the whole narrative no discussion of La Salle's far-reaching economic plans. The treatment of this event is typical of the whole book, which cannot be said to do more than make sporadic attempts to lay the foundations for a true economic interpretation of the settlement of the West.

It is better, therefore, to consider the two volumes as history rather than with the qualifying adjective "economic." Even thus they are not satisfying. To discuss the journeying of Jonathan Carver without some mention of Professor Bourne's famous criticism of Carver's narrative of his adventures, whether accepting it or not, seems a startling omission. One looks in vain, also, in the account of the fur-traders for Professor Turner's well-known essay and Burpee's excellent volume on the "Search for the Western Sea." To write of French explorations and trade without reference to Margry's noted collection of sources seems almost impossible in this day, when the cry is "back to the sources." These are omissions in the bibliography taken almost at random, and indicate the superficial manner in which the data have been collected. Finally, the mechanism of the work is faulty, as the notes are hidden away at the back; and the arrangement of the bibliography by chapters makes it very difficult to discover what works have been used and necessitates much needless repetition of titles. In the present stage of the investigation of Western history, the writing of such an ambitious work as Miss Coman conceived is impossible, and she would have used her years of research to much better advantage had she limited her investigation to a more restricted field.

Annals of the Emperor Charles V. By Francisco López de Gómara. The Spanish Text and English Translation. Edited with an Introduction and Notes by R. B. Merriman. New York: Henry Frowde. $4.15 net.

Students of the Reformation period will be grateful to Professor Merriman, of Harvard, for the publication of this long-neglected historical source. Early in the nineteenth century Gallardo discovered a manuscript of the "Annals" in the National Library of Madrid, and shortly afterwards Gayangos unearthed another in the British Museum; but nearly a century was to elapse before this important work by a contemporary of the great emperor was to be used by a modern historian. The editor has prepared a text based upon the two manuscripts, which he prints both in the original and in an English translation. Copious footnotes elucidate the text. Each statement of the author has been carefully tested, his errors indicated, and references supplied. The whole is a monument of minute scholarly research. The introduction contains a biography of López de Gómara, an estimate of his historical writings, together with a discussion of the various literary problems to which the "Annals" give rise. There is also a complete index.

López de Gómara, a priest and private chaplain to Hernando Cortés, is chiefly noted for his "History of the Indies," a work written in a partisan and adulatory spirit, but valuable on account of the author's intimate personal relations with the great conquistador. He also wrote a "Chronicle of the Barbarojas" in which he narrates the lives of the two famous Mediterranean pirates who bore the name of Red Beard. The "Annals" is less important than either of these works. For the most part, it consists of terse jottings of current events under the years in which they happened. The chronicle starts with the birth of Charles in 1500, and ends with the year 1556, when he entered the monastery of Yuste. The whole work appears to be the skeleton of a more important history, projected but never completed. Most of the notes consist of a line or two each; but at times the reader is rewarded with more extended notices. The short biographies of Luther, Henry VIII, Louis XII, and other important personages of the epoch are of most interest. Gómara naturally has the point of view to be expected of a Spanish priest of the day. Thus: "Luther was a tale-bearer, a liar, a slanderer, a revolutionary, audacious, stubborn, vainglorious, rude, a cheat, buffoon, and drunkard, and, in fact, the personification of knavery, for he neither possessed nor taught a single virtue. He thus lived sixty-three years a bad man, and thirty a heretic." In like manner, his comments on English

politics reflect the national sympathy with Catherine of Aragon and the Spaniard's detestation of her supplanter, Anne Boleyn. In the following century Calderon gave literary expression to these feelings in "The Great Schism of England."

But if Gómara, like the other historians of his time, was unable to divest himself of prevailing prejudices, he was in advance of his century in the interest he displayed in economic phenomena. In this particular he was perhaps unique. Hear him bewailing the increased cost of living:

> This year (1548) was dry, lean, and dear. In Valladolid beef was worth seven maravedis a pound, and goats' flesh ten and a half, and oil nineteen, and the latter would have cost more had it not been for the whale oil. A pound of wax candles was worth twenty-one maravedis; a pound of pears, eggs, and prunes twelve, a load of water four, and a bundle of straw four also, prices which have never been seen in Castile.

He attributes this rise in values to the sudden influx of gold from the New World.

Again, he displays no little sagacity in his repudiation of Machiavellism and Italian statecraft:

> Some persons are pleased to approve of the shiftings which kings make in their friendships and leagues, perfidiously, and to their own hurt and even dishonor, saying that such action is necessary and suitable as much for the conservation of their kingdoms as for their increase; and they confirm this doctrine by the examples of King Ferdinand the Catholic, and of Louis XII, King of France, and of Pope Julius II, who frequently employed such methods; although it would be better to hold and keep perpetually to that which they have once agreed on, as King Sigismund of Poland has done with the Turks, and as the Emperor has been desirous of doing; but since all men break their words, they maintain that to do so is not as bad as would otherwise be the case, whereas in reality it is just so much the worse, in that the evil is so common that no one trusts another in diplomacy, so dangerous is it to do so.

Those expecting to find in the "Annals" new information of a sensational character will be disappointed. Gómara's writings will not change in the slightest degree our previous estimate of Charles V, his great contemporaries, and the momentous events in which they figured. They afford at most only a few gleanings of trifling importance. This is partly due to the fact that the "Annals" were exploited by Charles's seventeenth-century biographer, Prudencio de Sandoval. Professor Merriman has conclusively shown Sandoval's indebtedness to Gómara, and has secured to the latter credit for certain information which has long been attributed to his plagiarist. But if there is little new, it is something to have old facts confirmed by an observer of Gómara's intelligence. A perusal of his racy characterizations of great men and stirring events will enable one better to appreciate the standpoint of the Spaniard of the Renaissance.

Notes

Mr. Murray, the London publisher, has collected into a volume intended as a supplement to the "Life," Disraeli's early writings, the so-called by-products of his pen. Mr. W. Hutcheon adds an introduction and notes.

Among the announcements of J. B. Lippincott Co. are "A Pair of Little Patent Leather Boots," by Edith Stotesbury Hutchinson, and a republication of Mrs. George McClellan's three novels, "A Carpet Knight," "Cupid and the Sphinx," and "Broken Chords."

Dr. John MacCunn is bringing out with Edward Arnold "The Political Philosophy of Burke."

Stanley Paul & Company promise shortly "August Strindberg," by Miss B. Lind-af-Hageby.

Putnams publish this week: "The Adventures of Miss Gregory," by Perceval Gibbon; "The Inferno," by August Strindberg, translated, with an introduction, by Claud Field; "Synonyms, Antonyms, and Associated Words," a manual of reference by Louis A. Fleming, and "The Fine Points of Auction Bridge," by Florence L. Irwin, second revised edition.

The "Three Farms" of John Mätter, which Holt announces, are as widely distant as Europe, Canada, and Indiana.

Miss Florence Converse will edit for Dutton the new Little Schoolmates series. The first volume to appear will be "Under Greek Skies," by Madame Dragoumis. Prof. Katharine Lee Bates, of Wellesley, will tell of children of Spain in "Queen Esther's Make-Believe." Prof. Margarethe Müller will describe German child-life, and Padraic Colum will attend to the children of Ireland.

Anne Douglas Sedgwick's first collection of short stories is issued this week by the Century Co.

Prof. George Santayana's "Winds of Doctrine: Studies in Contemporary Opinion," announced by Scribners, includes chapters on the Philosophy of M. Bergson, the Intellectual Temper of the Age, the Genteel Tradition in American Philosophy, etc.

Houghton Mifflin Co. issues next week the following volumes: "The Fall of the Dutch Republic," by Henrik Willem van Loon; "Guerilla Leaders of the World," by Percy Cross Standing; "England in 1815," by Joseph Ballard, and the latest contribution to the series edited by William Allan Neilson, bearing the general title Types of English Literature—"The English Lyric," by Felix E. Schelling.

Mr. Henry Frowde, the publisher to the University of Oxford, is at his own wish retiring on the 31st of March, after thirty-nine years' active work as manager of the London business of the Oxford University Press. Mr. Humphrey Milford, who has for some years been associated with Mr. Frowde, has been appointed as his successor. Though Mr. Frowde is retiring from the active supervision of business at Amen Corner, he will, it is understood, be available for consultation, so that his knowledge and experience will not be lost to the Press.

A committee, composed of Arnold Bennett, John Galsworthy, C. H. Herford, H. G. Wells, and others, has invited donations for a memorial to George Gissing. The memorial will take the form of a scholarship for the encouragement of literary studies, and will be attached to the University of Manchester, where, when it was known as Owens College, Gissing spent his student days and won literary distinctions. It is hoped that not less than £2,000 may be raised, of which amount £200 has been promised.

Under the title, "An Undergraduate's Diary," Mr. James C. White, Harvard, '53, is publishing in the *Harvard Graduates' Magazine* jottings which he made while in college. When he matriculated, the college faculty consisted of twelve persons: President Sparks, Professors Channing, Walker, Beck, Longfellow, Felton, Peirce, and Lovering, and Tutors S. Hartwell, F. J. Child, John B. Felton, and J. P. Cooke. "Other teachers"—the writer does not distinguish more precisely—were Prof. Asa Gray, Prof. Jeffries Wyman, and Messrs. Sophocles, Rölker, and Wheaton. Of the eighty-seven students in the freshman class all but fourteen lived in Massachusetts, and only nine came from outside New England. "With one or two exceptions, they were all of pure American stock."

At the beginning of his sophomore year young White was proud to recall that his corner room in the attic of Massachusetts Hall was the one occupied by President Quincy during his entire college life. Interesting is the topic of the first theme of the year assigned to him by Professor Channing: "It was said of Marcus Cato that his life was rather admirable than amiable." Frequent entries in the Diary show that even in those days young gentlemen sought mischief in the neighboring city. We read: "Last night three seniors, members of the Boat Club, were in a fight in Boston and put in the watch house." Student sympathy with a fellow in disgrace was also not uncommon: "A classmate was sent off for a street disturbance. A coach and four was procured, and as he drove by the Yard, he was given six cheers." The present-day policy of taking students to observe the workings of industrial plants is not new, as may be seen from the following: "We have begun a series of Saturday visits with Mr. Cooke to the various factories in the neighborhood—iron and gas works, sugar refinery, bleachery, dye works, glass and soap factories, and others, which he makes very interesting." There is a pleasant reference to a future great man, engaged in a public function: "It was a treat to hear him declaim Browning's stirring poem, 'How They Brought the Good News from Ghent to Aix.' That was Charles Eliot." Various jottings make it plain that President Sparks preferred rules and discipline to popularity. After hearing Emerson make a speech on the Fugitive Slave law, containing severe references to Webster and Everett, "some 200 students marched to the Everett residence, old President's

House, and cheered him. They then proceeded to President Sparks's yard and cheered. On his hostile appearance they vaulted the fence and rusbed for the street."

The January number of the *American Journal of International Law*, just issued, opens with a paper describing the negotiations, British and American, by which the rules and proccdurc recommended in the award of the North Atlantic Coast Fisherics Arbitration Tribunal (rendered at The Hague, September 7, 1910) have been put into effect. Two articles discuss the question of the Panama tolls, one by John H. Latané, the other by Crammond Kennedy, and both strongly in favor of amending the act of Congress. Mr. Latané, in particular, recognizes tbc forcc of Secretary Stimson's declaration that our coastwisc shipping interests do not need exemption from tolls. Mr. Kennedy's review of the state papers, including messages, treaties, and other official statements, constitutes a strong argument for tbe contention tbat there should be "neutralization on equal terms" and a régime at Panama similar to that which regulates the Suez Canal. That the principle of neutrality should be respected by tbe United States is tbe more imperative because of England's generous admission of our desire to cxercise belligerent rights for protection. Another writer, Mr. Vesnitch, describes the career of Cardinal Aiberoni, born at Piacenza in 1664 and tbougbt by the writcr to have been a pioneer of pacifism and international arbitration. He became Prime Minister of Spain, whither he went shortly before Philip V married Elizabetb Farnese. In 1736 appeared a translation, in both English and German, of the Cardinal's "Scheme for Reducing the Turkish Empire to the Obedience of Christian Princes." His projects for pacification are therein included.

The eighth series of Paul E. More's "Shelburne Essays" comes from the press of Houghton Mifflin Co. and bears a distinct title, "The Drift of Romanticism." Two of tbe essays, those on Pater and Nietzsche, have already appeared, in part, in the *Nation*, but the bulk of the volume has not before been printed. As indicated by the title, the papers all bear on romanticism considered as the underlying literary and philosophical tendency of the nineteenth century. William Beckford is taken as a type of morbid egotism and extravagant fancy, Cardinal Newman as the English leader of romanticism in religion, Pater as the romantic æsthete and for his idea of the art of life, Fiona Macleod as the spokesman of the new Celtic pantheism and revery, and Nietzsche for his impotent revolt from humanitarian and romantic sympathy. In all these cases there is an attempt to portray the man himself and to give a rounded criticism of his work, besides sbowing his relation to the drift of the age. The last essay deals with Huxley, setting forth first the antagonism between the early evolutionary philosophy as Huxley preached it and romanticism, and proceeding from this to show how the newer evolutionary philosophy of the *élan vital* has gradually beco › merged with romantic expansiveness. Tbe volume closes with an exposition, in the form of aphoristic definitions, of the dualistic philosophy which, according to the argument of the book, is the basis of classical art and morality and from which romanticism is a present aberration.

The January Bulletin of Hampden-Sidney College is a pamphlet of 56 pages, containing the "Discourse on the Lives and Characters of the Early Presidents and Trustees of Hampden-Sidney College," delivered, in 1876 at the centenary of the founding of the college, by the late Hugh Blair Grigsby. Besides the "Discourse," the publication contains the roll of charter trustees and a sketch of the life of Mr. Grigsby taken mainly from the Virginia Historical Collections, Volume IX, and incorporating very appreciative remarks before the Massachusetts Historical Society by the Hon. Robert C. Winthrop on the occasion of Mr. Grigsby's death. The body of the address covers the men of the charter, Patrick Henry and James Madison among them, and gives short biographies of the early presidents—John Blair Smith, Archibald Alexander, and others.

The "Solitude Letters" (Sberman, French) of Mary Taylor Blauvelt are supposed to have been written by a school-mistress from her summer refuge to a devoted woman friend. They are really a series of intimate essays or homilies on a variety of themes. They are thoughtful in tone and simple in expression, the utterances of an amateur of living rather than an amateur of writing. Thc conditions under which ber living is to be done are those of hundreds of serious and intelligent women. Marriage and motherhood have not been granted them, youth bas departed from tbem, and they must reckon with life upon terms of work and friendship. Tbe "Constance" of these letters, though not altogether free from that touch of self-consciousness with which the spinster faces her lot, is a wholesome and cheerful person. Marriage is a frequent theme with her. Freely acknowledging that at its best it offers woman her fullest opportunity of usefulness and happiness, she holds that the relation which distinguishes the best marriages from other marriages is a relation in which the single woman may excel—friendship:

> When an unmarried woman speaks of marriage there will always be some to think that she "speaks as a fool," but whether I am competent to treat of marriage or not, I am sure that when I write of friendship I am no tyro, I know whereof I speak. And I am sure that a marriage that does not include friendship is as much beneath friendship as Earth is beneatb Heaven.

As for the basis of friendship in marriage, it depends, believes Constance, on intellectual equality. She is an ardent teacber of young girls, and is confident that they need to be taught. She believes in sending girls to college "that they may develop their own personalities." She believes that men prefer intellectual women, and that "the marriages of college women are likely to be happier than those of other women." She believes tbat "it is only the education of women that has made marriage high or holy or even dignified." In short, she holds a brief for school-breeding versus home-breeding, and finds sucb arguments as are to be found in favor of the mental stimulation and training of womankind as a whole. After marriage and friendsbip, work is her favorite theme, but this again brings us to the sex comparison. That there is a radical difference in the mental constitution and capacity of men and women is a possibility not entertained by this letter-writer for a moment. "My impression," she says comfortably, "is that the main reason why women have not done such work ['great artistic or intellectual work'] is because they have been fully occupied, generally necessarily so, with the every-day of life." The truth of this theory ought to be pretty decisively tested in the near future—if, indeed, it has not been sufficiently tested in the past.

In "The New Immigration" (Macmillan), Peter Roberts has essayed to paint from life a picture of the would-be Americans wbo for some thirty years have been coming among us from the countries of southeastern Europe. He has chosen to portray them not in the bold outlines of picturesque generalizations, nor with academic restraint after the manner of the scientific investigator, but rather in the broken color of anecdote and incident. In a narrative style which is often vivid but which also becomes wearisome for lack of cohesion, he describes the ordeal of Ellis Island and of the first journey into the new country; the industrial conditions in which the immigrants find themselves; the traits which aid and the traits which hinder economic acclimatization; the housing and home life of tbe immigrant; his relationships with his fellows, with his church, and with political society; his recreation and culture; and the problem of his assimilation to Americans and tbe American way of living. Dr. Roberts is strongly sympathetic. He has faith in the new immigrant. Whether he is sufficiently judicial is not so plain. To be sure, be disclaims any intention to lay down conclusions: his "main purpose has been to give facts and leave most of the theorizing to the reader." Yet he seems hardly to realize the prejudice that lurks in an array of the barest facts when these facts bave not been so selected as to be wholly representative. He has set forth part of the truth—fortunately, that part which has been all too commonly ignored. As a corrective his book is sincerely to be recommended to the general reader who has not yet granted the petitioners for the immigrant a hearing.

According to Mr. John Leslie Garner, author of "Cæsar Borgia: A Study of the Renaissance" (McBride, Nast), "with the passing of 'the great man theory,' biography and history have become completely separated, and a personality such as Cæsar Borgia is interesting now chiefly as a product of tbe egotism of the age." Whatever the truth of this assertion, it is difficult to see its bearing upon the writing of popular biograpbical monographs in our day. Whether the so-called "great man" be regarded as the cause or the effect, he remains the epitome or expression of the age in which he lived, the convenient peg on which to hang an account of its happenings. To carry out his theory logically and completely, Mr. Garner would do better to single out some entirely unknown egoist of the Renaissance and show how the traits which characterize a Borgia were tbe common characteristics of his contemporaries. So long as he and his fellow-writers in this field continue to select such shining exampies as Cæsar Borgia, to whom tradition is accustomed to assign a kind of singularity, their readers will continue to believe that

the genius of the individual counts for something in the lives of those who express their ages too well not to express at the same time a quality in themselves that moral and material conditions are powerless wholly to account for. And from this back to complete acceptance of the theory which our author repudiates, that history is directly influenced by the efforts, ambitions, and desires of a few superlatively endowed individuals, is but a short step. Cæsar Borgia, at all events, however we may regard him, seems still to retain a large measure of personal prestige, or, if one prefers, sinister fascination. There has even been a certain revival of interest in him and in his family during the past year or so. In addition to this book of Mr. Garner's, which, despite its professions of contempt for men of violence and "ferocious egoists," is keyed to a somewhat higher pitch of sensationalism than the others, we have already noticed in recent issues E. L. Miron's "The Derelict Duchess," over which, even if Cæsar enters its pages only as an incident in the life of his abandoned bride, his dark presence nevertheless casts a kind of continuous gloom; and Bishop Mathew's "Life and Times of Rodrigo Borgia," which contains a detailed account of the son as well as of the father and the other members of the upstart Spanish family. To these the present work adds little or nothing that is particularly fresh either in the presentation or in the interpretation of facts, and is, moreover, disfigured by the author's rather rhetorical style and his tendency to become controversial or dogmatic in the statement of moral and economic commonplaces.

The latest addition to a series of monographs by Chinese students in the Studies in History and Political Science, issued by Columbia University, is Dr. Wellington Koo's "Status of Aliens in China" (Vol. L, No. 2, Longmans, Green). The author, after a brilliant career as a student in America, now occupies the responsible position of English Secretary to the President of China, an appointment which the impeccable literary style of this volume would seem by itself to justify. In a brief introductory review of the historic policy of China towards foreigners it is easily shown that the adoption of a "closed door" attitude on the part of the Imperial Government dates no farther back than four hundred years ago. Dr. Koo is inclined to attribute the change in the sixteenth century to the truculent conduct of European traders. This was certainly one cause, but his theory does not explain a rather sudden reversal in the Chinese attitude towards strangers without implying a timidity that does them scant justice. The true reason appears to rest in the fact that for the first time in their long history they found themselves confronted by a menace of intrusion from the sea; and that, being essentially an inland race without aptitude or taste for maritime adventure, they chose a natural, if futile, method of protection by closing all their ports but one to access by sea-faring aliens. Their intercourse with Russia shows a resolute policy in meeting and matching the attempts of foreigners approaching them along accustomed trade routes across the continent. To this fact in the national experience of China Dr. Koo gives no attention at all. His examination of the generally accepted notion that Caleb Cushing introduced the requirement of extraterritoriality into China demonstrates that this right was clearly implied in the British treaty of 1842. The fact remains, however, that it was Cushing, the ablest and best trained diplomatist ever sent to China before Lord Elgin's mission, who first enunciated the principle upon which the exercise of that right could be logically maintained. The tone and temper of Dr. Koo's concluding chapter, in which he discusses the reasonable hope of a better understanding between China and the great Powers, are admirable.

The career of the President of the Provisional Republic of China is picturesque enough to justify a biography, but some feeling of disappointment will attend the reading of "Sun Yat Sen and the Awakening of China" (Revell), by James Cantlie and C. Sheriden Jones. Dr. Cantlie is the British physician who taught Sun medicine in Hongkong, and who succeeded in 1896 in obtaining his release from durance in the Chinese Legation in London. One could wish that the author had allowed himself to repeat the full account of that adventure as related in a rare little pamphlet entitled, "Kidnapped in London," by Dr. Sun himself. The friendship between the two men is creditable in the extreme, and there can be no doubt about the goodness and personal charm of one of whom the Englishman can say:

> I have never known any one like Sun Yat Sen; if I were asked to name the most perfect character I ever knew, I would unhesitatingly say Sun Yat Sen. . . . His sweetness of disposition, his courtesy, his consideration for others, his interesting conversation and his gracious demeanor attract one toward him in an indescribable fashion, and have led me to think of him as a being apart, consecrated for the work he had in hand.

Beyond a few anecdotes and the honest panegyrics of a devoted admirer, the book adds little to knowledge of a character which, in spite of great personal magnetism, still strikes us as rather unreal. Nothing is said of the debated question of Sun's birthplace, or of his early life or rebellion in Canton. The reader will echo Dr. Cantlie's "chief regret—that I have been able to paint so meagre a picture of a truly noble character." Two-thirds of the volume is made up of an unprofitable *réchauffé* of the recent history and political prospects of China, by Mr. Jones.

Jane Marsh Parker, writer, and a founder of the Ignorance Club, of Rochester, N. Y., which was one of the earliest women's clubs organized in America, died a week ago in Los Angeles, aged seventy-six. Her best-known books are "Rochester—A Story Historical" and "The Midnight Cry."

William Hale White, better known by his pen name, "Mark Rutherford," died on Saturday at his country home out of London. He was eighty-four years old. Among the books of which he was the author are "Mark Rutherford's Deliverance," "The Revolution in Tanner's Lane," "Spinoza's Emendation of the Intellect," and "An Examination of the Charge of Apostasy Against Wordsworth."

Professor Count Angelo de Gubernatis died in Rome on February 27. He was born in Turin, April 7, 1840, of a family Provençal in origin. After graduating at the University of Turin, he studied at Berlin under Weber and Bopp. From 1863 to 1890 he was professor in the Istituto degli Studi Superiori, at Florence; for more than twenty years past he has been professor of Italian literature at the University of Rome, delivering his last lecture there only nine days before his death. He aptly defined himself "an Italian polygrapher," because during half a century he poured out books on many subjects, founded and edited many learned journals and two biographical dictionaries—"Ecrivains du Jour" and "Ecrivains du Monde Latin." He was one of the earliest Italian Sanskrit scholars, as well as a specialist in comparative literature, mythology, and customs. His volumes on funeral customs and nuptial rites, on "Zoölogical Mythology," and the "Mythologie des Plantes"; his translations of twenty Vedic hymns and his discussion of Vedic sources; his numerous biographical studies, including his autobiography, "Fibra"; his lectures on Dante; his patristic works, and his anthologies, bore witness to his many-sided interests and to his facile talent as a writer and popularizer. He read many languages and was a great traveller, having visited all parts of Europe, India, and South America. In 1904 he visited the United States and lectured at Harvard, Columbia, and other universities. He wrote dramas, some of which, at least, had a *succès d'estime* on the stage. His lectures on Manzoni, delivered forty years ago at Oxford, are still valuable. In recognition of his manifold service, King Humbert bestowed upon him the title of count, which had once belonged to two branches of his family. De Gubernatis chose for his motto *Patrum decus calamo resumpsi*. He was one of the first pacifists in Italy. He married Sophie de Besobrasow, a cousin of Bakounine; she translated into Italian Lermontoff's "Demon," Turgenieff's "Les Eaux printanières," and Krestowski's "La Dame Rydneff."

Thomas Peter Krag, the Norwegian novelist, died in Christiania on Friday, at the age of forty-four. He enjoyed a considerable reputation in his native land because of his descriptions of the wild scenery along the Norwegian coast. The works for which he is best known include: "Ada Wilde," "Ulf Ran," "Gunvor Kjeld," and the drama "Kong Aagon."

Science

ENGLAND'S WONDERFUL WINTER.

PARIS, February 22.

English people of every class have been impressed as never before by the workings of nature during the present year. After making due allowance for hearsay evidence, or the unsupported reports of every sort which have appeared in newspapers, the fact remains that, for once at least, nature's calendar has been completely upset upon Shakespeare's "swan's nest" of an island. It has been the year of all years for the weather observer and the naturalist. Whether such a singular panorama will be unfolded again to the eyes of the present

generation, no one can say, but it is certainly true that living man has not seen the like before.

It seems highly appropriate that, during such a season of marvels in the living world, the natural history collections of Thomas Pennant should be given to the nation. Since the death of that indefatigable traveller, observer, and correspondent, in 1798, these collections have rested securely at Downing Hall, in Flintshire. Now, after this long interval of obscurity, they have been placed by Lord and Lady Denbigh where they rightfully belong, in the Natural History Museum at South Kensington. For more than a hundred years Pennant's name has been linked with that of Gilbert White, in the "Selborne," which is not only one of the most delightful books in the language, but the one also which has done most to foster an out-of-doors habit of observation among the entire English-speaking race. Had Pennant and White lived to record nature's calendar from 1912-1913, "The Natural History of Selborne" would certainly have needed revision in many important respects.

The account which follows is based on what I have seen in Hertfordshire and various other parts of England during a residence of above four months, including the summer, autumn, and a portion of February, supplemented by such reports of others, in districts which I have not visited, as seem worthy of credence. For December and January, I must rely upon other observers wholly, and here are some of the astonishing events which have been recorded for this period: battalions of snipe in the valley of the Wey, the occurrence of heron, teal, mallard, field and jack snipe in greater or lesser abundance in other parts, three of the latter birds having been shot on a golf links near London, and reported on January 8. On the same day was noticed the discovery of a nest of the song thrush with two eggs at New Lecke, in Lincolnshire. This, if true, is the most important biological fact which this extraordinary season has produced, for it would tend to show that weather conditions had affected these birds to such an extent as first to check their migratory instincts, then to start them singing, and finally to begin their serial round of reproductive activities months in advance of their usual period. With the probable exception of the English sparrow, the literature of birds, so far as I am aware, contains no case quite parallel to this.

Similar reports of winter nests of this thrush have come from other parts of England. Here are two which I gathered at Bushey, in Hertfordshire, from an intelligent man who keeps cage-birds and watches wild ones: a thrush's nest containing four eggs was found at King's Langley, the last week in December; another was discovered in Oxhey wood by a young man who works at the Bushey golf links, in early January, when it contained a single egg. At a later visit, towards the last of this month, there were two eggs, but the nest was deserted, probably in consequence of the storms which swept England for some days, beginning on January 11. I cannot vouch for any of these reports, though believing them to be true. Ornithologists will do well to sift the mass of extraordinary records of bird-life which will be piled up this year, with exceptional care, and to throw out every one which is not amply corroborated.

In a season of genuine marvels, imagination is apt to take a free rein, and every one seems imbued with the desire to outdo his neighbor with a still more wonderful tale. This is well illustrated by the controversy which has arisen over the alleged appearance of the cuckoo in England this winter. Few birds, certainly, follow the calendar more closely than this mysterious wanderer. Prompt to come in mid-April, and to depart in mid-July, for six hundred years the cuckoo has maintained its place in English literature as the embodied sign and emblem of summer days. A few records of March cuckoos are said to exist, and they are probably trustworthy, but a winter cuckoo is as much of an anomaly there as a winter organ-grinder would be in a New England village. Yet claimants are already in the field who aver that they have both heard and seen this cuckoo in different parts of England, not only in February, but in January, and in December as well. A cuckoo was also reported to have been shot in February at Saffron-Walden, in Essex; but in this case the cuckoo turned out to be a pigeon. It seems quite probable that a few cuckoos may have wintered in England this year, as hundreds of thrushes, blackbirds, and other migrants have obviously done, but knowing the literature of this interesting species, and the frequency with which it has been mistaken for a small hawk, or even for a goatsucker, we must count the evidence in favor of winter cuckoos as at present far from satisfactory.

To continue this general record: at Shipbourne, in Kent, a butterfly and a moth were seen fluttering round a Christmas tree; in early January a hawthorn showed both leaf and flower at Clifton; buttercups and celandine were blooming in Bedfordshire; house sparrows were hatched in Hertfordshire; a pear tree and climbing roses flowered in Surrey; from three different counties marsh marigolds were announced, while everywhere gorse was coming into bloom, and the growing chorus of birds was "a waking fact in every country place." On this very day and date (January 2) daisies were blooming everywhere, and primroses literally carpeted the woods in the most favored corners.

Here is a later picture drawn from Bushey, in Hertfordshire, sixteen miles northwest of London, whither I was called on the 13th of February. The country was everywhere in vivid green, and we missed only the summer foliage of such deciduous trees as elms, oaks, maples, and apple trees, on which the buds were still, for the most part, in the resting state. As in the live oaks and evergreen shrubs of our Southern States, fresh new foliage was lighting up the privet, the smilax, and the hollies, on which the berries were as bright as at Christmas-time. Many lawns had already been shorn, and grass in the fields was from six to eight inches tall. The hawthorn hedges looked bare at a distance, but on closer inspection you saw that buds were bursting, with here and there a few shoots in perfect leaf.

Bushey gardens were full of flowers of many kinds: snow drops and crocuses had been open on every mild day for weeks, and this was true also of the wall flowers, primroses, and gorse. The aconite had dropped its petals, and the daffodils were in perfection. Half-a-dozen shrubs were in bloom in this garden, and nearly all were in leaf. The flowering quince was a mass of scarlet; roses were opening their red-brown leaves, while more favored vines in other gardens showed flowers fully blown. The deep red shoots of peonies were pushing out of the ground or beginning to unfold. The buds of the lilac, though large and loose, seemed strangely conservative, when compared with the general progressiveness of their neighboring competitors. All over this village the purple plum trees were a mass of light pink flowers, which had evidently held in this state for a considerable time, and there were a number of blooming shrubs which I could not certainly name.

In more southerly parts of England strawberry plants have blossomed; pear trees are in complete flower, and the crimson stars and gray catkins have appeared on many of the nut trees. The sight is far from welcome to the Englishman, who knows the price which such enterprising fruits are almost certain to pay in the end. Fortunately, the apple trees, and in a less degree the cherries, have been more content to rest from their labors, at least in Hertfordshire, where I saw only swollen buds on February 15.

When I left Hertfordshire late in October, blackbirds, which are first cousins to the American robin, song thrushes, and robin redbreasts, were in

plenty about the garden, but little singing was to be heard, and this only from the robins. Tick-tacking was indulged in at all hours, but only in the early morning, and at evening, on warm days, did the robin sing with his customary vim and zest. Rooks, which spent the day in a neighboring field, and starlings, which had a predilection for certain housetops on the village street, came to the garden in the early morning or on foggy days, which are always chosen by the latter bird for its raids upon the fruit trees. Those who have introduced the English starling into the American States have probably never watched its behavior in a fruit garden in England at seven o'clock in the morning. Certain it is that they will have to answer for the commission of a grave mistake, if this bird keeps to the habits which it here displays. These starlings are robust, vigilant, and extremely destructive, and in a few days' time a dozen of them will account for a large amount of fruit, their first choice being pears and apples. Too wary to go to the ground, where the English cat is always stalking about, or to stay long in one place if watched, they pounce quickly upon a tree, sound their "barbaric yawp," sidle up to the best fruit, and get to work. They will cling to a pear until it drops, and then attack another, and another. After several successive raids I have seen pears, picked clean to the core, still clinging to the trees, and the ground strewn with riddled fruit.

The causes which have produced England's wonderful winter are far-reaching enough to have affected the greater part of Europe, if not of America also. Paris has experienced one of the mildest winters it has known in years, and in the Trocadéro gardens to-day the grass and shrubbery are quite as green as in the suburbs of London; forsythias were showing their lemon-yellow "bells," and the Japanese quince was really in flower, though a trifle pinched, while ice covered every fountain pool. In England, however, the checks, which every one has expected for weeks and months, have been continually postponed.

The first serious fall in temperature came on January 11, when gales and snowstorms raged over Scotland and the north of England. Snow fell as far south as Northampton, sixty-six miles north of London, but little or no damage was done in the southern and middle districts, and the effect produced was but temporary. Then came the last and really serious cold wave. It began with a north wind, which froze the water of London's streets on the night of February 17, and then, swinging quickly to the northeast, flooded the whole of Europe with air right off the Russian steppes. Up to the present time (February 22) there have been frost conditions over a large part of Europe and the British Isles. In the south of England many pear and nut trees, as well as early strawberries, were quickly blighted, and Englishmen are now seriously asking whether they are going to have any fruit. This genuine check came none too soon; but if there are many more lapses to unseasonably mild weather, followed by severe frosts, England will have to pay dearly for her unique experience of nearly four months of continuous "spring."

FRANCIS H. HERRICK.

The Nantucket Maria Mitchell Astronomical Fellowship of $1,000 has been awarded a second time to Miss Margaret Harwood, A.B., Radcliffe College, 1907. Her residence at the Nantucket Observatory is for six months; the remainder of the year is spent in a larger observatory of her own choice. She has elected to continue her researches at the Harvard Observatory during this semester.

Dr. John Shaw Billings, director of the New York Public Library, ex-deputy surgeon-general in the United States army, and an author of international reputation, died last week at the New York Hospital. He was born in Switzerland County, Indiana, in 1838, graduated from Miami University in 1857, and three years later from the Medical College of Ohio, at Cincinnati. In later life he was honored with degrees from several universities. Edinburgh, Harvard, Yale, and Johns Hopkins gave him the LL.D. Oxford made him a doctor of civil law; he received from the University of Dublin an honorary M.D. As an army surgeon, he served brilliantly through the war, and was attached to the Surgeon-General's office in Washington until 1875, when he was made full surgeon with the rank of major and was placed in charge of the library of the Surgeon-General's office. In 1883 he became curator of the Army Medical Museum and Library, and retained this post until his retirement as lieutenant-colonel and deputy surgeon-general in 1895. During the years from 1891 to 1896, he was professor of hygiene at the University of Pennsylvania, and was a frequent lecturer at Yale, Harvard, Columbia, and Johns Hopkins. He had much to do with drawing the plans for the Johns Hopkins Hospital in his capacity as medical adviser to the trustees of the Hopkins Fund. It was in 1896 that Dr. Billings was asked to become director of the New York Public Library, Astor, Lenox, and Tilden Foundation. Among his published works are "Principles of Ventilation and Heating," "Index Catalogue of the Library of the Surgeon-General's Office, U. S. A." (16 vols), and "National Medical Dictionary," in two volumes.

Roland Gideon Curtin, physician, and writer on medical subjects, died in Philadelphia on Friday. He was born at Bellefonte, Pa., in 1839, and studied medicine at the University of Pennsylvania. In 1868 he was surgeon to the United States Geological Survey, and in 1905 he was elected president of the Philadelphia Medical Society. Besides scattered articles, he wrote, with Dr. E. W. Watson, "Influenza," and, with Dr. D. E. Hughes, Vol. IV of the "Philadelphia Hospital Reports."

Drama

"Tradition" furnishes the title to a second volume of one-act plays (Holt) by George Middleton. Of these, none, perhaps, is so good as "Embers," "The Gargoyle," or "Madonna" in the first series, but the best of them show freshness of invention, a considerable faculty of psychological analysis, and a sense of theatrical situation. As a rule they make decidedly interesting reading. But in such pieces as "Their Wife" and "The Cheat of Pity"—both cleverly written—human interest is defeated by the laborious artificiality of the theme. In the first a deserted husband sends for his wife's lover, a former friend, to tell him that he, too, has been deceived in his turn, and to gloat over his suffering and humiliation, in much adroit, sarcastic, but unnatural dialogue. In the second the elopement of a much-abused married woman is frustrated by the unexpected return of the husband and his sudden death, in a bedroom overhead, while the lover is pleading his cause. There is imagination in both pieces, but it is sacrificed to theatricalism. "Tradition," in which an affectionate but densely matter-of-fact father is induced to recognize the spiritual forces in his wife and daughter, which breed revolt against the life-long monotony of a dull home, is a clever sketch, with insight, humor, and mild pathos, but not much dramatic substance. There is truth, with a sound moral, in "On Bail," a domestic study of the demoralizing influences of a gambler's life, and there is a sound appreciation of feminine character in "Waiting," whose heroine, far from approving her lover's determination not to marry until he is able to give her comfortable support, is inclined to refuse him when he does propose, for keeping her waiting so long. In "Mothers," a good woman, cursed with a worthless son, earnestly warns a young girl against encouraging his advances, only to discover that she is already his wife. The situation is pathetic and dramatic. There is a very wide field for the one-act play, and it is encouraging to note that younger writers are beginning to take to this form of dramatic composition. The besetting danger of it consists in the temptation to sacrifice every artistic consideration for the sake of one great central thrill, as in the Grand Guignol inventions.

The plays of Bracco, according to Mr. Addison McLeod, "sit on the soul as some legendary maiden, deserted by her lover, sits on a rock, looking over the river towards the sunset, giving out continual cries." Those who like such stuff will find an abundant supply of it in "Plays and Players in Modern Italy" (Chicago: C. H. Sergel & Co.). Those who do not will find it worth their while to be patient, for the book furnishes much information that cannot be found elsewhere, and some very sensible criticism. The first of the two main chapters contains summaries, with a few well-translated scenes, of about thirty plays, mostly by living playwrights. The other contains characterizations of about thirty living actors and actresses.

Rehearsals are proceeding actively in His Majesty's Theatre, London, of "The White Man's Burden," due for production on

Easter Monday. As previously reported, the three principal parts are to be played by Sir Herbert Tree, Norman McKinnel, and Phyllis Neilson Terry, who constitute the eternal triangle of wife, husband, and lover. Among others figuring more or less prominently in the cast are: Frederick Rosse, A. E. George, Nigel Playfair, and A. Scott Craven. Sir Herbert promises some striking spectacular effects, particularly in the South Pacific island scene, whither he, as the cynical man of the world, goes to oppress the native miners, only in the end to work out his own redemption and to become their protector.

Tuesday, March 25, has been chosen by Granville Barker and Lillah McCarthy for the first performance at the London Kingsway of Arnold Bennett's four-act comedy, "The Great Adventure." This was originally produced at the Glasgow Repertory Theatre nearly two years ago. At the Kingsway, Henry Ainley is to appear as the famous artist, Ilam Carve, who, supposed by a muddle-headed doctor to be his own valet, allows the servant to be buried in Westminster Abbey, with all necessary honors, while quietly taking upon himself the dead man's identity. The piece is satire upon all sorts of prominent persons and institutions: artists, authors, journalists, clergymen, and politicians.

Matheson Lang and his wife, Miss Hutin Britton, who recently returned to England from Australia, appear to have pleased their London public with their new romantic piece "Westward Ho!" All manner of liberties have been taken, evidently, with Kingsley's famous story. Francis Leigh and the Rose of Torridge, for instance, survive the terrors of the Inquisition and live to be happily married in England.

When Ellen Terry celebrated her sixty-fifth birthday in London the other day, her son, Gordon Craig, was able to announce that Lord Howard de Walden had provided him with the necessary funds to establish his proposed "School for the Art of the Theatre" upon a sound financial foundation. He declares that this institution will differ from existing dramatic academies in various respects. It is not his aim merely to train pupils as actors and actresses, but to acquaint them with the many aspects of theatrical art. The scheme really divides itself into two parts, the one to which its originator attaches the greater importance being the experimental school. To this, by the way, it is not intended to admit women. This school, according to Mr. Craig,

> will aim at infusing the life of imagination into every art and craft connected with the stage, so that fresh vigor will be given to the creative power of those actively connected with the drama. It will consist simply of a body of earnest and thorough workers, who will strive by means of experiment and research to rediscover and recreate some of those magic and elemental principles of beauty, simplicity, and grace in a department of the art world from which at present they are conspicuously absent.

Working under the guidance of Mr. Craig, the school will undertake theatrical productions in any part of the world. The preliminary work will be carried out at the theatre which is to be established in conjunction with the school, and subsequently the members of the experimental school will transfer their energies to London, New York, Paris, Moscow, or any other centre. In addition to the experimental school, there will be a secondary school for the study of the crafts of the stage. All pupils desiring to join will have to take up the study of speech and movement, and they may also select one other craft, such as the making of costumes, lighting, and the preparation of properties. The Hungarian system of a three years' course will be followed, and in each year there will be three terms of about twelve weeks. Examinations will be held at the end of the first year, and those who are found to be unfitted for the work will then discontinue their studies.

Music

Sixty Patriotic Songs of All Nations. Edited by Granville Bantock. Boston: Oliver Ditson Co. $1.50.

Lyric Diction. By Dora Duty Jones. New York: Harper & Bros. $1.25 net.

The Oliver Ditson Company could have found no one better qualified than Granville Bantock to edit the collection of patriotic songs just added to the Musicians' Library. Among the sixty-three volumes previously issued in this series, none is better than the "One Hundred Folksongs of All Nations" contributed by him—a volume which includes many gems. Equally satisfactory, in its way, is the group of patriotic songs just issued, although it cannot be denied that among them there are some which must have owed their official adoption as national hymns to their appealing words rather than to the merits of their music. There is little inspiration, for instance, in the patriotic airs of Brazil and Argentina, or in the "Know Ye that Race" which has served the Boers as a prayer and a battle-song. The Mexican "Canción Patriótica" is commonplace, the two Greek specimens included have little to recommend them, and the "Sons of Norway" and "Ay, this Land" make one wonder why they are so much less Norwegian and meritorious than Grieg's songs. Much cannot be said for the Canadian specimens included; and as for our own country, is it really necessary to insult us any longer by identifying us with the hideous vulgarity of Yankee Doodle, which is of European origin?

Far more musical and inspiring than any of these named—and the patriotic airs of the Balkan countries and of Egypt are not much better—are the Japanese Drill Song, "Shotai," and, particularly, the "May Our Lord Long Reign," of which Puccini made such clever use in his "Madama Butterfly." In the Drill Song the editor has skilfully emphasized the Japanese atmosphere by the slightly altered chords over an unchanging bass. The harmonizations of all the airs are his own, and they are always appropriate and interesting.

England is represented by "God Save the King," "Rule, Britannia," "The British Grenadiers," "Lilliburlero," and "Home, Sweet Home"; Scotland by "Scots, Wha Hae," "Auld Lang Syne"; Ireland by "Saint Patrick was a Gentleman," "Saint Patrick's Day," "The Wearing of the Green"; Wales by "Men of Harlech"; France by "Malbrouk to War is Going," "It was Dunois," the "Marseillaise," the "Carmagnole," "Ah, It Will Go"; Germany by the "Watch on the Rhine" (so odious to Wagner), the "Rhine Song," "I am a Prussian"; and so on. In the introduction a paragraph is devoted to each of the sixty songs in the collection, followed by references to books in which further information may be found. These notes, which are by the editor, are trustworthy and valuable. Mr. Bantock is not only one of the leading British composers of the day (with a special predilection for Oriental coloring), but he was for several years editor of the *New Quarterly Musical Review.* Under the circumstances, it is a little surprising that he did not also write the general introduction to this volume. This is by N. Desmond Anderton, who discusses the subject of folk music as related to national music in general at some length, noting the different opinions held by Ernest Newman, Dr. Parry, Cecil Sharp, Professor Bantock, and others.

While the music of national songs is often mediocre, it is nearly always well fitted to the words, and the words when sung are usually enunciated distinctly. At recitals of art songs, on the contrary, the words are seldom intelligible. Why this is so, and how the matter can be remedied, is explained in "Lyric Diction." The author's own elucidations are preceded by the text of a lecture on English diction delivered at the Guildhall School of Music by Mme. Melba, who refers to diction as the Cinderella of the family of arts, and bewails the scant attention given to it in England. Like many others, she used to think that English is not a musical language, but, she adds, "my maturer judgment and experience tell me that I was wrong; that, although the English language lends itself to expression in music less readily than the Italian, it is in that respect at least equal to the French, and certainly superior to the German."

On this point the author of "Lyric Diction" has much to say. In her opinion, "the intrinsic vowel music of English surpasses that of all other modern languages save only Spanish and Italian"; and "the vocal resources of our language, long obscured by the very richness and variety of the English vowel scheme, are only just beginning to be appreciated." The sibilants are a great stumbling-block, but even in that

respect English is superior to the German (pp. 86-90), and "the exaggerated hissing of the sibilant sounds so characteristic of British speech is, happily, not one of our many American faults." The present volume was preceded by one entitled "The Technique of Speech," and we are not surprised to find the writer endorsing Dr. Aiken's statement that in the great majority of cases the difficulties with which singers have to contend are connected with the speech organs, and not with the vocal cords, as used by singers. Proper training of the speech organs at an early age would, no doubt, simplify the process of teaching singing. Emphasis is placed on Helmholtz's statement that correct singing by natural intervals is much easier than singing by tempered intonation; but inasmuch as there is little singing to-day except with instrumental accompaniment, which usually requires the tempered scale, this fact is of no great importance. Much space is given to showing how the integrity of the word can be maintained without sacrifice of tonal beauty, and to studies in vowel-placing and vowel harmonies nearly a hundred pages are devoted, with many illustrations in musical type. Advocates of the use of English at operatic performances and song recitals may find food for thought and argument in this volume. Special attention may be called to pages 120-121 and 306-307, in which the subtle beauties of Howells's "Is it the Shrewd October Wind?" with MacDowell's music, are pointed out.

"Isabeau," Mascagni's latest opera, which started its career on this side of the ocean, and which found none too favorable a reception in Italy, has had its first German representation at the Vienna Volksoper, where, notwithstanding careful preparation and adequate presentment, it failed to fulfil the hopes that had been set upon it. The libretto of Illica, with its crude emotionalism, was objected to, while the music, on the well-known neo-Italian lines, at no point succeeded in realizing the romantic character aimed at by the story.

Arnold Schönberg, whose compositions have tended more and more towards eccentricity, recently had the salutary experience in Vienna of seeing one of his earlier and saner pieces, an extremely difficult choral work, called "Gurre-Songs," received with an unusual amount of approval. As an example of the generally conceded gifts with which Schönberg started out, the performance served its purpose by disclosing a composer quite out of the common, but as a standard of measure between what he once was and what he has now developed into, the occasion generally called forth rather more regret than satisfaction.

Aristocratic artists in the tone world, at no time very numerous, have in our days become extremely rare. A few of the composers' names are to be found in the Gotha Calendar, but among the virtuosi titled performers can hardly be found at all. Considerable interest therefore attached recently to the professional début as a pianist of the young hereditary Prince Lobkowitz (a great-grandson of him to whom Beethoven dedicated some of his compositions). At a charity concert in Vienna he performed an oft-heard Hungarian Rhapsody by Liszt in a manner calculated to make his listeners forget not only his rank, but also the fact that he did not lay claim to other laurels than those of an amateur.

Francis Alexander Korbay, who died last week in London, was one of the best-informed men on the subject of music in Hungary, of which country he was a native, having been born at Budapest on May 8, 1846. He was a godson of Liszt, at whose advice he took up the piano when his voice suffered from continued exertion as an operatic tenor at the National Theatre, in his native city. Subsequently, he gave song recitals, playing his own accompaniments. For some years he resided in New York. In 1894 he went to London, where, for nine years, he was professor of singing at the Royal Academy of Music. His own compositions are of no importance, but his arrangements of Hungarian songs, with English words, have a lasting value.

Art

THE ALTAR AND THE TOMB.

The Sacred Shrine: A Study of the Poetry and Art of the Catholic Church. By Yrjö Hirn. New York: The Macmillan Co. $5 net.

Professor Hirn, of the University of Helsingfors, whose excellent monograph, "The Origins of Art," will be recalled by many readers, now presents a simple principle to account for the apparently miscellaneous and confusingly various products of Roman Catholic poetry and art. With characteristic scholarship he has supported his thesis by abundant citations and references. This necessary ballast is carried lightly, and the book is written in lucid and charming English. Professor Hirn's theory may be thus paraphrased: Christian art grows out of the twofold cult of the altar, which was actually and mystically a tomb and a shrine (*arca et ara*). Christian art develops to its height by cultivating the ideal of a shrine in the person of the Virgin Mary, whose body contained as a shrine Incarnate God. The wholly material notion of an altar tomb eventually gives way before the more spiritual conception of an altar shrine in which with orderly regularity is repeated the miracle of the Word made flesh and that flesh broken for our redemption.

Whatever the warrant of this interesting theory, there is no doubt as to its fundamental historical postulate. Gradually, the cult of the mass minimized or even expelled from Catholic altars all secondary and local cults based on relic-worship. The tomb and the altar part company, or, rather, the tomb detaches itself and the altar remains. And equally unquestionable is the fact that the cult of the Host thrives in like measure with that of the Virgin. She becomes the gracious and fitting archetype of all altar-shrines.

> Within the cloistre blisful of thy sydes
> Took mannes shap the Eternal Love and Pees,

writes Chaucer, boldly paraphrasing Dante. But Dante merely wrote *nel ventre tuo*, in thy womb. Chaucer's metaphor precisely illustrates how readily the mediæval heart converted the body of the Blessed Virgin into the shrine *par excellence*. This process of thought and feeling was of gradual growth. The earliest Mary was merely the Mother of the Man Jesus, the earliest altar neither a tomb nor a shrine, but a table at which the Last Supper was reënacted as a simple and non-miraculous feast of commemoration.

How early such table altars became tomb altars is not certain. The most primitive tables upon a single columnar support—Prof. Howard Crosby Butler has lately found a most interesting one *in situ* at Sardes—do not seem fitted for such a use. But as early as the fifth century the poet Prudentius sings of the Roman altar which at once guarded the bones of St. Hippolytus and served for "the spiritual food at the holy meals." Presumably, St. Hippolytus's bones lay in a cippus, or small sepulchral casket, between the legs of this altar table. Soon the altar itself was to assume the form of a sarcophagus in recognition of the relic that it invariably enclosed, and there was to ensue a long, protracted competition between the cult of the relic and the sacrifice of the mass. Indeed, there seems a kind of infelicity in the decree of the second council of Nicæa that every altar should contain a relic, just as to-day there is an evident tautology in building into a new altar, when a relic is not procurable, a consecrated Host. The danger, of course, was that the relic, being of strong local interest and a source of advantageous miracle, might actually overshadow the daily, indispensable mystery of the mass. This was no imaginary peril. We read that in a church near Cluny the relics of St. Walpurge, being for greater accessibility moved forward on the altar, suddenly ceased to work the customary miracles. At length a disappointed suppliant had a revelation of the saint, who said: "The reason you have not recovered your health is that my relics have been put on God's altar, which ought not to be used save for the divine mysteries." The miracles were resumed the moment the saint's relics ceased to encroach on the territory of the Host. The legend at least shows how conscious the Church itself was of the excesses of the cult of relics, which, the supply being limited, produced an extensive fraudulent traf-

fic. Abbot Suger, haggling for his martyrs with a Roman Jew, and Chaucer's Pardoner, with his bag stocked with miraculous "pigges bones," are merely the more grotesque examples of the credulity and fraud that accompanied the worship of saints' relics.

Such abuses grew quite naturally out of the crassly material notion of the relic held by the believer. From the merest fragment of a saint, and *a fortiori* from the entire body, there was an actual physical effluence, as there is from a magnet. This effluence constituted the healing virtue of the relic, and communicated itself both to living and to inanimate objects. Thus the case in which the relic was enclosed became impregnated with the healing virtue, which persisted even after the relic itself had vanished. It sufficed the devotee merely to touch the reliquary, and to see the relic behind the protecting crystal. And the virtue of the relic might be communicated by contact to a copy. For example, there are said to be no less than thirty-six accredited holy nails, all of which are efficacious, being in most cases copies duly charged by contact with one of the three admitted originals. Such faith in physical emanations from sacred objects is, of course, ethnologically considered, magic. Thus the Loango sorcerers, for a fee, allow laymen to place objects of their own for long periods among the authorized collection of magical paraphernalia. We should hasten to add that this white magic has never been deliberately chosen by the Catholic Church, but rather forced upon it by the irrepressible instincts of simple believers. In fact, the pullulation of saints and relics has at all times been something of a scandal, an abuse tolerated for its presumed pragmatic value. And at times, as in the Reformation, the Church has paid dearly for tolerating a mass of rather crude folklore and magic, which, candidly, it has never been in a position to control. Even to-day the Church would hardly venture to move in a critical spirit against the stronger local saints, who canonically are neither real saints, nor ever likely to be.

It was with difficulty that the proper sacramental use of the altar vindicated itself. The institution of the feast of Corpus Christi, 1264, in honor of the bleeding host of Bolsena, marked only a beginning. In the fifteenth century the books of ritual forbade on the high altar of a church any picture or statue not representing the Passion of Christ. "We should always have the Passion before our spiritual eyes, and those of our body also; especially at the celebration of the mass, which is nought else than the memorial of the Passion of our Lord." But hundreds of noble altar-pieces of the Renaissance testify to the general disregard of this command, and, indeed, it was not until the end of the sixteenth century that the pyxis set amid gold rays made the Host unmistakably the central object of the believer's contemplation.

In short, during the best periods of Christian art, church decoration was a kind of compromise between the requirement of the relic and that of the mass. In analyzing the decoration of any church we should bear in mind that the altar-piece is usually a reliquary, being only an extended illustration and glorification of the particular relic in the altar tomb, while all pictorial decoration having to do with the life of Christ, the Apostles, and the Virgin concerns the altar shrine, and is of sacramental import. The crucifix and stations of the cross in a modern Catholic church represent the stereotyped minimum of such sacramental decoration. Why the cult of the Virgin is to be distinguished from that of the miracle-working saints is clearly shown by Professor Hirn in the most delightful fashion. The Elect Maiden of Nazareth is preëminently the most sacred of shrines, for in her body took place the miracle of the Incarnation. Under the general notion of the hallowing of the shrine itself by its contents, her body was absolutely pure. And, not content with this, the Christian imagination soon insisted that, like her Divine Son, she was conceived without sin. Thus for eight hundred years the dogma of the Immaculate Conception, though officially a doctrine of yesterday, has been generally believed throughout Roman Christendom. And we must insist that what to a rationalist or a Protestant can but seem an attenuation of the miracle of the Incarnation, and a kind of diminution both of the humanity and the divinity of Christ, bears no such aspect to a Catholic realist. To him it seems merely an extension of the sacredness of Christ's body. The image of the Virgin appropriately presides over the ever-renewed miracle of the making of Christ's body and blood in the mass, as her actual body conceived him at the word of the Lord and stood beside his cross. Mariolatry, in brief, is a perfectly natural inference from a realistic and non-mystical view of the Incarnation.

As a digression it is interesting to ask what is the logical and doctrinal status of the numerous miracle-working Madonnas? We have failed to find an answer in Professor Hirn's pages, but cannot doubt that he would regard these cults as a perversion of the idea of the Madonna as a shrine. At Montevergine and Lourdes the Mother of God sinks to the quality of a thaumaturge, becomes a local institution, is reduced to a necromantic function. As such she is merely the elder sister of the miracle-working saints. Such pilgrimage resorts do not deserve their usual name of shrines, but are essentially reliquaries, the apparition of the Virgin, or some especially venerated likeness, being the equivalent of a relic.

It would be most interesting to follow Professor Hirn in his brilliant and scholarly derivation of the exquisite ceremonial of the mass, itself a consummate work of art, from the notion of adorning a shrine, and to glance at the hymns and meditations that celebrate the gracious potency of Mary; but it will perhaps be more profitable to test in a concrete instance the general theory that "Catholic art as a whole, in all its manifestations, decorates a sacred shrine." Let us recall that here the word shrine includes also the altar tomb, and repeat that in the best periods of Christian art we find a sort of balance between the requirements of the altar shrine and those of the altar tomb. With these provisos in mind, let us examine the decoration of one of the loveliest churches of Christendom one built at the best moment of the Italian Middle Ages, the Patriarchal Basilica of St. Francis of Assisi.

The legend tells us that, as St. Francis was dying in 1226, at St. Mary of the Angels, he commanded that his body should be buried on the Hill of Hell, *Collis Inferni*, where criminals were executed. By the principle of effluence, with which the reader should now be thoroughly acquainted, the hill became a holy place, and ever since has been called the Hill of Paradise, *Collis Paradisi*. Saints are not made by the Church, but only certificated, and within three years Pope Gregory IX, by canonizing the *Poverello*, merely confirmed the will of all Christendom. The two-storied church which gradually rose on the Hill of Paradise was thus essentially a tomb containing a most notable relic. In this assurance pilgrim processions from all parts of Italy have ever since visited the Basilica. Naturally, much of the decoration of the church illustrates this idea of a tomb. The nave of the lower church, soon after 1250, displayed the chief miracles of the saint. Two generations later Giotto painted in the central vaults, directly above the high altar, which again is immediately above the actual tomb, his three lovely allegories of the Franciscan virtues of Poverty, Chastity, and Obedience, and a Glory of St. Francis. Still later a chapel was adorned with the deeds of St. Martin of Tours, illustrating a secondary altar tomb. In the nave of the upper church Giotto and his aids depicted the main episodes of St. Bonaventura's official life of St. Francis, and room for four supplemental frescoes was found in the lower church. The earliest windows are devoted to St. Francis and his fellows. These are the main decorations

that derive from the idea of a tomb. But the sepulchral decorations overlap significantly into those that are essentially sacramental. St. Francis kneels at the foot of Cimabue's sublime Crucifixion in the upper church, and the Giottesque Crucifixion, in the right transept of the lower church, depicts numerous Franciscans as attendants. In one of the Gothic vaults of the upper church the face of St. Francis in a medallion takes its place beside those of John the Baptist, the Virgin Mary, and Christ himself. Such, with negligible omissions, is the part of the decoration corresponding to the idea of the altar tomb of St. Francis.

It was wholly consonant with the evangelical temper of St. Francis himself that the decoration of his Basilica should be, after all, mainly sacramental, based on the idea of an altar shrine. The choir and transepts of the upper church are chiefly devoted to the Apocalypse, Christ's final act as Redeemer, and to the stories of St. Peter and St. Paul, the chief witnesses of the authority of the Church and of the divinity of the Man of Sorrows. Two great Calvaries were set, invisible to the faithful in the nave but present to the preacher and officiant of the mass. Above, in the vault Cimabue painted the Four Evangelists at their desks. In the two upper rows of the nave were arranged as type and anti-type the chief events of Christ's life, with the corresponding Old Testament events. One of the vaults contained, as we have seen, Christ with the Precursor and his Mother. Another depicted the four Latin Doctors, St. Augustine, St. Gregory, St. Ambrose, and St. Jerome, who gave to traditional Christianity its dogmatic formulation. On the front wall the infant Christ appears in his mother's arms. All these frescoes are the preparation for, or explanation of, the miracle of transubstantiation which daily recurs at the modest altar—all are appropriate extensions and natural reinforcements of the idea of an altar shrine. And such is obviously the case with the stories of Christ's early life and Passion in the transepts of the lower church.

We have tried only to bring out clearly the brilliant and suggestive generalization which Professor Hirn develops with copious erudition and reverent sympathy. That his book is of a rare sort we need not insist. As a contribution to the psychology of religion it is of permanent value. The specialist will wish at times that the chronological stages of the process had been more definitely established, and occasionally will long for concrete applications of the more paradoxical ideas. Yet it is easy to see that such solace to the specialist might have been prejudicial to the form of a book that is delightful as literature. In fact, much of the charm of this learned and generous work precisely lies in its stimulus. Supported by the main hypothesis, which seems, to us, essentially sound, the student of mediæval history and art may readily set out upon alluring adventures of his own, making his own applications. This, in a small way, your reviewer has endeavored to do as a mark of gratitude. We have rarely happened upon a modern historical work that combines in so high a degree with ripe scholarship and systematic structure, insight, eloquence, and real passion of the intellect.

The newest special number of the *International Studio* ("Modern Etchings, Mezzotints, and Dry-Points," edited by Charles Holme; John Lane) is essentially a review of the ten years which have elapsed since the same periodical issued a similar volume in 1902. That such a summary, with 196 reproductions, could be made by including only the most important artists is the best proof of the "extraordinary efflorescence in recent years" of the etcher's art. For that reason the volume is welcome, indeed, and valuable and useful. The number of illustrations allotted to the various countries is not without significance: Great Britain has 75, America 37, France 25, Holland 17, Austria 18, Germany 11, Sweden 13. These proportions may seem strange, and one wonders why Aid, Miêlatz, Quinlan, Roth, Senseney, and Washburn were not mentioned in the American section. Similar omissions may be found elsewhere—for example, Reifferscheid, Olbricht, or Pietschmann in Germany. Yet it is true that not every one could be included. A noteworthy feature is the variety of treatment illustrated, which in the case of Frank Short, for example, shows "recognition of the appropriate methods—etching, dry-point, aquatint, mezzotint—for each subject" (mention of soft-ground etching being noticeably absent). The writer of the chapter on America notes that an "increasing number . . . seem content to reproduce a mournful reiteration of nature, valuable only as documental facts, and a one-sided manifestation of technical ability, . . . expressing nothing beyond craftsmanship and the exaltation of the superficial." Such technical effort, without strong personal reaction, is noticeable elsewhere also, nor is it limited, of course, to etching.

An international exhibition will be held under the auspices of the Deutscher Buchgewerbeverein, at Leipzig, from May to October, 1914. The purpose of the exhibition is to celebrate the one hundred and fiftieth anniversary of the Royal Academy for the Graphic Arts and the Book Industry at Leipzig. Notification of the intention to exhibit must be given on forms provided by the management not later than June 30, 1913.

The Egypt Exploration Fund is proceeding in its fifth campaign at Abydos, and a report announces some important discoveries. On a small rise in the desert near the Coptic convent work was carried on in the ancient cemetery. The tombs there had to a large extent escaped the complete plundering which befell the greater part of the Abydos necropolis, owing to the fact that in Ptolemaic times a small village was built over them. The great interest of this part of the site proved to be that it contained what had hitherto been sought in vain in Abydos—namely, the cemetery of the Third to Fifth Dynasties. The tombs of this period consisted of small square or circular pits, at the bottom of which lay the body in a huddled-up position, covered with a huge inverted jar. Over each pit was a small *mastaba*, or shrine, about two feet high, with two niches in its east wall where the offerings of food and drink were made to the deceased. In the centre of the hill are several very imposing *mastabas* of this period, which it is hoped will prove to contain the burials of the more important members of the community. There were also found tombs of a later age on the same hill. The finest of these date from the Twelfth Dynasty (about 2000 B. C.). Each consisted of a rectangular pit, with two or more chambers opening off its ends at different levels. In the chamber lay the body stretched out on its wooden coffin, head to the north, while beside it were some of the favorite possessions of the dead. One of the finest of these tombs contained the bodies of a chancellor named Inher-sa, and of a woman, probably his wife or daughter. Both bodies had been plundered of the gold which once adorned them, and of which a few scraps still remained. But the majority of the objects were untouched. Among these were a fine steatite scarab of the chancellor himself, vases of alabaster and stone, bronze mirrors, small amulets of carnelian, blue glaze, and silver, and a wonderful necklace of amethyst, carnelian, and green felspar beads.

In another part of the site was found a cemetery of Ibises, where thousands of these sacred animals were buried in the Roman period in large jars, just below the surface of the desert sand. Many of the birds had been mummified with extraordinary care, the outer wrappings consisting of narrow strips of linen in two colors, white and black, accurately arranged in exquisite geometric patterns. Some of the mummies proved, when unwrapped, to contain only feathers of the ibis, which were evidently collected with great care as belonging to the sacred bird. Even the eggs were regarded as sacred, and several of the jars contained specimens of them, some of which were still intact. Other birds, such as hawks, were found in the cemetery, together with rare examples of oxen, sheep, dogs, shrews, and snakes. This cemetery, taken in conjunction with the dogs' catacombs found in 1910, shows that in the Roman period Abydos had assumed a great importance as a burying ground for sacred animals.

Louis-Maurice Boutet De Monvel, painter and illustrator, famous because of his portraits of children, died Sunday in Paris in the sixty-third year of his age. He was born at Nemours, and received his early education at the Lycée Charlemagne. He received a gold medal at the Universal Exposition in 1900, and was a Knight of the Legion of Honor. De Monvel turned to art early in life. He studied with Rudder, Cabanel, Jules LeFebvre, Gustav Boulanger, and Carolus Duran. He served as a soldier in the Franco-Prussian War, and exhibited for the first time in the Salon of 1873. For a while he devoted himself chiefly to draw-

ing for illustrated publications, but continued to paint and exhibit pictures in the various salons, for which he received numerous awards. Among his principal paintings may be mentioned The Temptation of Saint Anthony, the Portrait of Mounet-Sully, the actor, The Good Samaritan—which received a medal at the Salon of 1878, and is now in the Museum of Orleans; Arabs Returning from Market—shown at the Salon of 1879 and now in the Museum of Amiens. He has illustrated "Old Songs for Little Children," "Songs of France," "La Fontaine," "Nos Enfants," "Xavière," "The Life of Jeanne d'Arc," etc. In November, 1899, Boutet De Monvel visited New York, to make a study of American children, and painted several portraits.

Finance

DOMINANT INFLUENCES.

The events of each successive week bring into strong relief the three influences which at present dominate the course of our financial affairs. They are the fundamentally sound and strong condition of American industry, resulting from three years of after-panic retrenchment and from last year's great harvests; the danger of an unsound position in European finance and industry, following prolonged expansion and the shock of the Balkan War, and (in the mind of Wall Street equally important) our home political unsettelment and the fear of radical proceedings in Congress.

The condition of things in our own industrial affairs has been proved by the large railway earnings, the record-breaking foreign trade, and the continued activity in general business, despite the impending tariff revision. Leading steel companies, according to the *Iron Age's* advices from Pittsburgh, "report more new inquiry for delivery in the last half of the year than at any time for several months." Of the Government's estimate of last week, regarding grain and crops of 1912 still held on the farms, the Chicago market expresses the opinion that, with these surplus holdings "at the unusually high total of 2,111,000,000 bushels—an increase of 891,000,000 bushels, or 42.7 per cent. over the reserves of a year ago—the business and manufacturing interests of the country have something definite to reckon on, and so, in an even larger degree, have the railroads."

The principal and immediate cause for the weakness in our markets has unquestionably been the financial disturbance in Europe. Conditions such as exist to-day on the great European money markets would at least restrict the good effects of a promising situation in our own finance, without any other influences. We saw in our markets, in the sequel to Europe's Boer War panic, how such a strain on foreign financial resources must affect American affairs, even with American business conditions at the best. On that occasion, a strain in the European money market for which no other solution was in sight—with bank reserves at low ebb and bank rates at top notch in England and on the Continent, and with every foreign money centre defending itself against the other—had to end in a backward movement of European trade activity. It is difficult to see how it can have any other end on this occasion, or how the strain which it has indirectly caused on our own money markets can definitely end until the hour of such foreign trade reaction.

To what extent the hesitation of investment capital, on account of dislike of our own political situation, has really been a factor in the markets, it is difficult to say. Some influence must be exerted by impressions of the sort, even when it is as hard to discern their exact scope of influence as it was in 1900—a year in which a good many people withdrew their capital because they thought the market was depressed by the chance of Bryan's election to the Presidency—whereas the undoubtedly dominant influence was the reaction of Europe's financial collapse upon America. This much it is safe enough to assert—that if a sufficient number of investors believe the financial as well as the political fortunes of this country to be at stake at Washington, then we have at least a psychological influence in the field which must be reckoned with.

People who take that view of the outlook, however, and who exclude all others, must at least be regarded as unfortunate; for it does not look as if we shall very soon get rid of political irritations. With the community at large in so peculiar a mood towards ordinary questions of the day, it would not be reasonable to expect old-fashioned statesmanship in the legislative debates. When it excites no great popular surprise for an army of women to march up Pennsylvania Avenue a day ahead of the inauguration parade, the observant financial world may look for novelties of performance in the public men installed after the second of those functions.

Nor, as a matter of fact, ought selection of the requisite novelty by the Congressional orator to be difficult, at an hour when the trend of discussion, argument, and taste in the non-legislative community is based so frequently on the turning upside down of old and familiar truths. A legislator who has observed the extent of vogue which falls to art exhibits reproducing the paint-box exploits of defective children, to composers who found new schools by requiring from their orchestras the euphonies of election night on Herald Square, to sociologists who would have partners for the marriage relation selected or vetoed by the state, and to humanitarians who teach that virtue in women and honesty in men depend wholly on the amount of their salaries, must pitch his voice rather high to be heard outside the Capitol, but at least he has a hint how to do it. Such statesmen as the member from Oregon, who, on the 4th of March (while the inaugural programme was waiting for Congress to adjourn), set forth in great detail to the House of Representatives that "91,800,000 of our people" have become "the industrial slaves" of "the remaining 200,000," are fairly in line for much of what the public at large, and Wall Street along with it, may presently expect to hear.

It is natural that the financial community should not look forward cheerfully to a programme of this nature. Yet perhaps even sensitive Wall Street is beginning to get seasoned to it. Furthermore, a fairly long political tradition has taught how much easier it is to rouse the echoes of the Senate Chamber with an attack on the Rule of Three and the Law of Gravitation, than to place a repeal of either on the statute books. There is unquestionably much to be done in the way of rational progressive legislation, as there always has been; there is much of older and retrogressive legislation to be undone, and between the two movements it would be strange if some crude absurdities did not obtain a hearing. But Congressional majorities, even in these stirring days, are apt to be made up of public men who are not only aware that the bulk of their constituency can distinguish sense from nonsense, but that they themselves will be judged far more severely for what they do than for what they say.

The turning point in past civilizations has been marked, again and again, by the appearance of Socialism coincidently with a failure of the birth-rate. During the lifetime of the present generation these two phenomena have assumed a more and more prominent position among the races of white men, and the author shows how critical the position of any civilization is when it reaches the point at which they are manifested.

LONGMANS, GREEN, & CO.

THE GREAT ART GIFT-BOOK OF THE YEAR

ART By Auguste Rodin

(Translated from the French of Paul Gsell by Mrs. Romilly Fedden.) With over 100 illustrations in photogravure and half-tone. Buckram, $7.50 net; three-quarter levant, $15.00 net; carriage additional. A book which takes its place at once as the most important art book in years. It covers practically the whole range of art, and abounds in memorable analyses of the works of the masters of painting and sculpture, ancient and modern. *Send for descriptive circular.*

PANAMA: AND WHAT IT MEANS

By John Foster Fraser

Author of "The Land of Veiled Women," "America At Work," "Canada As It Is," etc.

In this volume on the great canal we have the point of view of an international traveller, student, and author of repute.

The author not only gives us his impressions of present conditions in the work of the canal and in the canal zone—the engineering and sanitation difficulties overcome—obtained from careful studies and personal observations made on the spot, but he presents us with a vivid history of the canal project from the beginning —"the dream of four centuries." He discusses the meaning of the canal to the commerce of the nations of Europe, North and South America, and Asia; the question of tolls, fortifications, and the canal as an instrument of war.

The illustrations, made from photographs, number over forty-five, and add much interest to the volume.

12mo, cloth. Fully illustrated. Net, $1.75. *Postage* 15 *cents.*

A HISTORY OF THE MODERN WORLD

By Oscar Browning, M.A.

Lecturer on History at Cambridge University.

The story of the world's progress since 1815. "To one interested in recent or contemporary European history Mr. Browning's work is a fascinating stimulant. The reader feels that it is not the colorless compilation of a Dryasdust, but the personal expression of a distinct individuality who has opinions of his own."—*The Nation.*

2 vols. 8vo, cloth, 528 *pp. each. Net,* $7.50. *Postage* 45 *cents.*

THE STORY OF THE RENAISSANCE

By William Henry Hudson

Author of "An Introduction to the Study of Literature."

A broad survey of that interesting period of European history. The author has made his work instructive and entertaining. There are chapters on "The Age of Inventions and Discoveries," "The Revival of Learning," "The Renaissance in Religion," "Philosophy," "Education," "Art and Literature." *8vo, cloth,* 250 *pp., fully illustrated. Net,* $1.50. *Postage* 20 *cents.*

THE RISE OF THE DEMOCRACY

By Joseph Clayton

A history of democracy from its inception in primitive tribal communities to its consummation in enfranchisement and representative government. It shows the march of the people in the struggle against absolutism, but not without a warning word against the dangers of democracy. The book ends on the note of optimism, discussing the achievements and possibilities of democratic power.

12mo, cloth. Net, $1.25. *Postage* 12 *cents.*

ANNOUNCEMENT OF AN IMPORTANT NEW BOOK BY

Dr. Alfred Russel Wallace

SOCIAL ENVIRONMENT AND MORAL PROGRESS

As what may practically be considered a birthday message, Dr. Alfred Russel Wallace (who has just passed his ninetieth birthday anniversary) has written this book on "Social Environment and Moral Progress."

Dr. Wallace, who shares with Darwin the honor of having discovered the great principle of natural selection, pronounces in his new work a strong indictment of many current social conditions, traces out the root cause of what he considers our degeneracy, but concludes the volume with a constructive policy based upon the vital facts of psychology and morality.

A vital topic set forth by a world authority.

12mo, cloth. Net, $1.25. *Postage* 15 *cents.*

The Government of the Ottoman Empire in the Time of Suleiman

8vo. Cloth, 300 pages. $2.00.

By A. H. LYBYER

Professor of Mediæval and Modern European History in Oberlin College.

A timely study of the organization of the Ottoman Turks in the period of their greatest power and prestige. The author describes the vast energies and magnificent achievements that characterized the Constantinople of the sixteenth century.

HARVARD UNIVERSITY PRESS
CAMBRIDGE, MASSACHUSETTS.

Swedish Song Games

By Valborg Kastman and Greta Köhler

8vo, cloth, 95 pages, illustrated.

75 cents.

This convenient manual provides a book of song games, such as are already famous in Sweden. The Swedish system of gymnastics, now so commonly taught in the United States, has prepared the way for a collection of this kind, which may be used in school or on the playground, indoors or out, with children of all ages.

These games give an opportunity not only for imitation but also for initiative, and hence are both recreative and educational. The music has the lilt of all folk songs, and the words will be intelligible to even the youngest players.

Many of the games are so simple that they may be played in the kindergarten. A few are played in Sweden by pupils of high-school age and even by older people. So explicit are the directions that a teacher should be able to use the book with any group of children. Its possibilities for playground and home are obvious.

NOTABLE SPRING PUBLICATIONS

FICTION

MY LITTLE SISTER

By ELIZABETH ROBINS.

This remarkable novel has created a nation-wide sensation. It deals with a subject foreign to novels in a big, bold, unique way, that makes it worthy of all the enthusiasm with which reviewers have greeted it. "The story you can't forget."

$1.25 *net.* *Postage* 12 *cents extra.*

RUNNING SANDS

By REGINALD WRIGHT KAUFFMAN, *author of "The House of Bondage," etc.*

In the skillful hands of this well-known author, his novel runs admirably and convincingly true to life; it reveals a depth of insight into human nature, a grasp of the real forces of life, and a finish and mastery of the novelist's art that make "Running Sands" a notable piece of work in modern American fiction.

$1.35 *net.* *Postage* 13 *cents extra.*

THE WEAKER VESSEL

By E. F. BENSON, *author of "Dodo," etc.*

Drunkenness is the tragedy in the domestic life this story describes. But the girl is a genius, and when the inevitable catastrophe comes she meets it with a noble and sunny fortitude, and from the wreck builds up at last an enduring happiness.

$1.35 *net.* *Postage* 13 *cents extra.*

UNTIL THE DAY BREAK

By W. L. GEORGE, *author of "A Bed of Roses," etc.*

"Dedicated to the facets of the anarchist mind," says the author in his preface. It is the story of the development of an anarchist of peculiar type and striking personality.

$1.30 *net.* *Postage* 13 *cents extra.*

THE GLOVED HAND

By BURTON E. STEVENSON, *author of "The Holladay Case," etc.*

Mr. Stevenson's distinct contribution to detective literature is Jim Godfrey—urbane, shrewd, level-headed reporter. "The Gloved Hand" is mystifying, thrilling, absorbing—in fact, Jim Godfrey's latest and best detective exploit.

Illustrated. $1.30 *net.* *Postage* 13 *cents extra.*

THE HEART OF NIGHT WIND

By V. E. ROE, *author of "The Maid of the Whispering Hills," etc.*

A tense, vigorous, out-of-doors kind of story about the primitive passions of men and women, told in dramatic style, and ending in bringing happiness to the heart of Night Wind.

Illustrated. $1.30 *net.* *Postage* 13 *cents extra.*

THE FETTERS OF FREEDOM

By CYRUS TOWNSEND BRADY, *author of "The Island of Regeneration," etc.*

The Emperor Nero and his court, St. Paul at Rome, the vicissitudes of the early Christians, form the framework of this brilliant historical romance, which in intensity of interest is comparable only to "Ben Hur."

Illustrated. $1.35 *net.* *Postage* 13 *cents extra.*

MISCELLANEOUS

ALASKA, AN EMPIRE IN THE MAKING

By JOHN J. UNDERWOOD.

A gripping account of the last American West written by one who is of this last West a part. In addition to live facts and accurate information, the book teems with human interest stories of the real pioneers who have dared the wastes of the Northland.

Illustrated. $2.50 *net.* *Postage* 17 *cents extra.*

THE LIFE OF THE SPIDER

By J. H. FABRE, *author of "Insect Life," etc.*

You may know nothing about spiders and may think you care nothing about them, but Fabre writes a story of the spider that is as thrilling, as dramatic, as intensely interesting as a most exciting novel.

$1.50 *net.* *Postage* 13 *cents extra.*

THE IMMIGRANT INVASION

By FRANK JULIAN WARNE, Ph.D., *Secretary of the New York State Immigration Commission, etc.*

An authoritative volume covering all phases of the subject. It points out innumerable national problems regarding immigration, with especial attention to the future policy of this country.

$2.50 *net.* *Postage* 17 *cents extra.*

WAY STATIONS

By ELIZABETH ROBINS, *author of "My Little Sister," etc.*

A forceful exposition of the great Woman's Movement for sex equality, written with strong conviction and enthusiasm. Especial attention is given to the English Movement. A necessity to suffrage workers.

$1.50 *net.* *Postage* 13 *cents extra.*

THE THREE GIFTS OF LIFE

A Girl's Responsibility for Race Progress

By NELLIE M. SMITH, A.M.

Sex hygiene treated in a new way. The basis of this little book on sex hygiene is the great ethical truth: evolution or progress. The scientific facts of reproduction in plant, animal, and human life are given in demonstration of this truth. A book with a simple style, easily understood, yet forcible and convincing.

50 *cents net.* *Postage* 6 *cents extra.*

THE WOMAN WITH EMPTY HANDS

By A PROMINENT SUFFRAGETTE.

The story of one woman's conversion to the cause of suffrage; but a story which gives woman's point of view simply yet cogently, clearly, and with genuine appeal to the sympathies. A great big bullet for ballots.

50 *cents net.* *Postage* 6 *cents extra.*

BRINGING UP THE BOY

By CARL WERNER.

To fathers who were once boys, but have forgotten, Mr. Werner's message will ring true; to mothers who perhaps think they understand the boy, but do not, this book will prove invaluable.

$1.00 *net.* *Postage* 8 *cents extra.*

The Nation

NEW YORK, THURSDAY, MARCH 27, 1913.

The Week

Ex-President Taft's desire for the portrait of ex-President Roosevelt which hung in the President's office for four uneasy years can hardly be inspired by any such consideration as that which led Little Lord Fauntleroy to present his old friend Mr. Hobbs with a watch on the eve of the boy's departure for England. "When this you see, remember me," read the inscription within the case, and it was supplemented by the giver's naïve explanation: "I don't want you to forget me." The incident quite upset the honest grocer. One would suppose that the most recent Executive to leave the White House needed no reminder of his predecessor. All that is dearest and bitterest in the sheaf of memories that now constitutes his sole connection with the highest pinnacle of official greatness in this country is bound up with Theodore Roosevelt. What can one picture more or less matter? And why should he not try rather to forget the tragedy? Well, in our opinion, this is exactly what he is doing.

In going closely into the particulars of the tariff bill with Chairman Underwood, so as to bring about a practical concert between the Executive and Congress, President Wilson is pursuing the course which experience marks out as wise. Democratic and Republican Administrations alike have found in the uncertainties of tariff legislation endless difficulty and danger. If Mr. Taft had been able to get from Congress what he had, in his campaign, virtually pledged that the country should have, the history of his Administration might have been very different from what it proved to be. The Cleveland Administration found its greatest difficulty in the financial troubles arising out of the great panic, and in the free-silver split in the party; but its situation was made much worse by the struggle with a few powerful marplots over the tariff, and by its unsatisfactory conclusion. President Wilson has a prestige incomparably greater than was President Taft's, and his party is in a condition of general harmony that was sadly lacking in the time of President Cleveland. He is not overstraining his prestige by any attempt to dictate to the House, but he is taking proper advantage of it to procure effective co-operation between Congress and the Executive.

With only three more States needed, Delaware has refused to join the affirmative States in ratifying direct election of United States Senators. It is always inspiring to see a man or a State that dares to be in the right with two or three; but much as we should like to be able to applaud little Delaware, we are constrained to say that the assertion of independent thought on this particular subject would have come with better grace from some other of her forty-seven sister States. Indeed, if there were any need of further argument on the subject of direct election of Senators, a very strong one would be supplied by the fact that the Legislature of the State which has furnished the classic example of debauchery of its electorate through the existing method is counted against the reform.

For ten years a "public opinion" bill has been knocking in vain at the door of the Massachusetts Legislature. In the meantime, the much more radical initiative and referendum has been growing in favor, so that at last the "public opinion" proposal seems rather conservative, and has been allowed to slip through the lower house without opposition. It provides that, on petition of two hundred voters in any Representative district or of twelve hundred in any Senatorial district, asking for the submission of any instructions to the Representative or Senator concerned, the Secretary of the Commonwealth shall determine whether the instructions proposed relate to a question of public policy, and if he finds that they do, shall draft them in a simple, unequivocal, and adequate form for presentation on the ballot in the next election. Not more than two questions may be submitted at one election, and no question negatived may be submitted again in any form in less than three years. To be an "instruction," the affirmative of the question must receive a majority of all the ballots cast at the election. It will be interesting to see whether this measure, if it is adopted, proves to be a sop to the radicals, or only whets their appetite.

CHICAGO, March 18.—One hundred and fourteen warrants for thirty-one alleged members of the "arson ring" were issued by Judge Wade in the Municipal Court today at the instance of Assistant State's Attorney Johnston. Twenty-eight of those named in the warrants are business men, some of them wealthy.

Items of news like this have been playing havoc with some notions which, a few years ago, seemed to be spreading rapidly among humanitarians interested in questions of penal policy. The doctrine that crime is always, or nearly always, a matter either of wretched environment or of such mental defectiveness as amounts to moral irresponsibility is incompatible with "Arson Trusts" of the kind we have been recently reading about in New York and elsewhere, and with such stories as that of the Hawthorne-Morton-Quincy mining adventure, or the Sugar Trust weighing frauds. And the notion, still more fatuous though closely related to this, that punishment has no deterrent effect, likewise gets a severe blow from the arson experiences. The enormous gain already shown in New York as to incendiary fires is an indication of the thoroughness of the cure which better laws, added to more rigorous administration of them, will bring about.

Four dictagraphs have been found in the Pennsylvania House of Representatives, and a member of that body asserts positively that an equal number of these machines has been installed in the Senate. The devices were discovered in the small ventilators at the bottom of the desks. Who can have put them there? It is solemnly declared on investigation that none had been purchased by the State. Burns detectives, of course, are suspected. The most disturbing aspect of the situation is the possibility that more of the uncanny contrivances are scattered through the committee rooms and other places where

the legislators are in the habit of congregating. There has been nothing quite like this since the days of the King of Syria to whom it was explained that a certain prophet had no difficulty in telling the King of Israel "the words that thou speakest in thy bedchamber." In Woodrow Wilson's phrase, this is "pitiless publicity" indeed. What is really needed is an instrument that will automatically make public those words that legislators ought to have said, and suppress those that they ought not to have said. This would save many a labored and unconvincing "explanation."

The final signing of the subway contracts last week was a momentous event in the history of New York city. In no city on this continent has, we believe, so large a transaction been put through in such a far-sighted way, with such advantages to the public. If the success of the fusion ticket in 1909 needed any justification, there is more than sufficient in this one act, which will affect the whole development of the metropolis for generations to come. It is only necessary to think what would have happened if Tammany had controlled the city at this juncture, to realize in fullest measure the good fortune the city has had in having three such men as Messrs. Willcox, Prendergast, and McAneny to safeguard it. Even the Mayor was ready to sign in 1911 a contract which bore no resemblance in its benefits to the city to that which became binding last week. The honors which might have been the Mayor's are clearly Mr. McAneny's. To him chiefly are due the scope and the many good bargains for the city of these contracts, which involve the staggering sum of $325,000,000. The city may well be proud of its achievement, carried through without even the suspicion on the part of any sane citizen that any public official has personally profited or sought to profit thereby.

The Indiana Legislature has passed and the Governor signed the proposed press-muzzling law. As originally drawn, it made a crime of printing anything in a newspaper that might expose a man to ridicule or contempt in order to influence others to vote against him or to win support for or oppose any measure at a primary, election, or convention, or in the Legislature. As finally passed, it is modified by the use of the word "falsely"—one must not falsely hold up a legislator or a statesman to ridicule. "The effect," says the Indianapolis *News*, "will inevitably be to expose every newspaper in the State to the wrath of crooks with a grievance against it." The *News* adds that, as many prosecuting attorneys are creatures of political gangs, it will not be difficult for offending politicians to find agents to proceed against that portion of the press that has incurred their wrath. Indiana, of course, has its libel laws, both civil and criminal, so that no additional statutes were necessary. Had the new law been in existence recently, the *News* declares, it would have been a crime to call public attention to the activities of certain groups who were working against the Public Utilities bill. "Except for that publicity which it is now sought to destroy, the sleek gentlemen who fill the Indianapolis hotels while the Legislature is in session would run away with the State House." Such legislation ought to meet with the general contempt and prompt repeal which marked the course of Gov. Pennypacker's muzzling bill in Pennsylvania.

A settlement of the protracted labor war in the West Virginia coal fields is imminent, if it has not actually been attained. Credit for the restoration of peace is due in large measure to Gov. Hatfield, who has made use of the exceptional powers conferred on him through the proclamation of martial law under his predecessor. We are still of the opinion that the trial of civilians by military court is a vicious practice. But finding the situation as Gov. Glasscock had left it, Gov. Hatfield has used his authority as commander-in-chief of the State forces in a spirit of clemency and has thereby succeeded in appeasing the feeling of bitterness engendered in the course of what has at times approached the condition of civil war. The same energy and judgment displayed at the beginning of the conflict might have averted violence and the necessity of martial law.

The final census bulletin concerning Mississippi brings out a number of interesting facts about its population. As is well known, it is one of the two States, South Carolina being the other one, in which the negroes outnumber the whites. In Mississippi the proportion is 56.2 per cent. colored and 43.8 per cent. white, as against 58.5 and 41.3 per cent. in 1900, showing a substantial white gain. There are few, if any, States in the Union with so large a native-born population, only 0.5 per cent. of the whites being foreign-born and but 1.1 per cent. having foreign parentage. Out of a total citizenship of 1,797,114, only 207,311 people reside in Mississippi's cities; all the rest lead the rural life. Two-family houses or tenements are little known, for there are 376,420 dwellings and but 384,724 families. Despite the fact that, except Texas, Mississippi produces more cotton than any other State, and still has a soil of rarest fertility in some portions, few emigrants are lured from other States, for 87.5 per cent. of its citizens were born within its boundaries. Altogether, in many of its aspects Mississippi is one of the most interesting of our purely agricultural commonwealths; it is at least free from all those questions that arise out of overcrowded cities and a teeming population large in proportion to the total acreage. But it is in many respects one of the most backward of our States.

A "Citizens' Protective League" has just been formed in Denver, and what does the reader think is its object? To protect the city against disease or crime? No; against vicious journalism. Increasing numbers of citizens have become disgusted with the course of the Denver newspapers. They do not object chiefly to the squabbles between rival editors, though these are unseemly enough, but to the practice of sensational journalism in its worst forms. Filth is poured into Denver homes by some of these sheets. They seize upon every scandal and story of vice and spread the whole forth in startling and exaggerated reports. The thing has gone so far that a League has been formed to combat this public evil. The intention is to keep up a rain of protests against the publication of all the revolting details of crime, and by combined action to bring the truth home to yellow editors that their course is not only offensive to the public sentiment of their city,

but will surely lead to the withdrawal of public support.

A piece of genuine protection is sought from the tariff-makers by persons interested in saving certain birds from further destruction. The proposal is to amend Schedule N by prohibiting the importation of the plumage of wild birds, except for scientific purposes. A precedent for this action is found in the present tariff act, which prohibits the importation of the eggs of game birds. In behalf of the amendment, it is urged that bird slaughter is greater than ever before, so that in another decade a dozen of the most beautiful species will be exterminated, unless the war upon them is checked. The United States is the largest market for wild-bird plumage, and the closing of our ports to this trade would probably be followed by similar action in London and Berlin. Australia has already led the way. The prohibition would arouse little opposition either from women wearers of such plumage or from milliners, since ostrich plumes and fancy feathers of domesticated fowls will be available, to say nothing of what the art and ingenuity of the milliners may devise.

The recent English bye-election in South Westmoreland is noteworthy for the fact that the successful Conservative candidate was an avowed free-trader. As commander of a Territorial battalion in the constituency for fifteen years, Col. Weston was well known and popular, and his party turned to him to save the seat. He had never made any concealment of his free-trade views. These, in fact, had been so pronounced as to keep him out of sympathy with the recent Unionist management, and to prevent his taking any active share in county politics. Moreover, Col. Weston was not even rabid on the subject of Lloyd George and the Insurance act; and, to add to the wonder of his candidacy, was not fiercely against Home Rule for Ireland. His words were: "If Ulster can be brought to see that some compromise is fair and reasonable, I should welcome it." Yet heterodox as he thus was on two main points of Conservative doctrine, Col. Weston was elected by a majority some 200 greater than the 308 by which the Unionists won in 1910. What this "proves" would puzzle the Scotchman who asked what "Paradise Lost" proved. It will, however, undoubtedly have the effect of cheering the free-trade Unionists, and stiffening them in their determination to throw over as soon as possible the protectionist policy which Joseph Chamberlain, with disastrous consequences, imposed upon their party.

The make-up of the new French Cabinet, so far as its principal members are concerned, would at first sight promise a continuance of M. Briand's policies. The new Premier, M. Louis Barthou, and his associates in the important Ministries of War and Marine, together with two minor positions, are taken over from the Briand Cabinet. Nevertheless, there has come a change over the aspect of French politics. The mere fact that the "strong man" Briand should have been driven from office within less than a month is significant. His successor is not a "strong man." M. Barthou is an old wheelhorse of the Radical party. He was Minister of Public Works and Minister of the Interior during the crucial years of the Dreyfus affair, 1894-98. From 1906 to 1909 he was Minister of Public Works and of Justice in the same Cabinets with, or under the presidency of, Clemenceau and Briand. He held the portfolio of Justice in the late Cabinet. From his former affiliations little is to be gathered as to whether he is a Clemenceau man or a Briand-Poincaré man. Probably he has been chosen to tide over a crisis. He is said to be in favor of the three years' military law; but so is every prominent politician at the present moment outside the Socialist ranks. On the subject of proportional representation he is apparently a moderate.

The bases of peace, as submitted by the Powers to the Balkan allies, exclude the demand for a money indemnity to be paid by Turkey, fix the new frontier along a line from Midia on the Black Sea to the Gulf of Enos on the Ægean, and concede Adrianople to the allies. If the suggestions put forward by the Powers should be adopted by both sides, the allies will at first sight have gained nothing by the resumption of hostilities. That Turkey would lose all her territory west of the line along which the decisive battle of Lule-Burgas-Bunarhissar was fought has been a foregone conclusion. As for Adrianople, the Powers long ago formally advised the Turkish Government to consent to the surrender of the fortress. The probabilities are that, in return for Adrianople, Bulgaria would even now consent to dispense with an indemnity and surrender her claims to the peninsula of Gallipoli, with the virtual control of the Dardanelles. But if the bargain is to be pushed through, the Powers must bring Turkey to reason before warm weather sets in and the Bulgarian artillery, now largely imprisoned in the quagmires around Tchatalja, can once more be brought into operation. A battle in front of the Tchatalja lines, or in Gallipoli, may come any day to render the work of the mediating Powers labor wasted.

The murderer of the King of the Hellenes has as yet given no motive for his act. But whether the assassin of kings and presidents asserts a motive or not, in the end it is pretty sure to turn out that mental aberration is the impelling cause. As the list of assassinations increases it is more and more evident that the madman's bullet is one of the risks of a "trade," and is not to be connected with the personality of the royal victim. That is one of the handicaps under which the constitutional monarch labors; he takes the physical responsibilities of royalty without the reality of power. During the fifty years of King George's reign, Greece has passed through many tribulations, but her way has been that of progress. The boundaries of the kingdom have been extended until to-day the Greater Hellas of the visionaries has almost been attained with the conquest of Epirus, Hellenistic Macedonia, Crete, and other islands of the Ægean. The sovereign under whom the Greek national aspirations have been so fully realized met his death on the scene of the most notable victory won by his people. Without exaggerating the merits of the dead King, we may find fresh meaning to Fitz-Greene Halleck's well-worn lines, dedicated to another Greek leader:

But to the hero, when his sword
Has won the battle for the free,
Thy voice sounds like a prophet's word;
And in its hollow tones are heard
The thanks of millions yet to be.

NOT LEAVING CHINA HELPLESS.

There is a certain force in the criticism of the manner in which President Wilson announced that this Government would no longer give its backing to the six-Power loan to China. The Secretary of State was away and the matter was taken out of the hands of the Acting Secretary. Of course, all Presidents reserve the right to decide important questions of foreign policy, but they usually consult the officials of the State Department with due courtesy. That President Wilson did not do this in the case of Huntington Wilson gave the latter a technical grievance, and justified him in peremptorily resigning if he so wished. But it did not entitle him to lecture the President on the folly of the plans of the Administration. In thus translating his hurt into impudence, the Acting Secretary made the grave diplomatic blunder of over-playing his hand and needlessly putting himself in the wrong. The President's curt acceptance of his resignation naturally followed, and evened up matters on the score of official etiquette.

From Washington come reports of a kind of subdued complaint on the part of foreign representatives there, because they were not informed in advance of our Government's change of policy in the China affair. It is said that we were in a quasi-partnership with five other Powers, and should not have withdrawn without notice to the members of the firm. But the thing was no great secret. It was known for some days that the President's announcement would be what it proved to be. The diplomatists in Washington could not have been ignorant of what was virtually common knowledge. And we are much mistaken if the banking houses here or abroad interested in the Chinese loan were in any doubt what the President's decision would be. Berlin telegrams spoke of the news as causing surprise there, but the London comments implied that a confused and rather hopeless situation, in regard to the six-Power loan, had been cleared up by Wilson's action.

All these criticisms relate to the form, not the substance. It may be that there was a brusque directness about it which did not, in the absence of Secretary Bryan, study the diplomatic *convenances*, but that is not very serious. There are, however, weightier things alleged. It is said that it is all very fine to take our Government out of the six-Power loan, but what is to become of China? She needs a great deal of money to meet her financial obligations and to reorganize her affairs under the new régime, as well as to undertake internal improvements, and where is she now to get it? The implication is that the new American policy somehow leaves China helpless. We talk about our desire to assist the struggling young Chinese Republic, yet we proceed to deprive it of the loans without which it cannot get upon its feet.

For this view we are convinced that there is no substantial warrant. In the first place, it would require some hardihood to assert that the six-Power project had been so glittering a success that any interference with it would be an outrage. How long it had dragged out its weary and inconclusive negotiations, we cannot say exactly, but certainly for many months. Always the transaction was on the point of being definitely closed, and always some new difficulty was arising to defer it. We do not say that there was an attempt to drive a hard bargain with China. The rate at which the money was to be supplied does not seem unreasonable, while it was proposed to take future loans at the market price of Chinese bonds at the time, so that China would have the advantage of any improvement in her credit. But it is not denied that the Chinese Government found much to object to in the proposal. The plan had throughout the appearance, not of something which China was seeking, but of something pressed upon her as a disagreeable necessity. There was a frankly avowed intention to make a certain degree of financial "control" go with the loan. The latter was to be secured by the salt tax, to the continuance of which, as Dr. Morrison pointed out in the *Pall Mall Gazette*, the Chinese reformers were strongly opposed. Then it was impossible to exclude the political implications of the six-Power loan. After Russia and Japan, both borrowing nations, had insisted upon being taken into the arrangement, there could not be any doubt on this point. That was another thing which offended Chinese sensibilities. So that it is not a little absurd to represent President Wilson as dashing from China's lips a cup which she was eager to drain. Definite word has not yet come from Peking, but we shall be much surprised if it does not speak of a sense of relief there.

If the six-Power scheme is now abandoned, as it probably will be, there is no reason to doubt that China can float loans by other arrangements. She made a successful beginning last year. A contract for $50,000,000 was made with a London house, and $25,000,000 in Chinese bonds were actually issued. That method of obtaining money was not continued, mainly, it is conceded, because Government pressure of one kind and another was exerted against it. But if the alternative plan urged upon China is dropped, and if the new Republic gives proof of stability, it is hardly to be doubted that loans can be had from bankers without a direct sanction by any Government. It has been done before and can be done again. And the objectors should not overlook those sentences in President Wilson's statement which look to facilitating American banking operations in China and elsewhere, by methods less perilous and less under suspicion than those now given up.

THE NEW SECRETARY ON THE ARMY

The first utterances of a new Secretary of War are naturally scanned with eagerness as a guide to the policy of the Administration. As a whole, we think that Mr. Garrison's position will please neither the big-army men nor those who would have the War Department devote itself to other things than the creation of a military spirit in the land. Briefly, his position may be summed up thus: He does not recommend any increase in the standing army; but he urges a steady development of the National Guard through better instruction, the establishment of a regular-army reserve, and the creation of the machinery by which volunteers may readily be raised in time of emergency.

All of this, he admits, is but his hastily thrown-together thought, and we need not take this declaration too seriously. After he has found himself in his office and has begun to form his own opinions, rather than to take the color of those in his immediate entourage, he may look more deeply and soberly into the questions confronting him. At present he is much impressed by the lack of

preparedness of the country for a great struggle. Later on he will see that if the hundreds of millions spent upon our seacoast defences have not been wasted, we have a superb system of fortifications, now reinforced by a strong navy. Both of these are ample for the defence of our coast and harbors. If, however, Mr. Garrison means that the country is not prepared in the sense that Germany and France and Russia are prepared, he is correct. Moreover, this country would never be willing to be prepared in that sense; it is a realization perhaps of this that makes him turn to the idea of a better National Guard, a reserve, and a citizen yeomanry in readiness for the call to arms as volunteers.

His plans, he is careful to add, can be achieved without additional cost, or with so little as to be negligible. But he cannot avoid adopting somewhat the language of the extreme militarist, and saying: "Nothing could be more insensate than to refuse to prepare for an emergency because we don't foresee its coming." Upon that theory, any expenditure or sacrifice, any tax-burden, is justified abroad to-day.

However, the Secretary, despite his somewhat bellicose language, looks to a citizen soldiery rather than to professionals. His present professional advisers will tell him that this is all wrong. Gens. Wood and Bliss have been preaching 250,000 men and officers as the minimum for the standing force. Taking up, however, his plan for better instruction for the militia, Mr. Garrison will need to spend many an hour in study of it. There is grave question how far the closer association of the regulars and the militia has improved the latter. The militia complains with much truth that in the past ten years it has been a school of instruction for regular officers, who have profited at its expense; that the big joint manœuvres have had their chief use in informing the regular generals and staff how not to feed and march and overwork the citizens who leave their offices every year to manœuvre in the open. Mr. Garrison will, we believe, find that the militia cannot be made the reserve he hopes without more and more destroying its usefulness as *State* troops. On the one hand, he will find, if they talk frankly to him, some army officers who go so far as to say that the regulars are "fast approximating the standards of the militia" as a result of present conditions; on the other, he will find a newspaper like the Boston *Herald* soberly explaining the excellent appearance in Washington of the First Massachusetts Regiment of Coast Artillery, on the ground that it has but once been brought into contact with regulars in joint manœuvres!

As for the seven-year enlistment term just introduced by Congress, Mr. Garrison is enthusiastically for it; so may anybody safely be now, but no one will know for five years at least whether this law, which makes a man serve four years with troops and be for three years on call in reserve, in return for small payments, is actually workable. Whether the men in civil life can be kept track of remains to be seen. And there is much else for Mr. Garrison to consider. No department at Washington offers a better opportunity for executive and administrative success. Let him first think for himself, break up the War Department cliques, curb the General Staff, muzzle the generals who would arm every adult, drive politics out of the army, and save the millions upon millions squandered by inefficient and unbusinesslike methods, and he will reflect great honor on himself and the Administration. More than that, he will in this way do more towards really creating an efficient army and strengthening our defensive power than by spending months upon months in experimenting with militia or reserves.

HOW RAPIDLY WE CHANGE.

Woman having been driven from her historic sphere, the home, by the developments of modern industry, she has gone in for—well, everything that the modern woman is going in for. This is perhaps the most familiar assertion in the text-book of militant feminism. It is a formula which seems on the face of the facts so true that one rarely stops to consider just how true it is. We know by simple observation that the domestic occupations of woman are taken away from her by the factory baker, the factory clothier, and the factory laundry. We know by simple observation that women are crowding into the factories, the business offices, and the professions. Consequently, when the ardent feminist demands whether man, having forced woman out of the home by his many inventions, will venture to deny her the rights which go with her new functions in society, the fair-minded reply seems obvious.

But a doubt arises, Why, after such a stupendous change, should the world be so very much like what it was before the home was destroyed? There are notable differences, too, no doubt. The attitude of the sexes towards each other is not what it was a generation ago. This and other differences assume importance when the question of woman's position is under debate. But when one is not debating, but merely living, the sense of change is not so apparent. The family is so intimately bound up with civilization, that the destruction of the home must inevitably bring a new world into existence. We look about us and find that in the great essentials the world is still what it used to be. There are movements, agitations, propagandas, reforms, readjustments; but life itself is still entirely recognizable for what it was. What can be the explanation?

One explanation may be built up after a few minutes' study of the statistics of industry in the United States Census. Before consulting the Government's figures, the reader might well pause and ask himself the simple question, How many more women are there in industry to-day than there were twenty years ago? If in New York, he will think of Broadway during the rush hour, of the armies of women workers who have of late years been waging the most picturesque of our labor wars, and he will probably say, "Oh, I don't know. Three times as many. Five times as many." If he should be warned against the very simple error of counting actual increase in numbers without allowing for the increase in population, he will modify his estimate, but still maintain that the growth of wage-earning women has been enormous. He may now glance at the Census figures. In 1880 the number of women of sixteen years and above engaged in gainful occupations was 16 per cent. of all women in that age class. In 1890 the ratio had risen to 19 per cent. In 1900, the last year for which complete figures are available, the ratio was 20.6 per cent. We do know that between 1899 and 1909 "most of the individual States show comparatively little change in the proportion of women." This applies to women in the

manufacturing industries only. But we are fairly safe in assuming that, for all classes—wage-earners, the professions, and the trades—the rate of increase during the last ten years has not been very much greater than it was between 1890 and 1900.

The conclusion is plain, therefore, that during these last twenty years of "revolutionary" change in the social status of woman, the exodus from the home to the shops has been much smaller than we are likely to assume. The proportionate number of self-supporting women during these twenty years has not increased five-fold nor three-fold. It has not even doubled. It has not increased by 50 per cent. Roughly speaking, the increase has been about 20 per cent. Where twenty years ago five women above the age of sixteen were working for pay, to-day there are six. It is by no means a negligible change. But neither is it revolution, if we consider what twenty years means at the present pace of civilization. Deduct from this number of self-supporting women all those between the age of sixteen and the average marriage age for women, and the evil effects of our industrial development on the business of home-building are further decreased. In 1890 the number of married women who were also breadwinners was 4.6 per cent of all the married women in the country. In 1900 the ratio was 5.6; again the increase is not negligible, but again it does not justify confident predictions regarding the speedy extinction of the home.

One important reservation must be made. While the increase in the proportion of women wage-earners, strictly speaking, has been inconsiderable during the last twenty years, the increase of women in the professions and in clerical and mercantile pursuits has been far greater. But here evidently it is not the factory that has forced women to go outside the home. To a large extent they are now performing paid services, where formerly they performed no services at all. In other words, women in salaried and professional classes are largely recruited from the comparatively leisured families. They come from families of higher than the average education. It is in this comparatively small, though important, middle class that the change in the economic status of woman has been most noticeable. And in that fact, too, we find an explanation of the distorted impression regarding the change in the status of womanhood as a whole. Because they come from the class with the facilities and qualifications for self-expression, it is their views and needs that find utterance in the press and in public movements. They aim to speak for the self-supporting women of the nation, but it is inevitable that they should picture conditions with which they themselves are familiar.

In this there is nothing blameworthy. Perhaps the thing is inevitable. But at the same time it is well to remember that among the farmers, the workers, and the small traders of the nation the home is not dissolving.

ENGLAND'S AERIAL DEFENCE.

The trepidation which fills all England whenever it hears the news of another extended voyage by a German dirigible, has led to the promulgation by the British Home Office of an order regulating the use of the air above the "tight little isle," and prescribing the behavior of each and every airship after it finds English territory a mile or so beneath its keel. Never shall it be truthfully said by any Tory that a Liberal Government was remiss in protecting Albion's shores. Hence the appearance of this order just after the news that mysterious lights, presumably from a Zeppelin, have been seen over Manchester, London, and other cities. Primarily, be it noted, there are certain proscribed areas over which no airship may fly, and no foreign military or naval aircraft may pass over any portion of the United Kingdom and its territorial waters "except on the express invitation, or with the express permission previously obtained, of his Majesty's Government." When such an invitation has been extended, there will be special rules of conduct laid down for each case.

As for the proscribed areas, of which there is a long list, no one shall bring an airship to earth or water within three geographical miles of any one of them. Thus, if you should by some accident land 2¾ geographical miles from Cromarty Ness, Allhallow's Church, Spike Island, Thurso Town, or Haulbowline Dockyard, six months in jail (unless shortened by a hunger strike) or a fine of $10,000 will stare you in the face. That this will tend for accuracy in landing goes without saying; we are sure that an air pilot will soon learn to gauge distances so that when flying at forty miles an hour he can tell to a rod just when he is three geographical miles from Teapot Hard, Barking Creek Mouth, Grain Martello Tower, or Chattenden Farm. Loch Long will, however, present its difficulties, for only so much of it as lies north of a line drawn due east from Knap Point (it is well to reduce speed to forty miles while drawing the line) is prohibited. Plainly, here it will be as dangerous for a pilot not to watch his compass as it is necessary for a ship captain to beware of color-blindness in approaching the Black or the Red Sea. But there are certain areas that are unrestricted, and for such of our readers as are going abroad with their aeroplanes this summer, we hasten to print them. They are:

From Fraserburgh to the Ythan River.
From Holy Island to Newbiggin.
From Sutton (Lincolnshire) to Holkham (Norfolk).
From Stansgate Abbey on the Blackwater to Burnham-on-Crouch.
From Margate to Walmer.
From Rye to Eastbourne.
From Hove to Bognor.
From Bridport to Dawlish.

If this list is pasted on the dashboard in front of the pilot, next to the barometer and speedometer, it will simplify his task. But travellers by way of the air must bear other things in mind. To prevent any mere haphazard and casual wandering into British air—as our idle rich sometimes start for Central Park and then decide to invade New Jersey or make an afternoon call in Philadelphia—it is prescribed that before commencing any voyage to the United Kingdom the person in charge of an airship shall report to a duly authorized British consular office in the country from which the voyage is to be undertaken. Not for forty-eight hours thereafter shall the voyager fly into England; and when he appears before the consular officer he shall state accurately in triplicate the answers to these questions:

(1.) Name and registered number (if any) of airship.
(2.) Type of airship.
(3.) Name, nationality, and place of residence of the owner, of the person in charge, and of every member of the crew, and name, profession, nationality, and place of residence of every passenger (if any).
(4.) Nature of cargo, if any.
(5.) Approximate time of departure.

(6.) Place of departure.
(7.) The intended landing place in the United Kingdom (which must be within one of the prescribed landing areas).
(8.) Proposed destination.
(9.) Object of voyage.

That no triflers need apply is apparent from the fact that a later change of intention, or addition of any cargo or unrecorded passenger, is forbidden. Moreover, when the airship reaches England one cannot make use of a copy of this clearance paper, but must promptly report these few facts as soon as one lands at, let us say, 3⅛ geographical miles from the proscribed area which centres at Barrow-in-Furness Town Hall:

Name and registered number (if any) of aircraft.
Description of aircraft, type, horsepower of engines, capacity of envelope, date of envelope and engines, number of crew, number of passengers, nature of cargo, including personal baggage and goods of every description carried, quantity of petrol or other liquid fuel on board, capacity of fuel tanks; name and nationality and place of residence of owner; name and nationality and place of residence of person in charge; name and nationality and place of residence of crew; name, profession, nationality, and place of residence of passengers (if any); place of departure; proposed destination and route; object of voyage; duration of voyage; number of pilot's certificate.

Of course, no photographic or wireless apparatus, basket of homing pigeons, or explosives may be carried, and no aircraft may quit England, even if a forty-five-mile gale be blowing, until it has descended and landed the authorized Government officer who must sail on every airship after its first arrival in England as long as it hovers over the kingdom (fee at first landing, $15 for airships, $5 for aeroplanes). If any of these terms cannot be complied with because of stress of weather, the airship, even if blown 500 miles to sea, must return promptly (with or without petrol, or other liquid fuel) and report at once by telegram to the British Home Office. Even a British airship must give eighteen hours' notice before flying home, and nobody who travels by air is allowed to stay abroad more than thirty days without bringing down upon him all the powers of the Government. As for the control of the traffic, this is vested in army and navy officers. When an airship takes the wrong course, the nearest fort is to fire three shots at ten-second intervals by day, and by night projectiles showing red stars or lights. If then an aeroplane is unable to land immediately, the operator must leave his wheel and engine and wave a red triangular flag with two black balls superimposed vertically—this even though one may be flying sixty miles an hour 6,000 feet above the land. By night you must wave a white light, like a rear-end brakeman, at the same time extinguishing the side lights which every aircraft carries (including port-hole lights). Altogether, we are more than ever sure, after seeing these regulations, that Britons never, never, shall be slaves. For no foreigner yet heard of would be brave enough to run the gantlet of these regulations.

THE MEMORY OF LIVINGSTONE.

Commemoration in this country and in England of the centenary of David Livingstone's birth has many aspects, but its central significance is easily seen. Though Livingstone was a wonderful explorer, there have been others almost his equals in that respect whose centenary no one has thought of observing. Attempts have been made to show that his achievements were over-estimated, but the sober judgment of the competent is that he did more than any other to make over the map of Africa, first giving the world an approximately correct idea of the interior of that Continent, with its plateaus, river-systems, and lakes. Yet it is not merely as a traveller and geographer that his name is cherished. Nor did his labors as a missionary, pure and simple, bulk so large as to entitle him to this world-wide recognition, forty years after his death. In that special form of activity, many have surpassed him.

What makes his fame so singular and secure is the exalted character and the deep humanity in which his varied qualities were united. He had strong scientific interests, but they were subordinated to his love of human beings, even when lowest in the scale. The enthusiasm and daring of a pioneer were his, yet he always thought of himself as primarily an agent of religion and civilization. Over that "open sore" of the world—the slave-trade in Africa—his heart bled; and he early took a vow, as solemn as Lincoln's against American slavery, to do all in his power to bring it to an end. This was the aspect of him as a man with the broadest human sympathies, to whom the misery of even degraded and forgotten men and women appealed irresistibly, that most powerfully caught and longest held the imagination of the civilized world. The rest might fade or be overlooked, but David Livingstone who carried the wretched millions of Africa in his heart was bound to endure in the memory of mankind.

In his own narratives and letters, and in what has been written by others about his methods, the outstanding fact is the law of kindness that was always on his lips and that consistently ruled him in all his intercourse with the natives. His trust in his fellow-men was almost as implicit as in the Eternal Goodness. It never entered his mind that he must "impress the Oriental imagination," in our proud but fallacious modern phrase, by acts of brute force. Not for him were the arms and violence and terrorism which have unhappily marked too many African exploring parties. With only a handful of attendants, he crossed the vast stretches of the interior, lost himself in the jungle, lay fever-stricken by the shores of lakes and the banks of rivers, never doubting that the simple good faith in which he confided himself to the natives would be his sufficient shield and buckler. He was justified by the result; for the veneration in which he was held throughout his travels, and the devotion of his African followers to their "great master," as they called him, were a tribute at once to his sagacity and his human kindness. Even when, as more than once happened, he had to witness terrible atrocities inflicted by the traders upon the groaning slave-gangs, he restrained his hot impulse to pistol the murderous ruffians. The weapons of his warfare were spiritual. Hence came his moral grandeur, and the extraordinary testimony which his life bore to moral forces.

Americans of a generation back got their most vivid knowledge of Livingstone through Henry M. Stanley. The remarkable influence which Livingstone exerted upon Stanley, in the time they were together, has not often been noted, although the latter freely confessed it. But the fact is that Stanley was thereafter a changed man. He had been simply a keen and somewhat jaunty newspaper correspondent, ready to face hard-

ship and go anywhere in order to get a sensational bit of news. But it seemed as if virtue went out of Livingstone to Stanley; for thereafter he entered upon the phase of his life which, with all its unhappy mistakes, brought out his great qualities and won him his place on the list of African explorers. It all dated from that historic meeting in Ujiji.

GERMAN BOOKS ON AMERICA.

A conversation which took place in the editorial rooms of the *Gartenlaube* some two years ago has given rise to a very practical little book by Kurt Aram, "Mit hundert Mark nach Amerika" (Berlin: F. Fontane & Co.). The question had come up how a German without means would fare in America to-day. The author volunteered to try the experiment. The *Gartenlaube* furnished a steerage ticket and the obligatory twenty-five dollars (one hundred marks), and the playwright and novelist, Kurt Aram, started on his mission. The letters in which he reported his progress to the *Gartenlaube* form the bulk of the book. When the experiment was concluded he had seen the country from the angle of the usual visitor, but on surveying the books on America when he returned to Berlin, he decided upon a radical departure from the beaten track of impressions and interpretations. He felt that he could serve a greater number of his countrymen by a simple record of his experiences as immigrant, and he not only limited himself to these, but preceded them by a catechism for emigrants and a synopsis of the American Constitution.

"Fritz Müller," as he called himself while playing his part, has little to say that is new, but what he says makes a direct appeal to the foreigner. That no one who is not young, strong, and healthy should think of going to America to earn a living, that the country is preferable to the city, and that those who intend to remain in America should by all means become citizens, these and other prudent counsels cannot be too frequently repeated. His account of steerage conditions contains hints that might be heeded by the companies and the cabin passengers. One incident deserves mention. Among the ladies of the first cabin that had watched the sordid scenes on the steerage deck as one watches a menagerie, one threw down a pair of old gloves, and these not being noticed, sent after them an old stocking. A young Hungarian administered a well-merited rebuke by picking up these "gifts" and throwing them back at the "donor." Ellis Island comes in for a good deal of sharp censure. The manners of a German "Unteroffizier" are called gentle in comparison with those of the immigrant officials. That the author roused suspicion by not being ready to state his profession, seems natural, but that he escaped annoyances and possible deportation by stating that he had one thousand dollars with him, and, being in a free country, could do as he pleased, is likely to be cited as proof that the dollar standard is the only one applied to men and things in America. His brief career as immigrant began in a furnished room in Hoboken, but its chief scene was a saloon on West Street, where the new arrival made his first acquaintances and received tips on available jobs. He ran the gamut of "Frankfort" peddler in a pleasure resort, waiter in a restaurant, porter in a German clubhouse, man-of-all-work in a furnished-room house, and coachman; and by strict economy succeeded in making the two ends meet. When he left the last place with $23 in his pocket, he changed his linen, brushed up, and strolled along Broadway. Entering a restaurant, on the windows of which shone the magic words, "Würzburger Hofbräu," he heard a waiter call "Ein Sauerbraten und Kartoffelklösse"—and surrendered. He looked with dismay at his shabby clothing and the traces of rude labor on his hands, and "Fritz Müller, from Berlin, Germany, profession none," rose from that dinner as Kurt Aram, playwright and novelist, or as Herr Hans Fischer, which is the author's name in private life.

The lectures which Dr. John Firman Coar delivered a year ago as representative of the Germanistische Gesellschaft before German universities and other audiences, have appeared in print and take a place among the valuable contributions to German literature on America. In his "Wollen und Können in Amerika" (Berlin: Universitäts-Buchdruckerei von Gustav Schade), he shows some of the ethical motives underlying the material manifestations of American life. Among other noteworthy passages is the one in which he dwells upon the essentially humanitarian spirit back of some American undertakings which have been misinterpreted as expressions of national ambition. He proves that this spirit conforms with the ideal of humanity cherished by Klopstock, Herder, Lessing, Goethe, Schiller, and other German thinkers towards the end of the eighteenth century. Dr. Coar calls the American people justly a new people, *i. e.*, one still in the making, instead of insisting, as most foreign writers do, upon its being a young people. In this newness he finds the explanation of many traits of American life that strike one as crude and dismal. He does not attempt to ignore or excuse them, but calls attention to their causes, to conditions which foreign observers cannot readily grasp, even if they have lived in the country.

A. von Ende.

THE WESTERN ECONOMIC SOCIETY.

Chicago, March 18.

Scientific Management was the subject of the Fifth Conference of the Society, held at Chicago on March 14 and 15. The attendance at each of the five sessions indicated an interest exceeding that which any previous programme of the Society had aroused.

The opening paper of the conference, on "The Spirit and Social Significance of Scientific Management," was presented by Mr. Morris L. Cooke, Director of Public Works of Philadelphia, a prominent exponent of the principles of management which are associated with the name of Mr. Frederick W. Taylor. Mr. H. P. Kendall, manager of the Plimpton Press, admirably illustrated the difference between scientific management and the mere introduction of unenlightened system into industrial methods. Mr. Sanford E. Thompson, speaking on "Time Study and Task Setting," pointed out the importance of minutely analyzing and timing the elementary motions of operatives at work, in order that, by study of the unit-times thus observed, rates of remuneration may be fixed and operations standardized and brought into efficient coördination. Mr. Hollis Godfrey and Mr. Carl G. Barth—known as the inventor of the Barth slide-rules for the determination of appropriate machine-speeds—contributed accounts of the results of scientific management in various industrial applications. Mr. Amasa Walker, of Longmans, Green & Co., interestingly indicated the possibilities of the scientific distribution of goods, and by elaborating a scheme of specialization in selling and of "functional salesmanship," carried the idea of scientific management over from industry into commerce. Mr. Harrington Emerson's theme was "Organization and Personnel."

The significance of scientific management for the laborer proved to be the topic about which the most active and most interesting discussion revolved. This was the topic assigned for the principal session of the Conference; and again at the concluding session Mr. Frank B. Gilbreth and Mr. Cooke, who spent a whole afternoon in answering questions, found the labor question dominant. On the side of the efficiency experts Mr. C. B. Thompson had led the way to the labor question by showing how scientific management had laid a foundation for determining positively what is a fair day's work. Mr. Hudson W. Reed attempted to indicate the many ways in which scientific management contributes to the advantage of the laborer. But organized labor remained unconvinced. The principal spokesman of the unions, Mr. John P. Frey, editor of the *International Moulders' Journal*, expressed their contention that scientific

management tends to overdrive the worker by speeding up and by bonuses, reduces him to the position of a semi-automatic attachment to a machine, denies him a due share of the increased earnings which result, and, above all, treats with him as an individual and thereby breaks down the collective bargaining upon which organized labor has fixed its hopes of ameliorating the conditions of work. It was to little purpose that Mr. Gilbreth, Mr. Cooke, Mr. Barth, and others affirmed their belief that scientific management was compatible with collective bargaining and held no menace for the laborer. The parties still failed to reach an understanding. The professional mind of the engineer seems not to grasp the policy of solidarity to which the trades unions are at present committed. In this respect, the engineer shares the limitations of the typical employer. The labor leaders, in their turn, seem hardly to appreciate the need of recognizing scientific management as a movement too vital to be resisted, and therefore requiring compromise and adjustment. For here, once more, is presented a problem of mitigating the hardships of economic change such as came, for example, with the day of machine methods. Possibly, given time for reflection, such discussion as this Conference brought out will aid advisers, employers, and employed to recognize in scientific management a mutual benefit. JAMES A. FIELD.

NEWS FOR BIBLIOPHILES.

The other day while hunting for something else I came upon this item in the *General Repository* of Cambridge, Mass., for July, 1813:

Walter Scott.—The following statement is printed by desire of the publishers of the comparative sale of Rokeby and the Lady of the Lake. Sold of the Lady of the Lake in nearly four months (June 2 to September 22, 1810)—

2,000	4tos, at 2 gs.....	£4,200
6,000	8vos, at 12s.....	3,600
8,000		£7,800

Sold of Rokeby in 3 months (Jan. 14 to April 14, 1813)—

3,000	4tos, at 2 gs.....	*£6,048
5,000	8vos, at 14s.....	3,500
8,000		£9,548

*Less 126 remaining.

This demand is unexampled, and evinces the increasing popularity of this favorite poet.

That is to say: the sale of 2,000 copies of the "Lady of the Lake" at, roughly, $10 a copy, and of 6,000 copies at $3, so exhilarated the publishers that when they issued "Rokeby" they put out 3,000 copies at $10, and raised the price of the other 5,000 50 cents a copy, so that 8,000 copies of "Rokeby" brought in nearly $10,000 more than the same number of copies of the "Lady of the Lake"!

As a rule, poetry in England has sold at a price that was reasonable, even if not cheap. Dodsley's three-volume "Miscellany" (1748) cost the purchaser only 9 shillings; Thomson's "Castle of Indolence," that same year, was 3 shillings; the "Deserted Village" (1770) was a 2-shilling quarto; Hayley's "Triumphs of Temper" (1781), which ran through a dozen editions, was 6 shillings; "Perdita," Robinson's "Poems" (1791), in a handsome octavo with a print of one of Sir Joshua's portraits of her, and with a long list of noble subscribers, brought a guinea—but Mistress Robinson was a beauty and an actress as well as a poetess, and her publication was virtually a "benefit." In 1796, Cottle, who had bought the copyright of Southey's "Joan of Arc," issued it in a quarto volume at a guinea, presumably with the idea of giving a provincial press a high-sounding start; the two volumes of "Thalaba" (1801), however, were priced at only 7 shillings a volume. The "Lyrical Ballads" sold for 5 shillings, Landor's "Gebir" for 2s. 6d., and Hayley's "Triumph of Music," a quarto by a poet of reputation, for 10s. 6d. Scott, therefore, was doing a somewhat audacious and risky thing when he published the "Lay of the Last Minstrel" in January, 1805, at 25 shillings. Nevertheless, he sold that year 750 quartos, as well as 1,500 octavos at 10s. 6d., and nearly 10,000 more before "Marmion" appeared. Success brought increase of boldness, and when "Marmion" came out in February, 1808, the publishers issued 2,000 quartos at a guinea and a half. In spite of this increase in price, the 2,000 quartos sold in less than a month, and were followed by 3,000 octavos at 12 shillings, also an increase in price. With the "Lady of the Lake" in 1810, Scott raised the price to two guineas—and in spite of everything, not only sold unprecedented quantities of the new poem, but also 5,000 copies of "Marmion" and some 1,500 of the "Lay."

During these years of Scott's harvest, almost no other volumes of poetry brought anything like such prices. The only ones I have found are Southey's "Madoc" (1806) and Hodgson's translation of Juvenal (1808), both in quarto at 2 guineas. On the other hand, Wordsworth's two volumes in 1807 cost 11 shillings, Crabbe's "Poems" (1808) brought 8s. 6d., and Lamb's "Specimens of the English Dramatic Poets" (1808) 10s. 6d.

Fortunately for buyers, Scott's outrageous prices for poetry failed to set a fashion. Just for comparison, here are some prices taken almost at random: At 4 shillings, "English Bards and Scotch Reviewers" (1809),"Original Poems by Victor and Cazire" (1810), Browning's "Strafford" (1837), Mrs. Browning's "Poems before Congress" (1860), and English editions of Longfellow's "Poems and Ballads," and "Voices of the Night" (1843). At 4s. 6d., "Christabel, Kubla Khan and Other Poems" (1816), Shelley's "Cenci" (1820), and Arnold's "Strayed Reveller" (1849). At 5 shillings, "Childe Harold, Canto III," the "Corsair," the "Siege of Corinth," and "Mazeppa"; Tennyson's "Poems chiefly Lyrical" (1832), the "Princess" (1847), "Maud" (1855), and "Demeter" (1889); Bailey's "Festus" (1839), Browning's "Dramatic Idylls" (1879), "Ferishtah's Fancies" (1884), and "Asolando" (1889), and Mrs. Browning's "Casa Guidi Windows" (1851). At 5s. 6d., the "Bride of Abydos" (1812) and Arnold's "Poems" (1853). At 6 shillings, "Hours of Idleness" (1807), Tennyson's two volumes of 1842, "In Memoriam" (1850), "Enoch Arden" (1864), and "Queen Mary" (1875); Browning's "Paracelsus" (1835), and the two volumes of "Men and Women" (1855); Mrs. Browning's two volumes of "Poems" (1844), and Arnold's "Empedocles on Etna" (1852). At 6s. 6d., Hunt's "Story of Rimini" (1816).

Among the higher prices I have noted were: Shelley's "Prometheus Unbound" (1821), at 9 shillings; "Childe Harold, Cantos I and II," quarto 30 shillings, octavo 12 shillings; "Aurora Leigh" (1856) and "Lucile" (1860), 12 shillings each; "Lays of Ancient Rome" (1842) and Landor's "Last Fruit off an Old Tree" (1853), 10s. 6d. each; the four volumes of the "Ring and the Book," 7-and-6 each; the "Prelude" (1850), 14 shillings, and the "Spanish Gipsy" (1868), 12s. 6d.

These examples, which run pretty well through the century and include volumes of various kinds, many of them by poets whose names alone would insure a heavy sale, make the prices of Scott's poems seem the work of some ultra-modern monopoly, shamelessly levying tribute on art and literature. It must be remembered, too, that these two-guinea editions of Scott's poems were not illustrated editions, but merely "large-paper" copies; they were not exceptional specimens of the printer's art, like the books of the Foulis brothers or of Baskerville a generation earlier; the price bore no reasonable relation to the cost of production, and the editions were not limited in the modern sense. Schiavonetti's engravings of Blake's designs for Blair's "Grave" (1808) at two guineas and a half were cheap by comparison; and so was Rogers's "Italy," with illustrations by Stothard and Turner, at 28 shillings. A modern two-guinea edition of a poem is a very different thing from Scott's; for example, a few years ago Mr. Heinemann issued the "Midsummer Night's Dream" in an edition de luxe on hand-made paper, with 40 illustrations in color by Arthur Rackham, each plate mounted, limited to 1,000 numbered and signed copies. The publisher's returns may have been handsome, but the price of 2 guineas bore at least some relation to the cost of production and to the artistic results of skilfully applied technical processes.

On the other hand, it must be admitted that very cheap editions of *new* poems have rarely sold well. In 1840 or 1841, Edward Moxon, the publisher, told Browning of a plan he had to issue new poems in what were really paper-covered pamphlets at a very low price. Browning at once fell in with the plan, and between 1841 and 1846 Moxon published for him the eight numbers of "Bells and Pomegranates." The first number sold for sixpence, the next five for a shilling each, the seventh for two shillings, and the last for 2s. 6d. It is mortifying to have to record that Number Five (the "Blot on the 'Scutcheon") was the only one to go into a second edition, but that the sales picked up when Moxon raised the price. A sad change from the days when the poets offered and the public bought fresh from the press Johnson's "London" or his "Vanity of Human Wishes" for a shilling; Mason's "Isis" or Gray's "Elegy" for sixpence; and Johnson's "Irene," or Home's "Douglas," or the "Traveller," or "She Stoops to Conquer" for 1s. 6d.!

One other instance of cheap publication is interesting both for its success and for the reasons that prompted it. In 1843, Richard Henry Horne (he had not then changed Henry to Hengist) issued his epic poem

"Orion" at the price of one farthing. Three editions sold at this price (in spite of the fact that if the books were sent by mail purchasers must forward nine stamps, *i. e.*, ninepence), a fourth sold at a shilling, and two more at 2s. 6d. The author never received a penny for his poem, but the later editions reimbursed his publisher, who incontinently went bankrupt as a result of a less fortunate venture. In 1872, in the "Brief Commentary" prefixed to the first library edition (a seven-shilling book), Horne gave the following reasons for his cheap editions—surely among the most curious on record:

As there was scarcely any instance of an Epic Poem attaining any reasonable circulation during its author's lifetime (certainly not up to *that* period, with the exception of Voltaire's "Henriade"), the first, second, and third editions of "Orion" were published gratuitously—that is, they were published at a nominal price, the least coin of the realm, to avoid the trouble and greatly additional expense of forwarding presentation copies; which, moreover, are not always particularly desired by those who receive them.

In their prices "Orion" and "Rokeby" represent extremes; fortunately neither Horne nor Scott had much effect upon the price of poetry. Scott, however, as I hope to show in another paper, did have a decisive influence upon the three-volume novel.

EDWARD PAYSON MORTON.

Correspondence

OUR IRREPRESSIBLE PRESS.

TO THE EDITOR OF THE NATION:

SIR: May I say another word about the evils of newspaper sensationalism? My letter to the *Nation* of January 16 on "The Ethics of News Suppression" has been, like poor Banquo's ghost, stalking abroad in the land and will not down. And when I seek an explanation of this phenomenon, I can find but one answer: I used the words "hell" and "sewer" in my first paragraph. Isn't it, Mr. Editor, a striking proof of the deplorable condition of our American press, when, with its nose for news, it seeks out such words in a modest letter of four paragraphs on the tenth page of a conservative journal?

Mr. Louis Brandeis, who really has a high opinion of the newspapers when they are free, says that while fighting the special interests of Boston some years ago, he had to make the news so dramatic that it called out to heaven before the papers would give it attention. Can it be possible that Blease at Richmond discovered the real secret, and, calling out to the right place, met with an immediate response? At any rate, the case stands clear that news must be made dramatic, or it will not be news in the eyes, or nose, of the ordinary paper. And I am still inclined to believe that there is entirely too much of the cheaply melodramatic in our news columns.

Why is it that the ordinary newspaper is a tacit confession to the belief that sensationalism, too often in connection with wrongdoing, is a necessary financial asset to American journalism? Simply because sensationalism has paid in the past; and its power, it is said, was first discovered in America by James Franklin, the brother of Benjamin. Thus we see that both these brothers made discoveries which have been potent forces in American life; but there is this difference: Benjamin snatched electricity from heaven, whereas James caught the secret of sensationalism from—but I refrain.

And have we not here the secret of such cries as "censorship," "suppression of free speech," "reactionary methods," which are heard from newspapers generally when any amelioration of present conditions is suggested? Such cries were provoked even by my letter; but they were heard much more distinctly when Senator Bourne had passed in Congress the Newspaper Publicity law, and, again, when George H. Dunlop, of the Los Angeles *Municipal News*, suggested a publicly owned newspaper as a remedy for existing evils of the press.

In defence of their position, newspaper men say that sensationalism leads to reform. But if so, why place it before others than legislators, sociological workers, and the more intelligent people who are our sole dependence for reform? It is very doubtfully necessary there; and when employed as it is now, it places its purveyor in as fallacious a position as that of the saloon-keeper, who, as Charles Dudley Warner said, "does not merely offer to satisfy an existing demand, but stimulates and creates an appetite by which he profits."

Again, it is asserted that an editorial attitude offsets whatever evil results may follow from sensationalism applied to all types of news on the front page. One newspaper man, whose statements I have before me, throws all responsibility on the editorials after first contending that the news must be made sensational in order to be readable. What of the editorials then? This same writer, in answer to my statement that detailed accounts of ingenious and suggestive crime have an immoral influence upon the weaker and criminally inclined elements of our population, says: "This would be true if the newspapers did not assume an editorial attitude on all criminal actions." Such argument ignores the fact that ten, perhaps twenty-five, men read the front page, while one man reads the editorials. In other words, this argument would place on the most prominent street of a city a saloon carrying all grades of whiskey all the time, with sensational and alluring signs on the front of the building, sell the alcohol at prices from one to five cents, and then leave it to the discretion of the customers to step back through the alley to a modest little church completely surrounded by walls higher than itself and hear preached from the sanctum of the man who owns or operates the front establishment the evils of the stimulant they have consumed.

Of course, an inactive public opinion is largely responsible for the continuance of this condition. And if those newspapers who objected to my first letter will admit that sensationalism is necessary to arouse public opinion in this case, then I concede a value in the least censurable part of their methods of reform, so far as it is aimed to have an effect upon intelligent and right-minded people.

Ottawa, Kan., March 18.

DIFFICULTIES OF THE SMALL INVESTOR.

TO THE EDITOR OF THE NATION:

SIR: I do not question the general soundness of your views as expressed in your articles on finance, but as an investor in a small way I believe that very many are deterred, as I am, from freely buying railway and other securities because of the apathy with which the general public views the extreme and continually advancing demands upon such corporations by their employees. We are deterred also by the apathy of the public before the arrogant attitude of the leaders of labor unions, and before their half-veiled sympathy with the fiendish outrages which have been perpetrated in furtherance of their schemes. One of the last acts of ex-President Taft was to veto a bill which aimed to single out these organizations as superior to all others in the land, making them exempt from the restrictions of law to which all others are subject; yet we heard of no outbreak of indignation over that bill. I could find in our Baltimore daily papers no hint of the acts of violence recently perpetrated against the Bangor & Aroostook Railroad, when the latter had successfully operated in spite of a strike against them. If the press is silent and legislators range themselves with those who have shown themselves unscrupulous enemies of invested wealth, and if this awakens no popularly expressed indignation, do you wonder if many of us hesitate to invest our savings in stocks and bonds?

T. E. C.

Baltimore, Md., March 20.

THE SUBMERGED PROFESSION.

TO THE EDITOR OF THE NATION:

SIR: The New York *Times* of March 4 contained the following statement in its brief summary of the career of Secretary William Gibbs McAdoo:

Mr. McAdoo was born near Marietta, Ga., on October 31, 1863. The Civil War cost the family all of its possessions, and Mr. McAdoo's father, who had been a Judge and a soldier, was afterward forced to take up teaching as a professor at the University of Tennessee.

Many of us still living sat at the feet of former soldiers who, "armed with resolution," took up the arduous task of schoolmaster or professor at the close of the war. They were often appointed, not to a chair, but to a veritable divan, teaching sometimes as many as four or five subjects. They were, for the most part, modest and simple men, who performed their duties with conscientiousness and dignity. They were, nearly all of them, as far as possible from the military pedant described by Addison in the *Spectator*. The glory of these brave men was so great and their adopted career so respected that we are warranted in conjecturing that the author of the words, "who had been a Judge and a soldier, was afterwards forced to take up teaching as a professor," belongs to the younger generation. The capital letter of "Judge" as compared with the humble initial of "professor," and the implication in "forced to," will escape no one. While our first feeling on reading the above statement is one of amusement, the matter has a serious side. The columns of the *Nation* have more than once borne witness to a relative loss in the dignity of the profes-

sorial career. In conclusion, has not the recent news item that a late President of the United States is to become a professor at a salary of five thousand dollars a year, whereas his private secretary is to go to a business position at four times this salary, a peculiar significance in a country whose only standard of success is money?

RAYMOND WEEKS.

Columbia University, March 16.

FARNOL AND DEKKER.

TO THE EDITOR OF THE NATION:

SIR: Various critics of Jeffery Farnol's latest romance, "The Amateur Gentleman," have quoted with admiring comment as a novel presentation of an undefinable word the wandering preacher's definition of a gentleman:

> A gentleman, young Sir, is (I take it) one born with the Godlike capacity to think and feel for others, irrespective of their rank or condition; . . . one who possesses an ideal so lofty, a mind so delicate, that it lifts him above all things ignoble and base, yet strengthens his hands to raise those who are fallen—no matter how low. This, I think, to be truly a gentleman, and, of all gentle men, Jesus of Nazareth was the first.

Mr. Farnol's works show him to be a reader of wide and sympathetic tastes. It is impossible in a novel to give credit for every suggestion, but the author would probably be the last to deny his indebtedness for this striking thought to Thomas Dekker. Perhaps Dekker will longest be remembered for a single passage in one play, the very title of which cannot now be mentioned to ears polite, but which may be called "Bellafront" from the name of the heroine:

> Patience, my lord! 'tis the soul of peace:
> Of all virtues, 'tis nearest kin to heaven:
> It makes men look like Gods—The best of men,
> That e'er wore earth about him, was a sufferer,
> A soft, meek, patient, humble, tranquil spirit,
> The first true gentleman that ever breath'd.

FRANK W. HOYT.

Montclair, March 17.

OUR GENIAL POST OFFICE.

TO THE EDITOR OF THE NATION:

SIR: This our government of the people, by the people, and for the people occasionally does some remarkable things. The act of August 24, 1912, requiring semi-annual sworn statements of ownership, circulation, and many other interesting things, of periodicals, was at the time properly criticised in the newspapers, and is now before the Supreme Court on the question of Constitutionality.

The new, clean-sweeping broom of Mr. Wilson's Postmaster-General would have the law applied to foreign periodicals as well. He would require newspaper agencies which have entered foreign periodicals as second-class matter at the New York Post Office to file sworn statements for every one of them as to editor, owner, known (?) bondholders of 1 per cent. or more; and demands the publication of such statements twice a year in these foreign papers. Think of submitting such a request to the publishers of the London *Times*, the *Revue des Deux Mondes*, or the *Kolnische Zeitung!* This government would become the laughing stock of the world.

RISUM TENEATIS.

New York, March 19.

AN ACKNOWLEDGMENT.

TO THE EDITOR OF THE NATION:

SIR: At the time that my "Journal of an Expedition Across Venezuela and Colombia" was published I was absent from this country on an expedition to South America. An appendix on "Temperature and Weather" was prepared from my notes by Mr. Burton M. Varney, of Harvard University. Owing to a misunderstanding which would not have arisen had I been in this country, or had Mr. Varney not been so very modest, this acknowledgment was not included in the preface.

An "Additional Note" stating this fact has been prepared in such a form that it may readily be inserted in the volume in question. If any of your readers who own copies of the book will send a line to that effect either to the Yale University Press or to me, I shall be very glad to furnish them with the inset.

HIRAM BINGHAM.

Literature

THE BALKAN WAR.

With the Victorious Bulgarians. By Lieut. Hermenegild Wagner. Boston: Houghton Mifflin Company. $3 net.

With the Turks in Thrace. By Ellis Ashmead-Bartlett. New York: George H. Doran Company. $3 net.

With the Conquered Turk. By Lionel James. Boston: Small, Maynard & Company. $2 net.

The Balkan War Drama. By Cyril Campbell. New York: McBride, Nast & Company. $1.40 net.

No one looks for a definitive account of how battles have been lost and won in the hastily compiled war books of the professional newspaper correspondents. All the four volumes on our list were obviously written within a few weeks after the events with which they deal. The armistice in the Balkans, which was generally assumed to mark the end of hostilities, turned out to be only a truce. We have here, therefore, the story of a war told while the war is still in progress. Evidently, there was no chance to correct the impressions of the moment by such information as is generally forthcoming after peace has been signed and the General Staffs have nothing more to gain by a policy of reticence. But in the present instance the situation is more than ordinarily complicated. Readers are by this time familiar with the difficulties under which the correspondents labored in the Balkans. On the Bulgarian side the newspaper men were subjected to a censorship of such extraordinary rigor that just one correspondent of the large number that gathered at Sophia upon the outbreak of hostilities succeeded in getting even into approximate touch with the march of events. This man was, of course, Lieut. Wagner. On the Turkish side the censorship was far less strict. But by pursuing a policy of characteristic evasion and delay, the Turks succeeded in keeping nearly all of the accredited war correspondents at a comfortable distance behind the battle line. Mr. Ashmead-Bartlett, of the London *Telegraph*, did escape from Turkish hospitality in time to see the fighting at Lule Burgas, though only in one portion of the field. Mr. James, of the London *Times*, was also at Lule Burgas on the decisive day. But between the stories of the two men there are important discrepancies which time must resolve.

An additional element of uncertainty arises from the sharp contradiction between the accounts given by the English correspondents and that furnished by Lieut. Wagner, in regard to many important features of the campaign in Thrace. The case of Lieut. Wagner is by this time celebrated. For weeks the outside world was dependent for its information upon Wagner's dispatches to the Vienna *Reichspost*. That he alone of all the correspondents at the front should have been in a position to know the truth was finally explained on the hypothesis that Lieut. Wagner was virtually a press agent for the Bulgarian army. He dated his dispatches from army headquarters, and his knowledge of operations was at times so minute as to favor the assumption that his information emanated from the Bulgarian General Staff, and was, therefore, to be accepted with a degree of suspicion. This hypothesis was held to be confirmed later, when it was shown that a sanguinary battle at Tchorlu reported by Wagner as following upon the Turkish defeat at Lule Burgas had never taken place. Lieut. Wagner reported important Bulgarian successes in front of the Tchatalja lines, and these, too, were subsequently disproved.

Wagner's explanation, in the present volume, of just what his status was at Bulgarian headquarters is not illuminative. He does admit that his personal experience with the armies in the field was confined to a brief visit to the army of investment around Adrianople. But it is his contention that war correspondence under modern conditions can be carried on only by the methods he pursued—that is, by choosing a base of operations in close touch with official sources of information; by interviewing prisoners of war, refugees, and friendly officers among the victors; by an expert study of large-scale maps. He denies that his telegrams were dictated to him by the Bulgarian authorities. Yet he speaks of a mysterious mission the nature of which he is not yet at liberty to disclose, and his book is published with a preface by the Bulga-

rian Premier. It is, therefore, undeniable that he enjoyed exceptional favor in official circles. The English correspondents notwithstanding, Wagner persists in speaking of a bitterly fought battle at Tchorlu. He gives a minute account of a severe fight at Kirk Kilisseh, preceding the decisive struggle at Lule Burgas, whereas the opinion seems to be now that there was no battle to speak of at Kirk Kilisseh, but that the Turks fled from the town in sudden panic.

Yet, with so many reservations to make, Lieut. Wagner's narrative is easily the most satisfactory account of the war as a whole; and this, not only because his story, after all disputed points have been cancelled, presents a faithful picture of the campaign in Thrace in its broad aspects. Lieut. Wagner's is incomparably the most comprehensive of the four books that we are now concerned with. His knowledge of the people and the country is of the most intimate nature. The book is a condensed encyclopædia of Bulgarian history, biography, and politics. Wagner's analysis of the historical forces that brought about the conflict, and of the strategical and political factors that determined its course, is excellent. His book will have permanent value for the student of Balkan affairs in the future. It is also eminently readable.

Mr. Ashmead-Bartlett enjoys the distinction of having been an eye-witness of the heaviest fighting of the war. He was in personal relations with the commander-in-chief of the Turkish forces in the battle of Lule Burgas-Bunarhissar. Of that bitter struggle, so far as it came under his own observation, he has given us a most brilliant description. His account squares with that of his colleague of the London *Times* and of Lieut. Wagner in regard to the main outlines of the battle. At Lule Burgas and Bunarhissar the Turks fought with desperate valor. They succumbed to superiority of numbers, to the tremendous effectiveness of the Bulgarian artillery, and, last but not least, to their own pitiable lack of preparation. For three days the Turks were without food, and during the greater part of the time without heavy ammunition. The splendid courage with which the Second Turkish Corps charged again and again in the face of a withering fire has been vividly told by Mr. Ashmead-Bartlett. His fine battle pictures and his somewhat over-impressionistic but engrossing account of the flight of the beaten army make the reader forget the wearisome detail of the earlier part of the book, in which the fate of the peoples of the Near East seems largely subordinated to the adventures of Mr. Ashmead-Bartlett, his dragomans, and his motor car. This undoubtedly is to be explained in part by the special circumstances under which the newspaper men did their work in Thrace. Certainly, no one will quarrel with the author's story of how he and Mr. Donohoe, of the London *Chronicle*, "got through" the first detailed story of Lule Burgas by a wild dash from the battlefield to Rodosto, to Constantinople, and so to Constanza, in Rumania.

What is a defect in Mr. Ashmead-Bartlett assumes the dimensions of a vice with Mr. Lionel James. His book is less an account of battle than a narrative of personal adventure. It is primarily the story of the English war correspondents with the Turks, a book rich in nicknames, personal banter, and light philosophy. Nevertheless, it is an honest book because of the very fact that it deals only with what the writer saw with his own eyes. He witnessed the turn of the tide at Lule Burgas without waiting for the final catastrophe. With regard to the aftermath of Lule Burgas, Mr. James takes issue with both Wagner and Ashmead-Bartlett. The *Reichspost* correspondent insists that there was a hard-fought battle at Tchorlu several days after Lule Burgas. Mr. Ashmead-Bartlett insists that there was no battle, but that there was panic and rout. Mr. James asserts that there was neither battle nor panic. Contrary to the statement of Wagner, he writes:

> While the privileged Vienna newspaper was telling Europe of the Turkish Sedan which had made the dry bed of the Tchorlu River run red with Ottoman blood, the Bulgarian armies, faint and exhausted, were resting on their arms, counting their losses and thanking the Christian's God that something had intervened to make the Turks evacuate the positions which they themselves were too exhausted to face again.

Against Ashmead-Bartlett, he writes:

> Here was the Centurion [Mr. James] at Tchorlu, six days after the general retirement of the Turkish army was ordered from the line Lule-Burgas-Viza. Tchorlu was only thirty-five kilometres—that is, one day's march—from the battlefield. At Tchorlu was a Turkish rear guard. For five days neither of these divisions had fired a single round. Where, then, was the rout? Some one or another had lost his sense of proportion.

It is plain that we are still in need of exact knowledge as to what happened after Lule Burgas.

Mr. Cyril Campbell was with the Servian forces in Macedonia. The campaign was much less stubborn than the one in Thrace, though in view of what Mr. Campbell has to say of the hard-fought battle at Kumanova preceding the fall of Uskub and of the operations leading to the capture of Monastir, he is hardly justified in describing the entire campaign as a procession. The book deals at length with the Balkan political situation.

There is no disagreement among our four authors as to the reasons for the Turkish débâcle. The Bulgarians had been preparing for twenty-five years, while the Turks were relying chiefly on Kismet. The Balkan allies were superior in numbers, incomparably stronger in artillery, and under excellent leadership. This is not underrating the extraordinary valor of the Bulgarian peasant soldiers, on which Lieut. Wagner lays so much stress. The Turks went into the struggle ill-armed, ill-fed, and under-officered. All our writers agree that the army reforms initiated under the Young Turk régime had resulted only in disorganization and a sapping of the traditional Ottoman fighting spirit.

CURRENT FICTION.

Jezebel. By Richard Pryce. Boston: Houghton Mifflin Co.

The Burden of a Woman. The same.

Elementary Jane. The same.

Time and the Woman. By Richard Pryce. New York: R. F. Fenno & Co.

About a year ago the *Nation* commented upon a novel by an English writer of good standing if not of popular fame at home, whom "Christopher" first introduced to American readers. That was a story of interpretation rather than of incident. It undertook to select and to illuminate certain episodes in the life of an unusual man. Christopher, however, was not unusual as Mr. Locke's and Mr. Hewlett's favorite heroes are; not eccentric in act or manner, but marked from his fellows by innate fineness of temper, by a passionate yet not unbalanced worship of beauty in character and conduct. Fate was not kinder to him than to his kind. To have carried the torch of youthful ideals unflickering into manhood only served to make its snuffing out more painful. Mr. Pryce was more ardent than skilful in bringing about the catastrophe. The unmistakable charm of the story depended upon its atmosphere and detail rather than upon its force.

That it "got across" (as the theatrical people say) in America, is sufficiently shown by the simultaneous publication of four other novels by this author. Reading them consecutively, one is struck, first of all, by their versatility of mood and manner. Versatility, we have more than once noted, is the most surprising quality of current English story-tellers as a group. They can play the game of fiction with either hand, and under any recognized set of rules—or simply go-as-you-please. They can give you the realistic or the romantic, the archaic or the last cry of the modern, the problem story or the humorous extravaganza; and each of them, in its way, the real thing. Never, since Eliza-

beth, has the pen of England displayed such virtuosity. Or, rather, let us say, never since then have the literary thews of England shown themselves so flexible and accomplished. What are single laurels?—all out for the pentathlon!

The title of the present champion, Arnold Bennett, is not in danger from Mr. Pryce. In the intermediate events he might hold his own, but he could hardly sprint in a class with "Buried Alive," or throw the hammer abreast of the "Old Wives' Tale." Still, we think of no American novelist who is capable of writing four books as different as the group we have in hand. Each story has a distinct atmosphere, moves, for one thing, upon a distinct social plane. Jezebel is daughter of one Lord of the Manor, and destined to marry another. "Time and the Woman" is a chronicle of polite, just not titled, town life. "The Burden of a Woman" is a study of peasant life on the Welsh border. Elementary Jane is a little Cockney music-hall singer.

And the style varies with the subject. In "Jezebel" the writer is filing his phrases. He has lived with Meredith, and more than met Hewlett. He is involved, allusive, too often merely decorative. He is careful not to say anything straight out. Lord Dormoral tells the parson at the font that his daughter is to be christened Jezebel. The parson feebly protests:

> Lord Dormoral's "By God, sir, am I or are you . . . ?" (the person to name the child, well understood) took all the strength out of him. He hesitated, and was lost. To the day of his death he would think (and he thinks) that he failed in his duty to the Church of which he was a member, and to the Almighty whose servant he was and whose name he had heard taken in vain so profanely [*sic*], when he quailed beneath Lord Dormoral's menacing presence (was there a laugh somewhere in his wrath? Was there? was there? And was the whole thing but a terrible jest?), and continued, albeit so fearfully, the interrupted service.

In substance as in manner, "Jezebel" is clever and self-conscious. But for the tag of the title, and the tang of the introductory incident, it is a too familiar substance. Lord Dormoral, believing that his supposed child is not really his, causes that ill-favored name to be given her at the font. Jezebel grows up under a cloud, not only on her mother's account, but because the Dormorals are known as an evil race. Still, we see very soon that she is going to marry her neighbor, young Lord Malmsey, in spite of the hatred of his dowager mamma—and in mentioning the dowager we have sufficiently suggested the course here taken by true love. That haughty dame, after savage and prolonged use of the brutal weapons by means of which (we gather) great ladies are wont to protect the family name from contamination, is driven, as so many of her kind have been (in fiction), to implore the alliance she has spurned.

"Time and the Woman," though it does not deal with lords and ladies, is still in the polite sphere. The hero, or leading man, Gerald Ventnor, is of much the same type as the young Lord Malmsey—though older and settled into the habit of the clubman. He is handsome, accomplished, well-provided in every way. He likes women casually, does not mind their loving him, thinks himself safe. In short, we know at a glance that there is trouble ahead for him at the hands of our author; and that the two pretty women whose path converges upon his in the opening pages are to be the instruments. These are the *mater pulchra* and her inconvenient offspring who have been so often interpreted in recent fiction. Mrs. Ruthven is, speaking vulgarly, a grass widow, with a husband, but not a heart, in India. She is of the siren kind, a pleasure-hunter, the female without vice, but without maternal instinct, who is to be found in all orders of society. Araby, the girl, has been brought up in a country household, very British, very spinsterly. She differs from her mother in every way, except in the degree of her beauty. Ventnor meets the pair, finds them charming, and allows himself to be lightly attached as cavalier by the mother. Araby is kept in the background as much as possible; but Ventnor presently falls in love with her. He is in no doubt of his feeling, but the habit of taking things easily is ingrained; he loses his chance: perhaps the most enlightening fact as to the book's quality is that we do not greatly care whether he has lost it or not. It is all very interesting and well-written, but it does not quite succeed in gripping the attention. To borrow from the slang of the theatre once more, it lacks "punch." Its style shows hardly a trace of the strain we have noted in "Jezebel"; it is simple, flowing, urbane, rather like the manner of "Frank Danby" or Mr. F. R. Benson.

"The Burden of a Woman" involves an altogether different setting and atmosphere. But for the fact that the scene is laid in a Welsh border-county instead of upon Dartmoor, and for the single page of epilogue which supplies, or implies, a happy ending, this tale might almost have been told by Mr. Phillpotts. To Maen Gorsedd has come, some years before we meet her, a young and comely mother and her child: a supposed widow with a "past," which presently confronts her, and almost—not quite—wrecks her life. The course of the narrative is quite Phillpottsian (but for the epilogue)—grim, naked of speech and of action, provided even with the familiar tavern group as chorus. But we have not here the feebleness of conscious imitation; we feel that Mr. Pryce is more certain of his ground, more absorbed, at least, in his theme, than in his studies in polite romance.

But "Elementary Jane" is "the real thing"—the really spontaneous and really finished work among the present group. Even in the story of Mary Redwing, Mr. Pryce seems a little outside of his characters. Jane he possesses as she possesses him. The incident of the tale is nothing; it might have been made the substance of a short story. But as an interpretation of a woman's heart, Jane is worth a dozen Arabys and a hundred Jezebels. She is only a music-hall singer, and is wafted to something like fame by nothing better than an air of innocence and a song about violets in a lane. But as it happens, the air and the song do not belie her. She is innocent, and her natural goodness is proof against the perils of her lot. But she is a woman, not a Clarissa—a creature worthy of the pain and joy of the two loves which complete and justify her nature.

Oddly enough, "Jezebel," which, by reason of its studied and artificial manner, one might guess to be the earliest of these stories, is actually the latest: *absit omen.*

THE RELIGION OF GREECE.

Themis: A Study of the Social Origins of Greek Religion. By Jane Ellen Harrison. With an excursus on ritual forms preserved in Greek Tragedy by Gilbert Murray, and a chapter on the origin of the Olympic Games by F. R. Cornford. New York: G. P. Putnam's Sons. $5 net.

Readers of Miss Harrison's previous books will expect to find in this also new light on old themes. Nor will they be disappointed. It contains much new material and illustrations carefully culled from Greeks and barbarians. It constitutes a notable annex to the Greek Anthropological Museum, with its contents, indeed, somewhat hastily classified. But a regrettable tendency, already too apparent in her "Primitive Athens," has increased. An arrogant assertiveness, joined with a plausible persuasiveness, may either impose a too ready assent upon the unwary or irritate the critical reader into premature dissent from arguments which deserve careful consideration.

Miss Harrison has made a really scientific study incidentally the vehicle for an unscientific polemic against religion—even religion defined in elastic terms. Avowedly under the influence of "L'Evolution créatrice" and other writings of Professor Bergson, and of Professor Durkheim's "De la Définition des phénomènes religieux, représentations

individuelles et représentations collectives," etc., she concludes that Themis is "social ordinance, the collective conscience projected." Vague emotions, desires, and instincts, long antedating any creation of a god, sprang, she thinks, rather from the group consciousness than from the individual. "In general, the progressive evolution of a god is from emotion to concept, from totem-animal to mystery-god, from mystery-god to Olympian" (p. 478). In her introduction she says: "These two ideas (1) that the mystery-god (*e. g.*, Dionysus) and the Olympian express, respectively, the one *durée*, life, and the other the action of conscious intelligence which reflects on and analyzes life, and (2) that, among primitive peoples, religion reflects collective feeling and collective thinking, underlie my whole argument."

William James, in commenting once upon the *salto mortale*, by which Herbert Spencer arrives at the first beginnings of consciousness, recalled this defence of a girl tried for infanticide: "Please, your Honor, it was such a little one!" Miss Harrison's denial of objective reality, or confusion of it with the subjective idea (cf. pp. 476, 487, 502, *et passim*), must seem to many philosophic thinkers to be a holocaust, to vitiate, indeed, her whole argument.

Another criticism has to do with the current practice of using in shorthand "The Greeks" or "Greek" as a constant. This is misleading enough even in the span from Homer to Menander, but when the terms embrace every period, from prehistoric origins to Pausanias and beyond, there is need of close attention. It would be unjust to Miss Harrison to imply that she pays no regard to this, as it would be folly to ignore the persistence throughout Greek life of popular beliefs and practices, many of which she illustrates so brilliantly; but any dispassionate account of Greek religion must distinguish much more carefully than she does between savage origins or crude survivals, and the intellectual independence of an Æschylus, Anaxagoras, or Plato. For example, not only, according to Miss Harrison, does Homer nod, but Pindar is really celebrating the Year Spirit in his Epinician Odes. As for poor Æschylus, he is as "pathetic" as the modern believer in religion whom she likens (p. 535) to a dancing medicine man. Æschylus, she says (p. 414), has "his mind all out of focus through his beautiful monotheism and his faith in God the father."

Charmed, like Eve, with one or another snake-emanation, the author deplores the intrusion of the anthropomorphic Olympians into her Eden of totems, and explains (p. 495) her irritation over the Hermes of Praxiteles by asserting that the statue's "whole conception is false." Hermes is by rights a phallus and, probably, a snake (p. 297).

But even those who may feel that the intrusion of Miss Harrison's religious Nihilism is an impertinence, may pass it by for the contributory value of the work. Miss Harrison recognized in the "Hymn of the Kouretes," which was discovered in Palaikastro in eastern Crete, the stimulus needed for her exposition of social origins. The hymn is of quite late source (actually inscribed in the second or third century after Christ!), but she is satisfied that it contains very ancient material. The Daimon invoked is the Greatest Kouros —the projected unity of the youths at the New Birth of their initiation. This clue is followed in explaining the Dithyramb of the drama, the Olympic victor as the Year-Daimon, and so on through the maze of Greek life. In her account of the hero, as the Agathos-Daimon, she might well have adverted to the recently discovered "Hero" of Menander. But even a mere list of the subjects of specific interest to the student of literature, here freshly illustrated, would be long. A few from many may be mentioned: P. 168, the Thunder-brides, Semele, Alcmene, Dido; p. 297 ff., Zeus Ktesios, and p. 406, Apollo Aguieus; p. 455 ff., Prometheus and the Oceanides; p. 461, the derivation of the Greek philosophy of the Ionic schools from Persia (which would be revolutionary, if true); p. 462, the account of Orphic religion; p. 477, "The wheel of Dike moves through time, Moira operates in space"; p. 478-9, "The Olympian became an *objet d'art*." When Miss Harrison says here that "the strength of the Greek temperament lay rather in art than in religion," she might well have emphasized more clearly, in a book upon Themis, that their art presupposes Law and Proportion. On p. 491 it is refreshing to have Cretan claims held in abeyance while emphasis is laid upon the fact that Zeus of Olympus is a patrilinear projection of a northern tribe. If the real Greeks, in addition to their conquering northern language, can lay claim to the Olympian hierarchy, their ultimate *status quo* may not prove to be so parlous as the Minoan missionaries have been asserting.

In the Anglicizing and spelling of proper names meticulous consistency need not be demanded, but Miss Harrison seems unnecessarily erratic: *e. g.*, Denys of Halicarnassus, Trozen, Alcestis *vs.* Herakles, Hæmon and Trachiniæ *vs.* Menoitios and Moirai.

Pilgrims to Athens—scores of them innocent of the archæologist's bias—have gratefully used as their companion Miss Harrison's "Ancient Athens" (now out of print), and all readers with even a little knowledge of things Greek will be impressed by the wealth of illustration in the present volume; but those who believe in the permanent value of Greek literature, both for its form and its content, will be satisfied as little with her patronizing admiration as with her splenetic outbursts.

Modern Italian Literature. By Lacy Collison-Morley. Boston: Little, Brown & Co. $1.50 net.

The Italian literature of the last two hundred years has found slight recognition beyond the Alps: it is nevertheless richer in absolute value than the far more influential literature of the Cinquecento. Machiavelli stands alone, it is true, and the magic of chivalrous verse is spent; but the Renaissance has no such poets as Leopardi and Carducci, no dramatists to rank with Goldoni and Alfieri, no satirist to match Parini; the short story is a finer thing than the old *novella*; and the novel is vigorous in youth.

Mr. Collison-Morley's book deserves a hearty welcome. It shows a good knowledge of most of the greater and some of the minor authors, and a conscientious use of the standard histories and larger monographs. It is comprehensive and well-planned. The only important name omitted is that of Fucini; the only men who receive entirely inadequate treatment are Zanella and Giacosa. Mr. Collison-Morley contents himself, for the most part, with straightforward accounts of books and men, and quotes De Sanctis and Carducci in preference to venturing criticism of his own. His success in quotation, whether from the authors he is considering or from Italian comment upon them, is indeed one of the best features of his work: the translations are plentiful, well-chosen, and well-executed.

Among the best chapters are those dealing with Parini, Monti, Leopardi, and d'Annunzio. In Leopardi, for instance, Mr. Collison-Morley sees clearly the positive strength that is so often disregarded. In spite of constant pain, in spite of the harsh verdict of his reason, Leopardi clung passionately to his dear "illusions," the old ideals of beauty and virtue and love. His poetry is not poetry of surrender, but of conflict between a relentless mind and a noble heart. Leopardi's scholarship suggests an excellent generalization: "Unlike our own, the great poets of Italy have almost invariably been men of considerable learning. Whether it is on account of the vast tradition of culture that lies behind them or for some other reason, they seem to draw their inspiration through a profound knowledge of literature rather than from a direct contact with life itself. Dante is as true an embodiment of the poetic characteristics of Italy as Shakespeare, rather than Milton, is of those of England." But the choice of Dante as example is unfortunate: surely no poet ever drew in-

spiration from experience of life more immediate or more searching than his.

Indeed, many of Mr. Collison-Morley's references to earlier Italian literature show him to be upon unfamiliar ground. He confuses Lorenzo and Lorenzino de' Medici, classes the story of Francesca da Rimini as a story of the Renaissance, says that the seven and eight-syllable lines preferred by Parini had been the popular metre in Italy from time immemorial, terms the "Secchia rapita" the first Italian mock-heroic poem, speaks of Naples as the birthplace of the opera, and calls Tartaglia "one of the four original masks" of the Commedia dell' arte. Similar errors in fact and in judgment mar his treatment of the modern literature which is his main subject, but the errors in fact seldom concern matters of primary importance. The printing of Italian words, even names of books and authors, is very careless. Sisara becomes Sissaro; Gropallo becomes Grapollo, and the line "Finchè non sorgi un uom che ci raduni" halts in the disguise, "Finchè non sorgi un nom che non ci raduni."

It is a pity, too, that the author should not have learned from the Italians more grace and clarity of style. His account of Giacosa contains this sentence: "After trying historical plays, in which Felice Cavallotti (1842-98), 'the last of the Romantics' as Carducci called him, who was killed in a duel, also obtained considerable success, he turned to modern comedy." Elsewhere he writes of "the neighborhood of Vesuvius, which is certainly more calculated to impress us with the littleness of man, especially during an eruption, than any other district in Italy." But his judgment is most seriously at fault, perhaps, in his estimate of Goldoni and Alfieri. Many of their best qualities escape his notice. Against Goldoni is brought the specific and quite unwarranted charge of moral indifference: "Vice, and even crime, amused him, instead of rousing his indignation." On the contrary, the *castigat* is for Goldoni literally true, and masks no exploitation of indecency. His satire is less pungent than that of Parini, but it is none the less revealing and effective, whether it deals with the universal themes of greed, vanity, and malevolence, or with so special and noisome an offence as cicisbeism. And the cleanliness of his whole theatre is a notable protest against the depraved likings of the public of his day. Of the ordinary comic qualities, the only one that Goldoni lacks is verbal wit: the others he has in exceptionally good measure. But his peculiar claims to greatness lie in the nature of his realism and in the quality of his comic atmosphere. Goldoni found himself only when he laid aside conventional forms and language to imitate, in his own dialect, the life of his own city, the motley, crowded, homely life of lagoons and *campielli*, many-hued, noisy with chatter, sweet with honesty. The Venetian comedies bring in the whole population of each little neighborhood, the stage is constantly filled with a democratic variety of persons and interests, and the talk is short, crisp, interrupted. The realism of these plays is neither indifferent nor indecent: Goldoni selects what is most delightfully characteristic, and renders it with deft and vivid minuteness, yet comprehensively. Moreover, he has always the charm of a rare geniality. His humor, springing from his characters, is the humor of humanity itself. The clear air of his Venetian afternoons is life-giving and joyous. He brings one unfailingly into a mood of sunlit happiness—and that is surely the true function of comedy.

Mr. Collison-Morley's depreciation of Alfieri is the more unfortunate in that it sustains the general injustice of modern critics to the great tragedian. Alfieri was, in life and work, intense—a Byronic Michelangelo, with the *terribilità* of the sculptor and the driving restlessness of the Englishman. His whole art moves from a responsiveness to intensity in others: as he read of intense love, or ambition, or thirst for vengeance, a personating sympathy possessed him, and forced a new utterance of the old emotion, rekindled in its passage through his spirit. Intensity informs his plays throughout. Nothing is permitted, in word or act, that does not lead directly towards the catastrophe. Scenes, speeches, sentences, are cut down until the residuum is of living strength. Every one of the few personages is intensely concerned for the outcome. There is no cessation in their reinforcements and their thwartings, no interlude, no delay for rhetoric. Event hurries on event with terrible swiftness; no change of scene allows escape from the insistent tragedy. The unity of action is perfectly attained, and the minor unities are for once self-justified. If one is conscious of them at all, it is only in realizing that they are inevitable. Mr. Collison-Morley is right in saying that Alfieri is in general too subjective for dramatic personification, but he is very wrong in calling Saul his one great character. And he is wrong, too, in saying that there is no variety in the tragedies. A few of them differ from the others in being merely political manifestoes, but the majority are tense with varied life: "Filippo," with the sinister cunning of its dominant presence; "Antigone," with its pure and fearless devotion; "Oreste," terrible with rushing fate; "Rosmunda," romantic wine in a neoclassic cup; "Saul," "Mirra," and the second "Brutus." With "Saul," moreover, comes a notable change in style. Hitherto Alfieri had wrought for the effect of overwhelming force; hereafter his imagination and his love of beauty seek and receive plentiful recognition. His last plays are rich in poetry: "Saul" in poetry of vision and of deep humanity, "Mirra" in poetry of fated and resistant love, and the "Brutus" in poetry of eloquent patriotism.

Some English Story Tellers: A Book of the Younger Novelists. By Frederic Taber Cooper. With portraits. New York: Henry Holt & Co. $1.60 net.

This is a companion to Mr. Cooper's volume on American Story Tellers. The substance of its chapters has appeared in the *Bookman* or elsewhere, chiefly in the form of reviews, and traces of timeliness remain. Fifteen writers of fiction are commented upon, half a dozen of whom belong strictly to the category of "the younger novelists," if it is taken to include writers of not more than middle age. More strictly, this book deals with novelists who have won an audience of late years. In this sense, Kipling is a far older novelist than De Morgan, and Anthony Hope considerably the senior of Joseph Conrad.

Kipling, indeed, is the patriarch among them all, and Mr. Cooper feels constrained to apologize for his inclusion in this gallery of current favorites. "The day when one was compelled to write of him exuberantly," he admits, "in the sheer joy of speculating on what his erratic and undisciplined genius would do next, is a thing of the past." But he must be included here because "he is too imposing a figure among contemporary English story-tellers to be omitted." These easy-going phrases suggest the need, which persists throughout the reading of these pleasant papers, of taking our commentator not too literally. A critic may be known by his adjectives. Kipling is not imposing as a contemporary story-teller. A quarter of a century ago he founded a school of short-story writing which, for better or worse, is still thronged with pupils. In America the head-mastership itself changed hands some time since: where Kipling has his tens of imitators, "O. Henry" has his hundreds. Kipling has never been a novelist, in the sense in which the other writers treated of in this book are novelists. His one long story of sustained power was printed a dozen years ago. And it is difficult to see how his genius could ever have been characterized as either "erratic" or "undisciplined"; no writer of this generation has been more consistent or has had a stiffer schooling. In short, Mr. Cooper's use of words is so casual as to make it difficult to follow his often ingenious and suggestive thought. When he says, "It seems inevitable to write of Mr. Phillpotts without making mention of Hardy," one has to reflect an instant to make sure that he means the reverse of what he says. He is too easily content with the cheap

counters of the critical vocabulary, "virile," and "vital," and "convincing," "technique," "artistry," and the like. He can even say that Kipling's chief distinction lies in his "dynamic force"!

However, his judgments are in the main sensible and interesting, if not "compelling." The papers on De Morgan and Hewlett and Arnold Bennett are perhaps the best of the group.

Notes

In "Widecombe Fair," promised by Little, Brown for next week, Eden Phillpotts completes his series of books on Dartmoor which were planned more than twenty years ago.

Included in the spring publications of the same house are the following: "The Uphill Climb," a story of Montana, by B. M. Bower; "The Long Way," by Mary Imlay Taylor; "The Quarry," a tale of New York life by John A. Moroso; "The Creeping Tides," a romance of Greenwich Village by Kate Jordan; "The Philippine Problem," by Frederick Chamberlin; "A Sunny Life: The Biography of Samuel June Barrows," by Isabel C. Barrows; "Crime and its Repression," by Gustav Aschaffenburg, professor of psychiatry in the Academy of Practical Medicine at Cologne, translated by Adalbert Albrecht; and "History of Continental Criminal Procedure," by A. Esmein, professor in the University of Paris, with chapters by Profs. François Garraud and C. J. A. Mittermaier, translated by John Simpson.

April issues of the Century Company will include "Mr. Hobby," a novel by Harold Kellock.

Dodd, Mead & Co. are bringing out this week Miss Elizabeth Robins's book on woman's suffrage, entitled "Way Stations."

A long narrative poem by John Masefield, entitled "The Daffodil Fields," is one of Macmillan's announcements for this week.

Putnams will bring out in this country an autobiography entitled "My Past," written by a relative of one of the reigning monarchs of Europe. The author's name is not given.

The Allen Book & Printing Company, of Troy, N. Y., will have ready about May 1 "Economics as the Basis of Living Ethics," by John G. Murdoch.

Among the books promised shortly by Houghton Mifflin Company are: "Gettysburg," by Elsie Singmaster; "Justice and Modern Law," by Everett V. Abbot; "The Value of Organized Speculation," by Harrison H. Brace; "Strange Stories from the Lodge of Leisures," translated from the Chinese by George Soulié; "Stowe Notes," by Edwin Martin Taber, and "A History of Lexington, Massachusetts," by Charles Hudson.

The publication of the Selden Society for the current year will be "Year Books of the Eyre of Kent," edited by William C. Bolland. The Society has also in preparation a volume of "Year Books of Edward II," edited by Mr. Turner and Professor Geldart, and for issue shortly "Select Chapters of Trading Companies," edited by Cecil T. Carr. Provisional arrangements have been made for the following further publications: The second volume of the "Law Merchant," by Professor Morgan; other volumes of the "Year Books of Edward II"; a volume of "Select Cases Before the King's Council," by Mr. I. S. Leadam; a volume of "Select Ecclesiastical Pleas," by Mr. Harold D. Hazeltine; an edition of the "Liber Pauperum" of Vicarius, by Mr. F. de Zulueta, and a volume of "King's Bench Ancient Indictments," by Mr. Cyril Flower.

Mrs. Meynell's poetry has been collected in a single volume, which is printed by the Arden Press and will be issued next month by Burns & Oates.

Mr. Noel Buxton, M.P., is publishing, through Smith & Elder, his experiences "With the Bulgarian Staff." Save for his brother, he was the only Englishman to enjoy the privilege denoted in the title.

The concluding volume (the eighteenth) of T. N. Foulis's authorized version of Nietzsche is promised this month. Special features of the book are an exhaustive index compiled by Robert Guppy and an introductory essay on "The Nietzschean Movement in England" by the editor, Dr. Oscar Levy.

A tragic tale of Old Ceylon is told in Woolf's "A Village in the Jungle," which Longmans, Green will bring out in this country.

Other spring announcements by the same house are: "College Sermons," by Dr. L. C. Stewardson; a new book of "Sermon Notes," by Cardinal Newman; Monsignor Robert Hugh Benson's "Confessions of a Convert," and "Organized Democracy," by Frederick A. Cleveland.

A committee, headed by Joseph H. Choate and Charles W. Eliot, is preparing plans for a memorial to the late Rev. Dr. Samuel Gilman, Harvard, 1811, and author of "Fair Harvard." The project is to fit up a Samuel Gilman Memorial Room in the tower of the historic church at Charleston, S. C., in which Dr. Gilman had a long, distinguished career. The treasurer of the local Charleston committee is Mr. Frank R. Frost, People's Office building, Charleston, S. C.

A dictionary of moderate size, published in this country by Macmillan, is "Books That Count," by W. Forbes Gray. It is a list of some 5,500 books in English, that present an authoritative and not too recondite study of all manner of subjects, from Biography to Sports. Prices are given in shillings and pence, and a brief note tells the character of each work. The dictionary will no doubt prove serviceable to those who are reading or studying without much guidance.

We have to record the appearance of two new issues of Baedeker, which we shall not attempt to criticise. One is the fourteenth remodelled edition of the "Northern Italy," corresponding with the eighteenth in German. The other is the sixteenth revised edition of the "Northern Germany." These, like all the Baedekers, are Scribner importations.

A. C. McClurg, of Chicago, publishes a second edition of "The Ships and Sailors of Old Salem," by Ralph D. Paine, which, on its first appearance, was favorably reviewed in the *Nation* of June 16, 1910. In this reprint seven chapters in the original work together with several paragraphs and appendices have been omitted. But the book, still a large one, remains an authoritative and indeed thrilling account of the exploits of Salem's early sailors, who made the American flag known and respected even in the far distant South Seas, who were equally ready to serve on privateers or men-of-war, fight pirates, or trade with Christians and heathen savages.

In his "Portraits and Sketches" (Scribner), Edmund Gosse is at his very best. The book is not made up of criticism, in which Mr. Gosse lacks philosophy, nor of scholarship, in which he sometimes wants accuracy. He has here written a series of portraits of men he has known—Swinburne, Philip James Bailey, "Orion" Horne, Aubrey de Vere, Tennyson, Whittier, Shorthouse, Mandell Creighton, Andrew Lang, Wolcott Balestier, Carl Snoilsky, Eugène Melchior de Vogüé, and André Gide—and in each case, with varying fulness of detail, he has brought his subject vividly before the eye. All the other portraits, however, pale beside that of Swinburne. The poet was picturesque enough in appearance and original enough in habits to make description of him easy for any hand, and the clever anecdotal literature about him is already enormous; but for a vision of the very man himself we know of nothing comparable to these pages by Mr. Gosse. There is nothing to do but quote at great length:

> The world is familiar from portraits, and still better from caricatures, with his unique appearance. He was short, with sloping shoulders, from which rose a long and slender neck, surmounted by a very large head. The cranium seemed to be out of all proportion to the rest of the structure. His spine was rigid, and though he often bowed the heaviness of his head, *lasso paparera collo*, he seemed never to bend his back. Except in consequence of a certain physical weakness, which probably may, in more philosophical days, come to be accounted for and palliated—except when suffering from this external cause, he seemed immune from all the maladies that pursue mankind. He did not know fatigue; his agility and brightness were almost mechanical. I never heard him complain of a headache or of a toothache. He required very little sleep, and occasionally when I have parted from him in the evening after saying "Good-night," he has simply sat back in the deep sofa in his sitting-room, his little feet close together, his arms against his side, folded in his frock-coat like a grasshopper in its wing-covers, and fallen asleep, apparently for the night, before I could blow out the candles and steal forth from the door. I am speaking, of course, of early days; it was thus about 1875 that I closely observed him.
>
> He was more a hypertrophied intelligence than a man. His vast brain seemed to weigh down and give solidity to a frame otherwise as light as thistledown, a body almost as immaterial as that of a fairy. In the streets he had the movements of a somnambulist, and often I have seen him passing like a ghost across the traffic of Holborn, or threading the pressure of carts eastward in Gray's Inn Road, without glancing to the left or the right, like something blown before a wind. At that time I held a humble post at the British Museum, from which I was freed at four o'clock, and Swinburne liked to arrange to meet me half-way between that monument and his own lodgings. One of Swinburne's peculiarities was an extreme punctuality, and we seldom failed to meet on the deserted northern pavement of Great Coram Street. But although the meeting was of his own making, and the person to be met a friend seen

every day, if I stood a couple of yards before him silent, he would endeavor to escape on one side and then on the other, giving a great shout of satisfaction when at length his eyes focused on my face.

"Religion in China, Universalism: A Key to the Study of Taoism and Confucianism" (Putnam), by J. J. M. de Groot, is a book of great importance, being the work of a scholar who has spent half a lifetime on his subject. He has to his credit eight big volumes on "The Religious System of China." This vast work has now been condensed into eight lectures, in all about 300 pages, which make up the volume before us. Many will rejoice to have the range of the author's views in such convenient form. The methodical manner in which they are presented and his support of statements of fact by translations from Chinese originals put readers in a position to weigh his theories and to draw their own conclusions. One of the most interesting chapters is that on Asceticism, Prolongation of Life, Immortality. It deals with cultural elements, such as the "discipline of the breath," cultivated in China in the fourth century B. C., long before we find any historical evidence of intercourse with any of the other civilized nations of Asia. We should have liked to hear the author's views on this strange similarity with practices known to have existed among the sages of early India, to which fact Professor Conrady, of Leipzig, drew attention in a learned academical essay published in 1906. Another chapter, as interesting as it is important, is the eighth and last lecture, entitled Feng-shui. In it the author attempts to connect that well-known popular superstition, which it may be hoped will gradually disappear in republican China, with his general theories on Universalism. Another writer on this subject, Dr. E. Eitel ("Feng-shui, or The Rudiments of Natural Science in China," Hongkong, 1873) has asked the question, "What is Feng-shui? Sinologues have looked through the Chinese classics for an answer to this question, searched their dictionaries, and found none." The answer, it appears to us, has been found by Professor De Groot.

It was a happy idea of the American committee for lectures on the History of Religions to entrust to a specialist like Professor De Groot so complicated and difficult a subject, and the committee on publication also deserves credit for having turned out a neat little volume. A number of misprints, if they may be so called, might have been avoided by referring the proofs to the author. The author, who speaks the Amoy dialect, so important in his former career as an interpreter among the Chinese settlers in Java and Borneo, is evidently not so well at home with the Mandarin dialect as spoken in Peking. Thus he does not distinguish between the syllables *shan,* "good" or "goodness" (pp. 32, 35, and 80) and *shen,* "a god" (p. 152 *et passim*). Altogether, the absence of Chinese characters, which would be of little use to the general reader and would have interfered with the popularity aimed at, calls for transcription based on a fixed and uniform system of spelling. Why, for instance, should the aspirate be expressed by an apostrophe after *t* and by the letter *h* after *k*, as in *Khin t'ien kien,* a want of uniformity resorted to in a number of examples with what appears as intentional, though incomprehensible, regularity? But these are trifles which ought not to discourage readers bent on learning rather than on criticising.

"Jean Jacques Rousseau" (Scribner), by Gerhard Gran, of the University of Kristiania, is in the main a narrative of Rousseau's life, with a psychological commentary. The present volume ends with the publication of the first "Discourse" (1750). The author is unduly harsh when he says that Rousseau "lied with ease and fluency whenever the situation demanded it." As a fluent liar, Rousseau cannot compare with Voltaire. Yet if the work fails to be a really noteworthy addition to the endless stream of publications on Rousseau, the reason is to be sought in the fact that the writer is himself too much under the spell of the Rousseauistic view of life. He makes an elaborate application of James's theory of conversion as a "subliminal uprush" to Rousseau's sudden illumination on the road to Vincennes. This uprush, so far from being related to the inhibitive and rational powers of personality, is in direct opposition to them. Professor Gran does not raise the question whether true religious insight may not come from an entirely different direction. The question proposed by the Academy of Dijon, he says, "acted as an explosion on the threshold of Rousseau's consciousness; it forced a breach. Through this breach there suddenly streamed a flood composed of all the memories, all the indignation, all the moods, in short, all the psychic stuff that, gained through inheritance, race, and early experience, lay settled in his subconsciousness." Since the "uprush" is composed, after all, only of previous impressions, it becomes important to trace their origin. Accordingly, Professor Gran devotes several chapters to a study of Geneva (from the sixteenth century) and of Paris under Louis XV, and attempts to show that the conflict in Rousseau between the impressions received from these two environments culminated in his outburst against civilization.

The translation of Professor Gran's work reads smoothly in the main, though the translator has an irritating trick of omitting the definite article from the titles of books (*e. g.,* "While 'Discours' in its contents is essentially aggressive"). Proper names and quotations in French are often very incorrectly printed. Two portraits are given, one of Rousseau in youth and one of Madame de Warens, without any warning that in both cases the ascription is uncertain.

The monograph of Prof. Adolf Harnack on "Bible Reading in the Early Church" is translated by Rev. J. A. Wilkinson and published in the Crown Theological Library (Putnam). Professor Harnack takes issue with the celebrated proposition of Lessing, that "the laymen of the primitive church might not even read the books of the New Testament, not at least without the permission of the presbyter who had them in his keeping." He cites a large number of references from the literature of the first three centuries to prove that Bible reading by private individuals was encouraged as a pious duty, and that no restrictions were placed upon any class of Christians in the freest use of all canonical books. He holds, of course, with Lessing that "Christian faith and a Christian church existed before ever there was a New Testament," but maintains that from the first, and at least to the time of Constantine, the sacred documents of Christianity were regarded as a free gift to the community, over which the church claimed no special privilege of supervision or interpretation. Harnack is especially interested in the corollary that early Christianity was not a mystery-religion, with secret documents for the initiated. As a daughter of Judaism, Christianity opened its treasures to all, and the mysteries which developed within the church were encroachments from without, not growths natural to its genius.

With his volume on "The Old English Country Squire" (Doran), supplementing those already published on the "Parson" and the "Parish Clerk," P. H. Ditchfield completes a pleasant trilogy on English rural life. Mr. Ditchfield, as we know from his previous volumes, is an ardent lover of the subject which he has made his own—the old-fashioned village community of England, happy though feudal, and on the whole well content with existence under the benevolent tyranny of "the quality." If he is also somewhat of a special pleader and quite frankly a *laudator temporis acti,* who sighs for the good old days before Lloyd George thought of land taxes or insurance acts, and when rustic hinds, as a matter of course, ordered themselves lowly and reverently towards their betters, we need not quarrel with him on that account, for his convictions are those of the squires and parsons about whom he writes, and without them his writing would lose something of its sympathetic quality. But if he has grievances against modern tendencies, he has also humor sufficient to keep them in the background. One feels that at the bottom of his soul he regards himself somewhat seriously as the Froissart of the aspects of English life that he chronicles, but his zest in his stories of squiredom, of the joys of the chase, of the whole round of country life, is such that one is ready, with a smile, to concede him the title. In these pages the whole history of the English squire is given, from the age of chivalry, when he was the gentleman attendant on a knight, to these less ardent days, when, his warlike guise laid aside, he is simply one of that order, a little lower than the nobility, which, as the author might affirm, is likely before long to be known as "the landless gentry." Mr. Ditchfield feels sadly that he is telling the story of a class that is rapidly disappearing, and his serious purpose is to show that, whether the system that created him is now outworn or not, the country squire has played no inglorious part in contributing to the greatness of England and has performed faithfully the work that fell to him to do. The admirable illustrations are an attractive feature of this book.

The compliment of translation into German has been paid to but few works of American classical scholars. The last example was the German translation of Professor Hale's "Cum Constructions," which was published in 1891. The appearance of such a translation of Prof. E. G. Sihler's "Annals of Cæsar" ("C. Iulius Cæsar: sein Leben, nach den Quellen kritisch dargestellt"; Leipzig) is, accordingly, of more than passing interest. The chief difference

between the two editions lies in the omission in the German of the appendix, which was devoted to an unsparing criticism of Mommsen and Froude. This was perhaps to be expected, for Mommsen is still too near to German thought to be subjected to harsh criticism, especially by a foreigner. The German preface is in much better taste than the original, for in the latter Professor Sihler seemed to feel it necessary to draw attention to his own fitness for his task, as shown in his numerous studies in the life and times of Cæsar. Professor Sihler's work represents an attitude of mind, a protest against the prevalent custom of building upon the modern interpreters of antiquity rather than upon the ancient sources. He, therefore, has paid scant attention to the views of modern investigators, with the exception of Holmes. As a consequence, he falls into occasional errors of fact—when more attention to modern investigation would have saved him. Then, too, his pursuit of his main theme has led him into a certain carelessness about less important details. Many of these inaccuracies, particularly those pointed out by Meusel in a review of the English work, have been corrected in the translation, but too many still remain to mar a study which as a whole deserves hearty commendation. The translation presents a much more pleasing appearance than its original, and the style is free from those idiosyncrasies which are so evident in the English form.

By the republication of the "Folk-Tales of Bengal" (Macmillan), by the late Rev. Lal Behari Day, one of the best-known collections of the folk-tales of India—a volume long out of print—has again been made accessible, this time adorned with thirty-two colored plates by Mr. Warwick Goble. The volume contains twenty-two stories, all told by Bengalis unacquainted with the folk-tales of the West, and the value of the collection has too long been acknowledged to require further emphasis. At the same time it may be noted that there are frequent suggestions of the "Arabian Nights," although no minute comparison of the "Arabian Nights" with folk-tales of India has thus far, to the reviewer's knowledge, been made. Some of the Bengali stories show blendings of cycles familiar to folklorists. Thus the "grateful animal" *motif* is found in the story of "The Bald Wife"; the "Story of the Rakshasas" contains three well-known themes, the "life token," "sleeping beauty," and the "separable soul"; and "violated tabu" is prominent in "The Man Who Wished to Be Perfect." The diction of the collection, it must be confessed, seems rather too literary when compared with the more exact "Wide-Awake Stories" of Steel and Temple or with Swynnerton's "Indian Nights' Entertainments"; in "The Field of Bones" the redactor's language was confessedly influenced by the vision of the valley of dry bones in Ezekiel xxxvii, 1-14. The general appearance of the new edition is far more attractive than that of the old one, and a special word of praise is due the illustrations, which, though not markedly Oriental, have a happy Eastern flavor.

The Connecticut Valley Historical Society, which has just issued at Springfield Volume IV of its Publications, 1904-1907, was organized in 1876, and has at present a membership of about three hundred. The Society has done much to preserve whatever relates to the natural, civil, military, ecclesiastical, and genealogical history of the country in general, particularly to that section known as the Connecticut Valley. It aims also to prepare and to preserve correct reports of passing events of importance. The volume opens with a full description and many illustrations of the new home of the Society, the palatial Springfield residence of the late D. B. Wesson. Built in the style of Louis XIV, it is valued above a million dollars; and the only condition of gift is that the Society shall raise a fund of $100,000, the income of which shall be used in maintenance. A committee, headed by the president, W. F. Adams, is actively at work in completing this fund, towards which J. P. Morgan, one of the life members, has offered $10,000. By far the handsomest building owned by any historical society in the country, this edifice will house all the collections which have heretofore had a somewhat uncertain home in the Art Museum, where many of the meetings are held.

The Rev. Dr. Joseph Newton Hallock, editor and proprietor since 1880 of the *Christian Work*, died Monday in Brooklyn, aged seventy-eight. Among his writings, which include books on travel, finance, and religious topics, is a "Life of D. L. Moody."

Lady Dorothy Nevill, who had a close acquaintance with the Duke of Wellington, Disraeli, Lord Palmerston, and most of the leading Englishmen for fifty years past, died Monday in London in her eighty-seventh year. She was the author of a book of reminiscences, "Leaves from the Note-Books of Lady Dorothy Nevill."

Field Marshal Viscount Garnet Joseph Wolseley, the famous soldier, died on Monday at Mentone, France, in his eightieth year. He retired as commander-in-chief of the British army in 1900, after having been at the head of the forces of the Empire for five years. His first taste of actual service was in 1852-3 in the Burmese war, in which he was severely wounded. He took part brilliantly in other campaigns, especially in the Crimea, where he was again injured, being picked up for dead. He was a careful student of the art of war, and wrote several books on the subject, among them "The Soldier's Pocket-Book for Field Service," "The Story of a Soldier's Life," besides "Life of the Duke of Marlborough" and "Decline and Fall of Napoleon."

Science

Mr. Henry T. Finck's new book, "Flavor in Food," described as a gastronomic guide to health and good living, will be issued by the Century Company in April.

Nearly eighteen months ago we noticed in this column the first of four volumes of Luciani's interesting treatise on "Human Physiology," in the English version of Frances A. Welby (Macmillan). The second volume is now at hand after an interval which suggests a long delay in the completion of the work. This part takes up Internal Secretion, Digestion, Excretion, and the Skin, inclusive of the Mammary Gland and its secretion. All these subjects are treated in an entertaining and illuminating fashion. The text naturally lags somewhat behind the progress of the experimental study of the internal secretions, but this fault is in part made good by a supplementary list of recent literature in English. To this list the translator has added a special reference to the very recent book of Swale Vincent on the ductless glands, but makes no allusion to the large book on this subject by Sajous, which came out a few months earlier. Leonard Williams's translation of the important book of Biedl came perhaps too late for notice, although one would suppose that its prospective appearance would have been sufficiently known to make its inclusion possible. The literature concerning the movements of the digestive tract ought to have taken similar cognizance of Cannon's little book on the "Mechanical Factors of Digestion," published as one of the International Medical Monographs (Arnold) in 1911. Luciani seems to overlook the important researches of Meissner and his American pupil Shepard on the connection of the kidney with the synthesis of hippuric acid. There is also no account whatever of Meissner's studies of the transformation of proteins by the digestive ferments. In this field he worked for a time with great zeal and such refinement of observation that his contemporaries virtually drove him away from further labor of that kind by their ridicule of his results. It was a pathetic episode in the history of physiological research, for, only a few years later, a change in the method showed the cleavage products to be even more numerous, and fully justified the efforts of Meissner to establish very fine distinctions among them.

Great as have been the advances in the study of economic entomology during recent years, the available comprehensive texts are nearly all deplorably antiquated and deficient. To meet the demand for an up-to-date compendium, W. C. O'Kane has just published, through Macmillan, "Injurious Insects: How to Recognize and Control Them," illustrated with 600 original photographs. To arrange such a book so as to make it of use to the untrained reader is a very vital matter. For him, an arrangement according to zoölogical relationships is almost useless, although it has been tried in one of the best of the older texts. Grouping by host plants leads to confusion and duplication because so many of the insect pests feed on several varieties of plants. Professor O'Kane seemingly has met the difficulty satisfactorily by first grouping the injurious insects under three heads: pests of garden and field crops, pests of orchard and fruit crops; and those of the household, of stored products, and of domestic animals. Within each of the first two groups, the various species are arranged according to the part of the plant where they are found at work. The determination is still further facilitated by the arrangement of the page headings to serve as an index to the place where the insect is found at work, and to its general characteristics. The most striking feature of the book is the absence of the hackneyed illustrations borrowed from the old texts and from Federal and State bulletins. In their stead are six hundred photographs

of injurious insects and their work. Some of these are excellent—of many of them the best that can be said is that they are original. It is needless to add that with such a number of good-sized illustrations in less than four hundred pages of text the consideration of the various pests is very meagre. For this reason, the addition of an extensive but carefully selected list of references to bulletins and reports in which may be found detailed accounts of the insects considered is especially commendable. The book will prove of value to agriculturists as a "finding list," and may meet admirably the needs of some agricultural schools and "short courses." Unfortunately, its use will not be limited to such courses. Until it is more fully realized that the study of an applied science as college work presupposes a knowledge of the science upon which it is based, there will be a ready demand for books of this type as texts in some of our agricultural colleges.

Dr. Ira Van Gieson, bacteriologist to the Health Department in New York, died on Monday. He was born on Long Island, forty-seven years ago, and graduated from the College of Physicians and Surgeons of Columbia University. He was accounted an authority on insanity, but much of his recent research was in connection with hydrophobia. He was a prolific writer on methods of staining tissue for microscopic work.

Drama

The Dramatic Works of St. John Hankin. New York: Mitchell Kennerley. 3 vols. $8 net.

There can be no doubt that the English speaking theatre suffered a positive loss in the premature death of St. John Hankin His steady advance in the art of play-making is clearly marked in the seven pieces printed in this collected edition, and he was still in the early prime of manhood when he ended his life and labors, It is only reasonable to suppose that he had in him the latent capacity for more earnest and vigorous production, although it may be doubted whether he could ever have created a permanent drama. The springs of his inspiration were fresh and sparkling, but had no depth. His strength lay in the readiness of his invention of dialogue, sufficiently simple in form to appear natural, yet charged with a witty and satirical humor which gave it a distinctly literary quality; a happy knack of characterization, of somewhat conventional personages; a shrewd sense of current social absurdities and hypocrisies; a not too bitter cynicism and a lively appreciation of comic situation. In his observation of those various phases of English middle-class life of the later Victorian era he was accurate so far as superficialities are concerned, but by no means profound or reflective. His personages, almost without exception, belong to exceedingly familiar types, both on the stage and in fiction, but the intellectual and moral atmosphere in which they move is more often suggestive of real life than the theatre, and in this way they frequently become living actualities.

Although Mr. Hankin is commonly accounted among the younger school of dramatists, whose works, being regarded as too audacious for the commercial stage, owed their earliest representation chiefly to the London Stage Society and Mr. Granville Barker, he differs widely from the more modern realists in his moderation, his general sanity, and his literary skill. If he is occasionally disrespectful to the rigid axioms of sanctimonious puritanism, is frequently more worldly wise than austerely moral, and, like a good many enthusiasts of different kinds, is apt to forget that modern conditions and human nature are often formidable barriers against the enforcement of abstract justice, he neither violates the canons of good taste nor exceeds the limits of credulity. He preserves a certain plausibility even when he approaches most nearly to the borders of extravagance.

The defects of his plays lie in their technical construction, their lack of general human interest, and the manifest artificiality of their plots. Effective and amusing as many of the individual situations in them are, these are too clearly the result of a carefully calculated mechanism to provoke the suspense which is of the essence of true drama. This is particularly the case in "The Two Mr. Weatherbys," where the nicely preserved balance between contrasted characters and incidents is clearly arranged for a whimsical and predestined end. The same thing is true, though less conspicuously, in "The Return of the Prodigal." Here the workmanship is better and the plausibility greater, while the characterization of all the principal personages is uncommonly well maintained, but the ultimate conclusion—the virtual triumph of a clever wastrel who "blackmails" his duller but more prosperous relatives into supporting him by threatening to disgrace them—is plainly due to a preconceived scheme, worked out with indisputable comic force, but very little logic. Successful business men, even if father or brother, under the prescribed circumstances, would have checkmated the trickster by prompt defiance. No amount of clever writing could win for such a tale belief or sympathy. In "The Charity that Began at Home" again—a piece which is often suggestive of the methods of Oscar Wilde—the plot, with all its destined coincidences carefully dovetailed into their appointed places, is transparently mechanical. There is not an incident or a personage in it that might not be founded on fact, but as a whole the play would be more akin to farce than comedy, were it not for the excellence of its dialogue.

But "The Cassilis Engagement" is genuine comedy of a superior order—even if it be a trifle overdrawn in places—with an effective story, of a vital kind, developed along lines of a perfectly sound social philosophy. Fewer simple youths would be betrayed into disastrous marriages if all rich mothers were as wise as Mrs. Cassilis. Here is a play that really does reflect life in witty and credible fashion, illustrates a sound maxim, and solves a dramatic problem in a way that is as reasonable as it is entertaining. It is, taking it all in all, the best accomplishment of its author. "The Last of the De Mullins," clever as it is in many ways, and unconventional in its courageous but reasonable attitude in the special case of the heroine, who saved herself from social shipwreck, and declined thereafter to barter assured freedom for an unnecessary and doubtful rehabilitation, is not so well made, so fresh, or so convincing. It has none of the crucial directness of such a study as "Hindle Wakes." Actually, there is nothing especially new, startling, or controversial in the case of Janet de Mullin. Women in life, as well as in fiction, have fallen and recovered themselves, but it does not follow that they were wise because they were fortunate. No rule can be proved by an exceptional instance. Nor is there anything new or very valuable in the easy satire which Mr. Hankin levels against the follies of an almost extinct feudalism. The most valuable portraiture in his play is that of the slighted Hester, whose fate—though he does not appear to have realized the fact—furnishes a most significant illustration of the manner in which the innocent may be made to suffer for the guilty. Such trifles as "The Burglar who Failed" and "The Constant Lover" need no more than this passing reference, but these volumes are well worthy of a place in every modern dramatic library, not only as early examples of intellectual revolt against the crudities of the commercial Victorian drama, but for the sake of their genuine wit, humorous perception, and literary skill.

Mr. Winthrop Ames, director of the Little Theatre, New York, offers $10,000 for the best play by an American author, submitted before August 15, 1913. It is his intention to produce this play next season at the new playhouse now being built for him on West Forty-fifth Street, near Broadway. All manuscripts must be submitted anonymously. No limitations as to the type of play are imposed; but in making the award plays which promise to appeal to the general body of playgoers will be preferred to those which appeal to a limited class only.

William A. Brady announces a revival of "Rosedale," to be made in the Lyric Theatre on April 7, with a specially selected cast of players. The revival will be in-

teresting as an example of the sort of romantic melodrama which pleased an earlier and less sophisticated generation, although the piece has no special merit of its own, except from the standpoint of the leading actor. Wallack, of course, wrote it, as he did "The Veteran," with especial reference to his own style and personality. Nobody ever succeeded as he did in the part of Elliot Grey, although many actors essayed it, Lawrence Barrett among them. Even in advanced middle life, he cut a brilliant figure in it; in his prime he was almost an ideal hero of romance. He had the air and authority that could add plausibility and even a touch of the heroic to a situation in itself false and ridiculous. His successor is to be Charles Cherry, and it is doubtful whether a better selection could have been made. He is not the Lester Wallack of fifty years ago, but the number of playgoers who can subject him to the test of that comparison is limited. What an array of first-class acting talent there was in those early casts of "Rosedale"! Charles Fisher, John Sefton, Fanny Morant, George Holland, John Gilbert, Mrs. John Sefton, Mrs. John Hoey, Mary Gannon, all had a share in the first production. They were members of the regular stock company. Nowadays it is questionable whether a list of equally competent players could be selected from all the acting companies between Sandy Hook and the Golden Gate. This is a striking illustration of what the syndicate system has done for the stage.

The annual Shakespeare Festival at Stratford-on-Avon, once more under the direction of F. R. Benson, will extend this year over three weeks. It is to be opened on the afternoon of Monday, April 21, by Arthur Bourchier, who will deliver a lecture on the subject of "Drama and Shakespeare." In the evening Mr. Benson and his company appear in a revival of "Richard II." During the course of the festival Violet Vanbrugh will be seen as Beatrice in "Much Ado About Nothing," and Nancy Price as Chorus in "Henry V." Mrs. C. C. Stopes will lecture on "The Burbages." Miss Jean Sterling Mackinlay will give a recital of old songs and ballads, and Mrs. Gordon Woodhouse a concert of English music.

Ibsen's "The Pretenders" has failed to attract the general public to the London Haymarket Theatre. It ran for a month only. The piece is to be taken off and replaced by "The Typhoon," of Melchior Lengyel, which has already had a run in New York. The principal characters will be played by Laurence Irving, Mabel Hackney, Leon Quartermaine, and Arthur Whitby.

This week is the time chosen by Gerald du Maurier and Frank Curzon for the revival of "Diplomacy" at Wyndham's, in London. The piece is announced simply as "a new version of a play by Victorien Sardou." It has been very considerably revised, but the leading features of the story have been strictly preserved. In the old days, for instance, it was the fortifications of Constantinople which attracted the attention of the Countess Zicka; to-day these have been replaced by certain important works connected with the safety of Gibraltar. The part of Lady Henry Fairfax has been materially enlarged. In the revival that character will be taken by Lady Tree. Gerald du Maurier will be Henry Beauclerc; Owen Nares, Julian; Donald Calthorp, Aigle Fairfax; Arthur Wontner, Count Orloff; Norman Forbes, Baron Stein; Eilis Jeffreys, Countess Zicka, and Gladys Cooper, Dora.

Music

"BORIS GODOUNOFF."

Among the operatic novelties promised last year by the management of the Metropolitan, but not produced, was "Boris Godounoff." The promise was redeemed last week, when Moussorgsky's famous opera had its first performance in America. In St. Petersburg it was heard as long ago as 1874. The fact that Moscow did not hear it till 1889 indicates that it was not a real success at first. Outside of Russia it was virtually ignored until six years ago, when a Russian company produced it in Paris in the original tongue and with all the accessories Russian. It was in the midst of the Russian craze in France, a craze partly political, partly artistic, fanned by the graceful dancers from St. Petersburg and fostered by the followers of Debussy, who recognized a kindred element in the harmonic audacities and the bravado of Moussorgsky. Yet even with these advantages it is doubtful if "Boris Godounoff" would have succeeded in Paris had it not been for the powerful impersonation of the imperial assassin by Chaliapine. The managers of the Grand Opéra took that view of the situation. After buying the scenery of the Russian company, it reconsidered the matter, concluding that the opera would not attract the public without its chief interpreter. The scenery was then purchased for the Metropolitan Opera House by Giulio Gatti-Casazza, in the hope and belief that New York would accept the opera, even without the advantage of having a Chaliapine to act and sing the part of Boris, and in an Italian version, with a mediocre cast—a touching instance of managerial optimism.

The hero of the opera—a Russian Macbeth—is an historic character. Boris, after the death of Ivan the Terrible, usurped the throne by assassinating the boy Dimitri, who stood in the way of his ambitions. Tormented by his conscience, he seeks refuge in a monastery, but is persuaded by the clamor of the populace to resume the sceptre. A young monk named Gregory, discovering that he is of the same age as the murdered Dimitri, conceives the bold plan of posing as that heir to the throne, rescued from the hand of the would-be assassin. He gathers an army in Poland and invades Russia. The Duma meets to consider the most suitable punishment to be inflicted on him when captured. Boris, crazed by his sense of guilt, and tormented by the fear that the false Dimitri may be the real Czarevitch, finally falls dead at the foot of the throne, after admonishing the court to accept his son as heir to the kingdom.

Though this is the plot of the opera (which is based on Pushkin's play), the audience would hardly be able to guess it from the scenes enacted on the stage, most of which are episodes or incidents but loosely connected with the story. Moussorgsky was well aware of this; in fact, he wished it so. Being a musical Nihilist, he was averse to all operatic conventions—and was not a coherent plot one of the conventions to be avoided? Another operatic convention he could not approve of was having interesting vocal parts for a tenor and a soprano, such as theretofore had been regarded as necessary, even by Wagner. Boris is a bass, and for the most part he scorns real melody, contenting himself with more or less melodious declamation. The apology for a prima donna is a contralto, a Polish maiden to whom Dimitri makes love. In the opera as originally produced there was no love episode. The composer was persuaded to add it, but his heart was not in it, and he had his revenge on those who asked him to be conventional by making the love music remarkably uninteresting.

After his death his opera gained a fresh vogue, but not until it had been revised and polished by his friend, the eminent composer Rimsky-Korsakoff. As all copies of the original score seem to have been destroyed or hidden, it is impossible to say just what the editor did with his file and shears. That he had a number of grammatical errors to correct is certain, for Moussorgsky was not an educated musician. In the words of Tchaikovsky, he not only liked "what is coarse, unpolished, and ugly," but even seemed "proud of his want of skill." In a preface Rimsky-Korsakoff refers to the principal changes made by himself—the correction of faulty counterpoint and slight alterations in harmonic progressions. That he greatly improved the orchestral coloring is also certain. In this line the editor was a master, and Moussorgsky was not.

"Boris Godounoff" is neither an opera, in the old sense of the word, nor a music-drama with Wagnerian leading motives to fuse the different sections. It is simply a group of scenes from Russian life, and as such it possesses considerable interest. The choruses of the populace are realistically impressive, even if they lack individual musical merit. The Czar is seen in the intimacy of family life as well as in the agonies of remorse. There is a bibulous scene in a tavern which is truly convivial, and the moonlit forest scene, followed by a snowfall, is beautiful. Nevertheless, it is not likely that "Boris" will prove a

permanent addition to the Metropolitan repertory, not, at any rate, unless the cast is improved. The choruses were admirably sung, and under the direction of Mr. Toscanini the orchestra was at its best; but the lack of ingratiating melody will prevent the public from taking this opera to its heart. While it is not likely that its chances would have been improved if it had been sung in English, it nevertheless is incomprehensible why, since a Russian production was out of the question, "Boris" was not sung in English instead of Italian.

Arnold Schönberg's "music" may not be music, but it serves a useful function in giving the critics something new to talk and differ about. According to G. H. Clutsam,

his dreary meanderings with impossible combinations of notes, debilitated, palsied, and defenceless, have certainly gained him followers, resulting in the establishment of an artistic brotherhood (whose tenets for some reason or other—but entirely illogically—have become associated with the art theories of the post-impressionistic school of painting); but they possess no possibility of providing material for the composer or the audience of the future.

Yet, according to another contributor to the London *Musical Times*, "Schönberg is a most earnest artist, and the tendencies embodied in his work assert themselves in those of an important group of younger men like Alban Berg, Anton von Webern, Horwitz, Jaglowetz, Egon Wellesz."

Opinions on Richard Strauss still differ widely. After the recent performance in Berlin of his "Ariadne" (which has been considerably compressed since its première at Stuttgart), the critic of the *Tageblatt* predicted that thirty years hence no one would be able to believe that there ever existed any difference of opinion concerning this opera—"the first really new thing since Wagner and the most important phenomenon in music of the last three decades." Dr. Ethel Smyth, the English operatic composer and suffragette, on the other hand, says Strauss owes his success mainly to "booming." But, according to her, the "booming" has invariably been followed by reaction. In support of this statement she instances "Elektra," which, she declares, "has practically disappeared from the Continental stage, and is frankly loathed, though as long as Frau Mildenburg is there to play the part of Klytemnestra, it will be given now and again." Then, of "Rosenkavalier," Miss Smyth says that it was "at first a madness, especially in Vienna. Now it is given once in three or four months, to half-empty houses."

Paris is awaiting the production of "Julien," the sequel to Charpentier's "Louise." As soon as he has put the finishing touches to it, it is to be given at the Opéra Comique, with a cast including Mlle. Carré and M. Rousselière. The story of the opera is that of a poet's life; it is full at once of actual life and of the atmosphere of fairyland. Apostle of universal love, Julien goes out to preach his dream to the people of the street. Then, discouraged, he seeks quiet and forgetfulness in Nature, among the workers of the soil, who cannot understand him. More and more discouraged, unable to find forgetfulness anywhere but in drink, he sees his ideal dream shattered. His inspiration is Louise, illusion of Love, and then in turn the illusion of Beauty; of Work; of Nature's consoling power; of Religion's consolation, and of Revelry.

Adrienne Augarde, a clever operetta singer, died in Chicago last week after undergoing an operation for appendicitis. Early in her career she sang at the Gaiety Theatre, London, and she was the leading woman in George Edwardes's production of "Toreador" in 1903. She appeared in this country the following year in "The Duchess of Dantzic." She also had parts in "The Rose Maid," "The Dollar Princess," and "Peggie Machree."

We have to announce the death of two foreign singers. Ferencz Korbay, born at Budapest in 1846, distinguished himself as a tenor in London and New York. In the former city, after returning from this country in 1894, he was appointed professor of singing at the Royal Academy of Music. Napoleone Zardo, who was born at Crespano in 1858, appeared as principal baritone in several cities on the Continent and in America. The Guildhall School of Music, London, made him professor in 1906.

Art

THE ACADEMY EXHIBITION.

The eighty-eighth annual exhibition of the National Academy of Fine Arts is distinguished by uncommonly agreeable hanging, made possible by reducing the number of pictures to three hundred, and by the abstention of a score or so of the stronger painters. Paradoxically, this absenteeism makes absolutely no difference in the general look of the show, nor at bottom in its quality. Either the stars are of lesser magnitude than their repute, or the minor satellites are more brilliant than we are wont to admit. For myself, I grasp both horns of the dilemma. Among a hundred or so of our painters who are regular Academy exhibitors, the question of rank is entirely negligible. Virtually none of them shows distinguished invention, all reveal competent workmanship, and most a patient and reverent attitude towards nature. Personality of a sort they must have, for one can identify their pictures without the aid of the catalogue; but it is a personality that usually expresses itself along obvious lines of geographical preference, is satisfied with small decorative inventions or minor novelties of observation, making no appeal except to a gentle sense of place, leaving the imagination wholly unperturbed. In the general sanity and competence of the work possibly a certain comfort should be taken. Yet people somehow do not crowd to this solace. I shared the galleries for a long hour the other morning with six other visitors, excluding as many League students. And, after all, sentiment for the old Academy aside, why should anybody come to see pictures which for the most part have been or will have been more attractively shown in the galleries of clubs and dealers? The annual exhibition as now conducted is well enough as a family affair, a partial outlet for Academicians and their protégés, but it is rapidly losing public significance, and if the much-discussed plan for adequate galleries is indeed to be effected, it were well this were done while some traditional vestige of public respect and good will persists. Unless the Academy is prepared to take a vigorous aggressive in the near future, its destiny can only be that of a respectably obscure parochialism.

The pictures which have for my eyes any distinguished quality of invention will not take long to enumerate. Far the most striking among them is Rosen's The Lineman. Two telegraph poles, one bearing the clutching figure of the lineman, are splayed to right and left on a tree-capped knoll. Above is a great whirling cloud, and below a suggestion of broad lowlands. Everything is flooded with pewtery light. The vastness of the effect, the fine selection and simplification of masses, make this a most inspiriting work. One must imagine that only some odd hazard of the rules prevented it from receiving a high award; or was the overdue honor of an associateship deemed a sufficient recognition for Mr. Rosen's distinguished talent? Yet one can hardly quarrel with the award of the Inness medal to Paul Dougherty for the canvas Rock Channels. A nearer conical crag pushes up before a distant cliff of identical form, and, between, the sea heaves tranquilly, finding a quiet way between the visible rocks and over invisible obstacles below. The color is restrained, but gains depth and indicates texture as one gazes. This elaborate interweaving of tones is a somewhat piquant enrichment of the simplicity of the design.

Snow scenes abound in the exhibit, and there are admirable ones by Redfield, not to mention somewhat sugared examples by Gardner Symons, the Saltus medallist of the year. Elmer Schofield's The Wintry Sun, a glimpse of the Harlem gorge and Highbridge under a spectral, sallow light, is surely the most imposing picture of this class. But it seems to me that Walter Nettleton, in his unpretending canvas, The Brook's Wintry Bed, has caught more of the hush and awe of a snowy landscape than any of his more adroit colleagues. And I find myself coming back to Van Boskerck's highly elaborated Gill Brook, Adirondacks, and wondering if, in spite of its entirely old-fashioned look, it isn't one of the best landscapes of the show. At least, it is very faithful and specific portraiture of a distinctive kind of scenery. The opposite pole

from this sort of thing is the opalescent embroideries of Daniel Garber. Here decoration is the aim, and very delightful decoration is achieved in such a canvas as September Fields. A similar quality with more vitality and a tinge of romance is in Johansen's Approaching Storm. Riders stagger against a blast which twists a sapling and flies heavenward in a towering, ominous cloud—a capital illustration for the frontispiece of a cape and sword drama. Landscapes by Ochtman, Walter Palmer, Bruce Crane, Charles Ebert, Cimiotti, Perrine, and Potthast are variously interesting. Parshall's highly synthesized perspective of a cañon seems to me to miss the scale, but is a most intelligent experiment, which may lead on to later successes. Frieseke's sultry vision of a verdurous river bank with a skiff and a bather putting off her clothes, should perhaps not be counted as landscape. Yet the sense of hour and season is predominant, and with it a languorous fascination. Something of this dreaminess gets into George Bellows's fantasia called In Virginia. Willowy girls thinly dressed for summer stroll under old trees before a colonial portico. They wander aimlessly as if missing the cavaliers who of old would have been making due professions while kissing fair hands. Whether or not this be the mood Virginian, it is not for me to say. At least, the scene recalls certain delightful Southern pages of Owen Wister. For Mr. Bellows's brusque and sometimes strident talent the mood is exceptional —one more proof, if that were necessary, of his quite extraordinary versatility.

We meet Bellows again as winner of the first Hallgarten prize, with his full-length portrait of a little girl. It is firmly constructed in grays and full of a certain defiant wistfulness. Margaret Richardson's sturdy portrait of a hale and vigorous old gentleman, Mr. Asa H. Paige, receives the first award of the Isaac A. Maynard prize for portraiture. The third Hallgarten prize goes to M. Jean McLane for a frankly brushed group called Brother and Sister. To Helen M. Turner is given the Julia A. Shaw prize for the most meritorious work by a woman. Her figure set before a Venetian blind that admits a green glare, most Tarbell-like, has the merit of solidity and decorative effect. The list of prize-winning pictures is complete with Robert Spencer's The Silk Mill, second Hallgarten. To close the paragraph, as it began, with portraits, Henry Salem Hubbell's full-length of a lady in black turning at a door is most gracefully conceived in the early English vein. W. E. B. Starkweather's Mlle. Tomescu has vitality and suggestion of a potent character; a similar grimness inspires Leo Mielziner's portrait of a red-robed Hebrew theologian; Cecilia Beaux's portrait of a lady in a lilac and gold peignoir is rasping in color and unsteady in placing; Thomas Eakins's portrait of Dr. Hayes Agnew in operating blouse is salient, and hints of a character in which strength and whimsicality seem to blend attractively.

In the field in which portraiture shades off into decoration and character study we have Wilton Lockwood's The Firefly, an adroitly arranged vision of a girl in a Liberty scarf; Edward Peixotto's The Reader, lovely in color; Josephine Paddock's garish and humorous sketch of Miss Trelawney in Russian finery; Dimitri Romanoffski's stern and impressive picture of a woman sewing, and Sergeant Kendall's Intermezzo, a little girl plucking at a violin which lies across her lap. Charles W. Hawthorne's Fille du Pêcheur has a disconcerting consciousness of her public. Heaven help this gifted painter if he begins deliberately to put into his pictures that human interest for the spontaneous occurrence of which he has been justly praised. Even Blumenschein, in The Driver, gives to his truckman a romantic lilt. He looks like the tenor of a transportation opera. Of the competent official portraiture of Wiles, Swedley, Chase, Ipsen, Fromkes, Haggin, and others, what can one say but admirable, most admirable!—and yet not much.

Figure compositions are few. Gifford Beal's vivacious pictorial version of the familiar lyric,

> The elephant now goes round,
> The band begins to play,

has something of the cadence of its literary original, and in an off-year perhaps deserved the Thomas B. Clarke prize. In the slender and maidenly figure of Spring, F. S. Church taps once more his thin but authentic vein of fancy. It is more memorable than more imposing works. I dutifully record the memorial appearance of a large canvas of newsboys by the late J. G. Brown. Recollection of childish joys in this work withholds the full expression of wonder that anybody who had explored an interesting corner of human nature so thoroughly could wish to tell of it with so tedious an explicitness. Among remaining figure compositions there is only to note W. W. Gilchrist's clever and prettily painted confection of a nude model amid stuffs before a gold screen, and a very handsome little kitchen interior by Benjamin D. Kopman.

This beautifully felt little work, with Lockwood's delicious bowl of peonies and Rosen's spacious landscape, afforded me the only sharp and pleasurable sensations that I could not have had on easier terms elsewhere, among the winter exhibitions. But, of course, I am fully aware that, if this show has become quite negligible except in so far as it conserves—let us hope until better days—a dwindling tradition, my notice may well seem an even more egregious superfluity.

F. J. M., JR.

Francis P. Harper, of Princeton, N. J., will issue, April 7, "Colored Plate Books and Their Values," a reference work for collectors, librarians, and booksellers.

The summer session of the School of American Archæology will be held in Santa Fé and at the near-by ancient ruins, August 1 to 30, inclusive.

Henry Stull, the well-known painter of animals, particularly thoroughbred horses, died last week at his home in New Rochelle, N. Y. He was born in Canada about sixty-two years ago, and came to the United States when a boy to join the staff of *Leslie's Weekly*. The late Dudley A. Buck, then owner of the *Spirit of the Times*, engaged him to make pictures of famous horses for that publication, and his pictures of the horse, whether standing or in action, were really portraits. He took up painting in oil, and soon fully established his reputation. Scarce a racehorse of prominence in the last score or more of years but has been painted in oil by Stull, and he was nearly as popular in England and France as here.

Henry W. Desmond, editor of the *Record and Guide*, died last week at his home in Cranford, N. J. He was born in Kingstown, Ireland, fifty years ago. He was one of the founders of the *Architectural Record*, of which until recently he was editor. Another publication started by Mr. Desmond was *Sweet's Index of Building Construction*. He was the author of several books, the last being "Stately Homes of America," of which he and Herbert Croly were joint authors.

Louis Amateis, the sculptor whose death occurred last week in Washington, was born in Turin, Italy, in 1855. After studying at the Institute of Technology in the town of his birth, he came in 1883 to this country. In 1892 he was made head of the department of fine arts in George Washington University, then known as Columbian University, Washington, which post he held until 1899. Amateis executed busts from life of several prominent men, among them President Arthur, James G. Blaine, Gen. Hancock, Gen. Logan, Secretary Bayard, etc. He designed the monument to the heroes of the war of 1836, in Galveston, Tex., and a pair of historical bronze doors at the west main entrance of the Capitol in Washington, besides statues and mausoleums.

Finance

IN THE NEXT NINE MONTHS.

With the stock market in its unstable condition of last week, and, more particularly, with the severe declines converging on shares of certain companies which trade in general merchandise, it was not surprising that the community which watches the Stock Exchange should have been asking again whether all this means trade reaction. Wall Street itself has had a ready enough explanation of the recent violent break in

such stocks as "Woolworth," "Goodrich," "Kresge," "Rumely," "Sears-Roebuck," and "May Department Stores." It is, that these are newly introduced securities, representing companies whose exact intrinsic value and earning power are unknown to the general public: which are thus apt to rise more extravagantly in an enthusiastic mood of the Stock Exchange, and decline more extravagantly in an hour of pessimism, than shares of seasoned properties.

But this is reasoning which does not impress the ordinary observer. He grasps only the fact of the fall in prices for shares of such companies, and infers that holders of them must foresee extremely bad business conditions during the rest of 1913. Coupled with the prevalent atmosphere of gloom which has lately surrounded the Stock Exchange community, it seems to such watchers a convincing argument. Among people of the more despondent sort, it leads to predictions of bad times. Occasionally, one encounters, in his club or office, the melancholy remark that this is not only the thirteenth year of the century (an omen in itself), but is the twentieth year since the panic of 1893, which in turn was the twentieth since 1873. If the "twenty-year crisis" is an economic rule, why, then, not look for something of the sort this year?

This not unfamiliar logic of the day puzzles some people who listen to it, causes others to smile, and makes the hair of others stand on end. To old hands in the market, it suggests the familiar principle that the great panics which every one predicts are the panics that never come; it is also a reminder of the Congressional orators of 1908, who told their colleagues that, unless such and such bills were passed, "we shall have another panic next autumn," and who then forgot all about their own prediction. Still it may not be without interest to inquire what answer, on either specific or general principles, should be made to the argument.

Obviously, the first answer to be made is that we had one of our great financial panics in 1907, and that such an event is not followed, five or six years afterward, by another like it. The reason for this is that a real panic stops the movement of financial and industrial inflation, forces prolonged reaction, brings securities and commodities into reasonable touch with actual values, and puts the markets, after more or less resistance, into a fundamentally sound condition. Application of this rule to the present situation rests on two assumptions—one, that the breakdown of 1907 was a real financial panic; the other, that nation-wide liquidation has occurred between then and now. But no intelligent economist or financier questions either assumption.

People who say, as a good many said four or five years ago, that October, 1907, was merely a "Wall Street flurry," are hardly capable of judging economic questions. There is no recognized test of a real economic crisis, which does not now fit that episode. As to why that crisis came in 1907, instead of patiently waiting for 1913, that is no special mystery. The panic came fourteen years after 1893, instead of twenty, for the same reason which caused the panic of 1873 to come sixteen years after 1857, instead of twenty—namely, that in both intervals promotion and speculation had been wilder in the world at large than in the orthodox twenty-year cycles, and that, in both, two or three prodigiously expensive wars had swallowed up capital, which did not happen in the two decades after 1837 or 1873.

As for the question of "after-panic liquidation" in the present case, it is true that this process, applied to industry at large, was delayed a year or two after 1907, with a false aspect of revival in the meantime. But exactly the same was true of the sequel to 1873—a fact of which most people are unaware. That nation-wide industrial liquidation, however, and nation-wide readjustment of business and credit did occur in 1910 and 1911 (as they also did in 1876 and 1877), and with the same result of bringing the whole position back to a normal basis, no one in the least familiar with our recent business history would think of denying.

Sometimes one meets a street-corner oracle who rejoins triumphantly that, whatever may be said of general trade in these regards, real estate shows the pinch of unfavorable times. It unquestionably does—and it thereby conforms to one of the most interesting traditions of the Cycle of Prosperity. All previous experience with such economic waves of prosperity and adversity has shown that the market for real estate is the last to fall in panic times, and the last to recover in the return of prosperity. In the great "boom" with which this century began, the stock market had started its upward rush as early as 1899. Business at large followed suit in 1901 and 1902, but real estate, as most people will remember, did not join in the movement until 1904. The downward movement, after the turn was marked in 1907, observed precisely the same sequence, and so it did after all our other greater panics.

Students of economic history are also aware, however, that the fact of an economic movement in a given country being at a certain hour on the up-grade or the down-grade, as the case may be, does by no means render the markets of that country immune from temporary outside influences of the day, such as developments in other countries or in domestic politics.

Salisbury, Barrows and Tower's MODERN GEOGRAPHY

The Effects of Physical Features on Living Things. By Rollin D. Salisbury, Harlan H. Barrows and Walter S. Tower, of the Department of Geography, University of Chicago. ix+406 pp. 7 *maps in color.* 12mo. $1.25.

Representing the "new" geography which stresses the geographic factor in human life, it lays a solid foundation of physiography, but vitalizes it by constantly showing that broad physiographic principles underlie all commercial, industrial and economic activities of mankind. Its discussion of purely physiographic topics is comprehensive, and keeps the student alert to discover, either for himself or by the aid of the printed statement, the effect which mountains or climate or the sea-coast have on living things. With the way thus paved, a series of chapters treats of matters very closely connected with the past history and the future development of man.

Henry Holt & Co., 34 W. 33 St. New York

History and Historians in the Nineteenth Century

By G. P. GOOCH, M.A.

8vo. *Pp.* viii+600. $3.50 *net* (*postage* 17 *cts.*)

Summarizes the manifold achievements of historical research during the last hundred years, portrays the masters of the craft, traces the development of scientific method, measures the political, religious and racial influences that have contributed to the making of celebrated books, and analyzes their effect on the life and thought of their time. No such survey has been attempted in any language.

31-33 East 27th Street, New York.

The Inferno

By AUGUST STRINDBERG

Author of "The Bondwoman's Son," "Countess Julia," etc. Translated, with an Introduction by Claud Field.

12*mo.* $1.25 *net. By mail,* $1.40.

This autobiographical novel is one of the most intimate studies of personal psychology that has been offered to the world. It is as appallingly frank, as unsparingly veracious, as anything this gifted but erratic genius has produced. The book is a veritable "black ray" in the sky of literature, and an antidote to a too facile optimism. It has a certain resemblance to Oscar Wilde's "De Profundis."

BANKING REFORM IN THE UNITED STATES

By O. M. W. SPRAGUE

Assistant Professor of Banking and Finance in Harvard University.

8vo. 176 pages. Cloth. $1.00 net

The volume includes criticism of plans for a central bank of the European type, proposals for strengthening the existing banks, and a plan for a central bank of limited scope.

HARVARD UNIVERSITY PRESS
CAMBRIDGE, MASSACHUSETTS.

Published March 26th

School and Home Gardens

By W. H. D. MEIER

Head of the Department of Biology and School Gardening, State Normal School, Framingham, Massachusetts.

8vo, cloth, 319 pages, profusely illustrated, 80 cents.

Meier's "School and Home Gardens" gives practical instruction for planning, planting, and caring for plants that are grown in the house, yard, or garden. The directions are explicit, the problems confronting the student in cultivating each individual plant being considered, one at a time, and definite directions being given to meet them. The book serves the purpose equally well as a textbook for grammar grades or as a handbook for the home gardener. Primary and intermediate-grade teachers will find in it ample material from which they may select.

Smith's Geometry, Developed by the Syllabus Method

By EUGENE R. SMITH, A.M., Principal, Park School, Baltimore, Md., formerly Head of the Department of Mathematics, Polytechnic Preparatory School, Brooklyn, N. Y.

Plane and Solid Geometry, $1.25
Plane Geometry, $0.75. Solid Geometry, $0.75

This book, the outgrowth of 10 years' classroom experience, teaches geometry so that it quickens and trains the pupil's reasoning power. It supplies the pupil with a syllabus which contains the definitions, axioms, etc.; the statements of the theorems, arranged in some logical order; a discussion of methods, with a few sample proofs illustrating the different methods of attack; a series of exercises grouped partly under the theorems and partly in general lists; and classified summaries of the theorems. Except for a few specimen proofs and some necessary hints as to the method of attack in the more difficult theorems, the demonstrations are omitted and the space saved by their omission is largely taken up by a discussion of methods and other important points often overlooked.

THE BRITANNICA YEAR-BOOK—1913

An Entirely *New* and Altogether *Original* Publication

Timely—Unique—Necessary

CONTAINING the latest and most trustworthy information about current progress in all new subjects of investigation; such as the battle against cancer and consumption, progress in ship-building or aviation, the newest improvements in industrial machinery or internal-combustion engines, most recent advances in wireless telegraphy, in agriculture and metallurgy, military and naval expansion, the latest discoveries in geography, physics and chemistry, etc.

ALSO dealing in detail with national and international politics and current history in all lands; as, for example, the Morocco crisis, the Italian-Turkish War, Panama Canal controversy, Titanic disaster, Woman's Suffrage Movement, the Peace Movement, Labor Unrest and Syndicalism, the Balkan-Turkish War, the High Cost of Living, and all other significant events and issues upon which attention has been centered from day to day.

Full Limp Suede Binding (with extreme limpness). Prayer-book style, rounded corners, gilt edges. A particularly attractive and serviceable binding. Price, $3.00 (in a neat box).

A Bargain to Those Who Act Before April 21

1290 pages, 967,000 words, 8⅞x5⅞x1 inches, printed on Cambridge India paper, bound in the same styles as the Encyclopædia Britannica. The volume is small enough to be carried in one's pocket. Prices, to be increased 50c. on April 21: Cloth, $1.75; Full Sheep, $2.25; Full Limp Suede, $3.00; Full Morocco, $3.50, just *one-half* what other publishers would charge.

A Cyclopaedia of Current Progress—World Wide in its Sweep

THE BRITANNICA YEAR-BOOK (1913) has been planned on lines much the same as those of the Encyclopædia Britannica itself, and its function is to do for the multifarious contemporary activities of the world what the Encyclopædia does for the whole body of accumulated knowledge. No other annual deals in such detail with world activities as a whole, none is broad enough in scope to make it an authoritative register and interpreter of the progress of the sciences, as well as an illuminative recorder of the preceding year's events, and a complete compendium of the latest information—statistical and critical—in every department of knowledge or activity.

Written and compiled under the direction of the editor of the Encyclopædia Britannica, 11th Edition, with the assistance of many of the contributors to that work, issued 1910-11. The Britannica Year-Book has benefited by the exceptional international editorial equipment utilized for that edition, admittedly the most comprehensive and most authoritative of all works of reference. *The American section* (about 250 pages) has been in charge of the American editor of the Encyclopædia Britannica.

The Problems of Today and Tomorrow

In Part I—a "General" or "International" section (500 pages, 375,000 words)—the book deals in detail with particular branches of knowledge. Each field of investigation or development is covered by an original article written by a recognized authority, in which he has lucidly explained the advances during 1911-1912 in his own subject. This information has exceptional value, because it is supplied by experts whose daily work it is to make such advances themselves, or to keep in touch with the advances made by others. The Britannica Year-Book, in short, taps *the sources of supply* of the knowledge upon which the progress of the world is conditioned, and expounds that knowledge for the benefit of all readers and all workers. It makes universally accessible those essential new things in the growth of knowledge which are buried in scores of technical journals and learned proceedings in different languages. It presents not the bald facts of each recent discovery, invention, or hypothesis, but *the considered judgment* of a high expert upon its practical bearing and its real utility in 1913. A summary of this section follows:

POLITICS AND ECONOMICS

Special International Affairs and Events, by the Editor .....21 pp.
The Tureo-Italian War, by Major H. H. Wade, Editor "Journal United Service Institute" .....5 pp.
The Balkan War, by Major H. H. Wade. 8 pp.

Economic, Political and Social Progress

Part II. the "Local" or "National" Section of the Britannica Year-Book, consists of about 700 pages, equal to 525,000 words, devoted to a survey of the domestic progress, political conditions, and local development of all the separate countries and districts of the world down to the beginning of 1913. The descriptive section of each of these articles includes the latest available statistics.

The plan upon which each has been written embraces: **Population:** vital statistics, latest census returns. **Agriculture:** statistics, area of arable lands, chief crops and yield, live stock, forestry, etc. **Industries and Manufactures:** new industries, mining and fisheries, statistics of production, etc. **Commerce:** imports and exports, value of trade with chief trading countries, tariffs, etc. **Financial:** revenue, expenditure, debt, etc. **Communications:** railway mileage, waterways, new harbors and docks, roads, postal and telegraphic communications. **Government and Administration. Army** and **Navy. Education. Religion:** religious bodies, ecclesiastical movements. **Charities** and **Social Legislation. Law, Justice** and **Crime. History** (for 1911-1913).

The United States

A connected account, an article of 52 pages, gives the present status of the United States as a whole, together with the recent history of the country from 1910 to the appointment of President Wilson's cabinet. There is a separate article on **American Churches and Denominational Statistics,** by Henry King Carroll, LL.D., in charge census of churches, 11th census, United States; secretary of World Missionary Conference, 1910; Author of "Religious Forces of the United States." **The Recent History** of the country is by Edward M. Sait, Ph.D., Assistant Professor of Political Science, Columbia University. Under the heading **American Obituary** an extensive series of articles deals with noted Americans who have died in the last two years.

In addition to the article on the United States as a whole, each of the **States and Territories** is dealt with in a separate article with a fulness of treatment never before attempted in a publication of this class.

Hawaii, the Philippine Islands, Porto Rico, and Panama Canal and Canal Zone are each fully treated in separate articles on the same general plan as the States.

Statistics Section: This covers International statistics for the trade of the world; also comparative production and consumption of gold, silver and other principal metals, wheat and all the cereals, tobacco, wine, beer, etc.

The Index: The book is completely indexed so that every event, fact, person or date of importance can be readily found.

A Large Pre-publication Demand

for the Britannica Year-Book has followed immediately upon its first announcement a few weeks ago. This quick success of the book was to be foreseen. It met with singular completeness a need of the hour. Its utility as a digest of current progress, and its authority and readableness as an interpreter of every phase of our busy modern life give it a value far beyond its trifling cost.

Order Before April 21 and Secure a Concession in Price

As the book is bound in English-made leather, subscriptions in advance of publication were invited, in order to determine the proportions in which the Year-Book will be called for in the different styles of binding. A discount will, therefore, be allowed to **subscribers who order before April 21, with remittance.** The price will be increased fifty cents, for each binding, from that date. At these prices the Britannica Year-Book is the **cheapest work of the kind** ever published, although it contains more reading matter and covers a much broader field than any other.

Orders will be executed in sequence, that is, according to the date of their receipt. Intending subscribers should **act at once.**

ORDER FORM

(These prices to be increased by 50c. after April 21).

Manager, Encyclopædia Britannica, Na. 1.
120 West 32nd Street, New York.

Send me the Britannica Year-Book (1913) (indicate by x the binding desired).

☐ *Bound in Full Sheep, $2.25

☐ *Full Flexible Suede, $3.00

☐ Cloth, $1.75

☐ Full Flexible Morocco, $3.50

*These bindings are especially recommended.

Important New Macmillan Books

A LITERARY EVENT. JUST PUBLISHED

MASEFIELD'S *latest work* THE DAFFODIL FIELDS

A new poem by JOHN MASEFIELD

Author of "The Everlasting Mercy and the Widow in the Bye Street," "The Story of a Round-House" and other Poems.

John Masefield's new poem, "The Daffodil Fields," is a vivid expansion of the wonderful narrative art he has employed with such mastery in his previous works.

Tenderly sympathetic with the characters of two men and a woman, the story leads with tragic foreboding from Shropshire, England, to the South American pampas, returning thence to end among "The Daffodil Fields" of England.

In its vigor and reserve the poem again stamps Masefield as the greatest artist of the day.

Decorated boards. $1.25 *net.*

DRAMA, SOCIOLOGY, INDUSTRIALISM, POLITICS, ETC.

IN THE VANGUARD

By Katrina Trask

A sparkling play in book form which makes excellent reading. An unusual theme full of sentiment and action. $1.25 *net.*

AMERICAN SYNDICALISM THE I. W. W.

By John Graham Brooks

Author of "As Others See Us," "The Social Unrest."

An illuminating work on the self-help problems of the Industrial Workers of the World. $1.50 *net.*

'TIS SIXTY YEARS SINCE

By Charles Francis Adams

Author of "Studies, Military and Diplomatic."

A contemporaneous review of men and events of historical value. *Cloth, 75 cents; paper, 50 cents.*

ANCIENT IDEALS

By Henry Osborn Taylor, Litt.D.

A fascinating description of intellectual and spiritual growth preceding the Christian era. *2 vols.* $5.00 *net.*

SOCIAL IDEALISM AND THE CHANGING THEOLOGY

By Gerald Birney Smith

(Chicago University)

A lucid study of the ethical aspects of Christianity in the light of modern thought. $1.25 *net.*

ESSAYS IN TAXATION

By Professor Edwin R. A. Seligman

(Columbia University), Author of "The Income Tax," etc.

A new book by the well-known expert on taxation and its most recent problems. $3.50 *net.*

TRAINING THE BOY

By William A. McKeever

Author of "Farm Boys and Girls."

"Train the boy, and not merely a part of him," is Prof. McKeever's slogan. The book outlines a practical method. *Illustrated.* $1.50 *net.*

THE INTERPRETATION OF DREAMS

By Professor Dr. Sigmund Freud, LL.D.

The first English translation of this masterpiece which solved the mystery of dreams and its riddles. $4.00 *net.*

IMPORTANT ANNOUNCEMENT. READY MAY 28

THE INSIDE OF THE CUP

By WINSTON CHURCHILL,

Author of "Richard Carvel," "The Crisis," "A Modern Chronicle," etc.

The most matured work of America's leading novelist, dealing with delicate phases of modern life and conditions vital to the national welfare. *Illustrated.* $1.50 *net.*

Published at 64-66 Fifth Ave., N.Y. **THE MACMILLAN COMPANY** On Sale at All Bookstores

The Nation

NEW YORK, THURSDAY, APRIL 3, 1913.

The Week

While instant help was the uppermost demand when the news of the terrible disasters in Ohio and Indiana first came, it is of the highest importance that the thought of the country should be directed at this time to the great need of considering the whole problem of river floods, as a standing peril to millions of our people, and a steadily recurrent cause of colossal destruction of property. It is only when stirred to the depths by a great tragedy like this that the people at large realize the duty of averting calamities which come rarely and unexpectedly. It was thus that the Triangle Waist fire led to legislation for the improvement of the fire-safety laws in New York. But in this matter of the floods, there exists a prior difficulty which is in itself formidable. The problem here is not only to institute improvements, but in the first place to ascertain what are the means to which we may resort with a hope of ending the evil, or of bringing it within as narrow bounds as possible. No time should be lost in setting on foot, and pushing with the utmost vigor, an investigation of the whole problem by the highest scientific and engineering ability that the country can command. A liberal appropriation for this purpose should be the first act of Congress at its approaching extra session.

It was long ago discovered by one who had had ample experience in the patronage business that every time he selected an appointee to office he made ten enemies and one ingrate. The figures given out last week at Washington show that the statistical basis for this political theorem still exists, for there are 131,530 applicants for the 10,384 offices that are to be given out. But while the *ratio* continues to hold good, it is a great comfort to reflect that the absolute numbers are immensely different from what they would have been under the good old ways of a former generation. The total number of positions under the Federal Government is now not far from 400,000. How large a proportion of these would be regarded as falling under the fine old Jacksonian principle of rotation if it had not been for the growth of civil service reform, we cannot venture to say; but it would certainly furnish an appalling aggregate, even without multiplying by ten the number of "ingrates."

In choosing Walter H. Page as Ambassador to the Court of St. James's, President Wilson has selected a gentleman of unusual charm and unquestioned ability. This pleasingly upholds the tradition that a man of letters should represent the United States in Great Britain. That Mr. Page is not known to the English public outside of the publishing world is unquestionably true. But it will not take him long, in our judgment, to win a place for himself in their estimation. A ready and graceful speaker, he has many of the best qualities of the diplomat. More than that, he has a most unusual knowledge and understanding of American life. A Southerner of broad views, he has long lived in New York and New England, besides studying with great care Western problems. In the revival of education in the South he has played a noteworthy part, as a member of both the Southern and the General Education Boards. Finally, that Mr. Page is not reputed to have wealth is a proof that the country is not shut up to being represented abroad by millionaires alone.

A method of checking Federal extravagance, particularly in the matter of public buildings and river and harbor improvements, is suggested in an article in *Harper's Weekly* by Anson Phelps Stokes, jr., of Yale University. It is, in a word, to condition national appropriations upon local contributions. By this plan, no new building for a post office or Federal court house, costing $100,000, would be authorized unless 10 per cent. of the sum were forthcoming from the city or town where it was to be erected. So with dredging rivers; the State or region benefited would be called upon to meet a percentage of the expense. Mr. Stokes points out that this would be only an enlargement of a policy already followed, in a hesitating way, by the general Government. It would also be in accord with the practice of road-making in many States, which require counties or townships to cover a part of the cost. Nor can there be any doubt that, if the system were to be made the rule in Congressional appropriations of the kind, the "pork barrel" would shrink in size.

Col. Roosevelt told his Progressive followers at Albany last Friday night that the existence of their party is necessary in order to compel the rich to divide with the poor. This is not the language he used, but it is the effect of what he said. He cited the case of two wealthy men in Chicago whose wills disposed of property amounting to more than $20,000,000, yet who in their lifetime had employed girls in their shops at very low wages. "Conditions like that," he observed, "will be changed under our leadership." But at that game the Socialists can beat him hollow. It is easy to imagine a Socialist orator dilating on the shocking instance of a millionaire resident of Oyster Bay, who inherited all his money, yet who paid his cook and butler and gardener only the current wages. "Conditions like that," the Socialist agitator might conclude, "will be changed under our leadership." And could Col. Roosevelt say him nay, except by denying the validity of general principles, and exposing himself to the rebuke of Socrates for refusing to "follow the argument"?

Secretary Daniels has started well with a vigorous effort to break up the clique of naval officers which regards the Navy Department as its own, and by insisting that sea service is to count towards promotion. This will drive many influential navy officers to sea. There is something about the atmosphere of both the War and Navy Departments that makes for cliques, rings, and abuses of varying kinds. In the War Department there are officers who have been intrenched for years and years, and they perpetuate their dynasty by getting Presidents to appoint their friends to high positions. Hence their nickname of "Manchus." Last year Congress struck a deadly blow at "Manchuism"

by compelling officers after four years of detached service to return for at least two years to regimental duty. This made a tremendous upset in the army, and was vigorously opposed by Gen. Wood and other insiders. Army opinion outside of Washington favors the extension of the order to take in the majors, lieutenant-colonels, and colonels now excluded from its excellent provisions. Under Mr. Taft the Manchus had it all their own way. It hardly seemed possible for him to appoint or promote a general outside of the War Department. For an officer to leave Washington was truly to be out of mind as well as out of sight. All of which affords a wonderful opportunity for Secretary Garrison.

They are retired but not retiring, those half-pay naval officers who have been touring the Southern Chautauquas and lyceums preaching the message of a big navy and big naval appropriations. In the opinion of Senator Johnston, of the Senate Military Committee, himself a Southerner, this educational campaign has taken on something of the dimensions of a movement to prevent the election of Congressmen and Senators opposed to the big-navy idea. We sincerely hope that Senator Johnston will have the backing of President Wilson in his attempt to put a stop to such practices. The navy is by no means the only sinner in this respect. There are too many high officers in the army who devote to the business of publicity time that should be given to their strictly professional duties.

The breaking of the six weeks' Senatorial deadlock in Illinois by the election of Lewis, Democrat, and Sherman, Republican, for the long and the short term, respectively, was a victory for Gov. Dunne. In the beginning, he, with the National Committee, was inclined to demand both of the Senatorships, but a single week of balloting convinced him that such an outcome was impossible. Thereafter he bent his energies to the achievement of the agreement which was carried out. The Sherman supporters gave him little encouragement at first, as they were planning a pact with the Progressives which would have left the Democrats without either prize. Reluctance on the part of a considerable number of the Progressives to join hands with a body of men some of whom wore the Lorimer stripes proved fatal to any such arrangement. Indeed, Gov. Dunne won four of the Progressives over to Lewis. Not until last week, nevertheless, did the Republicans give up hope of the long term. Enough members of the Legislature signed the bi-partisan agreement, however, to make the result certain—the most logical issue that could have been brought about.

An interesting development in the direction of centring legislative responsibility has been taken by the Illinois House of Representatives. By unanimous vote, a rule was adopted which prescribes that the Governor may designate any bill as an "Administration measure," and that it shall have the right of way immediately after appropriation bills. The House is to sit in committee of the whole every Tuesday morning to consider Administration measures. Such a rule is particularly desirable in Illinois, where juggling with bills in committee and "gavel rule" have been among the worst features of the bi-partisan alliance that is even now struggling to regain a foothold. The larger significance of the new rule is its recognition, to some extent at least, of the greater part which the Governor has come to play in legislation. In this State, Gov. Hughes openly sought popular support for certain bills, and in New Jersey Gov. Wilson went even further. To this exercise of authority, Illinois has now given official sanction.

Gov. Mann did a service to the cause of law and order throughout the country by his prompt return to Virginia on being apprised of the possibility that his absence might be made use of to procure a commutation of sentence for the two Allens, sentenced to death for the Carroll court-house murders. That sentence has now been put into execution, after a stay given under orders of the Attorney-General of the State pending determination of the question whether the Lieutenant-Governor had a right, in the absence of the Governor, to act upon a petition for commutation. If a case ever existed in which the idea of leniency should be repugnant to the instincts of the sound-minded citizen, it is that of the deliberate murder of a judge in open court, by friends or relatives of a criminal upon whom he had just passed sentence, and who were in court for that very purpose. A community which can tolerate that, or which can regard it as presenting any element calling for the exercise of clemency, is deficient in one of the first requirements of civilized society.

The more official salaries are studied, the clearer does it become that they are not provided to live on, but merely as a mark of appreciation by a grateful but impecunious people. One would hardly suppose, for instance, that the Lieutenant-Governor of Massachusetts was under the necessity of living sumptuously. Yet, according to his own statement, his $2,000 a year scarcely covers what he has to spend for taxicab and car fares. What would our Congressmen have done all these years without mileage? When they reluctantly prohibited themselves from using railway passes, only the courage of necessity enabled them to drive away the wolf by raising their own salaries.

There can be no difference of opinion with reference to that part of the seventh annual report of the Carnegie Foundation for the Advancement of Teaching which is entitled "Education and Politics." The political difficulties of most State institutions of learning, it is explained, have come, not from any effort to serve a political party, but from a desire to further personal interests. The troubles of the University of Oklahoma on this account have extended over a period of some years, and are not yet ended. It was found necessary to dismiss the entire board of trustees, and more recently the Governor has abruptly got rid of three of the members of the new board whom he believed to have used their offices partly for their own political advantage, partly in order to place personal friends in faculty positions which had been made vacant for them by dismissals of competent professors, and partly for private gain by entering into a dishonest school-book contract. The Oklahoma Senate, however, refused in special session to confirm the new appointments of the Executive, and this forced the latter to name a temporary board to act in important matters until the Legislature

convened. In this particular case, the struggle will be worth all it costs the State if in the end it impresses the people with the necessity of divorcing education from politics.

One of the best-loved men in New York was honored last week when alumni of Columbia presented John Howard Van Amringe with a likeness of himself in undying bronze, and sang songs in his praise. It is some years since Professor Van Amringe resigned from the post of Dean of the College, and four years ago the University celebrated his semi-centennial as a member of Columbia's teaching staff. But "Van Am" to-day is still the most vivid of traditions in the university on the hill, and his physical presence crowns the festivities of the sportive graduates in reunion. The generations remember him as the man who, in his capacity as inquisitor of unexplained absences from class, tempered mercy with justice. Only by way of rhetorical exaggeration does the alumnus sing:

Oh, I shook in my boots at the things he said
When he asked me to call in the morning.

The skill which "Van Am" as professor of mathematics displayed in searching out the secret of complicated curves was not brought into full play in following the devious course of an undergraduate argument on those occasions when it was

First a cut, then a bar, then an interview
With the Dean in his den in the morning.

That was a charming story about Colombia and Uncle Sam which appeared in some of the morning papers on Saturday. Whether it is true, or even *ben trovato*, we shall not undertake to discuss. But it is safe to say that if it is true it is one of the queerest stories that ever came out of the world of diplomacy. Colombia wants reparation for an injury she asserts was done to her by us in substantially compelling her to part with a valuable portion of her territory, including the Panama Canal Zone. If the story is true, we virtually admit that Colombia is entitled to reparation, but instead of undertaking to make reparation in a straightforward way, we make a series of propositions which have in common only one thing —that they offer no direct compensation in the shape of money or other tangible thing handed over to Colombia by the United States as compensation for an acknowledged injury. One of the proposals does, indeed, carry an offer of money; but the money is offered, not in the form of reparation for the past, but in that of purchase money for a new privilege to be given by Colombia to the United States. And it is to this proposal that the peculiar picturesqueness of the story of Minister Dubois's negotiation attaches.

The proposal is as follows:

Payment of $10,000,000 to Colombia for an option to build an interoceanic canal by the Atrato route and for the rights of establishing coaling stations on the islands of St. Andreas and Providencia.

Now, some people might think that this was simply an offer of $10,000,000 to Colombia. But that is all a mistake. The option is for seventy-five years, and our Mr. Dubois points out to those ignorant Colombians that, "if at the expiration of the option the canal should not have been built, Colombia would have enjoyed the $10,000,000 for seventy-five years, which sum, with the interest added at 5 per cent., would have reached the total of $47,500,000." It is doubtless only politeness that prevents Mr. Dubois from making the computation at compound interest instead of simple interest. Even simple interest cannot be got if you touch the principal; and if you don't touch the principal for seventy-five years, why not pursue the same policy with regard to the interest and let that, too, be productive during the period of the option? In that case the sum "would have reached a total" of about $400,000,000, instead of a mere $47,500,000. And just think what a sum would be in Colombia's grasp if for our $10,000,000 she would sell us an option for, say, 200 years instead of 75! That the economists have unanimously ignored this simple method of increasing the wealth of nations is one of the mysteries of human perversity.

Two arguments were frequently brought forward during the early years of the Asquith Ministry to prove that the speedy collapse of the Liberal Cabinet was inevitable. One of these dealt with the conglomerate nature of the Liberal majority in Parliament, made up as it is of Liberals proper, Laborites, and Irish Nationalists. How long will it be, people asked, before the factions begin to quarrel? They are still asking the question. Mr. Asquith has so far displayed admirable skill in driving his team of three abreast. The second supposed cause of dissolution lay within the Cabinet itself. Its three outstanding members, Asquith, Lloyd George, and Winston Churchill, all men of ambition and force, were bound to find their ambitions conflicting. What Mr. Asquith's feelings towards Mr. Lloyd George are we do not profess to know; but with regard to Mr. Churchill, the Prime Minister's letter to Sir Rufus Isaacs, read before the Marconi Committee, is instructive. "We are having broken weather," writes Asquith from Malta, "and but for Winston there would be nothing in the newspapers." If there is venom in this paternal reference to Winston it is effectively concealed. Actually the three leading men in the Asquith Cabinet are precluded from being rivals by their disparity in years. The Prime Minister is sixty-one. Lloyd George is fifty, Churchill is thirty-nine. The younger men are in a position to await their turn patiently.

Mr. Winston Churchill's suggestion that all the nations which are afflicted by the battleship mania should cease construction for a year, is good sense. Obviously, if these countries were to agree to expend not a single cent on new vessels for a year their relative position would not suffer in the least, and their respective treasuries would profit greatly. What possible excuse is there for not accepting the First Lord of the Admiralty's suggestion? It would be an entering wedge towards disarmament, of vast benefit because it would bring the nations into concert on this question of big-navy building. There is an opportunity for President Wilson, and one that would not conflict with Washington's warning against entangling foreign alliances; for this would be an agreement that could only be of benefit to the world as a whole. It would not require action, but non-action, and it would lift in some degree the heavy burdens of wage-earners in the hardest pressed and most heavily taxed countries. Mr. Churchill's suggestion, by the way, is but one of several proofs that Great Britain is tiring of her fearful naval load.

J. PIERPONT MORGAN.

The remarkable career in the field of American and international finance, which was closed by Mr. Morgan's death in Rome, will be variously regarded. There has been abundant evidence, these past few years, in the voluminous published reviews of his activities, that critics, appearing equally sincere, were drawing conclusions of a wholly conflicting character regarding the real significance of that personal history. What all agreed upon was the fact that a figure, more masterful than the financial world had perhaps ever seen before, had risen in the domain of American affairs, and had stamped its own individuality on the financial history of the period.

The question how far Mr. Morgan's personality caused or directed the tendencies of the period in large finance, and how far it was itself shaped by the economic tendencies of the day, is not so easy to determine. There are those who believe that the history of American finance in the two past decades could not have been what it was but for Mr. Morgan's presence in the field. There are those who believe that his career could not have been what it was but for the extraordinary financial conditions of the period. History will probably say that the truth lies somewhere between the two conclusions.

The personal domination which Mr. Morgan exercised over other men, in the field of large affairs, has had few parallels; the magnitude of the undertakings in which that masterful leadership played its part has had none. Mr. Morgan's prestige reached its climax when the financial world had begun to think in hundreds of millions; but the power of his personality had been recognized, in Europe as well as in America, long before that time. The economic wisdom of the methods by which the exhaustion of the United States Treasury's gold reserve was stopped in 1895, through the artificial control of the avenues of foreign exchange, has been much disputed; but as to the fact that the achievement would itself have been impossible without Mr. Morgan's determined overruling of the doubts and hesitations of the world's greatest bankers, that is not open to dispute. It is probable that the breathing-space permitted by that unusual operation saved the Government from lapse to the silver standard.

Those who lived through the bewildering days which followed 1893 will probably agree that the mass of wrecked corporations which then blocked the path of American finance would have had a history different from their actual rapid reconstruction but for the dominance of Mr. Morgan in the plans for setting them on their feet again, and the financial community's confidence in his resourcefulness. This powerful individuality came into play again at the crisis of the panic of 1907. The fate of the two great New York trust companies, whose depositors had already drawn out upwards of $50,000,000 in the run, was hanging in the balance; no expedient of relief remained except the guaranteeing of the rest of their depositors by the other trust companies, and the institution on whose concurrence everything depended refused to sign. Probably no one but Mr. Morgan could have broken that panic deadlock, and it was broken by the sheer force of his personal influence over other men.

That such a personality was bound to play a great part in the extraordinary outbreak of promotion, company amalgamation, and financial expansion which marked the beginning of this century, followed as a matter of course. What could not have been so certainly foreseen was the manner in which that great personal influence would be applied. History has produced great financiers who, in an era of public excitement and speculative excesses, devoted all their powers to the work of restraining and controlling the dangerous tendencies of the day. It will always remain a matter of deeply interesting discussion just how events financial would have moved in 1901 and 1902, had Mr. Morgan pursued a policy of that nature.

That he did not pursue such a policy, but elected rather to lead in the memorable campaign of exploitation; that he apparently saw no limit to the possibilities of the new machinery for hundred-million and thousand-million amalgamations—these well-known facts will be the crux of later historical controversy over the great career now ended. It is perhaps still too early to pass judgment finally on that episode. Some questions involved in it, such as the period's utter misconception of the capacity of credit and capital to endure the prodigious strain imposed, have been settled by subsequent events. Others, such as the economic necessity or value of the enormous industrial combinations, are still matters of active controversy, to which only future economic history can give a conclusive answer.

Public discussions of a still more recent day have brought Mr. Morgan's career into the foreground of popular interest and controversy in connection with the so-called "Money Trust" investigation, of which he was avowedly the focus. Every one at all familiar with the past decade in American finance is aware that, at various stages of this controversy, particular episodes in Mr. Morgan's career were treated with gross unfairness, ignorance, and misrepresentation; but that, after all such crudities were allowed for, the animus of the controversy really lay in the public's not at all incorrect impression of the immense individual power possessed by this masterful dictator over American finance.

But who is to say whether even that power was not in the main a result of the personality of the man, which exercised so great a sway over men and institutions of the financial world, long before any Congressional orator had detected a "Money Trust"—at times, indeed, when a favorite complaint, in the banking community of the day, was the absence of "concentration"? Not the least important question of the hour is how the more recent movement in that direction, and the public attitude caused by it, will be affected by the ending of this great career.

MR. MORGAN AS ART PATRON.

An art patron in the sense of his banker predecessors, the Medici, Mr. Morgan never was; yet few wealthy men of any time have been more persistently concerned with accumulating precious objects. The difference lay in his attitude towards the art of his own day. To name the Medici and their business and political associates is to revive the memory of the greatest artists of their age. Mr. Morgan's name will evoke no such memories of our workers in the future. He outlived two artistic revolutions, marked by the success of the Barbizon school and that of the Impressionists, but his taste

was deeply touched by neither. He employed, to be sure, the best architect in America to build his beautiful private library, but it never occurred to him to summon a mural painter of highest distinction to complete the work. The only portrait painter whom he consistently and enthusiastically employed is an artist of inferior talent. We call attention to these limitations of a great art lover, not to depreciate his taste, but because these facts mean something about both the man and the art of our own times.

It must be admitted immediately that modern art, subdivided into specialties, maintained largely by esoteric cults, an art so little central and public, could not have appealed to so potent, public, and essentially simple a character as was Mr. Morgan's. Such an art must have represented to his consciousness either an evasion of the main business of life, or a disintegration parallel with that which he dreaded in society at large. In short, the Medici art patrons transported to our age would probably have liked our art no better than Mr. Morgan did, while he, in their times, might well have been the friend and employer of a generation of craftsmen. It is the defect of our art, and the loss of our wealthy contemporaries, that its appeal to those who robustly do the world's work is so small. What is remarkable about Mr. Morgan is not the indifference to current art, which he shared with many of his kind, but the enthusiasm with which he turned to the great things of the past.

Nor was this an indiscriminate lust for possession, as might appear when one remembers that he bought, literally wholesale, entire collections of bronzes, porcelains, drawings, prints, decorative objects, and what not. One may trace in his career something more than the dauntless competitor. Always a reading man and a traveller, he began his art collecting precisely where he loved to acquire literary manuscripts—with the early English school of a century or more ago. The fine pictures of this school now on exhibition at the Metropolitan Museum, assume to-day the aspect of a pathetic memorial. As his collecting progressed he passed to the earlier periods, largely as subordinate to the building up of his library. The rarest illuminated manuscripts found a ready purchaser in him. He acquired extraordinary series of the prints of Dürer and Rembrandt. It was not until his private library was built that the extent and worth of these accumulations were realized.

Meanwhile he began the purchase of great collections; these passed into the obscurity of the storage warehouse, or were lent to European exhibitions. In the year 1900 Mr. Morgan bought for the Metropolitan Museum the Garland collection of Chinese porcelains. It had long graced the Museum as a loan. As a trustee Mr. Morgan could not bear to see the Museum suddenly bereft of one of its most beautiful and instructive exhibits. From then on the great purchases, such as that of the Hoentschel collection of decorative art, were made with the Museum in view. When in 1904 he became its president, his personal contributions made it possible at once to recruit an expert staff. This should be remembered both because the reform was sorely needed and because he characteristically showed more respect for expert advice in a corporate enterprise than he did in his personal collecting. This service, with the gift of the Garland and Hoentschel collections, will keep his memory fresh and grateful as long as the Metropolitan Museum stands.

In the later years his interests widened. He became active in excavating and buying the antiquities of Egypt, where he was a frequent visitor. He built a noble museum building at Hartford, Conn., in memory of his father. He became a chief agent in the extension of the work of the American Academy at Rome through the consolidation with the School of Classical Studies. His catalogues, which at first had been perfunctory affairs arranged by his dealers, began to be highly authoritative works. The library on Thirty-sixth Street was generously opened to accredited applicants, and became a resort of scholars. In short, Mr. Morgan was finding his way to real sources of knowledge by the academic route when death overtook him.

Mr. Morgan was a candid man, and it would be to affront his memory to claim for him a connoisseurship to which he never pretended when living. It was his weakness as a collector that he did not readily seek or win the confidence of critics and other amateurs, but depended too much on dealers. He was too impatient and too rich to give himself the luxury of buying shrewdly, and the great prices which he willingly paid did much to produce the present demoralization of the art market. In fact, the amateur must regard Mr. Morgan's artistic career with something of awe and misgiving, not unmixed with pity, feeling the disproportion between his unwearied activities as a collector and the personal solace which he got from his royally abundant possessions. Such refinements of sympathy and appreciation need not trouble the ordinary man. It is enough for him to know that all his long life Mr. Morgan earnestly coveted the best in art, that through his enterprise tens of thousands of beautiful objects have come from Europe to America, and that through his gifts we all have the possibility of an illimitable extension of our æsthetic life. In no other way will Mr. Morgan's insatiable will to possess redound more surely and enduringly to the common good.

SENATE, HOUSE, AND PRESIDENT.

With the election of one Democratic and one Republican Senator from Illinois, ending the long deadlock in that State, the membership of the Senate is now complete. The Illinois result, following upon the recent election of a Democrat from New Hampshire, gives the party a firmer hold on the control of the Senate than had been expected by the most sanguine shortly after the elections last November. Especially in view of the impending death of Senator Rayner—whose successor was to be named by a Republican Governor—it looked, for a time, as though the Democrats might command only an even half of the total membership, and thus be dependent for the passing of important measures upon the casting vote of the Vice-President, except in so far as they might get the help of Progressives outside the party. The actual situation is emphatically different from this. Out of the 96 Senators, 51 are Democrats, a clear party majority of 6. In the regular session, this majority may, after the first few weeks, be expected to be increased to 8, through the election by the Maryland Legislature of a Senator to serve for the remainder of Senator Ray-

ner's term. Thus the responsibility for accomplishing substantial and desirable results is squarely on the party. As an excuse for failure, it will be impossible to plead that the possession of the Presidency and of an overwhelming majority in the House was rendered nugatory by a hairbreadth hold on the Senate.

In the matter of the tariff, the gain of this additional margin is peculiarly important. It counts for much in moral effect as well as in the direct arithmetical accession of strength. With an extremely narrow margin, the recalcitrancy of one or two men determined to insist on protective demands in the interest of their own constituencies or sections would be difficult to deal with. This difficulty will exist, even as matters stand; but a firm attitude on the part of the party leaders is all that will be required to overcome it. For any tariff bill that has obtained, after full deliberation, the authoritative approval of the President and of the leaders in Congress, it is now clear that, with ordinarily strong and sagacious party management, enough votes can be had to insure its passage in both houses. Those who are going to fight for concessions of a protective nature will have to reckon with this situation from the start, and pitch their note accordingly. There will be a hearing for dissentients, but there can be no coercion by them, unless the men at the helm are weak, or unfaithful, or incompetent. The only danger-point lies in the as yet unknown character of the party leadership in the Senate. And those entrusted with that leadership should be made to understand from the outset that upon their shoulders rests a responsibility of the gravest kind. The party is in no extraordinary situation, but in the normal position of a party in full control of all branches of the Federal Government, and it must give a good account of itself or suffer the penalty of failure.

In grappling with the currency and banking problem, Congress will be confronted with perplexities and difficulties of quite a different nature. With the tariff, it is a question of fulfilling a fairly definite promise, of carrying out a programme concerning whose general lines there is substantial agreement in the party at large—indeed, one may almost say, at the present moment, in the country at large. Not so with banking and currency. Everybody, to be sure, is agreed that something must be done; and, even more than in the case of the tariff, it is felt that reform is not merely needed, but is of critical importance. But the moment the question of method comes up, there emerge not only disagreements, but prejudices and inveterate prepossessions. To decide upon a scheme that will satisfy the requirements which those who understand the problem regard as indispensable to a real solution is but one part of the task before the President and the leaders in Congress; the other part is to make the scheme acceptable to Congress in the face of these long-standing obstacles. The Republicans, in their long tenure of power, have been unable to accomplish anything; but let it not be supposed that this will serve as an excuse for the Democrats. The time is ripe for a conclusion, after all these years of floundering; and President Wilson has had the courage to commit his Administration to the achievement.

The color of the political situation is affected by a development concerning the House, as well as by the completion of the roll of the Senate. The refusal of Representatives Lenroot of Wisconsin, Anderson of Minnesota, and Kent of California, to ally themselves with the new third-party organization in the House, accentuates a tendency plainly visible for some time. These gentlemen are among the most prominent and pronounced of the Progressive Republicans. They not only refuse to go with the Roosevelt Progressives, but explicitly recognize President Wilson as the natural leader in the promotion of the policies which they advocate. "Not until President Wilson shall have shown a willingness to abandon the road in which he is travelling," said Mr. Kent, "shall I consider it my duty to do other than to help him to the utmost of my strength and ability." Precisely what that road is, remains to be defined. The spirit in which he takes up his work was declared in his inaugural address. Nobody doubts his sincerity. When his programme comes to be more clearly defined, disagreements may develop which are now in abeyance. The pressing problems of immediate legislation are putting off that test. But it is safe to say that, for the present, although Mr. Wilson was elected by a plurality vote, the sentiment expressed by Mr. Kent is shared by a great majority of all the people of the United States.

MURDER AND THE LAW.

Exchange of congratulations over the fact that there were "only sixty-four lynchings in the whole country last year" must give a detached observer something of a shock. Yet it is such slow and painful progress away from this form of barbarism that we are driven to acclaim, and even the satisfaction thus extracted is tainted with signs of a tendency to resort to mob law for alleged offences of a trivial nature. Following Gov. Blease's outburst at the Governors' Conference, one negro was hanged for "refusing to give evidence"; another was shot for being "impertinent"; and another met a similar fate for the peculiarly African outrage of "not paying his debts." There have been also an unusually large number of colored men who have been lynched so speedily that their innocence was not established until it was too late for anything but another public crime in the shape of the lawless killing of the "right" man. Nevertheless, there are rifts in the cloud, and some of them are significant.

Booker T. Washington has expressed the belief that there is a growing respect for law and order in the South, and that this improvement is due mainly to the Southern newspapers. Mr. Washington has a pronounced habit of looking on the bright side, but in this matter his judgment is borne out by an examination of the Southern press. He is well within the truth when he says:

> A few years ago the daily press in the South was either silent on the question of lynching, or in a few cases approved it for certain crimes. To-day in the South there is practically no daily paper of any standing that does not openly condemn lynching and all forms of mob violence. They all speak against these crimes more forcibly than has ever been true before, and their utterances are making a better and saner public opinion on this subject.

Typical of such utterances is one from the Chattanooga *News*:

> A Mississippi mob last Friday lynched a negro suspected of murder. The guilty man confessed and was lynched Saturday. Another argument in favor of the recall of Judge Lynch.

And the Mobile *Register*, in commenting on the same case, called it "an atrocious murder." "It is wrong," it con-

tinued, "to lynch the law. It is the people's law. If the makers of the law do not respect it, how can they expect it to command respect?" When the leaders of public sentiment in a community begin to urge the rule of reason in this way, the institution they are attacking, however deeply grounded in prejudice and passion, is doomed.

Indeed, revolting as the situation with reference to lynching still is, one hesitates to say that it is not more encouraging than our condition regarding murder in general. However bad the record of any city or county may be in this respect, it is not difficult to find a worse one in some other part of the country. "Life is cheap in the United States," remarks the Macon *Telegraph*, "and worse than cheap in the States of the South." It is cheap enough in New York, but the Chicago *Record-Herald* publishes a table to show how much cheaper it is in Chicago. Cook County, with little more than half of the population of New York, had 221 homicides in 1911 against our 198 in 1912. And Atlanta, which numbers 155,000, had 55! For this shameful condition, afflicting the entire nation, certain specific causes are cited. A Maryland grand jury has just reported its conviction that "the demoralization and crime in the county" are in a very large measure due to "the illegal barterings of intoxicants and the gatherings caused thereby." What in the South is picturesquely termed "pistol toting" is held responsible in the North as well for a considerable proportion of the violations of the Sixth Commandment. The law's delays and miscarriages, too, are always coming in for a share of the blame.

But the cause of causes is our attitude towards law. A few weeks ago the Mobile *Register* gave the first column of its front page to a series of interviews with some thirty prominent citizens. What was the inspired word that these men agreed in speaking? Simply this: A law should be either enforced or repealed. The same thing might happen almost anywhere in the land. What is there to say about ourselves so long as we think it news to have our most respectable citizens affirm with emphasis a commonplace of the Old World? Yet we breathe a sigh of relief and admiration when a chief of police delivers himself of a defiance of law-breakers and announces his determination to put into effect whatever he finds on the statute books, regardless of his personal opinion of any particular law. Our admiration may quickly change to disgust at his tactlessness and stupidity when he proceeds to compel obedience to some measure which hits us, but that only makes the boldness of his announcement the more evident. However the psychologists and the ethnologists may explain it, we are prone to pass two new laws rather than enforce an old one. In other words, as a people, we have still something to learn respecting the difference between liberty and license. The discussion now going on in all parts of the country should contribute to this most desirable end.

AROUND ADRIANOPLE.

The law of competition holds for the news columns. If the floods in the Ohio Valley had not monopolized the attention of the country for several days, more space would have been found in the press for the fall of Adrianople amidst circumstances surpassing in dramatic intensity even the last days of Port Arthur. In the near future we shall undoubtedly learn more of the nature of the fighting which resulted in the taking of a mighty fortress as a single redoubt is taken, by the onrush of charging lines of infantry, victors following on the heels of the vanquished and settling the final account, as now appears, within the city itself. Notable for many reasons in the history of military operations, the siege of Adrianople will stand out because of what may be described as the tragedy of the war correspondent. For above five months a garrison of more than fifty thousand men was besieged by an army which at the end must have attained twice that number. Platoons of newspaper correspondents were hovering on the Bulgarian frontier not much more than twenty miles away. Yet we know little of what happened around Adrianople after the first two weeks of the war, and of what occurred within the city we know nothing. At the beginning there were almost daily rumors of plague, mutiny, and starvation in the beleaguered city. Gradually the rumors died of inanition, but the inhabitants of the city held out. Englishmen of Wellington's day actually knew more of what was going on in the trenches around Badajos than we of the wireless age knew of what was happening on the banks of the Maritza.

At the beginning of the war, the Bulgarian General Staff was itself badly informed as to the situation within Adrianople. We have the word of Lieut. Wagner for that. Fighting in the environs of the city began on October 19, and for ten days the Second Bulgarian army under Gen. Ivanoff resorted to assault tactics. Outlying Turkish positions were captured, but at such heavy cost that by October 29 it was decided to blockade the city and starve it out. Adrianople was believed to be insufficiently provided with food, and its surrender was supposed to be a matter of days. Two Bulgarian divisions had been assigned to the task of reducing Adrianople. Later they were reinforced by a third division from the central Bulgarian army and by two Servian divisions, one operating on the northwest front of the fortress, the other to the southeast. That was the situation at the beginning of November. As the Servians completed their own rapid operations in Macedonia, still more troops were diverted to Adrianople. The Servian siege guns admittedly played an important part in the reduction of the city. When the blockade was completed at the end of October, the Balkan allies were extended in an almost perfect circle some thirty-five miles in circumference. The twenty-five redoubts constituting the defences of Adrianople formed an inner circle twenty-five miles in circumference. Full mastery of this inner circle was won by the allies only during the last few days. After that the contest apparently resolved itself into something like open field fighting, until the final charge of the allies brought them inside the city.

Lieut. Wagner had the good fortune to be an eye-witness of the last desperate assault delivered by the Bulgarians before they shifted to a policy of blockade and bombardment. It was an attack on Karagash, on the southwest front of the fortress. We can very well infer what happened around Adrianople during last week's three days of battle from what the correspondent of the *Reichspost* saw and heard at Karagash last October:

> Denser and denser grow the Bulgarian firing lines. Again and again the men

spring up and dart forward with rushes which the Turkish forces seem too weak to withstand. The enemy's attack seems to have no success and their lines are now rolling back by the burning ruins of Maras. There, as some of the wounded tell me, the corpses were piled up two yards high on each other. The Nizams, the Turkish regulars, stood up even against case-shot. . . . The energy of the Bulgarian advance gradually relaxed; exhaustion made itself felt even among them. Far away one could still hear the booming of guns. Terrible scenes were described by those who were brought wounded from this last phase of the conflict. Men grappled and tried to strangle each other with their hands, and there were orgies of the most horrible bloodthirstiness.

Here, as at Lule Burgas, the Turks gave evidence that the old fighting spirit is not extinct among them. Given food and ammunition, both of which they lacked at Lule Burgas, they could render account of themselves man for man. The factor of strongly superior numbers must not be overlooked in accounting for the victories of the allies.

The fact that the Servian troops seem to have taken almost as active a part as the Bulgarians in the reduction of Adrianople, is not without importance for the continuance of amicable relations among the allies. There are observers on the spot who have predicted a recrudescence of the old Servo-Bulgarian rivalry as soon as peace is signed. On the part of the Bulgarians there would have been a tendency to minimize the rôle played by Servia in the course of the war. The task that was assigned to the Serbs in Macedonia was undoubtedly a lighter one than that which confronted the Bulgarians in Thrace, although at Kumanovo and Monastir the Servians utterly confounded the legend of their military incompetence. But if Kumanovo and Monastir were the beginning, Adrianople was the final proof. After fighting side by side for the conquest of the city, Bulgars and Serbs are less likely to indulge in mutual recriminations.

MAKING A MAN OF SHAKESPEARE.

Close on the heels of Mr. Frank Harris's expressed conviction that the Dark Lady of Shakespeare's sonnets was Mary Fitton, comes a book by Mr. Arthur Acheson, naming the lady as Mistress Davenant, sometime hostess of the Crown Inn at Oxford. Something more seems to be behind these efforts than a thirst for the truth. The authors, like the "Baconians," are resolved by hook or crook to confer a large benefit upon this day and generation. Bacon or the Dark Lady, one or the other of these is the clue by means of which our literary detectives hope to throw light on Shakespeare's obscure personality. Then shall the public have the longed-for chance to caress him, to "investigate" him, and to write his full biography. Messrs. Harris and Acheson say, in effect: "If you will understand the heart of Shakespeare, let us first show you the woman to whom he opened that heart." In their hands one woman can be made to tell much. Be she Mary Fitton or Mistress Davenant, there is scarcely one of the plays whose love-interest she cannot explain. It is she, in the person of Juliet, who proclaims that her love for Shakespeare surpasses all other love, yet who in "All's Well" admits that she is running after his false friend, etc. In the process of these confessions, the figure of Shakespeare is supposed to emerge, considerably more of a man.

It begins to look as though the present age were determined to add the identification of Shakespeare to its other achievements. While the world looks on expectant, Professor Wallace runs through legal documents, not without some finds; Dr. Owen, in the interest of thoroughness, digs for secrets in the slime of the Avon; and, if we may trust to hearsay, the London bookseller, Mr. Bertram Dobell, whose genius for picking literary prizes out of rubbish heaps is established, has now set his heart on recovering personal memoranda of Shakespeare. To what all this may lead who can say? In many minds there is probably the thought that the poet's works will never be properly estimated until he himself comes out into the light. Thanks to over-indulgence by publishers, the present age finds it difficult to appreciate an author without knowing where he spends his winters, what car he uses, etc. If the out-and-out modernist could be sure that nothing in Shakespeare's dramas was based on his actual experience or observation, it would be so easy to discredit them. But so long as the author keeps from view, their attacks are not whole-hearted; they canont forget that perhaps, if the facts were known, he was as firmly rooted in the world about him as they in theirs. Certain overdone classicists are in a similar plight. It is a vexation to them that Shakespeare, despite his formlessness, has had such a magnificent success down the centuries. Now, if only it could be proved that as a youth he used to sit on the banks of the Avon, not fishing, simply dreaming, how readily they could convert the dreams into revery—that first and last infirmity of romantic minds! Then could his lack of form be ascribed to a congenital weakness; then, too, would the explanation of Hamlet's madness soon be forthcoming. Conversely, the romanticist would be quick to see in the act of lolling on a river bank the best preparation for literary greatness.

It is difficult to foresee what would be the total result of a sudden revelation of Shakespeare's life. For a time at least the man would overshadow his works. "Macbeth," "Othello," "King Lear" would possess a new interest. Consider the host of pregnant lines which would require an autobiographical explanation. The extreme to which this method has been carried in Goethe scholarship would be far exceeded. Once let it be shown that a great author has embodied some of his own experience in his writings, and few critics are steady enough to stop short of absurd inferences. On the whole, we prefer the present follies of Shakespearean critics. They are harmless compared to what would happen if an army like them were to be turned upon the man himself. If the plays are at present all things to all people, the life of the man would be so too, with the result that biassed statements would appear to have a real foundation. And it would be years before any body of settled conviction could be reached. This is not intended as an alarm. All the world to nothing, Shakespeare will elude the investigating clan.

All things considered, many would be quite as well pleased to learn no more than the plays reveal of Shakespeare. It is salutary to be confronted by such documents, dropped, as it were, from the sky, and to be asked to say whether they are great, and if so why. Shakespearean criticism is only just getting back some of the big lines which it followed in the days of Johnson and Morgann. In the meanwhile inaccuracies of detail have been corrected by textual study, and the way is now prepared for

a reasonable appreciation of Shakespeare's large humanity. It would be a pity if criticism should again be distracted. Yet it must be confessed that no one can look on Shakespeare's portrait, at his extraordinary signature, or can read works of his which almost look like personal revelations, without being tremendously piqued. But this way madness lies—at least temporary madness.

THE AMERICAN ORIENTAL SOCIETY.

PHILADELPHIA, March 28.

The one hundred and twenty-fifth meeting of the Society, at the University of Pennsylvania, March 25, 26, and 27, was well attended and was marked by the large number of communications announced by the members. The growth of interest in the Society and of the scientific activity of its members is such as to make imminent the division into two sections, Semitic and Indo-Iranian.

Of the sixty-one papers announced, only about fifty could actually be presented, and a great many of these in such brief summary as to be hardly satisfactory. The discussion of the papers, on the other hand, was in many cases quite full and proved to be one of the most satisfactory features of the meeting. The first session, on Tuesday afternoon, was devoted to the business of the Society and to the address of the president, Prof. George F. Moore, of Harvard University, on "Babism and Bahaism."

Professor Moore defined Bahaism as "the latest offshoot of the banyan tree of Mohammedan heresies"; but in order to understand this movement, which, curiously enough, is spreading to some extent even in this country as well as in European centres, it is necessary to go back to Babism. This made its appearance in Persia shortly before the middle of the nineteenth century, when a young Persian, Mirza Ali Mohammed, the son of a small tradesman, declared himself to be the Bab, or door of communication between Allah and his worshippers. This latest Bab, or "door," illustrates the continuity of religious beliefs in the Mohammedan world; for scarcely a generation has passed since the mysterious disappearance of the twelfth imam (or religious leader) many centuries ago, without some one coming to the front and claiming to be, first, the door of communication and then the lost leader himself. This doctrine of the reappearance of the Mahdi, as the "leader" (literally "the rightly guided one") was also termed, may, in fact, be traced back still further to what ensued in the Mohammedan world soon after the death of the Prophet. Professor Moore gave an interesting account of the Babist movement in Persia, which early became involved in political entanglements with the Government, and led finally to the imprisonment and death of Ali Mohammed in 1850. One of the adherents of the Bab, Beha Ullah, escaped to Bagdad, which became for a time the centre of the movement. It was from the name of this adherent that we get the designation Bahaism. Beha Ullah also claimed to be a door of communication, but he stopped short at this point and did not go to the length of his predecessor, who announced himself as the incarnation of God Himself. The interrelation between these two doctrines, the reappearance of the lost leader and the incarnation of Allah in some human individual, are the two ideas around which a goodly portion of the history of Mohammedan heresies revolves.

As for the teachings of this heretical sect, Professor Moore characterized them as embodying many lofty and broad humanitarian ideas expressed in formulas that conveyed platitudes rather than profound truths; but mixed with these humanitarian teachings—which emphasize the brotherhood of man, the equality of all before the law, universal peace, the separation of religion from politics, and the education of women—there was a mystic conception of divine government which lost itself in nebulous speculations.

The greater number of papers read were naturally of a highly technical character, dealing either with philological problems or with the interpretations of special points in Vedic and Semitic literatures. Among those of more general interest, mention should in the first place be made of Prof. C. C. Torrey's (Yale University) communication on a possible metrical origin of the Lord's Prayer. Taking the older form of this prayer, as given in the Gospel of Luke, Professor Torrey found that in translating it back into the Aramaic original, in which, as is now generally admitted, Luke was originally written, it could be divided into four lines which turned out to be metrical. In the case of two of these lines, the metre, in fact, was perfectly evident, and for the other two merely slight changes were required in order to make them metrical likewise. The metre was one of seven syllables, a common form in Aramaic compositions which can be traced back to the fourth century B. C. In confirmation of his supposition, Professor Torrey pointed to the wide use of metres in inscriptions on tombs and in prayers couched in Aramaic dialects or in late Hebrew.

Another paper of general interest in a widely different field was presented by Dr. T. Michelson, of the Bureau of American Ethnology, who showed that, as a result of recent expeditions in northeastern Asia, a morphological connection between the languages of some of the peoples and the languages of the North American Indian stock was established, and that this connection was confirmed by physical anthropology. Dr. Michelson expressed the view that the similarity pointed to a migratory movement from the northwestern coast of America over into Asia Minor and not the reverse, and that this movement took place in comparatively recent times. A valuable feature of Dr. Michelson's paper was the demonstration of a fundamental error in many previous attempts to connect the languages of the North American Indians with Aryan or Semitic speech through accidental resemblances in mere words. Lexicographical agreement in the case of sporadic examples proves nothing whatsoever, unless confirmed by agreement in the structure of the languages compared.

Mr. W. S. Kupfer, of New York, gave an entertaining account of Vernacular Folksongs of India and illustrated some of their characteristics, which involuntarily suggest a comparison with our "ragtime" music. He gave interesting specimens of these songs, both those of narrative character as well as tragic and light songs, though to the European ear the distinction between the serious and humorous was scarcely apparent.

One of the social features of the meeting was a lunch offered by the president and board of Dropsie College, on Wednesday noon, the afternoon session being held in the large assembly-room of the College. Before the reading of the papers Dr. Cyrus Adler, president of Dropsie College, made a brief address on the institution. He was followed by Prof. Carl Bezold, professor of Oriental languages in the University of Heidelberg, who was introduced as a distinguished guest and who gave an interesting announcement of a proposed Assyrian dictionary to be prepared on slips, after the manner of the great Egyptian dictionary projected by Professor Ehrmann, which has now grown to such huge dimensions. The Baden Academy of Sciences has become the sponsor for this new undertaking.

On Wednesday the Oriental Club of Philadelphia, a local organization consisting of those in Philadelphia and vicinity interested in Oriental studies and in the history of religions, entertained the members of the American Oriental Society at dinner at the Franklin Inn Club in celebration of the twenty-fifth anniversary of the existence of the local club.

The Society adjourned after the session on Thursday morning to meet

during Easter week in 1914, either in Cambridge or in Boston, Mass.

Prof. Paul Haupt was elected president for the ensuing year.

MORRIS JASTROW, JR.

SCANDINAVIAN BOOKS.

BERGEN, Norway, March 19.

Selma Lagerløf's new book, "Kørkarlen" ("The Driver"), is quite up to the expectations of her many admirers. Besides a rich imagination, it contains a solid religious element which cannot fail to make a strong impression. The story aims to show how right living and altruistic sympathies produce in those who possess them the only genuine happiness, and concludes with the prayer, "God, let my soul come to be ripened before it has to be cut." The book is to a large extent a glorification of the work of the Salvation Army, whose officers play important parts in the story; but much more it is the message of a fine poetic and imaginative spirit pleading for democratic good-will towards mankind. A collection of poems by David Fallstrøm, "Fontänen sjunger" ("The Fountain Sings"), contains much that is beautiful. Since the death of Frøding, the author may possibly be called the most important lyric poet of Sweden. There are many strings to his lyre, but the most used are of the soft, subdued kind, full of melody and charm. His memorial verses to Bjørnson and Herman Bang catch the essential qualities of these two poets.

Of other Swedish Christmas publications must be noted the third volume of Sven Hedin's "Transhimalaya," which brings to a close the exceedingly interesting account of the famous explorer's adventures in Tibet (Stockholm: Albert Bonnier). From the same publisher has come the third volume of the biographical monograph on Geijer, by Anna Hamilton Geete, "I solnedgången" ("At Sunset"). Tor Hedberg's "Ett decennium," a collection of critical essays on literature, art, and the theatre, is a book which deserves some attention. Among the recent novels are Per Hallstrøm's "Nya noveller" ("New Novels"), Sven Lidman's "Carl Silfverstråhl's upplefvelser" ("Carl Silfverstråhl's Adventures"), Henning Berger's "Lifvets blommor" ("The Flowers of Life"), and Anna Branting's "Valérie."

In Norway the book which has lately created the greatest sensation is Knut Hamsun's new novel, "Den sidste glæde" ("The Last Joy"). It is easily one of the poet's best works, showing abundantly that his "old age," which he has been somewhat too fond of mentioning (he is little above fifty), has bereft him of none of his vigor, biting irony, or charm. The book is full of sharp, witty satire on many subjects, but as a whole is a vigorous attack on the modern spirit that reigns in Norway at the present time. More than ever Hamsun in his latest work appears as a master of the Norwegian language.

Few authors were more industrious letter-writers than Bjørnstjerne Bjørnson. A selection of the letters he wrote in his young days (1857-1870) is now published by Prof. Halvdan Koht, who also furnishes an able introduction and notes. The letters fill two heavy volumes, and are deserving of careful study. They reflect the poet perhaps better than any of his published works, and throw new light on the political and intellectual conditions of his country. Written in his usual vivid and impulsive style, they hold the attention from the very first; they tell in Bjørnson's own words the story of his development during momentous years. Of particular interest are the numerous letters to Ibsen, which witness to the faithful and important support Bjørnson gave to Ibsen during the latter's difficult first steps in his literary career. Other useful and interesting information concerning Bjørnson and other leading figures of his time may be found in the memoirs of the educator and politician, O. Arvesen, "Oplevelser og erindringer" ("Experiences and Recollections"), newly published. Just before Christmas Capt. Amundsen's large work on the conquest of the South Pole was brought to a close. In two heavy volumes, provided with a number of excellent illustrations, it tells a straightforward tale, even the stirring chapter on the attainment of the goal being characterized by great simplicity.

A very promising first-work is the new biography of Dickens by the young scholar, Leonard Sandberg. It is a critical review and valuation of Dickens's works. The book, which was published on the occasion of the centenary, will add to the number of Dickens's friends in Norway, as also will the recently finished successful translation of the "Pickwick Papers" by C. J. Hambro. A Norwegian edition of "David Copperfield" by the same translator is to appear in parts in the course of the present year.

Recent additions to Norwegian fiction include several stories of high rank, among them Thomas Krag's "Frank Hjelm," Hjalmar Christensen's "Brødrene" ("The Brothers"), Sigrid Undset's short stories, "Fattige skjæbner" ("Poor Fortunes"), Regine Normann's "Den gang" ("Then"), and Kristofer Uppdal's "Trolldom i lufta" ("Witchcraft in the Air").

Of Danish books of the season the memorial edition of Herman Bang's works has found a large number of readers. It is edited by Johan Knudsen and Peter Nansen, and forms six large volumes, containing most of Bang's writings—his novels, short stories, plays, poems, and a selection of his critical essays. The work costs 20 kr. (unbound) and is a worthy memorial to the renowned author. A small biography of Bang by P. A. Rosenberg would serve as a useful supplement to this edition. This is a well-written statement of the chief events in Bang's life and a well-balanced estimate of his writings. The price is only 1.50 kr. The novels of Jakob Knudsen are widely read in all the Scandinavian countries. His idealism, force, and earnestness have added steadily to his reputation. His latest book, "Angst" ("Fear"), deals with the childhood and early youth of Martin Luther. It is history handled freely by a poet's imagination; it is a summary of a venerable popular tradition, full of art and life, and at times is rarely beautiful. The book belongs to the few that will survive the season of their publication. Mention should be made of a few other Danish novels, especially Harald Kidde's "Helten" ("The Hero"), Poul Drachmann's "Kraft" ("Power"), an historical novel by Laurids Bruun, "Den signede dag" ("The Blessed Day"), Karen Ewald's "Paa vei til Palæstina" ("On the Way to Palestine"), Franz von Jessen's "Katja" (a story from the Russian), and Sophus Bauditz's "Den gamle kro" ("The Old Inn").

For some years Prof. Karl Larsen has been compiling diaries and letters of Danish emigrants. Of great interest are those which he has included in his recent work, "De der tog hjemmefra" ("Those Who Left Home"). The accounts of the experiences of common men and women in strange countries far from home have a thrilling stamp of reality. Most of the documents date from the latter part of the last century. They are written chiefly by farmers and artisans and give an excellent picture of the various and variable conditions which Danish emigrants meet with. The work has run to two volumes so far, but Professor Larsen has collected about 8,200 diaries and letters, and intends to continue printing the most characteristic. Proof of the interest which this new venture in literature has stirred up may be found in the fact that the sociey of Norwegians the world over, Nordmandsforbundet, plans shortly to set on foot a similar enterprise, hoping thus to gather trustworthy materials for a history of Norwegian emigration.

ARNE KILDAL.

NEWS FOR BIBLIOPHILES.

Those of our grandfathers who bought books instead of writing them may not have squirmed at the prices Scott demanded for his poems, but they had good reason to complain of his greed in the matter of novels, for beyond question it was Sir Walter Scott who started that terrible incubus of the three-volume novel at thirty-one-and-six—an incubus which rode the British public for some seventy years, and made the fortune of Mudie and others who started

circulating libraries (although it was these very libraries which finally laid the spectre).

The three-volume novel, to be sure, was no novelty in Scott's day; there were many in four volumes, not a few in five and six—nice little twelvemos that you could easily slip into your coat pocket or travelling bag. (I am not speaking now of saurians like "Clarissa," in eight volumes, though the first edition sold at three shillings a volume). "The Vicar of Wakefield" (1766) appeared in two twelvemo volumes at three shillings each; "Evelina" (1778) was in three volumes at three shillings each, and the sale of 2,300 copies encouraged Miss Burney to expand "Cecilia" (1782) to five volumes, still at three shillings a volume; and the sale of 2,000 copies of that novel in three months led to hoisting the price of "Camilla" (1796), also in five volumes, to one guinea. Even at that price it found 3,500 purchasers in three months.

Between 1803 and the appearance of "Waverley" in 1814, out of some 420 novels of from three to six volumes each, nearly three-fifths were in three volumes at from three to six shillings a volume; a very few brought seven shillings, or a guinea complete. In those years, however, I have come upon just one novel which sold at the rate of ten-and-six a volume, and that was a four-volume translation of "Gil Blas" (1807), at two guineas for the set.

"Waverley" appeared in July, 1814, at a guinea for the three volumes—the very highest market price. Nevertheless, Scott's publishers sold the first thousand copies of this anonymous novel in five weeks, four thousand more that year, and printed a sixth thousand in January, 1815. Only one other three-volume novel in 1814 sold for a guinea—Lady Morgan's "O'Donnell." In 1815, Scott let "Guy Mannering" go at a guinea, but with the "Antiquary" in 1816 he raised the price to twenty-four shillings, although the customary price that year as before was fifteen or eighteen shillings. Four novels in that year's list ("Emma" was one of them) crept up to a guinea, but only one other—Lady Caroline Lamb's "Glenarvon"—was twenty-four shillings.

For a little while Scott was content with eight shillings a volume, though he expanded his "Tales of My Landlord" into four-volume series. In 1820, he raised the three volumes of "Ivanhoe" to thirty shillings. No other novel of that year (even of four or five volumes) sold for thirty shillings; but late in the year Mrs. MacNally, "daughter of the late Rev. R. Edgeworth, of Lissard, Ireland," issued a three-volume novel, "Eccentricity," at the queer price of thirty-one shillings. Scott's other novels in 1820—the "Monastery" and the "Abbot"—fell back to twenty-four shillings, but in 1821, "Kenilworth" rose to 31s. 6d., and is not merely the only one of its year, but the first one I have found. By this time, three-volume novels were often twenty-one or twenty-four shillings, but Scott thereafter stuck to 10s. 6d. a volume, and when in 1823 "Peveril of the Peak" broke the record for four-volume novels by selling for two guineas, the *Monthly Review* starred the price and added this footnote: "We cannot omit to advert to the high price set on these volumes. The encouragement of the public ought not to be thus *fined*." In that year only three novels—one of them Lockhart's "Reginald Dalton"—ventured into the market at thirty-one-and-six, and eighteen-shilling novels were more numerous than guinea ones.

The virus had begun to work, however; in 1830, 18 out of 28 three-volume novels brought thirty-one-and-six; in 1835, 53 out of 64; and in 1840, 51 out of 58. Ainsworth, and Lytton, and G. P. R. James, and Mrs. Trollope and her two industrious sons, and a few score other purveyors of entertainment, made their handsome profits, and the public, with some reluctance, paid the bills.

On June 1, 1829, there began a new edition of the Waverley novels in forty monthly volumes of four hundred pages at five shillings each in cloth, which meant that for the first time—after fifteen years—one could buy "Waverley" for as little as ten shillings. (About this time, too, the poems appeared in neat volumes at only nine shillings each!) In 1842, the Waverley novels finally got within reach of all but the most impecunious, for the owners of the copyrights began three separate editions, one in handsomely illustrated volumes at twenty-eight shillings; another in twenty-five monthly volumes at only four shillings, each volume containing a complete novel or novels; and a People's Edition in weekly numbers or monthly parts, the parts at nine pence, the complete novels at two shillings each. In 1868, George Eliot's publishers began a cheap edition of her novels at three-and-six, but we find her complaining in her letters that this edition did not sell very well, although the high-priced ones had sold amazingly.

There were, of course, many other cheap series, such as the Parlour Library, the Shilling Library (composed largely of foreign fiction), and the Travellers' Library; but they were all alike in being invariably reprints. In the fifty years after Kenilworth I have come upon just one publisher, prominent enough to command the assistance of reputable authors, who made any attempt to issue new novels at a reasonable price. On January 1, 1833, Smith & Elder began a Library of Original Romance, composed of "Original Works of Fiction by Writers of the First Class, at six shillings each, and each contained in one volume equal to two of the usual size." The first year's output, however, consisted of only nine novels by Banim, Leitch Ritchie, Andrew Picken, Galt, Mrs. O'Neill, James Baillie Fraser, and one or two others even less known to readers of to-day. That was a lean year for English fiction; "Writers of the First Class" were perhaps reluctant to market their books at "cut prices"; —at any rate, Messrs. Smith & Elder gradually dropped the "original" part of their scheme, and continued to publish notable fiction at the usual figure. "Jane Eyre," for example, a first novel by an unknown author, appeared in the customary three volumes at thirty-one-and-six; Mrs. Gaskell's "Mary Barton," however, another first novel, came out timidly in two volumes at eighteen shillings; so did "Hypatia," but "Westward Ho!" more certain of its audience, was in three volumes at the conventional price.

Finally—at least, I have not come upon instances in the meantime—on November 11, 1871, the *Saturday Review* was moved to remark upon the three-volume novel as follows:

> Many monstrous anomalies flourish without remark until chance consigns them to the rubbish room of history; then, for the first time, they turn to useful purpose by satisfying future generations as to the creditable advances men make on the intelligence of their fathers. Surely the day must come, and come speedily, when the present standard price of novels will strike common sense from the ludicrous point of view. If our children ridicule us for having tolerated a guinea and a half as the regulation price inevitably ticketed on each new-born work of fiction, who shall blame them? . . . By exploding the tradition that makes three volumes an inexorable conventionality, we should relieve many a wretched author from the bed of Procrustes that cramps him and tortures us. . . .

The protest makes rather too much of the Procrustean effects of the three-volume novel (to-day we sometimes hear readers regret that we have lost the leisurely spaciousness of the old form!), for even Anthony Trollope did not try to make his novels of uniform length; but otherwise it is sensible and concrete in its suggestions. A fortnight later the *Times* took up the question and declared that "the three-volume system has become an abomination and a curse." Nevertheless, only one publisher seems to have made any attempt to cure the evil. This man was Samuel Tinsley, who shortly thereafter began a new series of original novels at four shillings, a series which he advertised industriously, but —he continued to publish the regular three-volume novel at the old price, and before a year was out seems quietly to have dropped the four-shilling series.

Another source of dissatisfaction with the price of fiction was that as a rule it was out of proportion to the prices of other books, especially poetry. An exception was the holiday trade; for many decades Christmas books of all sorts were a guinea, whether the book in question was a brand new Christmas story by Dickens or Thackeray, by G. P. R. James, or Wilkie Collins, or a "Book of Beauty" edited by the Countess of Blessington and lavishly illustrated. There were, of course, a few shameless attempts to capitalize public interest. In 1813-14, some London publisher brought out a four-volume edition of Mme. de Staël's "Germany" at two guineas—but the book had been suppressed in Paris, and at that particular time England was interested in anything of which Bonaparte did not approve. In January, 1828, Leigh Hunt's "Lord Byron and Some of His Contemporaries" was issued in one volume at three guineas, and in January, 1830, the first volume of Moore's "Life of Byron" at two guineas. There were, too, a few instances in which books priced to bring fair returns on moderate sales sold rapidly in spite of price. One of these was Dean Stanley's "Life of Arnold" (1844), in two volumes, at twenty-four shillings, of which four editions sold in five months. Another was the first volume of Forster's "Life of Dickens" (1871), at twelve shillings, which appeared on December 4, and of which the publishers sold nine editions that month! Still another was Canon Farrar's "Life of Christ" (1874), in two volumes, at twenty-four shillings, which appeared on May 14, and was in its eleventh edition before the end of the year. The "Origin of Species" was fourteen shillings; Forster's "Oliver Goldsmith," Creasy's "Fifteen Decisive Battles," and the "Seven Lamps of Architecture" were a guinea each; and

Macaulay's "History of England" was sixteen shillings a volume. But the instances just cited were exceptional.

As a result of the pressure now novels began to appear at six shillings, and a good many, like Mrs. Gaskell's "North and South" (1855), in the compromise form of two volumes at a guinea, and at last, after some years of waning popularity, the three-volume guinea-and-a-half novel came to a rather sudden end. This was hastened by the determination of the circulating libraries not to pay at so high a rate for the three-volume novels as for the others. A scrutiny of the book-lists of the *Athenæum* will show how rapidly the end came. In 1891, 1892, 1893, and the first six months of 1894, the *Athenæum* listed 864 novels at six shillings or more; of these two-fifths were ten-and-six a volume (almost one-third of these were in two volumes at a guinea), and a little more than half were in one volume at six shillings. In the second half of 1894, there were only twelve in three volumes at thirty-one-and-six, eleven in two volumes at a guinea, and 128 (more than three-fourths) in one volume at six shillings. (In this half-year came the last three-volume novel to have a notable sale—"Trilby," published about September 20. I do not know the size of the editions, but the seventh was ready on December 8, and was followed in June, 1895, by the "eighth and cheaper edition" at six shillings.) In the first six months of 1895, nearly nine-tenths of the novels were in one volume at six shillings, and not one at ten-and-six a volume. In the second half of 1895 there was just one at thirty-one-and-six, Miss Braddon's "Sons of Fire"—the latest one I have found.

EDWARD PAYSON MORTON.

Correspondence

"OBSESSIONS OF THE SPECIALIST."

TO THE EDITOR OF THE NATION:

SIR: If the writer of the editorial article in your issue of March 20, "Obsessions of the Specialist," had taken the trouble to read, I will not say Dr. Davenport's book, but the single paragraph of it from which he garbles his quotation, he should have seen that Dr. Davenport, whatever he may think, certainly did not express the opinion for which your writer takes him to task. Dr. Davenport is writing of biologic progress, not of social or economic advance; and so far is he from uttering any opinion that can be called "reckless" that he is probably well within the general opinion of the scientific world. Most zoölogists, at least, would probably agree that in America and in Western Europe "human progress," in Dr. Davenport's sense, has already stopped.

My protest, however, is against a slightly different aspect of the article in question. Dr. Davenport may be right, or he may not be. But, right or wrong, he is the one man in America, and one of the two or three in the world, who knows the evidence in the matter. Yet your writer wantonly goes out of his way to hold him up to scorn, lumps him in with "sociologists" and "uplifters," merely because he himself does not happen to agree with an opinion concerning which he can hardly have any first-hand information whatever.

Understand, I am not defending Dr. Davenport's opinion—I mean the opinion that he actually did express. I merely point out that he is an able and learned man, holding a high place in the scientific world, who is speaking on a topic to which he has devoted virtually his entire professional life.

When the *Nation* does this sort of thing, is it any wonder that the public is all at sea, not knowing whom to trust?

E. T. BREWSTER.

Andover, March 22.

[Whether our quotation was garbled or not, the reader may judge for himself. What we said was this:

> In the opening paragraph of his [Dr. Davenport's] book on "Heredity in Relation to Eugenics," after stating that the laws of improvement of racehorses hold for man, he declares: "Unless people accept this simple truth, and let it influence marriage selection, human progress will cease."

The whole paragraph in the book is as follows:

> Eugenics is the science of the improvement of the human race by better breeding, or, as the late Sir Francis Galton expressed it: "The science which deals with all influences that improve the inborn qualities of a race." The eugenical standpoint is that of the agriculturalist who, while recognizing the value of culture, believes that permanent advance is to be made only by securing the best "blood." Man is an organism—an animal; and the laws of improvement of corn and of racehorses hold true for him also. Unless people accept this simple truth and let it influence marriage selection, human progress will cease.

What Dr. Davenport may have meant by the phrase "human progress," we cannot say. But there is no general agreement, either among men of science or in the world at large, that human progress in the sense of "biologic progress" is now going on, or has taken place, in general, in historic times. Our correspondent himself says that, in the opinion of zoölogists, such progress, in America and in Western Europe, "has already stopped." It is not of a thing that has already stopped, or that many think has not been taking place for ages, but of a thing which, by common consent, is regarded as going on, that one must be understood to speak when he utters a solemn warning that it "will cease" unless we take certain steps. The fact that the book is devoted to the examination of heredity from a biological standpoint has absolutely nothing to do with the case. The opening paragraph is not a summary of the contents of the book, but a declaration of the importance to human beings of the matter with which it is engaged. For that importance, almost every reader must understand the claim to be made that upon the adoption of eugenics as a guide to marriage depends the continuance of human progress, in the sense in which those words, used thousands of times every day, are understood by all mankind.

We would not detract an iota from the merits of Dr. Davenport's work in the field of biological research. If, by using him as an illustration, we have associated him with "sociologists" and "uplifters," it is because, when dealing with the actual problems of human life, he has sinned in precisely the way that is characteristic of irresponsible "sociologists" and "uplifters." It is not as a man of science, but simply as a man like another, that he speaks when he takes up such a question as the relation between the low birth-rate among good stocks and the cost of supporting the imbecile and insane. And we have seldom, even in the literature of the "uplifters," come across a statement more reckless, or wider of the mark, than his assertions on this subject. The more admirable his scientific work, the more his obsession in this matter gives point to our moral.—ED. NATION.]

GETTING READY.

TO THE EDITOR OF THE NATION:

SIR: I once found it desirable to track a manuscript catalogued years before in the library of Sir Walter at Abbotsford. The usual repositories of such treasure did not have it; ingenuity was taxed to find it. Unsuccessful, I set to work upon other accessible and therefore less fascinating material.

One gloomy afternoon in the basement of the Advocates' Library, perfunctorily noting this spelling and that handwriting, I was easily disengaged by the entrance of a venerable gentleman in a rusty silk hat and a most negligently worn overcoat. I was at the end of the only table available for scribes, and I am still conscious of my keen expectation as he came to the other end of the table, got out of his overcoat, and carefully entrusted his hat to wide safety in the middle of the table. At the keeper's desk he got a large flat parcel wrapped in newspaper. He gravely seated himself in benevolent disinterestedness and opened the parcel, the wrappings of which stood up and cut off my view. The old gentleman soon fell to writing, and I went on with my task. A wee bit of luncheon broke the short Scotch day, and with the closing of the library the paper parcel was returned to the keeper.

For a fortnight the old gentleman worked within the exclusive limits of his newspaper parcel, the wrappings of which—it was a copy of the *Scotsman*—never once unbent to disclose the nature of the text within. Naturally, I guessed and surmised. It might be a collection of Jacobite memoirs, the letters of Cecil to James, or the Gowrie documents. It was no affair of mine, and I would do well to cloak my Yankee curiosity and attend to the matter in hand.

Yet it was not easy to do this. The library was a solitary place. The old gentleman's immobility and the squeak of his

quill pen gave me the fidgets. Long dark passages led away from the only open door showing cases stocked with brown volumes and dull red behind stout wire screens. A bust of Scott I knew was in the corner to the right; it was natural to wonder who had made the bust, and in going over to it I could not help seeing what the old gentleman had in his parcel.

It was a manuscript as yellow with age as any manuscript should be. It had good black writing in it, showing that it was no upstart after the invention of printing—and bad handwriting. That was as much as a glance of the eye could gather, but quite enough for me to resolve to outstay the old gentleman that evening and find out what the manuscript was.

At half-past three it was too dark to write, the parcel was in the keeper's desk, and I was alone. As I handed him my books, I seemed to detect, after a month's formal pleasantries, a "speiring" of kindliness in the keeper's face. Acting upon it, I asked what book the old gentleman was copying. "It's fifteenth century—several things in it." "Scotch?" "I think so. Really, I haven't examined it."

He then allowed me to open the parcel. It was the manuscript I had hunted in vain!

The rare moments granted me for examination and transcript in the days following are in no sense related to the importance or unimportance of the substance of that manuscript. I made some use of it—what use I have even now forgotten. Yet the finding thus accidentally of what I had not discovered after methodical search I shall never forget. The incident was actually more treasurable than the work for which it was a mere detail of preparation.

Lameness of diction prompts me to call getting ready for a piece of work more fun than the completion of that work. In getting ready we are responsible to no one; the public and judges are unaware. Committing entries in archives to type is commonplace compared with finding those entries. Planning a new house is more diverting than owning it. The process of finishing a picture is painful, whereas the studies and composition of it are alive with novelty. One feels that the best of Turner is essentially unfinished; he has preserved the marks of getting ready for a great picture. The eye single to final results may be very blind; the sketch may be greater than the picture. Certainly, a fondness for preparation may protect a man from achieving results neither desirable nor necessary. And something may still be said for a view of life which regards it as a means of preparation, of getting ready, rather than as an accomplishment.

W. P. Reeves.

Gambier, O., March 26.

RECENT FUR SEAL LEGISLATION.

To the Editor of The Nation:

Sir: Among the commendable acts of the Sixty-second Congress, just closed, was the prompt ratification of the treaty of July 7, 1911, in which Great Britain, Japan, and Russia joined with the United States in suspending for fifteen years the pelagic hunting of fur seals, the destructive agency which, through the slaughter of gravid and nursing females, has brought the herd in thirty years down from 2,500,000 animals to 215,000.

It became the duty of the Sixty-second Congress in due time to enact a law giving effect to this treaty. This was accomplished by the Sulzer bill, approved August 24, 1912. To this bill was attached an amendment suspending land sealing also. The House provision was for one year only; that of the Senate, for ten years. The conference determined the period finally at five years. The movement resulting in this amendment originally suggested a period of fifteen years, the full period of the treaty.

The treaty did not interfere with land sealing, because for the past sixteen years pelagic sealing has been looked upon as the sole cause of the herd's decline and threatened destruction. As land sealing is confined to the superfluous males (the fur seal is polygamous), it is attended with no damage to the herd. Furthermore, the suspension of pelagic sealing provided for in the treaty was directly contingent upon the continuance of land sealing, as the United States and Russia agreed to share their land catches of seals with Great Britain and Japan, whose citizens gave up the pelagic industry. The suspension of land sealing is, therefore, a violation of our treaty obligations. The action has immediately bred dissatisfaction. Abrogation of the treaty would mean the resumption of pelagic sealing and the ultimate destruction of the herd.

While the possible breaking of the treaty is the most serious objection to the amendment, it is not the only one. It involves the waste of a minimum of $2,500,000 worth of sealskins in the next fifteen years, and the animals bearing these skins will grow up as fighting, useless bulls to be a menace to the mother seals and their helpless young. Furthermore, an important race of fur-bearing animals, the blue foxes, which, through a century of habit, are dependent upon the killing fields for their winter food, is left to starve or destroy itself, the strong eating the weak.

In keeping with this amendment is the final act of the Sixty-second Congress touching the seals. Having suspended land sealing, it held that the force of Government agents, which has been maintained ever since we acquired the islands from Russia, in 1867, was unnecessary, and the item for their salaries was cut out of the appropriation bills, a single caretaker being left for each island. This act would save $25,000 a year for five years, a definite, if modest, offset to the $2,500,000 loss which the suspension involves. The indefensible nature of this act is apparent when we reflect that there are 300 dependent natives on the islands to be controlled, fed, and clothed as wards of the Government. The blue fox herd and the recently installed reindeer herd must be cared for. Foodskins to the value of $80,000 to $150,000 must be cured and shipped, and the whole expensive sealing equipment, now the property of the Government, must have intelligent attention. In the judgment of the Sixty-second Congress all this life and property, at the most critical period in the history of the fur seal industry, should be virtually abandoned to its own devices for five years.

Fortunately, the particular appropriation bill to which this item belongs failed of passage, and the Sixty-third Congress will have an opportunity to right this last mistake. It will do well, also, with as little delay as possible, to repeal the Hitchcock amendment to the law of August 24, suspending land sealing.

George Archibald Clark.

Stanford University, March 7.

SENATOR HOLLIS.

To the Editor of The Nation:

Sir: In your editorial of March 20 in praise of the newly elected Senator from New Hampshire, you fail to mention the fact that one of his best-remembered campaigns was in support of Mr. Bryan's scheme for free silver. Mr. Hollis lauded this, not merely as economically sound, but as in every way desirable as a national policy. Why overlook this argument for the prospective usefulness of Mr. Hollis as a loyal supporter of the chief of Mr. Wilson's Cabinet? A. T. Dudley.

Exeter, N. H., March 21.

THE OLD DOG.

To the Editor of The Nation:

Sir: In "As You Like It," I, i, occur these words, which, I believe, have not been annotated:

> Oliver: Get you with him, you old dog.
> Adam: Is "old dog" my reward? Most true, I have lost my teeth in your service.

The sense of the passage is perfectly obvious, but the allusion to the fable of "The Old Dog and His Thankless Master" has been passed over. The gist of the fable is this: An old dog, which in his prime has been held in high esteem by his master for his valuable services, now that his teeth are well-nigh gone and his spirit abated, lets the hare slip from his mouth in the hunt and escape. The master, enraged, falls upon the dog and abuses him; whereupon the dog laments and begs his master to remember past benefits.

The fable was certainly known to Shakespeare in some form. It occurs in the "Romulus" (II, 7, "Venator et Canis"), and in virtually every fable collection current in his day. Relative to the use of fables in schools, which fixed a knowledge of them in the mind of every lad, I hope to have something later to add to the material already available. It is sufficient here to emphasize the fact that fable lore was taken in by the Elizabethan youth with his milk, that fable and emblem books often assisted by grotesque illustration left vivid images in his mind, and that fables were translated by him from Latin into English and from English into Latin at a time when he was learning to use his own language. It is no wonder that the figurative language of the Elizabethans shows such a dependence upon this common lore.

M. Ellwood Smith.

Syracuse University, March 27.

"THE TWA DOGS."

To the Editor of The Nation:

Sir: In the Cambridge edition of Burns's poems the origin of "The Twa Dogs" is assigned to the fact that some unknown person killed the poet's favorite dog Luath; that thereupon he first thought of writing some "Stanzas to the Memory of a Quadruped Friend," but abandoned this project

for the tale as it now stands. On February 17, 1786, he wrote to his friend, John Richmond, that he had completed his "poem on the dogs." A translation of Cervantes's "A Dialogue between Scipio and Berganza, two Dogs belonging to the City of Toledo, giving an Account of their Lives and Adventures, with their Reflections on the Lives, Humours, and Employments of the Masters they lived with," appeared in the year 1767. The *Monthly Review*, for May, 1767, has not a very high opinion of these dialogues, "notwithstanding they are here and there distinguished by strokes of humour. . . . Scipio and Berganza are critics, moralists, and philosophers, and make many keen remarks on the lives and manners of men." It would be a curious fact to find Burns deriving his idea for "The Twa Dogs" from the great Spanish master of satire. I do not remember to have seen this possible origin suggested by any commentators upon Burns.

Literature

FRENCH IDEALISM.

Cardinal Manning; The Decay of Idealism in France; The Institute of France. By J. E. C. Bodley. New York: Longmans, Green & Co. $3.

In this *arriviste* age, when professors and publicists are prone to put into print hasty lectures which a fortnight after being reported in the papers as news are advertised in the publishers' circulars as literature, it is singularly refreshing to come across such well-considered and gracefully expressed thoughts as Mr Bodley's. He believes that it is better to travel comfortably than to arrive; that the swiftly flowing pen produces prose swift to perish. When he crossed the Channel twenty-three years ago to begin work on his life-task, on "France," he was privileged to taste the flavor of conversation in Madame Taine's salon. He also became intimately acquainted with many men of the older, more idealistic generation in France, whose disappearance ne recalls with reminiscent regret. He naturally cherishes the belief that proficiency in the "bien écouter, et bien répondre," which La Rochefoucauld regarded as the perfection of conversation, is one of the first of the fine arts. These three essays give evidence of Mr. Bodley's belief put into practice.

The sympathetic sketch of Cardinal Manning owes its existence to the fact that many years ago, when a Royal Commission on the Housing of the Poor was appointed, Mr. Bodley was its secretary and Cardinal Manning its moving spirit. "As the leading members of the Commission were too eminent to have time for drafting the report themselves," the task fell to the youthful secretary, assisted by the kindly advice of the aged bishop. Out of this common work for humanity grew a life-long intimacy. "Whenever you are in London and not dining out, come to me for a talk at half-past eight," Manning used to say.

So many a night saw me at Archbishop's house, where we talked till nearly eleven, when Newman would arrive to put me out. Newman, it should be explained, was Manning's butler. The malicious said he had been chosen for this name of his because Manning liked to order about a person called Newman—but that was pure legend. . . . The only object of piety discernible in the dim lamp-light was a fine malachite crucifix on the mantelpiece, which was given to him in Rome soon after his conversion and had always stood near him for twenty-seven years—so said his executor, Dr. Butler, who sent it to me when the Cardinal died. Facing it Manning used to sit, in a low armchair. With his faded red skull-cap cocked over his eyebrow he looked like an old warrior of the days of his boyhood, when men of war were often as clean shaven as priests. The best nights were those when he fought his old battles again. . . . Of the loneliness of his last years there is no doubt, in spite of the devotion of the kind priests of his household, and in spite of the numerous callers of all types, whom he received perhaps too accessibly.

Most interesting, perhaps, being from one who is a Protestant and at the same time an intimate friend, are Mr. Bodley's statements concerning the relations of Manning and Newman. He cannot justly understand "why Manning's hostility to Newman should be imputed a sin, while Newman's hostility to Manning is held to be a virtue." Manning, who had helped impose the dogma of Papal Infallibility upon the Vatican Council, held to the opinion that Newman was not in doctrine a "good Catholic." Mr. Bodley recalls that this opinion was also shared by another eminent Catholic, Lord Acton, and finds a confirmation of its justness in the fact that in recent days the Modernists have claimed Newman as their predecessor and supported their contentions with many a passage from his writings. Manning had hoped that Mr. Bodley might be his biographer; the charm and knowledge with which this sketch is written makes us keenly regret that Mr. Bodley's other literary work and ill-health made the realization of this hope impossible.

In the second essay, on "The Decay of Idealism in France," Mr. Bodley analyzes the "practical" idealism which was such a political force in France from Rousseau to the Franco-Prussian War. Rousseau's idealism, combined with the tradition-destroying acid of the philosophers, became the dynamic force which made the French Revolution. The optimism of the revolutionists, who believed that they were inaugurating a new era in human history, and the idea of "La Patrie en Danger," carried the Revolution over the European Continent, and assisted Bonaparte into the saddle. But Napoleon had no liking for idealists; one of his first tasks was to remove from the Institute and the Government all the idealogues whose views on liberty did not accord with his own. After the fall of Napoleon philosophers and statesmen who idealized the British Constitution were allowed to form for France a constitutional monarchy. Under Louis Philippe, in contrast to the crass materialism of the money-making *bourgeoisie*, Michelet was turning the history of France into a symbolical poem; Fourier and St. Simon were developing idealistic schemes of Utopian socialism; the "Napoleonic Idea" was seizing the popular imagination; and, finally, Lamartine's "Girondins," glorifying the idea of the great Revolution, appeared in 1847. Almost instantly the unpopular July Monarchy was swept out of existence by the combined force of a host of "practical" idealists. Napoleon III himself was an idealist, but each of his ill-calculated attempts to promote the idea of nationality returned like a boomerang upon his own unfortunate head. As the Second Empire grew unpopular, the ideal of a republic seemed again to have a magic power, "capable of elevating the moral sense and of healing all the ills of humanity." M. Lavisse has related how, in the days before 1870, youthful republican idealists used to import from Belgium contraband copies of "Les Châtiments" enclosed in plaster busts of Napoleon III, whose head they broke to the accompaniment of Victor Hugo's stanzas.

With the disaster of the Franco-Prussian War and the establishment of the Third Republic begins, thinks Mr. Bodley, the decay of idealism in France. He reads, for instance, the long debates in the Chamber of Deputies upon the Separation of Church and State, and finds nothing but sordid financial arguments —no great phrases which sum up a political idea, and no appeal to ideals. When Zola's remains were being transferred to the Panthéon, an anti-Semite fired a shot at Dreyfus, who was present. When tried at the Assizes of the Seine, the defendant declared that he had no hatred for Dreyfus, and had not even aimed at him. "My gesture was symbolic," he cried, "and I fired the shot at an idea." Whereupon the Parisian jury, in Mr. Bodley's words, "always prone to excessive mercy when judging attacks upon human life where any element of sentiment has provoked the crime, acquitted this singular symbolist as a farewell salute to the disappearing idealism of France."

For this decay Mr. Bodley finds many causes. The humiliating national defeat in 1870 naturally caused a widespread pessimism, and pessimism is incompatible with idealism. The Third Republic itself was another cause. The republican idealists who had lived in hope under the Second Empire soon found to their sorrow that in a repub-

lic governed by republicans the millennium did not come after all; they were disillusioned, because they had optimistically dreamed of having a government which has never existed outside the realm of fancy. For the first time since the idealists of the eighteenth century began to weaken ancient tradition and undermine the ancient monarchy, their successors had no plausible substitute to propose for the existing régime. As evidences, and in part as causes also, of the decay of idealism, Mr. Bodley further cites the disappearance of good conversation, of salons like Mme. Taine's, and of the provincial bookshop which offered a local centre for the fostering of traditions and ideals. Greater than all these causes, however, is the effect of the mechanical inventions of the past half-century.

While conceding that there is much truth in many of the author's observations, his sensibility seems to us to have been unduly distressed by the more superficial and obvious effects of the mechanical age upon the gilded youth who appear to him to be obliterating the distinctiveness of nations, so that "no joys of surprise will await the traveller of the future." But the gilded youth, though so very much in evidence, are, after all, an infinitesimal part of the great mass of the nation. Much more important would be a consideration of the effects of the mechanical age upon the thought and idealism (if any be possible) of swarms of operatives in densely crowded factories, of herds of clerks moved swiftly by subway and suburban trains into a vortex every morning and vomited forth by the same mechanical means every evening, or of peasants sitting on the harvester instead of sweating with the scythe. That France is so barren of idealism to-day as the author seems to suggest, we cannot admit.

In the third essay Mr. Bodley sketches the history, and explains the interesting characteristics, of the rich corporation which, aside from the Théâtre Français, is the only institution which succeeds in preserving the great literary traditions of pre-revolutionary France. With appropriate phrases, like those bestowed upon the recipients of honorary degrees in this country, and with pleasant and complacent reminiscence, he passes in review the *académiciens* of the past.

CURRENT FICTION.

One Woman's Life. By Robert Herrick. New York: The Macmillan Co.

Why is it that Mr. Herrick, who is so earnest, who studies the human scene so gravely, and puts so much sincere effort into his interpretation of it, never quite does a big thing? His later novels have shown decided technical improvement. He no longer dissipates the reader's attention by the juxtaposition of little-related groups of human characters, the multiplication upon his canvas of figures lacking not in reality, but in relevance. In "One Woman's Life," as in "The Healer," a straightforward story is told. Milly Ridge makes her entrance in the opening sentence, and there is not a page of the volume upon which her name does not appear. From beginning to end the attention of the reader is focused upon her single figure.

It cannot be said that she does not deserve attention. She deserves it for her importance as a type, if for nothing else. To be sure, she has been often portrayed before—by Mr. Herrick himself among others. She is the American girl who seems to have been born with a passion for getting in with "the best people" and for doing "the proper thing." To the satisfaction of that passion she is ready to sacrifice everything else. Because it enables her to satisfy it, her bodily beauty becomes an object of worship to her, and dress a part of the ritual. Beyond this is an instinct for feline comfort, for the softest places, moral and intellectual. A husband is an accessory, children an impertinence: the only thing worth real effort is the game of "society," the pursuit of persons and places that are acknowledged to be really "nice."

The Sister Carrie of Mr. Dreiser embodied this type in more rudimentary form. Of as respectable origin as Milly Ridge, she lacked that young female's extraordinary instinct for social nicety and social advancement. Success and happiness were represented to her fancy by luxury rather than by the entry into any circle. But her moral helplessness in the face of her desire, such as it was, was on Milly's plane. That she happened to "fall," while Milly did not, was due to circumstance rather than principle; and she is by far the more human and lovable of the two. The truth is, Mr. Herrick so scorns his worldly type of woman, is so obsessed by the scorn of her, that he cannot conceal his impatience, and permits himself to become a satirist instead of an interpreter. It is she who, with her petty exactions, her worship of convention, causes "the Healer" to prostitute his gift. It is she who under a dozen names dominates the entire group of novels thus far put forth by Mr. Herrick. And in this novelist's treatment of her there is always something a little enervated, a little plaintive. Here she is, he seems to say. There is nothing to plead for her—or to do about her. She is Woman.

It is this quality of plaintiveness, of languor, we think, which marks the limitation of Mr. Herrick's work. There is no robust and hearty philosophy of life behind it. No sweet waters of faith and courage flow beneath it. It is the work of a man disheartened, distrait, with an eye to see with almost painful clearness many of the phenomena of life, but never quite to see life whole. Aspiration is here, but not for fulfilment. Milly has her faint dreams of a worthy happiness, a perfect love, but "the real, right thing" of her vision is not for her. Getting on in life is, after all, a practical matter. Beauty and charm are the tools she has to work with. She lacks the control necessary to her chosen task. She is betrothed to a very rich man whom she despises; but she throws him over in a fit of temper at his petty frugalities, not from shame of the sordid bargain. Her marriage with a poor young artist is surrounded with a mist of emotion—through which she secretly sees him rich and famous; and when his sincere work proves unprofitable, she encourages him to kill himself with pot-boiling, body and soul, so that she may have "what everybody has." Certain purifying fires she does go through thereafter, and we leave her at the moment of a second and very different marriage with some dim hope of her future. But it remains dim: her creator sees to that. For it is with something very like a sneer that he seems to pen his final comment: "Milly was settled at last, and, let us assume, 'lived happily ever after.'" That, of course, is precisely what Mr. Herrick does not wish anybody, ever, to assume.

My Little Sister. By Elizabeth Robins. New York: Dodd, Mead & Co.

Issued under a different title in England, and published in condensed form in a popular American magazine, this story has roused a good deal of comment. The theme is an ancient one: the luring of an innocent girl into a house of shame from which only death releases her. The effectiveness of its treatment here depends largely on the sharp and studied contrast between the carefully sheltered youth and beauty of the victim, and her sudden and brutal sacrifice to the casual needs of a male world. Two sisters are brought up in the country by their widowed mother. She is a beautiful woman, and has once passed through a moment of dreadful fear which has left her without trust in any man. The sisters reach the verge of womanhood in safety under an eye of almost anguished watchfulness. But only one hour of mischance is needed, and for this the treachery of a servant paves the way. Journeying alone to London, they are met by a woman made up to represent the aunt they are to visit, whom they know only by their photograph. What follows is described with an effect of realism sufficient for the author's purpose, which is to distress and harrow the reader. The barred and guarded house in which the girls find themselves entrapped is "one of the most infamous resorts in Europe."

Their captor is a "gray hawk" with yellow eyes, who regards them merely as so much food for the evil beasts who are her patrons. A beast relents, and helps one of the sisters to escape. But she has failed to notice where the house is, and the other sister is never seen again.

Such are the facts of the story. They are undoubtedly related to facts which are actual or potential in the life of any great city. Probably we all have a more or less vague sense of personal acquaintance with incidents of the sort—recall hearing some one say that he knew So-and-So, whose sister, etc. And it is probably true that in most of us these stories, appalling as they are, inspire a mild and disinterested sort of horror. Such a thing, we feel, is never likely to happen to our sisters. We file it away, placidly enough, among the unspeakable outrages against the possibility of which civilization has no absolute safeguard. Mrs. Robins does not wish us to file it away. She wishes us to brand it upon our foreheads as a disgrace no longer to be concealed or borne with equanimity. To gain our attention she uses a voice shrill and emotional to the point of hysteria. She does distress and harrow her readers—if that is worth while.

American Nobility. By Pierre de Coulevain. New York: E. P. Dutton & Co.

A study of the problems involved in international marriage by the author of "On the Branch" might conceivably be a contribution worth while. In the present story, which first appeared some years ago, the parties to the contract are picked with a manifest desire to avoid the charge of exaggeration. The heroine, a charming girl of twenty-one, belongs to a fashionable but dignified old New York family. The hero is a young French marquis whose affairs require that he shall marry great wealth, or else put upon the market his ancestral estate. The meeting is in Paris. If the degree of love felt by the marquis does not quite efface his memory of an impeccable duchess, Annie at least enters into her new life whole-heartedly. But scarcely is the honeymoon at an end before inherent difficulties appear. Annie's insensitiveness to some treasured European tradition, for instance, her blunt misunderstanding of Catholic rites, recalls to the hero's mind, by contrast, the duchess's delicate spirituality, and at length sends him secretly to her arms. It is some years before Annie discovers his infidelity, and meanwhile her bond to her husband has been strengthened by the birth of a child, for whose sake there must be no thought of a separation. The story ends with the three on the point of making a visit to this country — under the circumstances a pleasant prospect for Annie!

The Amateur Gentleman. By Jeffery Farnol. Boston: Little, Brown & Co.

The scene of Mr. Farnol's new romance opens in an English inn owned by a retired prize-fighter. The son, who has unexpectedly come into a great fortune, declares his determination to go up to London and become a gentleman. The father scoffs at the young man, and swears he shall not start on so mad an adventure until he has thrashed him, the ex-pugilist—which the son proceeds, firmly and amicably, to do. The last scene is also at the inn, where we behold the hero with a ministering duchess at his side and a marvellously fair lady at his feet.

Between lies the world Mr. Farnol has evoked from memoirs of the days when the "first gentleman of Europe" was waiting to become the King of Great Britain. The fun and the perils go fast and furious—noblemen and servants, jockies and mad visionaries and forlorn damsels and money-lenders and retired sea-captains are mixed up in a huge kind of play, for which the stakes are heavy, often even life or death. The narrative is a little too long, and particularly drags towards the end; the style, though lively and highly colored, is marred by one or two tricks that become annoying by repetition, but withal the story is diverting, full of invention and dash and honest sentiment. It can be recommended as belonging to the best reading of the day.

THE MAN NAPOLEON.

The Personality of Napoleon. By J. Holland Rose, Litt. D. New York: G. P. Putnam's Sons. $2.50 net.

When a man who knows a great deal about a great subject discloses briefly and charmingly the heart of his subject, his book is likely to be worth reading. This is such a book. When Mr. Rose was invited to give the Lowell Lectures in Boston, a year ago, he evidently did not feel that he was called upon to read a narrative of Napoleon's life of the ordinary chronological sort; for he had already done that at length in his two-volume biography and in brief in the compressed encyclopædia article which displaces J. R. Seeley's biographical sketch in the new edition of the Britannica. Nor did Mr. Rose merely recast material which he had already published. These eight lectures are full of new facts and fresh thoughts.

The first seven lectures on Napoleon the Man, the Jacobin, the Warrior, the Lawgiver, the Emperor, the Thinker, and the World-Ruler, flash before the reader the whole career of the man seen from different points of view. This is the novel part of the book and enables Mr. Rose effectively to point out again and again the constant transformation which Napoleon was undergoing in the course of his life. At Valence the pure idyllic youth of seventeen, with olive cheeks, wan with study, feasted his eyes on the innocent face of a Provençal maiden in the glow of sunrise, when "all our happiness consisted in eating cherries together." At twenty-six he fell in love, stirred by the languorous charms of the beautiful but unworthy Creole. Within a dozen years his love for her was dead, and for reasons of state he contracted another marriage with the Austrian Marie Louise. At St. Helena, forgetting the Provençal cherries and the frenzy of his first passion for Joséphine, he finally pronounced that "love must be the occupation of the idle man, the temporary distraction of the warrior, and the chief peril of the sovereign." In the second lecture Mr. Rose shows him passing through the same kind of transformation in his political thought. Bonaparte entered politics as an ardent disciple of Rousseau and consequently as a Jacobin; he had even defended Rousseau fervently against a Genevese pastor who had protested against the attacks on Christianity contained in the "Contrat Social." Gradually he began to realize that Rousseau wrote with a Swiss canton, not France, in view; that the French Jacobins had committed an unpardonable crime alike against Rousseau and common-sense in their persistent attempt to apply the principles of the "Contrat Social" to a great state like France. He saw the need of a strong government to keep down the royalists and to push the war of conquest in Italy which he had begun to lead. And so, in 1800, visiting the room in which Rousseau died, he exclaimed, "He is a fool, your Rousseau! it is he who has brought us to our present condition." A few minutes later, on visiting Rousseau's tomb in the Isle of Poplars, hard by, he continued, "The future will discover whether it was not better, for the repose of the world, that neither Rousseau nor I had ever been born"—remarkable words which sound the death-knell of Jacobinism in him and suggest the coming Imperialism.

Most interesting, perhaps, is the lecture on Napoleon the Thinker, in which Mr. Rose traces the evolution of the great man's ideas on religion, superstition, Fortune, and his views on Voltaire and Tacitus. He suggests that it was Napoleon's boyhood reading of Plutarch and of the prominent part played by Fortune among the Greeks and Romans, notably in the remarkably lucky career of Timoleon as related by Plutarch, which originally made Napoleon think that he, too, might become Fortune's

minion. In reality he had no faith in Fortuno as Wallenstein had; his dry reason taught him that "man is always free, always master of himself," that "luck consists in always making preparations for every alternative," and that "Providence is on the side of the big battalions." Nevertheless, when the Corsican youth grew up and turned from Plutarch to practical politics, his keen insight into character showed him that the masses believe more or less in the influence of Fortune. Some generals are regarded as lucky and others as unlucky. He saw the advantage of being regarded as one of the lucky ones. Wellington used to say that Napoleon's presence on the battlefield was worth 40,000 men. Therefore, Napoleon deliberately spread the idea that he was Fortune's favorite. He shrewdly conquered Fortune by claiming that she was already on his side. By cool calculation he succeeded in having people regard him as the Man of Destiny, as though he sat up at night viewing the stars and casting horoscopes. He never did anything so foolish. If he sat up very late, it was in order to transact business and complete preparations.

Why did Napoleon fail? So far as any one formula can be assigned to explain such a complex question, Mr. Rose would say, "hardening of the brain." Napoleon had risen to power by his imagination, will, and extraordinary capacity for work and for clear and precise thinking on practical problems. He had acted, as he himself said, "by mere dry calculation." From his Corsican ancestry he had also inherited great impulsiveness and nervous intensity. In his earlier years the "mere dry calculation" of his brain had curbed the impulsiveness of his nature and checked the romantic flight of his fancy. Gradually great success began to impair the inhibitive power of his brain. The passion for the grandiose overmastered the calculating faculties which in early life generally held ambition in leash. He began to feel, as some one has shrewdly remarked of Napoleon III, "condamné d'être brillant." From the mistaken invasion of Spain until the reckless false moves at Waterloo, Mr. Rose traces the weakening of Napoleon's earlier power of cool calculation and the increasing mastery of passion and impulse. Megalomania had caused hardening of the brain.

In Wicklow, West Kerry, The Congested Districts. By J. M. Synge. Boston: John W. Luce & Co. $1.25 net.

These essays, dealing with the peasantry and conditions of life on the western coast of Ireland, have all the charm of Mr. Synge's papers on the Aran Islands, and derive additional value from their shrewd and sympathetic observation of the effect of the various relief measures recently undertaken by the British Government. They are, as might be expected, especially felicitous in their vivid sketches of individual character, in their descriptions of land and sea, their preservation of illuminative domestic detail, and their variety of anecdote.

He draws a striking picture of the vagrants of Wicklow and of the desolation in the hill districts brought about by death and emigration. The cholera played havoc in that region between sixty and seventy years ago, and there were ghastly incidents. An old man told him that, in the general panic, some sufferers were buried alive and that one husband, whose wife had been carried to the dead-house, made his way thither at midnight and found her still living amid forty corpses. He carried her home on his back and she recovered, to be shunned by her neighbors as one returned from the grave. After that, for many years, the population grew thinner and thinner and poorer and poorer. Not only the small farmers and fishers suffered. The country is full of deserted ruins, sole remnants of what, in the eighteenth century, were the luxurious homes of a high-spirited aristocracy. Landlords paid a heavy penalty for their greed and improvidence. Naturally, there is a tragic undertone in most of Mr. Synge's pages, but it is continually brightened by flashes of the comic spirit which is so potent an element in Irish character. There is an admirable illustration of enjoyment under difficulties in his account of a circus performance, in a leaky tent, during a torrential downpour, in West Kerry, and this is followed by a delightful sketch of cottage life in the Great Blasket. Here the simplicity was entirely patriarchal, but the peasant hosts proved that neither happiness nor hospitality was made impossible by the narrowness of their means or their accommodations.

In speaking of the wretchedness in the congested districts, and especially on the Galway seaboard, Mr. Synge remarks that "it is a part of the misfortunes of Ireland that nearly all the characteristics which give color and attractiveness to Irish life are bound up with a social condition which is near to penury." He makes it plain that the model, or modern, cottages erected in certain places by the Congested District Boards, are far less picturesque than many of the miserable hovels which scarcely afford shelter. It is a pity, of course, that artistry must sometimes be sacrificed to material benefit. That the relief boards have done and are doing good work, he freely admits, but he laments that the authorities often fail to consider the natural capacities and traditional occupations of the natives, and put them to uncongenial tasks, such as road-making of doubtful value, instead of encouraging them to develop their ancient industries of kelp-manufacture and boat-building, both of which are profitable. Nor does he believe that the land, in the poorest localities, can be made to support the population by any system of redistribution. But he expresses hope that a general improvement in the situation may be effected by former emigrants who are now beginning to return to their old homes. The book is full of interesting and suggestive matter.

History of Plymouth Plantation, 1620-1647. By William Bradford. In two volumes. Boston: Published for the Massachusetts Historical Society, by Houghton Mifflin Co. $15 net.

The Massachusetts Historical Society has departed from the customary routine of its publications by authorizing the preparation of new editions of the histories of Bradford and Winthrop and by issuing them in a series distinct from the familiar Collections and Proceedings. The new enterprise deserves unstinted praise from scholars and the public alike, both for the wisdom that prompted it and for the skill that has accompanied its execution.

The two sumptuous volumes containing the text of Bradford's "History of Plymouth Plantation" have been prepared by Worthington C. Ford, the editor of the Society's publications, and printed in a manner that is almost faultless by the Riverside Press. The only possible criticism from a typographical point of view concerns the facsimiles of autographs and signatures printed with the text, which are not as sharp as one might wish, a fault due, it may be, to the paper employed. The editor's reproduction of the text seems to be letter-perfect: "William King" is for the first time properly rendered "William Ring," and even Bradford's odd slip, "the Charels-river," previously corrected, is here retained. Mr. Ford states that the history is now printed in its entirety for the first time, but he does not say wherein the edition of 1898, supposedly compared word for word with the facsimile of 1896, is imperfect, and it must be said that a comparison of the two texts discloses no omissions. On the other hand, the defects of the first, or Deane, edition are well known, and the version printed in the "Original Narratives of American History" was rightfully abbreviated. The great value of Mr. Ford's text, however, lies in its readability, as all abbreviations, symbols, and ligatures have been extended, and the text, in all respects save the spelling, has a modern look. Especially noteworthy is the printing of *the* for the form *ye*, which has been ren-

dered so often in the past as if the first letter was *y* instead of an inverted *th*.

More than half the work is taken up with illustrations and footnotes. "Whatever was authentic and of contemporaneous origin," says Mr. Ford, "has been brought into the notes, so as to present as full a picture of the life of the plantation at the time as the available records will permit." The result is an edition built up somewhat after the fashion of Bagster's English Hexapla, one original text being supplemented and illustrated by other original texts. In this case the supplemental matter is drawn from the writings, chiefly printed, of Bradford himself, Winslow, "Mourt," Morton, and Winthrop, and from the Plymouth Records. This plan is of manifest convenience to the student, though we think it likely to prove distracting to the general reader. Intermingled with these quotations are scores of notes written by the editor, explaining, elucidating, and elaborating the text. In general, these notes have been written with learning and good judgment, though inevitably the critic will find opportunity for the exercise of his craft. We would gladly have sacrificed some of the more elementary of the historical explanations for one good account of the business relations between the leaders of the colony and their partners in England. Mr. Ford excuses himself by saying that "it is difficult, if not impossible, to unravel the innermost history of the commercial experience of the Plantation," but the fraud practiced upon the Pilgrims and the devious business methods of Beauchamp and Sherley play too prominent a part in Bradford's story to be passed over without adequate comment. We should have been glad, also, to find explanations of such phrases as "brusht away their coats" (I, p. 233), "given at a clape" (II, p. 130), and "carried into Saly" (II, p. 435), none of which is annotated, though "Saly" is easily identified as Sallee in Morocco. Furthermore, why has Mr. Ford, an expert on documents and their repositories, confounded Her Majesty's State Paper Office with the Public Record Office (I, p. 73, note), and why, even with the evidence of his own facsimiles before him, has he always printed the name of the latter "the British Public Records Office"?

These and numerous other little slips (such as "Barnstable" for Barnstaple in Devonshire, and "P. R. O. America and West Indies, VI," a meaningless reference) are irritating and unexpected in the work of so eminent an editor. But they count for little in comparison with the large amount of accurate and intelligent comment that the work contains. The note on the origin of the story of the plot "between Master Jones and the Dutch to land the Pilgrims in a place other than the Hudsons (*sic*) River" is masterly, while those on the plague of 1621 and the extension of the suffrage in 1634 are informing and helpful. Taking the annotations as a whole, we must admire the range and thoroughness of Mr. Ford's researches.

Our Book of Memories. By Justin McCarthy and R. M. Praed. Boston: Small, Maynard & Co. $4 net.

The friendship of Mrs. Praed and Justin McCarthy was founded at first on literary affinity and was continued on a basis of ever-increasing mutual affection. From Mr. McCarthy, Mrs. Praed received advice, help, literary assistance of all kinds, and was always able to draw unreservedly on his vast stores of knowledge of the world. From Mrs. Praed Justin McCarthy got an intellectual companionship which proved of the greatest benefit to him in those strenuous days through which he was to pass. He was never so busy that he could not find time to jot down a few lines, perhaps a few words only, detailing the crisis just past or just to come. Such is the tenor of the greater number of the letters which Mrs. Praed has edited with care and appreciation, and which give us as no other documents could do a vivid picture of the struggle for Irish Home Rule which was finally to fail and bring down in its fall the Great Commoner himself, weary and worn.

The life of an Irish Parliamentary leader was no easy one in those days. Justin McCarthy, idealist, enthusiast, patriot, most chivalric of gentlemen, most loyal of friends, found it peculiarly hard. As a patriot he had the same ideals as those which prompted some of the greatest crimes of the day, and the struggle to keep the political party clean from any taint of these awful happenings was a constant source of anxiety. The refutation of that Jesuitical formula that the end justifies the means had to be constantly on his lips; and besides he suffered most severely in his loyalty to his chief. For many years Parnell had been his hero, and when the crash came he could not at first believe the truth; so great a man could not have descended so low. But when the truth was out and the break in the party occurred Justin McCarthy, in spite of affection, of belief in the skill and ability of his leader, had to break away. The struggle in committee room 15 is historic now. Mrs. Praed catches many echoes of it in brief notes written in all haste from the room itself while the fight was still going on, little words which show that, if Parnell, baited, and with his back to the wall, suffered in the fight, the foremost of his opponents suffered even more.

Politics is the keynote of the letters. Whatever else McCarthy was he was first and foremost a politician. Yet he was no fanatic. Men and women loved him for his sympathy, his chivalry, his absolute honesty of purpose. He writes of people of all kinds as his friends, and he dabbled in all sorts of literary work. He was a novelist, leader-writer, short-story writer, all by turns and all at once, a dramatist, a politician always, and a great-hearted idealist who had one aim, one ambition. He went on a lecturing trip to America, covered half the continent, and met all the men of mark of the early eighties. Mrs. Praed was the recipient of many most interesting letters written from all sorts of places over the Eastern half of the United States.

The value of this work, however, is not in the people and places it describes, varied and interesting and well done as they are, but lies in the picture of the man, drawn all unconsciously by himself and now etched in and laid before us by one who was well qualified to finish the portrait, and did so as a labor of love.

Notes

"Essays in Biography," by Charles Whibley, is among forthcoming volumes announced by E. P. Dutton.

Miss Bertha Runkle will issue this season, through the Century Co., an historical romance, entitled "The Scarlet Rider."

The first copies of the "Britannica Year-Book, 1913," are now appearing from the press of the Encyclopædia Britannica Co. (New York). It aims to do for a single year, 1911-1912, what the eleventh edition of the Encyclopædia has done for all time.

In "Royal Women: Their History and Romance," which McClurg is publishing, Mary Ridpath-Mann deals with Queen Elizabeth, Mary Queen of Scots, Marie Antoinette, and the Empress Josephine.

"The Letters, Speeches, and Correspondence of Carl Schurz," which will appear under the imprint of the Putnams in April, have been prepared for publication under the general auspices of the Carl Schurz Memorial Committee, which was formed in 1906. The work, complete in six volumes, has been in the hands of a sub-committee, of which Mr. Oswald Garrison Villard has been chairman, and the editing has been done by Frederic Bancroft.

Putnams also promise shortly: "Little Thank You," a story by Mrs. T. P. O'Connor; "The Fringe of the Desert," a novel by Rachel Swete Macnamara; "The Psychology of Revolutions," by Gustave Le Bon; "The Cyclopædia of Social Usage," by Helen L. Roberts; "Trails and Tramps in Alaska and New Foundland," by William S. Thomas; "Personality," by F. B. Jevons; "The Economics of Everyday Life," by T. H. Penson, and "The Book of Judges" (the Cambridge Bible for Schools and Colleges), with introduction and notes by Prof. G. A. Cooke.

Burns & Oates, of London, have in prepa-

ration "Shelley, and Other Essays and Reviews," by Francis Thompson, in a volume uniform with the two volumes of Thompson's "Collected Poems," previously announced in these columns.

The handy and well-tested "Satchel Guide for the Vacation Tourist in Europe" comes to us from Houghton Mifflin Company, with the regular annual revision.

"Daily Song," an anthology published by George H. Doran Co., bears as second title, "A Year-Book of Spiritual Cheer." It contains a poem for each day of the year, most of them of an edifying, though not distinctly religious, character. The selection is commendable.

G. P. Putnam's Sons have issued an attractive reprint of the "Lincoln-Douglas Debates," with an introduction by George Haven Putnam. The text is apparently that of the Columbus edition of 1860, with modernized punctuation. The absence of an index is regrettable.

The following is an instance of the ridiculous prices at which books sometimes sell at auction in New York city. The New York State Library sent to its agent bids upon thirty-two several items in Part 4 of the Hoe sale. It was not able to procure a single one of these items, which sold for an aggregate of $583. The Library thereupon commissioned this agent to procure these books at any price within the amount of the original bids. Within four months of the sale the thirty-two items were delivered at a net cost to the Library of $175.35. In many cases the copies received were better bound than those in the Hoe library, and in no case were the books apparently inferior in condition.

In our review of F. Wolcott Stoddard's "Tramps Through Tyrol," we criticised "Amras" as erroneous for *Ambras*. Mr. Stoddard informs us that both these forms occur in Baedeker and elsewhere. We accept the correction, but "Ambras" is certainly the better spelling, and this form alone is used throughout Austria.

The Massachusetts Biographical Society has published advance sheets of its forthcoming "Biographical History of Massachusetts," of which Dr. S. A. Eliot is editor-in-chief. The contents are an introduction by Dr. E. E. Hale and the autobiography of the late Gamaliel Bradford. Dr. Hale pictures in his characteristic way what the State stands for in the history of the nation. Among other statements is one which will surprise many readers, that for long periods in the Revolutionary War "Massachusetts had more seamen engaged against King George's navy than were serving in that navy against her." The autobiography is of great interest, especially the part showing the main object of the last forty years of Mr. Bradford's life, the study of the "Lesson of Popular Government."

Lilian Rea's "The Enthusiasts of Port Royal" (Scribner) is a readable but distinctly amateurish account of seventeenth-century Jansenism. With such recent and excellent treatments of this subject in English as Miss Lowndes's "Nuns of Port Royal" and Lord St. Cyres's "Pascal" it is indeed not entirely obvious why the present volume should have been written at all. Miss Rea differs from the Port-Royalists in being a romantic rather than a religious enthusiast. Herein she resembles the greatest of all the historians of Port-Royal, Sainte-Beuve, who was drawn, he says, to Jansenism by the poetry of its inner life. This type of religiosity would seem more appropriate to the subject than Miss Rea's attempt to present it (to quote her own words) "in all the glory of prismatic colors." Her repeated references to Pascal as a stoic make one wonder whether she has not entirely missed the nature of enthusiasm in the Jansenist sense. If Pascal had not transcended stoicism he would not have deserved in this sense to rank as an enthusiast at all. In general, Miss Rea is more at home in dealing with the picturesque and anecdotal than with the intellectual and religious aspects of the movement.

How Tolstoy's writings were constantly censored by his wife, is told in a book recently published in Russia ("The Living Words of Tolstoy," by I. Teneromo), which contains the author's reminiscences of his visits to Tolstoy. For example, "War and Peace" originally included a description of Ellen bathing. Pierre Bezuhov accidentally sees through a crack in the door, and then decides on the mad step, for which he was sorry through life, and proposes to Ellen. Tolstoy's wife vigorously protested against the scene, and the meek creator of "War and Peace" gave in. The passage was thrown out, and the marriage of Pierre Bezuhov appears without artistic justification. Likewise, Tolstoy's wife demanded the omission of a chapter from the "Kreutzer Sonata," which depicted Pozdnishev stealing in his stockings up the stairs to his wife's bedroom, and killing Trukhachevsky, in whose arms he finds his wife. The passage was one of the strongest in the novel, and the fact was of chief importance in bringing about Trukhachevsky's acquittal. The chapter was thrown out, and the acquittal remains unintelligible to the reader.

"A Chronicle of the Popes" (Macmillan), by A. E. McKilliam, is a volume of about 500 pages giving the chief facts concerning each Pope from St. Peter to Pius X. It is intended for use as a reference handbook, and offers therefore a simple, impartial record without discussion of causes or results. Such a work has long been needed, and this book, based on the recognized authorities, meets the need most satisfactorily. It is very generally accurate, though a number of minor slips could be pointed out. The Pazzi, for example, are consistently called the Pozzi; the account of the decoration of the Sistine chapel is incorrect; the Kingdom of Italy in 1861 lacked Venice as well as Rome. Queerly enough, not one of the 258 biographies mentions the date of its subject's birth, though the age at death is often mentioned in connection with the date of the death.

"The Latter-Day Saints," by Ruth Kauffman and Reginald Wright Kauffman (London: Williams & Norgate), is an essay in the economic interpretation of religion. The conviction of the authors is that "belief in God or gods has little to do with the form or practice of any religion. Religious forms are the spiritual results of the economic conditions prevailing at the time of the religion's beginning, and religious practices are modified by the modifications of the economic conditions that prevail during the time of the religion's existence." The rise and development of Mormonism is explained on this theory. It had its origin in the economic unrest which prevailed in the pioneer period in America. Polygamy was accepted as a revelation because a plurality of wives and bevies of children were profitable in the labor of a new agricultural community. Capitalism, which is declared to rule America, favored the growth of the religion, and Socialism will be its doom. The authors see no prospect of the decline of the religion of Joseph Smith until a new social system wipes out the economic injustice on which it rests. Notwithstanding this one-sided view of the Mormon faith and the degraded interpretation of religion, the authors have brought together a large amount of useful material bearing on the history of the Latter-Day Saints. They present the facts as to the origin of the book of Mormon and the character of Joseph Smith and Brigham Young in plain speech and with abundant proof from contemporary sources.

In "The Italians of To-day" (F. G. Browne & Company), Mr. Richard Bagot writes the most sensible popular account of recent Italian conditions and policy that we have seen from the pen of any Englishman. He was goaded into utterance by the calumnies which the English press heaped upon Italy during the war with Tripoli a year and a half ago. Few foreigners have at any time equalled the vigor with which he denounces "the sanctimonious hypocrisy" of his countrymen. Italy's experience with war correspondents simply taught the Balkan allies to exclude them altogether. Mr. Bagot shows that the English pressmen who calumniated the Italian soldiers could not possibly have seen what they pretended to describe, because they were leagues away; he shows also, from indisputable official evidence, that the Turks and Arabs practiced upon the Italians, whether dead or living, atrocities too frightful to be told in print. The larger part of his little book, however, is devoted to a discussion of more general conditions—the state of the peasant and workman, of the professional classes, and of the aristocracy. His account of the relations between Church and State is the best that has appeared lately, and may be commended to the Americans, not less than to the English, who have been misled by Ultramontane propaganda. Mr. Bagot may seem at times to assume that he is the only person competent to speak on all these matters; but this proceeds from his enthusiasm and his chivalry; and he is right in declaring that his countrymen are ignorant of the Italians of to-day.

Achille Loria, professor at the University of Turin, deals with the subject of international law in "Les Bases Economiques de la Justice Internationale" (Putnam). This book is the first part of the second volume of the Publications of the Norwegian Nobel Institute. The object of this Institute, as pointed out in the preface to this work, is "to keep informed of the development of the relations among the nations, and especially of the efforts peacefully to settle international conflicts, in order that it may be able to give its advice to the committee on

the distribution of the peace prize." After pointing out the first germs of international law, which consisted in the substitution of a law of more general application for the tribal and family law, Professor Loria proceeds to show how the growth of this international law has been dependent almost entirely upon economic conditions. Competition creates the necessity for rules governing the commercial and economic relations between natives and foreigners, and the development of revenue determines the necessity of international institutions. When associations of groups of men, exchange, and other economic conditions increase the revenue up to a certain point, and the potentiality of production becomes paralyzed, the violent annexation of the revenues of others will follow; and this is a negation of international law. The means of this annexation is war, and war is always a reaction against a decrease in revenue. Furthermore, war, the pathologic means of increasing revenue, is bound to result in a violation of every rule of international law.

The economic conditions which have a tendency to reëstablish the rules of international law are the heavy damages sustained by the belligerents. That the nations have made some attempt to lessen these damages is evidenced by the agreements with regard to the protection of property and commerce; but it is not until more recent times that they have thought of the necessity of having an international law for the protection of human life. International law thus revived in this form differs from the international law outlined in the first part of his book, Professor Loria tells us, in that it is *abnormal* and *special*, whereas the other was *normal* and *universal*. With the increase in the size of the economic unit comes a decrease in the frequency with which war is resorted to, and it is thus that economic conditions tend directly to prevent war. This prevention is exercised by decreasing the advantages of war, and by increasing its cost and the damages which it causes. It necessarily follows that war becomes less and less capable of fulfilling its function, that of increasing revenue, and so economic progress tends to make peace the rule and war the exception. Professor Loria himself seems to be of the opinion that, owing to the development in economic conditions, war eventually will entirely disappear. Though the complication of economic international relations will give rise to more numerous differences, they will be better settled peacefully because it is now of the most vital interest to the nations to avoid war.

It would be a patient man, indeed, who should undertake to verify the accuracy of Capt. Albert Harrison Van Deusen's two stout volumes on "The Van Deursen Family," which is published by the Frank Allaben Genealogical Company. Since the work is written in a spirit of sober and wholly Dutch enthusiasm, there is no reason to doubt the fidelity of the endeavor, in spite of the more or less conjectural nature of the earliest traces of the South Brabant origins of these American and Canadian Van Deursens, Van Deusens, Van Dusens, and Van Duzers. As in the case of most of the Dutch Vans in this country, Deursen was first the place name and then the local surname. *Deur* or *dur* (seen in our word Durham) is Celtic for *water*, and so it fell out that the Jan, or Pieter, or Hendrik, who lived at or near The Water, became Van Deursen. Eventually, many of these and other Brabanders made their way to Haarlem, where was born, in 1607, the immigrant ancestor, Abraham Pietersen. He married Tryntje Meichiors, of Groningen, in 1629, and is known to have been in New Amsterdam as early as 1636, when he lived on the Heerewegh Straat, our Broadway, certainly at one time on the third lot south of Wall Street. He was the official Miller, or "Molenaar," and innkeeper, just as Tryntje Jonas was the official midwife of New Amsterdam. Marytje, his second child, married as her second husband Evert Jansen Wendell, who himself was the widower of Susanna du Trieux. Not until 1667 did this family use the local surname, when Pieter Abrahamszen added Van Deursen on a record of baptism. This sturdy Dutch stock started bravely on new soil, when the seven children of Abraham Pietersen all grew up, married, and raised families. The important American biographical dictionaries reveal only infrequent mention of the variants of the Van Deursen name, but of just such stuff as this family is the best, though not of necessity the most notable, fabric of American life made up.

Capt. Van Deusen's researches of nearly twenty years' duration seem to have been crowned by a self-conducted tour through the Netherlands in search of more light. He left few genealogical stones unturned in his itinerary, and he viewed the scenes of ancestral happenings with a natural satisfaction. The cuts are pleasing, as a rule, though at times portraying rather trivial objects, as, for instance, a handsaw issued by the British Government to one Caspar Dusen after his arrival in Canada in 1784. In the second volume there is a record of miscellaneous and related families, which is somewhat baffling in its arrangement and significance. As for the spelling of the early Christian names and patronymics of these New Netherlanders, it is the part of discretion to beat a hasty retreat from so appalling a maze. Few of us are of that stern yet elastic fibre of which the true genealogist is made. For instance, the Conrad Burghardt, and Mary, his wife, whose daughter Fiche married Isaac Van Deusen, the ancestor of the Great Barrington branch, are set down in L. H. Sahler's "History and Genealogy of the Van Deusens of Van Deusen Manor," as Cœnreat Hendrickse Borghghardt and Marya Janso Franse Van Hœsen. One must, indeed, walk by faith and not by sight in these Hollandish paths.

"From Religion to Philosophy" (Longmans), by F. M. Cornford, is not, as the title might lead one to suppose, a new book on the "present religious crisis." Its subject is early Greek thought, and its aim is to trace European philosophy and science back to primitive Greek religion, and, with the help of Professor Durkheim and the sociologists, to trace religion back to social structure. Thus, according to our author, *physis* is at first essentially social custom, and *Moira* is the projection of the social restraint imposed by the group upon the individual. In like manner, the two great philosophical schools of Greece, the Ionian or scientific, and the Italiote or mystical, are outgrowths respectively of the two great religions of the early Greeks —the Olympian and the Dionysian. In such a book there is inevitably a good deal of the purely hypothetical; but, fortunately, our author has not confused hypothesis with fact. This is fortunate indeed, for his hypotheses are often daring if not bizarre, and his implicit confidence in the French school of sociology is naïve. The reader who has his wits about him will find much that is of value from the author's sound classical scholarship; but the book is one that should be taken only with the large grain of salt ready at hand.

The Proceedings of the Mississippi Valley Historical Association for the Year, 1911-1912, indicate the growing importance of that organization. The papers show that there is growing up a group of younger scholars with the proper training, who are devoting themselves to the problems of Western history. Although the volume contains no contribution of great moment, still the average of the essays in scientific character and value is very considerably above that of similar contributions to the proceedings of the local societies; and gives promise that the study of Western history will soon pass completely out of the stage of antiquarianism and "gray-beardism," wherein it has lingered so long. The most successful papers in the volume discuss some phase of the anti-slavery struggle in the Old Northwest. There are several papers on the teaching of history in the secondary schools, a subject which the Association has taken up with great seriousness since its union with the Northwestern History Teachers' Association. The Southerners show a noticeable lack of interest in the work of the Association. Surely in a volume of this size there should have been more than one paper on some phase of history south of Mason and Dixon's Line. From the very beginning the Association has printed its proceedings on good paper and with excellent type, and this volume maintains the standard. The failure to print the names of the contributors in the table of contents seems to us a matter of just criticism.

Under the title "Primitive Christianity and its non-Jewish Sources" (Scribner), Robert G. Nisbet, of the University of Glasgow, has translated Prof. Carl Clemen's "Religionsgeschichtliche Erklärung des Neuen Testaments." The work is favorably known as a thorough and painstaking study of the ideas and incidents in the evangelists and other New Testament writings which offer parallels, or which have been supposed to be in any way related, to elements in non-Christian faiths other than Judaism. Chief attention is paid to alleged derivation from Babylonian sources, but Persian, Greek, and Eastern cults have also been searched for similarities to Christian ideas.

Dr. James Thompson Bixby, in "The Open Secret: A Study of Life's Deeper Forces" (American Unitarian Association), pleads for a spiritual interpretation of the world against the materialism represented by Haeckel. He appeals to the facts within the realm of personal life to justify belief in Providence, despite the invariable laws of nature. The book is a popular theodicy, an assertion of good as the final goal, written with earnest religious feeling, high moral appeal, and without argumentative bitterness.

That there was room for the Rev. James Baikie's "The Sea Kings of Crete" (Macmillan) is shown by the fact that it has now passed into its second edition. And though Mr. Baikie has apparently no other qualifications for writing on Crete than a diligent reading of what other people have published and a wholesome enthusiasm for the subject, nobody can deny that he has produced a readable book, which has the further advantage of numerous, good illustrations. He shows his good sense by acknowledging himself an outsider and not advancing any original theories. The new edition is virtually a reprint of the first edition, which appeared in 1910. The only addition is a short note on the translations of the "Phæstos Disk," attempted by Professor Hempl and Miss Stawell. No mention is made of the important discoveries recently made at Tiryns; and the bibliography does not include Mr. Seager's new book on Mochlos.

Science

A Psychological Study of Religion. By James H. Leuba. New York: The Macmillan Co. $2 net.

It is now seventeen years since the publication of Professor Leuba's first contribution to the psychology of religion ("Studies in the Psychology of Religious Phenomena"), the appearance of which almost simultaneously with Starbuck's "Study of Conversion" marked the beginning of the serious and concerted work of psychologists upon the religious consciousness. Since that time the psychology of religion has had a rather rapid growth, and to this Professor Leuba has been one of the chief contributors. Some twenty-three articles and monographs on this subject have come from his pen during these seventeen years, and it has been his plan to cover the whole field in systematic form in three volumes, dealing respectively with the origin and nature of religion, the contents of the religious consciousness, and the dynamics of the religious life. The first of these volumes is now completed. As the sub-title states, it is a study of the "origin, function, and future" of religion, and it falls naturally into two quite distinct sections, one dealing with the nature of religion, its origin, its relation to magic, and similar anthropological questions, the other discussing the respective rights of the psychologist and the theologian in dealing with the religious consciousness, and the question of the possible future of religion and theology.

There are, according to Professor Leuba, three great types of human behavior (excluding, of course, the lower sorts). These are "mechanical," "coercitive," and "anthropopathic." The second includes those practices which are supposed to bring about their inevitable results by occult means that are neither mechanical and quantitative nor "anthropopathic"—in other words, magic. The third kind of behavior is the attempt to induce a desired action on the part of some sentient being by various methods of appeal. When behavior of this type is directed towards unseen and supra-human psychic beings, it is religion. "Religion is that part of human experience in which man feels himself in relation with powers of psychic nature, usually personal powers, and makes use of them."

Magic and religion being thus essentially different from each other, they must, in our author's opinion, have had different origins. It is a mistake to regard either one as an outgrowth of the other. Leuba refuses to accept either of Frazer's well-known views, namely, that magic is primitive science, and that magic is the mother of religion. He believes, however, that it probably antedated religion, and that it grew out of the belief in a non-personal power permeating things—the mana of the Melanesians, the wakonda of the Sioux, etc. Dynamism, as Professor Leuba calls this view, is, in his opinion, older than animism, and magic (or at least one form of it) is the attempt to control this mysterious power by non-mechanical and non-personal methods.

Animism, however, though not man's most primitive philosophy, did form the intellectual side of his earliest religion, for early religion is the attempt to win the favor of mysterious, but *personal*, beings. The origin of the belief in these unseen beings, according to our author, is not to be found in any single phenomenon. This view of the multiple origin of religion is not new with Professor Leuba, but for some reason it has seldom been expressed—and never better expressed than here. Too long have anthropologists been discussing whether the gods came from ghosts or from personified nature forces, as if they could not have come from *both*. And Professor Leuba's pluralistic theory not only is more persuasive than the monistic one, but enables us also to account for many of the varying attributes and characters of the historical gods which the older view found it hard to explain.

The reader who cares only in a general way for origins and anthropology will find Parts iii and iv much more interesting than the earlier sections of the book—as, in fact, seems to be the case with the author himself, if one may judge by the style. For, coldly scientific in the first part, it takes on in chapter 11 a warmer and almost a belligerent tone. Professor Leuba is here fighting the battle of psychology against invaders, and he does not mean to cry Peace, Peace, when there is no peace. The invaders are, of course, the theologians, and the territory invaded is the religious consciousness. Professor Leuba shows at length how, having been driven out of the field of physical nature, the modern theologian has attempted to make of the inner life a fortress for religion unassailable by science. Few writers have spoken so openly on this subject as does our author. His view may be stated very briefly. The great majority of modern theologians base their belief in God on the facts of the religious consciousness. Now, the facts of consciousness can be studied intelligently only by the psychologist. When so studied the following conclusions are reached: (1) There is no immediate apprehension of God or of the traditional dogmas, and to say that there is, as the mystic and the theologian sometimes do, is to confuse introspection and description which cannot be refuted with theoretical and highly dubious interpretation; (2) no truly scientific induction from the facts appealed to can prove the conclusions which the theologians base upon them. The facts of the religious consciousness can be explained like the other facts of psychology without appeal to any supernatural source. Thus we come to the final conclusion, that mysticism and the inner life are in no way evidence for the existence of the Christian God or the truth of the Christian doctrines.

In dealing thus with "empirical theology," Professor Leuba does not mean to attack all theology. His own philosophy, he assures us, is idealistic rather than naturalistic. He wishes merely to show up "the dishonest shifts to which traditional Christianity is now driven," and to serve notice on all theologians hereafter to keep out of the psychological field. He tells us that he does not wish to overthrow religion, and that he hopes there is a future for it. And here we come upon an unsteadiness in his use of the word religion which makes certain sections of his book difficult to interpret. If religion be, as he insists, merely a form of "anthropopathic behavior," must it not die with the belief in a personal God and with the attempt to "make use" of God by "anthropopathic" measures? Yet Leuba has a whole chapter on the "religion" of the future, which he conjectures and apparently hopes will be something of a cross between Comte's religion of humanity and Bergson's creative evolution, with no anthropopathic nonsense about it. And this suggests a question which many will raise, namely, whether Professor Leuba has not underestimated the force and the emotional value of continuity and tradition.

However this may be, our author is evidently convinced that the psychological study of the religious consciousness will in time destroy the last refuge of the belief in a personal God who entertains personal relations with the indi-

vidual. And, indeed, he has put his case very persuasively. Yet the matter is hardly so simple as the hurried reader may be led to believe. The theologian will insist (as Professor Leuba knows perfectly well) that a thorough investigation of the religious consciousness will yield facts not fundamentally explicable on purely psychical laws. And though the theologian may be mistaken, it will be no easy thing to prove it. The mystic will insist that his "experience of presence" is unique in character—a claim impossible to prove and difficult to refute. The facts involved are complex and exceedingly evasive, and some kind of interaction between the soul and spiritual forces around it is at least conceivable. And even if a scientific "explanation" be granted, there would be in that nothing inconsistent with the belief in a "personal" God. In short, many thoughtful readers will refuse to follow Professor Leuba in all his conclusions about religion. But no one will be able to read his book impartially without admiration for his plain speaking on a most important subject.

The "Antarctic Disaster," the leading article of the *Geographical Journal* for March, contains Capt. Scott's message, written March 25, 1912, and the addresses of Lord Curzon and Sir Clements Markham at the memorial meeting of the Royal Geographical Society. Portraits of Capt. Scott and his four companions in their Polar surroundings are given, together with a sketch-map showing the sphere of operations of the expedition. Other subjects treated are Moroccan geography, by A. G. Ogilvie, with a map showing the Spanish spheres of influence; the formation of gravitation waves in the Culebra Cut of the Panama Canal, by Dr. Vaughan Cornish, and the progress of the Baghdad Railway, with maps. There is also the first part of a description, with diagrams, of some new and improved instruments and apparatus for geographical surveying by E. A. Reeves.

The aggressive activity of German scientific exploration is well indicated by the handsome form of official publication adopted for the results. The contrast between the "Mitteilungen aus den Deutschen Schutzgebieten," now in their twenty-fourth volume, and the official Blue Books in which British explorations occasionally see the light, deserves review under some such heading as Colonial Administration. One of the latest numbers of the *Mitteilungen* concerns the Manenguba highland of the Camerun region in west Africa, on which a well-illustrated report is made by Dr. F. Thorbecke, entitled "Das Manenguba-Hochland, ein Beitrag zur Landeskunde Kameruns"; it treats the surface forms, among which volcanic features figure largely, the climate and vegetation, and the native tribes. A number of photo-plates and a good map are included.

In these enlightened days of public sanitation and personal hygiene, when philosophers illustrate their points in terms of toxins and antitoxins, when microbe or germ replaces the bugaboo or bear in the nursery, it is well for the public, particularly the educated portion of it, to know some of the fundamental facts at least about the minute organisms which lie underneath. Such knowledge is presented in relatively simple scientific form in the admirable book on "Microbes and Toxins" (Putnam), by Dr. Burnet, of the Pasteur Institute in Paris. It is not exactly a popular presentation, although an excellent, if limited, glossary will aid the uninitiated, while on the other hand, it is sufficiently deep to be a guide to the scientific specialist. The translation has been made by Drs. Charles Broquet and W. M. Scott. Written originally in the Pasteur Institute, it was to be expected that the book would have the flavor of Metschnikoff's views on immunity and intestinal poisoning; indeed, Metschnikoff contributes a short introduction, in which he says: "And the progress of microbiology leads us to hope that this science will one day liberate man from his fear of the grave, and to permit him to attain the true object, the true conclusion of life." The biology of lower forms of life, the relations of animals and plants, and the transformations of energy are clearly and ably presented. It is shown that "life as a whole could not continue without bacteria; they do not create life, but they supply it with the necessary material." While the beneficent rôle of the bacteria is thus not neglected, the other side, the malevolent aspect, is much more fully elaborated and forms the bulk of the work. The intestinal bacteria as the agents of putrefaction and auto-intoxication make an introduction for the discussion of Metschnikoff's views on the prolongation of life, and pave the way to a detailed description of recent progress in regard to the facts and theories of immunity. In regard to the latter, it is Metschnikoff's view again that is supported. The phagocytes, or white blood cells, are shown to be not only the physical agents in immunity, but the originators, through phagolysis, or phagocyte disintegration, of the immune factors of the blood. Other theories, however, receive just treatment, and experiments and counter-experiments are cited until the reader is overwhelmed with the perplexing complications of the problems, and he is ready to admit with the author that they permit of no one harmonizing view at present. It is unfortunate that such a useful and valuable book should show unmistakable evidence of haste in its preparation for an English-reading public. Not only is the syntax so poor in places that the meaning is lost, but innumerable typographical errors show the effects of hasty proofreading and an inexcusable carelessness in the making of the book.

Drama and Music

Prof. Brander Matthews has placed with Scribners for publication in the autumn "Shakespeare as a Playwright."

In "Court Masques of James I," shortly to be issued by Putnams, Mary Sullivan, Ph.D., attempts to establish Shakespeare as an important instrument in the court entertainments of James I.

It is not often that so much good white paper is wasted in a single volume as in the 361 pages of Weedon Grossmith's reminiscences entitled, "From Studio to Stage" (Lane). Mr. Grossmith babbles cheerfully, with evident self-enjoyment, of his boyhood days, at home, at a Hampstead Academy, and the Royal Academy Schools, with a serene unconsciousness of the fact that he has nothing to tell worthy of print, and no special gift of relation to give fictitious point to his anecdotal trivialities. That he is a man of varied abilities has been sufficiently proved by his successes as a painter and as a comedian, but the reflection which he presents of himself in these pages is not flattering, and he would have been far wiser if he had submitted his rough notes, as he calls them—and as they actually are—to some judicious editor. There is entertaining material to be found in them, though nothing very new or startling. An ardent fisherman, he gives some useful hints to the English angler, and collectors of old furniture might read his experiences in that pursuit with interest and profit. But even on these matters he speaks as an intelligent amateur rather than an expert. One of his best chapters is that on the methods of rehearsal adopted by Henry Irving in the famous days of the Lyceum. The theatrical acumen of the actor, his masterful direction, and his zeal for artistic detail are clearly illustrated. A description of a rehearsal of a Drury Lane melodrama is significant in its contrasts. Mr. Grossmith, naturally, has a good deal to say about the commercial side of the theatre and his own histrionic and managerial achievements, but the value of the matter is grossly disproportionate to the space devoted to it.

Kenneth Douglas and Carl Leyel have obtained control of the London Comedy Theatre, where they will produce to-day a play by Frank Stayton called "The Inferior Sex." It is described as farce comedy, with sensational incidents, and the scenes occur on a yacht, chartered by a misogynist in order that he may be able to write a treatise on his pet subject without fear of interruption by the fair sex. His plans, of course, are completely frustrated by a fascinating intruder, who, in the end, makes a convert and a captive of him. The leading parts will be played by Kenneth Douglas and Renée Kelly.

The opening of new repertory theatres in England continues steadily. The latest of them is at Croydon, where an experimental season of six weeks is to be tried, with a new play every Monday. Elizabeth Baker's "Chains" will be presented on April 14; Haddon Chambers's "The Tyranny of Tears" on the 21st; a new comedy in three acts entitled "The Situation at Newbury," by Charles McEvoy, on the 28th; Macdonald Hastings's "The New Sin" on May 5, a four-act comedy named "Dropping the Pilot," by Keble Howard, on May 12, and Bernard Shaw's "Candida" on May 19.

Reports come from Manchester of the marked success of the revival of "Romeo and Juliet" in the New Theatre in that city. The Juliet is Margaret Halstan, who renews her success first won in this character six years ago. Warm praise also is accorded to the Romeo of Dennis Neilson-Terry, and it is pleasant to note that special stress is laid upon the eloquence with which both players uttered their lines. The

art of delivering blank verse properly upon the stage has not, it seems, been entirely lost.

The "Open Windows" of A. E. W. Mason seems to be a success at the London St. James's Theatre. The story does not appear to he entirely reasonable, but is well told and furnishes excellent opportunities to George Alexander and Irene Vanbrugh. They are Mr. and Mrs. George Herrick. The former is a Cabinet Minister, a supremely able and fortunate man, happiest of all in the love of his wife and beautiful daughter. Presently he gets a new private secretary, Philip Brook, and it soon appears that between the latter and Mrs. Herrick there is a secret. In fact, they had been lovers before Herrick ever came upon the scene, and when they were separated, it was to save her good name that she hastily married the man to whom she has long been devoted. But her daughter is Brook's child, not Herrick's, and the secretary takes care that the truth shall he told. But when it comes to the pinch, neither Herrick, who loves the girl too tenderly to infect her with the taint of disgrace, nor Brook, who is smitten at the last with compunction, can summon courage to reveal the shame and, in the end, both men learn to consider the case with broader minds—through "open windows," as it were—to let the dead past he buried and to lay hold on present happiness.

The London critics do not appear to have been deeply impressed by the performance of Hamlet which Louis Calvert gave recently with the Pioneer Players. A writer in London *Truth* says:

Mr. Calvert's impersonation of Hamlet is interesting, as must be every impersonation of the character which is not an imitation. But if his conception of the character were to he accepted as on the right lines, it would not be long hefore the play ceased to he played until some one with a more poetic imagination again unearthed it.

Sir Squire Bancroft has just given his last public reading, or recitation, of "The Christmas Carol," for charitable purposes. For many years he has read this work to raise funds for hospitals and other charitable enterprises, which have profited hy his benevolent lahors to the extent of more than $100,000.

Some of the hest of Liszt's songs have recently heen issued in sheet-music form hy the Ditsons, whose latest Bulletin mentions them with enticing descriptions.

Liza Lehmann, who is, with the exception of Mme. Chaminade, perhaps the best-known woman composer of the day, has written a book of "Practical Hints for Students," which Messrs. Enoch will publish soon. She was formerly a singer herself, and, as a child, she used to get hints by attending Jenny Lind's classes in the Royal College. The book contains examples from popular modern songs, with paragraphs pointing out the pitfalls and showing how they can he avoided.

The department of music at Harvard University was founded hy John Knowles Paine, whose portrait adorns the March number of the *Harvard Musical Review*. The same numher contains an article hy Paine's successor, Prof. Walter R. Spalding, entitled "Some Real Harvard Musicians." It gives a list of graduates who made a name for themselves, among them twenty-three composers, ten executants, twelve theorists and teachers, and nine musical critics. The names are also given of ten generous patrons of musical progress who are Harvard graduates. This number has an article hy Henry F. Gilbert on Indian music, and a numher of papers on current musical topics. In an article on the operatic situation ahroad, Karl H. Eschmann comments on the curious decadence of the Berlin Opera, which has recently lost three of its conductors, Muck, Weingartner, and Paur. Richard Strauss remains, but he conducts only "once every three weeks, and then only his own operas, which need the prestige of his name to fill the house." The other two conductors are rated as little more than drillmasters. Not only Vienna and Munich, but Dresden, too, are ranked above Berlin. The dearth of singers is felt more and more.

The Berliner Liedertafel, the strongest male chorus organization in that city, is contemplating an American tour in the spring of 1914. Such a tour was projected a few years ago, but had to be abandoned on account of plans made to visit the Orient and also Russia and Finland. The series of concerts given in Berlin each season invariably attract large audiences.

Concerning Debussy's new preludes and his playing of them at a concert in Paris, the English pianist, Fanny Davies, wrote to the musical critic of the London *Telegraph:*

The Debussy group came second in the programme, and I think it worthy of note that he ordered the lid of the piano to be half-closed, as in ensemble playing. Then he arrived, quite simply, with his music in his hand, and after arranging it and his chair he played three of his new preludes deliciously, all perfectly simple, in strict hut never stiff rhythm, always flowing, hut never forced. His touch is beautiful, very sonorous in pp. passages — it creates an atmosphere of calm serenity, and ahsence of all fuss—his tempi are most moderate; in fact, he strictly followed his own directions in each case. He has that *Hineinlegen* in the soft chords that Frau Schumann always wanted, which carries the chords into the air.

Melbourne has a new concert hall, erected at a cost of $200,000. It has a seating capacity of 2,000, which can be reduced to 1,000 if required. It is to be opened in May by Clara Butt, who will he followed hy John McCormack and Harry Lauder.

A bill has been introduced at Harrishurg asking the Legislature to expend $300,000 in the next two years for an orchestra which shall give concerts for a period of thirty-five years, under the supervision of the State Superintendent of Public Instruction. If the hill passes, Pennsylvania will have the first symphony orchestra supported by a State in the history of this country.

After occupying his stall in Westminster Abbey for more than forty years, the veteran hass singer, Robert Hilton, is dead. Since last year he had retired from active service on full pension, but when above seventy years old he was still "rolling out his rich diapasonal notes" in the Ahhey. Although Sir Michael Costa and Sir Julius Benedict frequently tried to lure him into opera, he remained true to oratorio and the church. As a glee singer he was regarded as unrivalled, and he was a leading memher of the Nohlemen and Gentlemen's Catch Club, the Round, Catch, and Canon Cluh, the City Glee Club, and the London Glee and Madrigal Union.

Clifton Bingham, the author of more than sixteen hundred songs, as well as "Lyrics without Music," a volume of verses, and "Love's Old Sweet Song," a novel, is dead in London. He was born at Bristol in 1859.

Georges Houdard, who is dead at the age of fifty-three, studied under Massenet, but soon gave up composing to become a writer on musical subjects. Among his writings are "Le Rhythme du chant dit grégorien," his principal work, and a history of the "Château de Saint-Germain-en-Laye" in two volumes.

Art

Della Robbias in America. By Allan Marquand. (Princeton Monographs in Art and Archæology No. 1.) Princeton University Press. $4.50 net.

With this handsomely printed and fully illustrated study of Della Robbias in America, the recently founded Princeton University Press makes its first important academic venture. It is the initial study of a series to be prepared by members of Princeton University covering the field of European art. No art series of similar comprehensive scope has hitherto existed in America.

Professor Marquand brings to his theme an intimacy extending over thirty years. He offers here merely a geographical selection from the complete illustrated catalogue of the Robbias which he has in advanced preparation. For the present work the form of a catalogue is chosen. One finds always a full description of the piece, a discussion of related compositions, and when necessary an historical commentary. The text is a model of cautious and urbane scholarship. Its peculiar value lies in the sharp and authoritative discrimination of secondary school pieces from the products of the Robbia masters. Since virtually all Robbias in private collections are ambitiously attributed, while the museums and art historians are often equally sanguine, this determination of the school pieces is very necessary. Despite the self-chosen geographical limitations of Professor Marquand's monograph, we know of nothing on the subject that gives so clear an idea of the qualities of the masters of the Robbia family.

When Cavallucci and Molinier made their catalogue in 1884 they credited America with one Robbia piece. Maud Crutwell, in her catalogue of 1902, increased Cavalluci's tally of four hundred and eighty-one to nearly eleven hundred, of which ten were in this country. Professor Marquand's list passes seventy pieces, and most of which are reproduced. Eleven pieces are in museums. Far the most important is the exquisite

and little-known Madonna, by Luca della Robbia, in the Altman collection. Only one other example of Luca's work is in America, but half-a-dozen pieces illustrate the beautiful practice of his studio. Andrea's hand and school are fully represented. Even portraits and coats-of-arms are found. Giovanni's work is to be seen only in the museum of the Brooklyn Institute, in the Metropolitan collection, and in the Gardner collection, but school-pieces of Giovanni type are fairly frequent. Professor Marquand's stylistic grouping of such derivative works is very interesting, especially the group built around an altarpiece belonging to Mr. Junius Morgan. These advance studies raise the hope that Professor Marquand's general catalogue of the Robbias will not merely define the work of the three famous masters, but also reveal and identify some of the interesting minor personalities of the school. Fully indexed and fortified with references to earlier authorities, this monograph meets the requirements of special scholarship, while remaining in style and appearance attractive to any reader of cultured taste. Its appeal is not merely to the academic public, but to all who are interested in the special theme and in the progress of American collecting. The make of the book is creditable to the Princeton University Press, but the cuts, which are in several cases muddy and inferior to those in cheap German books on the subject, are not worthy of the letterpress.

"The Letters of a Post-Impressionist, being the Familiar Correspondence of Vincent Van Gogh," is attractively published by Houghton Mifflin in the English of Anthony M. Ludovici, with an introductory essay. The book is timely, falling, as it does, upon the first considerable exhibition of Van Gogh's paintings in America. From the letters to his brother, upon whose bounty he lived; to Seurat, and to Emile Bernard, one gets a picture of the man at once pathetic and amiable. He came late to painting, and quite untrained. The robust polychromy of the Luminists and of the Neo-Impressionists fascinated him, and later he was captured by the barbaric energy of Paul Gauguin. To a kind of overemphasis, expressing itself in an almost symbolic choice and force of color, he was predisposed by that nervous intensity which ended in actual madness. The little pen sketches which are the sole ornament of this volume betray an almost morbid imputation of movement to nature. They are fine withal, instinct with a peculiar passion. For a few years he worked, or rather bungled along, in solitude or in uncongenial associations on the Seine or in Provence. With a frenzy of appreciation, he called upon the boldest hues of his palette to symbolize his emotions before nature. His drawing, never even in intention exact, attained a poignant tension. Soon he saw that his kind of painting should be executed apart from all models, but he never gained courage to forsake the fields for the studio. His tortured and vibrant canvases revealed an ominous world quite of his own, but a world not good to dwell in. Their apocalyptic character, which endears them now to jaded æsthetes, made no appeal at the time. Their present vogue is exaggerated, as was their former disesteem. Van Gogh's talent, while wholly abnormal, was never negligible. The reading of these letters will bring home the complete hopelessness of any such individualistic programme as Van Gogh attempted. Had he been, not a neurotic, but of the sturdiness of a Winslow Homer, this attempt to create unaided a new art must lamentably have failed. The very desire implies fanatical immodesty and lack of social discipline. For the rest it was an honest purpose, and stalwartly pursued, so the failure is written in the large lines of tragedy, and not, as in so many similar instances, in the sordid comedy of a gradually increasing charlatanism. The morbid power of Van Gogh's best paintings should keep them a place among the minor tragic eccentricities of genius. He was almost an El Greco of landscape, but without the Greek's shrewdly directed fantasy. His letters may serve as a perpetual reminder of what the life and training of the artist should not be.

Charles Moreau-Vautier's "The Technique of Painting" (Putnam) is a clearly written and interesting book with remarkable illustrative features. The author's description of pigments and demonstrations of fading, by means of color prints, will be useful to painters. Color facsimiles to scale of portions of famous paintings, Leonardo, Fragonard, Rembrandt, Ingres, Monet, Signac, and others are thus represented, show precisely the typical procedures of oil painting and spare much description. We cannot praise as highly the chapters on the care of pictures. Water should never be applied to any picture except in extreme cases, and after testing of the surface. Soap, of course, as M. Vautier rightly insists, should never be used. Those museum officials who regularly clean their paintings with suds are destroying their treasures. We miss any adequate account of the Pettenkoffen process, one of the safest and most efficacious.

Finance

THE "BLUE SKY LAWS."

The bills which passed the Assembly at Albany last week, with the purpose of regulating Stock Exchange business and the issue of corporation securities, unquestionably belong to the class once known as "huggermugger legislation." That is to say, these bills, whatever may be the motive and purpose underlying them, are hurried to a vote in complete disregard of the serious practical objections raised to them by disinterested critics, and in a shape which makes it impossible to say what their actual operation would be, though they meddle violently with the machinery of the legitimate investment community

Hitherto the least-discussed measure, but in many respects the most sweeping of them all, is the so-called Goldberg "Blue Sky Law," aimed at supervision of company security issues by the State. Behind this bill, which is patterned more or less closely on similar legislation proposed in other States, a proper enough purpose can be seen. Some control ought to be exercised over such issues as the shares of the Hawthorne mining group, and from such operations, which had cut an important figure in the rural communities of Kansas, for example, the "Blue Sky movement"—so christened, in the picturesque popular metaphor of the day, because designed to clear away the clouds and fogs from the simple investor's horizon — took its impetus.

Legislation of the same general purport has in fact been pending in no less than thirty-six States of the Union. But nothing could be more hopelessly inapplicable to the business of the country's financial centre than the bill which has now passed one house of the New York State Legislature. From beginning to end it applies to all corporation finance, small and great (with the sole exceptions of banks, insurance and realty corporations, and companies subject to supervision of the Public Service Commissions), the restrictions and supervisions which would naturally apply to a doubtful mining business.

Its language shows that its original authors apparently had in mind what is known as an "investment company" selling special securities, and that term was explicitly used in the Kansas law. But the New York law in its present form applies its provisions, not to investment companies alone, but to "every company." Its language, strictly interpreted, would apply its drastic provisions equally to the issue and sale of stocks, bonds, or notes, by a small business corporation or mercantile partnership whose affairs are in a few experienced hands, or by a great corporation known in the investment community, and with years of conservative history behind it. Before selling or offering for sale such securities, every company subject to the act must file with a board, consisting of the Governor, Lieutenant-Governor, and Controller of the State, a complete itemized statement of its organization, financial condition, property, liabilities, "and such other information touching its affairs as said securities board may require."

The examiner appointed by the board has the sweeping power of declaring whether the plan involving such security issues "in his judgment promises a fair return on the stocks, bonds, and other securities offered by it for sale." He may decree that it does not promise such return, and may veto the issue. He alone is to judge the undertaking. He may indeed decide "that the company is

not solvent and does not intend to do a fair and honest business," and is at liberty to bring proceedings for a receivership, and from such decisions there is provided no appeal except to the three State officers above referred to.

Nothing is more evident, even granting the best of general purposes to the authors of this bill, than that it is an effort to apply, to the greatest and most complicated financial market of the Continent, restrictions framed to protect a Western village from the impositions of a travelling peddler of "dollar mining shares." Its plan is, in fact, open to specific objections which do not apply to the Kansas "Blue Sky Law"; for that measure placed supervision in the hands of the present State Banking Department, whereas the New York Assembly bill commits it to a group of elected politicians and an "examiner" who might be a mere political hack.

This necessarily brief summary of a complicated measure draws attention to only a few of the bill's provisions which, in operation, would bid fair to throw the financial business of the State into instantaneous confusion. Undoubtedly, it was such considerations which last month caused the Governor of Indiana —himself a leader in the campaign against fraudulent security issues — to veto a similar bill passed by the Legislature of that State, and to insist, as a preliminary to legislation in the matter, on the careful study of the problem by a commission of competent experts.

LONGMANS' NEW PUBLICATIONS

Confessions of a Convert

By the Very Rev. Monsignor Robert Hugh Benson. Crown 8vo. Pp. x + 164. $1.20 *net*; by mail, $1.28.

The record of the author's religious life and development, with accounts of the various stages of belief through which he passed, and of the influences which bore upon him. The book includes sketches of his home education, his school life, his ministry as a parochial clergyman in town and country, his membership in an Anglican religious community; and finally the stages by which he came to submit to Rome and his experiences in the city itself. The book is not definitely controversial; it is rather narrative and descriptive.

Levia-Pondera: an Essay-Book

By John Ayscough. With Portrait. Crown 8vo. Pp. viii + 371. $1.75 *net*. (Postage 11 cents.)

Contents: Sir Walter—A Scamp's Probation—"The Entail": an Appreciation—The Leddy o' Grippy—Fickle Fame—King's Servants—An Essay on Essayists—Parallels—Loyalists and Patriots—Time's Reprisals—Cause and Cure—The Shoe and the Foot—Of Old Ways—Scientiæ Inimici—Laxity or Sanctity—Press and Public—On Book Buying—Of Dislike of Books—Atmosphere and Antidote—On Sitting Still—Diabolical Trees—Footnotes—"This Public Conscience"—State and Conscience—Empire Day—Duty and Discipline—On Decadence—Messrs. Hooligan and Turveydrop—Two Pessimisms—Peace and Peoples—Dress and Clothing—Of Cathedrals—Of Stone Sermons and White Elephants—An Admiration Note—Why Norwich?—Cold Porridge—Of Weaker Brethren—The Roman Road—Of Saints and Worthies—Of Great Age—Mares' Nests and Much Boasting—Of Lapse and Losses.

Dublin University Press Series

The Argonautica of Apollonius Rhodius

Edited, with Introduction and Commentary, by George W. Mooney, M.A., Fellow and Tutor of Trinity College, Dublin. 8vo. Pp. viii + 455. $4.50 *net*. (Postage 17 cents.)

The Architects' Library

Edited by F. M. Simpson, F.R.I.B.A., Professor of Architecture in the University of London.

Building Construction

In Two Volumes. Vol. II. By John H. Markham, A.R.I.B.A.; Edwin Gunn, A.R.I.B.A.; Alan G. James, Herbert A. Satchell, F.R.I.B.A., P.A.S.I.; F. M. Simpson, F.R.I.B.A., and J. D. Crace. With 142 Illustrations (28 full page). Medium 8vo. Pp. x + 360. $4.00 *net*. (Postage 15 cents.)

Stolen Waters

A PAGE IN THE CONQUEST OF ULSTER. By T. M. Healy, M.P., One of His Majesty's Council, Bencher of Gray's Inn, London, and of King's Inns, Dublin. With Folding Map. 8vo. Pp. x + 492. $2.25 *net*. (Postage 18 cents.)

A story based on unpublished MS. State Papers, and historical trials or inquisitions. It brings to light the hitherto unknown frauds practised on the Crown and the City of London in the times of James 1st, Charles 1st, Cromwell, and Charles 2nd. A curious setting is also given to the intrigues which followed the Restoration as to the disposition of Ulster property. The narrative is woven round the controversy as to the title to two great fisheries in Northern Ireland—the River Bann and Lough Neagh. The earlier part of the work is illustrated by quotations from the quaint State Papers of Henry 8th and Elizabeth, while it closes with an account of two famous fishery trials in the House of Lords, the last as recently as 1911.

Longmans' Pocket Library

Old Friends

ESSAYS IN EPISTOLARY PARODY. By Andrew Lang. With Frontispiece. F'cap 8vo. Gilt top. Pp. xiv + 178. 75 cents *net*. (Postage 4 cents.) Leather, $1.00 *net*. (Postage 4 cents.)

Published by **Longmans, Green, & Co.** Fourth Ave. and 30th St. New York

JESUS, SON OF MAN

By the Rev. RICHARD ROBERTS, Autbor of "The High Road to Christ."

The gospel portrait of Jesus Christ has become blurred by usage. Mr. Roberts aims at giving a series of pictures of Jesus as He appeared to His contemporaries. 16*mo*, 75 *cents*. *Postage* 7 *cents*.

LIFE'S TANGLED THREAD

By the Rt. Rev. W. BOYD CARPENTER, D.D.

Canon of Westminster and late Bishop of Ripon.

This little volume, written particularly for those who are perplexed by the inscrutable mysteries of life. 16*mo*, *frontispiece*. 50 *cents net*. *Postage* 5 *cents*.

PERSONAL POWER

By KEITH THOMAS

A book to hearten the average man, who seldom realizes his own possibilities. An inspiring, helpful volume. 12*mo*, *cloth*. *Net*, $1.75. *Postage* 11 *cents*.

In Press for Early Publication

Ready April 17th

PANAMA: AND WHAT IT MEANS

By JOHN FOSTER FRASER

Author of "The Land of Veiled Women," "America at Work," "Canada As It Is," etc.

In this volume on the great canal we have the point of view of an international traveller, student, and author of repute.

The author gives us his impressions of present conditions in the work of the canal and in the canal zone—the engineering and sanitation difficulties overcome—obtained from careful studies and personal observations made on the spot. He presents us with a vivid history of the canal project from the beginning.

The illustrations, made from photographs, number over forty-five, and add much interest to the volume. 12*mo*, *cloth*. *Fully illustrated*. *Net*, $1.75. *Postage*, 15 *cents*.

Ready April 24th

SOCIAL ENVIRONMENT AND MORAL PROGRESS

By ALFRED RUSSEL WALLACE

Dr. Wallace, the eminent scientist, at his ninetieth year, gives the world his ripened meditations upon human progress, both in intellect and morals. He destroys much of the common belief in the progress of the race, but, with keen insight, he sees the root causes of social degeneracy, and, with a prophet's fiery zeal, he exposes and denounces them, and then offers a constructive policy worthy of the serious consideration of every progressive person. 12*mo*, *cloth*. *Net*, $1.25. *Postage*, 15 *cents*.

Send for our illustrated descriptive Catalogue of books on Travel, History, Biography, and Art.

Postage 3c. per vol.

Shakespeare Lexicon and Concordance

Uniform with the above.

Cloth 60 cents | **Leather 75 cents**

Send for a fuller description.

A Novel "Crowned" by the French Academy

The Fear of Living

By HENRY BORDEAUX Foreword by René Doumic.

Translated from the 74th French Edition by Ruth Helen Davis

A remarkable picture of modern French society, showing how the modern habit of shirking the responsibilities of action is robbing life of all that gives it charm and value. **$1.35 net, postpaid $1.47.**

A Sensational Contribution to Theatrical Art

Towards a New Theatre

By EDWARD GORDON CRAIG

Mr. Craig has a very genuine message to the world of art which he is demonstrating in the School of Dramatic Art of which he is the founder. Its value was first recognized on the Continent, where Max Reinhardt, the foremost expositor of the methods of the "new theatre," has unquestionably been influenced by it; the Russian stage has seized upon it with enthusiasm. The forty designs for stage scenes with critical notes by the inventor in this volume illustrate ideas which bid fair to overturn all theatrical tradition. The book arrests attention instantly, and is more than stimulating. **Square royal 4to, $6.00 net.**

A Wonderful Book of Travel

The Sea and the Jungle

By H. M. TOMLINSON

"Maybe you don't care anything about travel books. Don't let that notion swindle you out of as much sport as you are likely to get out of a book this season. You like 'Treasure Island,' don't you? You like fun and adventure. You like excellent writing. Very well. Ship 'along of,' as John Silver says, Mr. Tomlinson and Captain Morgan, who had lived a life 'monotonous with adventure.' . . . After this you will always look at a map of South America with pleasure."—*New York Tribune.*

Cloth 8vo, $2.50 net, postpaid $2.67.

Ravenna A Study by EDWARD HUTTON

With 10 plates in colors and many line drawings by Harold Sund.

A most interesting description of the sole remaining monument of the years between antiquity and the middle ages which we know as the Dark Ages. **Cloth, demy 8vo, $3.00 net, postpaid $3.14.**

The Mystic Way By EVELYN UNDERHILL

The Author has already to her credit the best and most sympathetic book on mysticism yet published. Here she traces out the type of life called mystical in a fruitful piece of noble, interpretative work.

Ready next week. **Cloth, 8vo, $3.50 net, postpaid $3.64.**

Immanence Verses by EVELYN UNDERHILL

By the Author of "Mysticism," "The Mystic Way," etc. $1.25 net

The WOLCOTT SCHOOL, DENVER, COL.
Superior climate. Accredited with Eastern Colleges for girls. Fine music advantages. Gymnasium.

Significant New Books

What Children Study and Why
By CHARLES B. GILBERT, Formerly Superintendent of Schools, St. Paul, Newark and Rochester. 337 pages. $1.50.
A timely book on an important and much-discussed subject—the school curriculum—this volume offers material that can be found in no other one book—material by which to judge all proposed changes and reforms in the elementary school course.
It gives a clear, broad-minded analysis of the values of the different subjects taught in elementary schools.

Psychology as Applied to Education
By DR. P. M. MAGNUSSON, State Normal School, St. Cloud, Minn. 345 pages. Illustrated. $1.50.
An up-to-date, well-poised and practical pronouncement on the application of the principles of psychology to the work of teaching.
"Laboratory Psychology," "Child Study," "The Montessori Method," "Educational Reorganization," the Boy Scout and Playground Movements are a few of the interesting subjects discussed.

NEW BOOKS FOR THE UP-TO-DATE READER

History as Past Ethics

387 pages. $1.50.

By PHILIP VAN NESS MYERS

This work completes the series of historical textbooks begun by the author more than thirty years ago. It is the outgrowth of a conviction that the philosophy of ethics, if it shall become a stimulus and guide to social service and humanitarian effort, must be based on a knowledge of the race's moral life in the various stages of historic evolution, and that to gather and systematize these facts is the most important part of the historian's task; inasmuch as the development of conscience in the race is the ultimate goal of the historic movement.

Social Forces in Modern Literature

254 pages. $1.00.

By PHILO M. BUCK, Jr.

A history of European literature of the past century. It offers a study of the attitude of the leading writers toward the problems arising from our modern complex social life. The author traces the gradual rise of interest in pure literature, and suggests the various answers essayed by thinkers and writers who may be regarded as preëminent in their several fields. He emphasizes two leading ideas: the gradual breaking down of purely national ideals in literature and consequent close interdependence of the literatures of Europe, and the conception that many of the problems of our day lost their first varnish years ago.

British Social Politics

580 pages. $1.75.

By CARLTON HAYES

This volume deals with the revolution which has been accomplished in Great Britain's contemporary politics during the present ministry. The important acts: workmen's compensation, trade disputes, labor exchanges, old age pensions, the Lloyd George Budget, the defeat of the House of Lords, national workmen's insurance, etc., are treated in special chapters. Student, historian, social worker, practical economist, and citizen, concerned with the popular problems facing our own political democracy, will find British Social Politics invaluable.

Pageants and Pageantry

294 pages, profusely illustrated. $1.25.

By ESTHER WILLARD BATES

With an Introduction by WILLIAM ORR.

A work on the staging, costuming, organizing, expenses, sources, and writing of amateur pageants and plays. It contains five original pageants, with episodes, prologues, and directions for production. For school, home, or playground, the material presented will be found adaptable, entertaining, and eminently practical.

Essentials in Journalism

300 pages, illustrated. $1.75.

By HARRY FRANKLIN HARRINGTON and THEODORE T. FRANKENBERG

A textbook for all young people preparing for practical newspaper work. The book combines the practice and philosophy of all routine newspaper work, and takes up in turn each phase of editorial activity. The student is shown the thing to do and the why of it. The standards set are those of the best newspaper offices.

Kühnemann's Schiller

In two volumes: The Set, $3.00.

By EUGEN KÜHNEMANN

Translated by KATHARINE ROYCE, with an introduction by JOSIAH ROYCE.

A distinctive work in comparative literature. The book reinterprets the permanent significance of the poet Schiller for the literature of the world; carries out extensive studies of the relation of Schiller's dramas to dramatic poetry; and presents a careful and novel account of Schiller's development as artist and as man.

History of Modern Elementary Education

505 pages, illustrated. $1.50.

By SAMUEL CHESTER PARKER

A forcible and essentially teachable work, tracing institutional development from the first mediæval cities down to the present time. Typical movements, institutions, and individuals are emphasized; and the elementary school systems of Prussia, England, New York City, Pennsylvania, Massachusetts, and Indiana are studied in detail. The book will rank as an authority in its field.

Swedish Song Games

95 pages, illustrated. 75 cents.

By VALBORG KASTMAN and GRETA KÖHLER

This is a fascinating manual of Swedish song games that may be used in school or on the playground, indoors or out, by children of all ages. The music has the lilt of all folk songs, the words are in English, and the directions are explicit. These games give an opportunity not only for imitation, but also for initiative, and hence are both recreative and educational.

Wordsworth: Poet of Nature and Poet of Man

320 pages. $2.00.

By E. HERSHEY SNEATH

Wordsworth's mental and spiritual unfolding in relation to his heredity and physical and social environment is here carefully shown. The text includes a study of the poet's works down to 1814, and a complete statement of his poetic and philosophic creed.

GINN AND COMPANY, Publishers

BOSTON NEW YORK CHICAGO LONDON
ATLANTA DALLAS COLUMBUS SAN FRANCISCO

NOTABLE 1913 BOOKS

ON TOPICS OF THE HOUR

WITH THE TURKS IN THRACE — By Ellis Ashmead-Bartlett

By the Special War-Correspondent of the London "Daily Telegraph"

This is an impartial account of an eye witness of the short campaign which has ended in the Turks being driven from almost the last of their European possessions.

37 illustrations and a map. 8vo. **Net $3.00**

LOST IN THE ARCTIC — By Capt. Ejnar Mikkelsen

Being the story of the "Alabama" Expedition, 1909-12. This story of Capt. Mikkelsen's expedition is lacking in no elements of romance; and, though it is full of bitter facts and terrible encounters with nature's worst horrors, it reads like the story of another Robinson Crusoe.

Over 100 illustrations and a map. Octavo. **Net $5.00**

THE FOUNDATIONS OF A NATIONAL DRAMA — By Henry Arthur Jones

By the author of "The Liars," "Mrs. Dane's Defence," "The Hypocrites," etc. The famous playwright here examines the strength and weakness of the stage in Anglo-Saxon countries.

Photogravure Frontispiece. Octavo. **Net $2.50**

MODERN PROBLEMS — By Sir Oliver Lodge

A volume of 21 illuminating essays on some of the more earnest and pressing of modern controversies, by the noted author-scientist. *Crown 8vo.* **Net $2.00**

THE UPHOLSTERED CAGE — By Josephine P. Knowles

The Problem of the Unmarried Daughter. With an Introduction to American women by Belle Lindner Israels. A thorough and able presentation of a very pressing and extremely modern problem. *12mo.* **Net $1.50**

GOLD, PRICES AND WAGES — By John Atkinson Hobson

By the author of "Problems of Poverty," "Science of Wealth," etc. A practical, scientific, popular inquiry into present-day conditions, explaining from a scientific and economic point of view the rise in prices and increased cost of living which is now world-wide. *12mo.* **Net $1.25**

TRAVEL

IN THE SHADOW OF THE BUSH — By P. Amaury Talbot

This brilliant book describes a strange country—Southern Nigeria—and a still stranger people—the Ekoi, an African tribe still almost untouched by civilization. For its sound research and its astounding additions to our knowledge of African fauna and flora, this work must attract wide and serious attention. *With 123 illustrations and a map. Octavo.* **Net $5.00**

MY SUDAN YEAR — By Ethel S. Stevens

By the author of "The Lure," "The Veil," etc. In this happiest of wander-books, Miss Stevens conveys to the fireside tourist the tropic and ancient fascination of the Nile and Sudan.

With 40 illustrations. Octavo. **Net $3.50**

FRANCE FROM WITHIN — By Claire De Pratz

By the author of "Eve Norris," "Elisabeth Davenay," etc. A delightfully intimate volume describing the ways and customs of French people in their family and social life.

Illustrated. Octavo. **Net $3.00**

THE SHADOW SHOW — By J. H. Curle

The work of a modern Marco Polo—the most travelled man of his day. At forty the author has seen the world from end to end. His book reviews in a flash the manifold wonders of a complicated and fascinating world. *Photogravure frontispiece. 12mo.* **Net $1.35**

BIOGRAPHY

THE PRIVATE LIFE OF HENRY MAITLAND — By Morley Roberts

The most widely discussed book of the year. At one stride it has taken a permanent place in literature as one of the most human of records. *12mo.* **Net $1.25**

GEORGE FREDERIC WATTS — By M. S. Watts

The Annals of an Artist's Life. The first authoritative and complete biography of the great modern painter to be published.

With 39 photogravure illustrations. Three 8vo Volumes. Boxed. **Net, per set, $10.00**

QUALITY IN FICTION

'TWIXT LAND AND SEA — By Joseph Conrad

By the author of "Lord Jim," "Youth," etc. A book of three new stories by the incomparable Conrad—a marvellous combination of thrilling adventure and fine delicacy of phrase.

12mo. **Net $1.25**

THE RED HAND OF ULSTER — By G. A. Birmingham

By the author of "Spanish Gold," etc. An immensely topical and interesting novel revealing new strength and humor in Mr. Birmingham's writing. *12mo.* **Net $1.20**

THE BROWNS — By J. E. Buckrose

By the author of "A Bachelor's Comedy," "Down Our Street," etc. The novels of J. E. Buckrose take us into the by-paths of quaint English country life and charm us by their delightful pictures of every-day folk. *12mo.* **Net $1.25**

AT ALL BOOKSELLERS

GEORGE H. DORAN COMPANY, New York

PUBLISHERS IN AMERICA FOR HODDER & STOUGHTON

NEW EDUCATIONAL BOOKS

AESOP AND HYSSOP — William Ellery Leonard
University of Wisconsin.

Fables adapted and original, in a variety of verse forms, picturesque, lively, and humorous in phrasing, with a moral, fresh in wisdom and succinct in expression, pleasingly appended to each. Profitable for amusement and doctrine in nursery and in study.

Pp. xxii-158. Cloth, $1.50.

THE NEW LOGIC — Dr. Charles Mercier

Dr. Mercier is physician for mental diseases at Charing Cross Hospital, London; also examiner of mental diseases and psychology in University of London.

"The aim of this book is to show that the traditional logic of Aristotle occupies much the same position to-day that witchcraft did 250 years ago. It was as an introduction to the study of insanity that the author was first moved to examine logic. He holds the doctrine that until we have an adequate and correct logic we cannot duly appreciate or approve the erroneous reasoning either of the normal or the morbid kind." *—Boston Evening Transcript.*

Pp. xxvii-422. Cloth, $3.00.

ON THE FOUNDATION AND TECHNIC OF ARITHMETIC — Prof. George B. Halsted

"In Prof. Halsted's treatment, with the aid of history of the rules and technic of arithmetic and the merits of its symbolism and numerical systems, he is very stimulating."
—London Mathematical Gazette.

"The present volume is a welcome addition to the body of writings having to do with the history and methods of teaching arithmetic." *—School Science and Mathematics.*

Pp. iv-133. Cloth, $1.00.

MAN A MACHINE — Julien Offray La Mettrie

Translation by Gertrude Carman Bussey, Wellesley College.

La Mettrie was the most extreme writer among the earliest French materialists. His theory that the soul is but a mechanical principle upon which the human machine is constructed strongly resembles modern theories of the mechanical origin of life.

Pp. 226. Cloth, $2.00.

SYNDICALISM — J. Ramsay MacDonald

"The chapter on the philosophy of Syndicalism is as good as anything yet published on the subject in America." *—The Chicago Evening Post.*

"A book of information rather than of argument. The philosophy of 'direct action,' the principles of Syndicalism, the general misunderstanding as to the meaning of the movement and its growth in Europe and America, all these things are explained." *—The Outlook.*

Pp. vi-74. Boards, 60c.

FOR SALE BY ALL BOOKSELLERS. SEND FOR COMPLETE LIST.

THE TRUTH ABOUT THE TITANIC

By
COLONEL ARCHIBALD GRACIE

With Sixteen Illustrations

COLONEL GRACIE went down, as is well known, with the Titanic; but lived to tell the tale of the tragedy that appalled the world. He has given here a complete account of the sinking of the great ship, with the innumerable personal references which will make the book of absorbing interest, not only to the survivors and to the families and friends of all on board, but to the whole of the vast public which was stirred to its depths by the news of the catastrophe.

In addition to the personal narrative Colonel Gracie has added a detailed account of the launching and adventures of each boat, with the list of passengers and crew, and the names of those who said good-bye to their wives and children and stood aside, facing their own fate without fear.

It is a strange, vivid, wonderful picture that Colonel Gracie has drawn: a picture not merely memorable, but ineffaceable.

MITCHELL KENNERLEY PUBLISHER, NEW YORK

Spring Books, Yale University Press

THE FRAMING OF THE CONSTITUTION OF THE UNITED STATES. By Max Farrand, Professor of History in Yale University, Editor of the "Records of the Federal Convention."

This book is a most opportune account of the making of the Constitution, appearing at a time of agitation in regard to Constitutional amendments. It is a clear, concise account of what was actually done and what was attempted by the members of the Federal Convention. The author knows whereof he speaks, having devoted over ten years to collecting and editing all the information available on the subject.

8vo. 258 pages. Appendix of 47 pages. Index.
Price $2.00 net; postage 20 cents extra.

SOME INFLUENCES OF MODERN PHILOSOPHIC THOUGHT. By Arthur Twining Hadley, President of Yale University.

This book contains the John Calvin McNair Lectures substantially as they were delivered at the University of North Carolina in 1912. It is a most readable review of modern philosophy, full of valuable suggestion.

12mo. 160 pages.
Price $1.00 net; postage 10 cents extra.

THE ECONOMIC UTILIZATION OF HISTORY. By Henry W. Farnam, M.A., R.P.D., Professor of Economics, Yale University.

All those who are interested in social improvement and philanthropy will find much to hold their attention in this book. The author points out that science and philanthropy now go hand in hand. The first three chapters deal with scientific methods in economics, while the remaining nine chapters deal with their application. The book is at once scholarly and "good reading."

12mo. 240 pages. Cloth binding. Index.
Price $1.25 net; postage 10 cents extra.

A LANDSMAN'S LOG. By Robert W. Neeser. With an Introduction by Rear-Admiral Charles J. Badger, Commander-in-Chief of the Atlantic Fleet.

A refreshing sea-story of an entirely new sort. The author is an authority on Naval affairs and Secretary of the Naval Historical Society. The introduction by Rear-Admiral Badger heralds the book as a proof that the poetry of the sea has not gone with the disappearance of sail-rigged vessels. The appendices contain matter valuable to the student of naval affairs. The forty illustrations are of unusual interest. They are from photographs taken by the author while on the cruise of which this book is the chronicle.

8vo. 194 pages. End papers in color. 40 illustrations. 27 pages of appendix.
Price $2.00 net; postage 16 cents extra.

THE CONSERVATION OF WATER. By Walter McCulloh, Consulting Engineer of Niagara Falls.

The Chester S. Lyman Lectures delivered at Sheffield Scientific School of Yale University.

A convincing and clearly illustrated account of the present need for a greater water supply and of the methods used in New York State to insure its conservation.

8vo. 100 pages. 40 illustrations, diagrams, etc.
Price $2.00 net; postage 20 cents extra.

STELLAR MOTIONS. By William Wallace Campbell, Sc.D., LL.D., Director of the Lick Observatory, University of California.

The Silliman Lectures delivered at Yale University in 1909-10.

This book marks an important advance in the science of Astronomy. It contains discoveries and calculations made possible by the spectograph. The matter, the diagrams, and the illustrations are of abundant interest.

8vo. 380 pages. Diagrams and illustrations.
Price $4.00 net; postage 25 cents extra.

PROBLEMS OF GENETICS. By William Bateson, Director of the John Innes Horticultural Institution, Surrey, England.

The Silliman Lectures delivered at Yale University in 1907-08.

The author has made extensive investigation along the lines suggested by Mendel's Law. This, his latest treatment of the matter, contains interesting and valuable discoveries. The work must be considered of great importance in its field.

8vo. Two color plates. Diagrams and illustrations.
Price $4.00 net; postage 25 cents extra.

IRRITABILITY. A Physiological Analysis of the General Effect of Stimuli in Living Substances. By Max Verworn, Professor at Bonn Physiological Institute.

The Silliman Lectures delivered at Yale University in 1911-12.
8vo. 300 pages. Diagrams and illustrations.
Price $3.50 net; postage 20 cents extra.

STUDIES in the Lyric Poems of Friedrich Hebbel: The Sensuous in Hebbel's Lyric Poetry. By Albert Gubelmann, Ph.D., Assistant Professor of German in Yale College.

The author has proven himself exceptionally well fitted for this extremely difficult task of interpretation. He has shown in a simple, interesting, and scholarly way the elusive appeal of Christian Friedrich Hebbel.

12mo. Cloth binding. 303 pages. Index.
Price $2.25 net; postage 14 cents extra.

GAWAYNE AND THE GREEN KNIGHT. By Charlton Miner Lewis, Emily Sanford Professor of English Literature in Yale College.

A poem of Arthurian legend in a delightful new form, with an appeal to all lovers of King Arthur.

12mo. 108 pages.

IMPORTANT BOOKS

MY LIFE. By AUGUST BEBEL. (With a Portrait.) An Autobiography of the Famous Leader of the Social Democratic Party in Germany.

This autobiography contains the story, from the inside, of the rise of the German trades-unions. Bebel gives a vivid description of the poverty of his early life and of his wanderings as a craftsman in search of work all through Germany—the Germany before the wars of 1864, 1866, and 1870-71, and before the Unification. Soon after his election to the Reichstag he was convicted of high treason for his attitude toward the Franco-German war and had to spend some years in prison. The international reputation of the author, the extreme frankness with which he writes, and the striking success of the movement with which he is identified make this a human document of remarkable interest and significance.

344 *pages, 8vo, cloth; postpaid,* $2.14.

FRANCESCO PETRARCA AND THE REVOLUTION OF COLA DI RIENZO. A Study in the History of Rome during the Middle Ages. By MARIO EMILIO COSENZA, Instructor in Latin in the College of the City of New York.

In these pages the author draws a picture of Petrarch as a statesman. He has chosen for special treatment Petrarch's relations with Cola di Rienzo, because they constitute a story that is virtually a chapter in the history of Rome during the Middle Ages. The material of the present volume is drawn chiefly from Petrarch's letters, from the extremely important correspondence of Cola di Rienzo, and from the equally important archives of the Roman Church. Nearly all of this material is new to the English language. The notes have been made detailed enough to make clear Petrarch's allusions.

344 *pages, 12mo, cloth; postpaid,* $1.60.

AMERICAN POEMS. Selected and Edited with Illustrative and Explanatory Notes and Bibliographies. By WALTER C. BRONSON, Professor of English Literature in Brown University.

The book offers a most carefully chosen and well-balanced presentation of the poetic works of Americans, covering the entire period of our history. For the teacher, as well as the student, the value of the work is greatly enhanced by the comprehensive Notes, Bibliography, Glossary, and Index. It is believed that the book will have the wide popularity of Mr. Bronson's earlier collection, "English Poems," which has been adopted by all leading American colleges.

680 *pages, 12mo, cloth; postpaid,* $1.68.

THE COURTS, THE CONSTITUTION, AND PARTIES. Studies in Constitutional History and Politics. By ANDREW C. McLAUGHLIN, Professor of History in the University of Chicago.

The work consists of five papers, the first of which discusses the power of a court to declare a law unconstitutional. Two deal with the growth and essential character of political parties, and are followed by one on the history of differing theories of the Federal Union. The work fittingly concludes with a discussion of the written Constitution in some of its historical aspects.

308 *pages, 12mo, cloth; postpaid,* $1.63.

THE ETHICS OF THE OLD TESTAMENT. By HINCKLEY G. MITCHELL, Professor of Hebrew and Old Testament Exegesis in Tufts College.

The aim of the author is to present a faithful and, as nearly as possible within the limits of a manual, a comprehensive view of the development of ethical ideas among the Hebrew nation. To this end he takes the books, or parts of books, of the Old Testament in the order of their origin, so far as their dates can be determined, and discusses their teaching. This is the first volume to be issued in the series of "Handbooks of Ethics and Religion," edited by Shailer Mathews.

420 *pages, 12mo, cloth; postpaid,* $2.15.

THE MECHANISTIC CONCEPTION OF LIFE. Biological Essays by JACQUES LOEB, Head of the Department of Experimental Biology, Rockefeller Institute for Medical Research.

This volume consists of nine chapters written on different occasions, and mostly in response to requests for a popular presentation of the results of the author's investigations. The layman is led into the wonderful realms of biology, where he is made to see with understanding eyes things which heretofore have had no meaning for him, or about which he has at best speculated and thought with but partial comprehension.

238 *pages, 12mo, cloth; postpaid,* $1.65.

HEREDITY AND EUGENICS. By JOHN M. COULTER, WILLIAM E. CASTLE, EDWARD M. EAST, WILLIAM L. TOWER, and CHARLES B. DAVENPORT.

A book intended to present the recent developments of knowledge in reference to evolution, heredity, and eugenics, and related subjects. Five of the leading investigators in this field have collaborated in its production, and the result is a work which will appeal to the general public, because it presents the latest conclusions in a popular and extremely interesting manner. The authors are eminently fitted to discuss the branches of the subject covered by their respective contributions to the work.

312 *pages; 8vo, cloth; postpaid,* $2.70.

Important Books of the Spring

Paul Elmer More's
THE DRIFT OF ROMANTICISM

Under the main title, "The Drift of Romanticism," Mr. More has brought together a collection of papers upon a group of writers of allied tendencies and relations: William Beckford, Cardinal Newman, Walter Pater, Fiona Macleod, Nletzsche, and Huxley.

By themselves, these papers are admirable specimens of critical writing—close studies of the minds and methods of the men in question. Taken together, they point out significantly the romantic drift that is one of the most characteristic phenomena of the life of the nineteenth century as expressed in its literature.

$1.25 *net.* *Postage* 12 *cents.*

Hugo Münsterberg's
PSYCHOLOGY AND INDUSTRIAL EFFICIENCY

"The volume is not only interesting; it is fascinating. The problems here discussed are those of every-day life, and the book is a study of human nature. It will be found useful, not only to the economist and manufacturer, but also to the sociologist and the clergyman."—*Boston Transcript.*

"Whoever reads Dr. Münsterberg's book will be surprised at the large number of plausible suggestions which he has deduced from his experiments. . . . His work cannot fail to be serviceable to managers of mills, railroads, mines, and other employers of labor on a large scale."—*Harvard Graduates' Magazine.*

$1.50 *net.* *Postage* 13 *cents.*

YOUTH AND LIFE — By Randolph S. Bourne

"The round dozen of essays abound in suggestions, in the high-heartedness of youth, in its audacity and readiness to tackle a faulty world much in need of making over. Mr. Bourne has a pretty turn for epigram; the pregnant phrase runs nimbly from his pen and illuminates his thought."—*Milwaukee Free Press.*

"Mr. Bourne is one of the most charming of writers, and his views of our earthly careers as individuals, battling with destiny, are choice examples of limpid English, laden with imagination, deep philosophy, and valuable inspiration."—*Philadelphia Record.*

$1.50 *net.* *Postage* 13 *cents.*

PAN-GERMANISM — By Roland G. Usher

"Professor Usher's book is one of great value. Nowhere else can a student of modern history find a more comprehensive and searching account, or a more acute analysis of the history of the past quarter of a century and of the actual situation."—*New York Times.*

"No one who wishes to be well informed in regard to world affairs can afford to overlook this book. In addition to its element of timeliness, it is, in its thoroughgoing account and discussion of the great movement of Pan-Germanism, an important and permanent contribution to history."—*St. Louis Republic.*

$1.75 *net.* *Postage* 13 *cents.*

Hermenegild Wagner's
WITH THE VICTORIOUS BULGARIANS

"Lieut. Wagner's narrative is easily the most satisfactory account of the war as a whole. . . . His knowledge of the people and the country is of the most intimate nature. . . . His analysis of the historical forces that brought about the conflict, and of the strategical and political factors that determined its course, is excellent."—*The Nation.*

"It is beyond comparison the best account I have yet seen of the campaign from the side of the allies. The subject is treated scientifically, with knowledge, and with full reference to past history."—*Henry W. Nevinson, Special War Correspondent to London Daily Chronicle.*

55 *illustrations and* 6 *double-page maps in color.* $3.00 *net.* *Postage* 20 *cents.*

Hendrik Willem Van Loon's
THE FALL OF THE DUTCH REPUBLIC

This authoritative and highly readable book takes up the story of the Dutch Republic from the height of prosperity toward the end of the seventeenth century, and carries it to the final fall of the Republic early in the Napoleonic Wars a century later.

The writer's knowledge is wide and intimate, and he has contrived to make the story of the decline as fascinating and instructive as the well-known story of the Republic's rise. Particularly interesting to Americans is the full account of the part played by the Dutch Republic in the international complications attending the American Revolution.

Fully and attractively illustrated from facsimiles of contemporary Dutch prints, etc. $3.00 *net.* *Postage* 18 *cents.*

The Nation

NEW YORK, THURSDAY, APRIL 10, 1913.

The Week

President Wilson's message to Congress states the theory of which we have the practical application in the new tariff bill. He lays down the general principles; the bill furnishes the details. The President gave simply a survey of the work to be done, and of the spirit in which it should be undertaken. He could not do more in the limits of space which he was wise enough to impose upon himself. But, happily, the labor which Mr. Underwood and the other Democratic members of the Ways and Means Committee have expended upon the tariff during the past two years, and especially in preparation for the extra session of Congress, has made possible the instant production of the full bill. Thus we are in the fortunate position of having theory and practice go hand in hand. As the President truthfully says, and as everybody knows, the original idea of the protective system was long since outgrown. Instead of a modest shelter, protection became a blown Government subsidy. The final expression of the belief that the Government must be a patron of industry was given in the eye-opening phrase of the Republican platform of 1908, that duties must be so laid on imports as to assure a "reasonable profit" to American manufacturers. Against all this, and against the practice of money-bought and log-rolled tariff bills, President Wilson urges Congress to set its face. The aim must be to make it impossible for monopoly to hide behind tariff walls, to remove taxes as far as possible from the necessaries of life, to lift needless burdens from consumption, and in general to put American enterprise to the test of effective competition.

A purely local cause has been suggested for the breaking of the levee which resulted in the flooding of the western part of Indianapolis. It is that manufacturing concerns have been encroaching on the bed of the White River by dumping cinders and earth, and building on the ground thus made. As a consequence, it is declared, the stream has been narrowed, so that, when the unusual pressure came from the extraordinary rains, the force of the water was irresistible. A responsible citizen of Indianapolis asserts that he has repeatedly called the attention of the City Engineer and of other city officials to this practice on the part of manufacturing companies. Unfortunately, this story is inherently quite credible. It tells the tale which in varying forms we are thoroughly accustomed to hear; the tale, that is, of the exploitation of public resources by private interests. If it is true in this instance, the city of Indianapolis has paid well for the dereliction of its officers. In any case, there should result a quickening of the sense of both officials and private citizens in respect to the enforcement of law—even law that imposes some inconvenience upon some persons.

The defeat of woman's suffrage in Michigan was not altogether unexpected. The suffragists themselves were not united, and the campaign does not seem to have been well managed. On the other hand, the anti-suffragists were more active than before, including a vigorous men's association. Besides, as was the case in Ohio and Wisconsin, the liquor interests were aroused to the point of spending money right and left. A red circular passed about in the saloons bore the legend: "Woman suffrage means doubling the vote which is naturally opposed to you and your business." And, finally, the crazy actions of the English militants are affecting the cause in this country. When all is said and done, however, the importance of the event is not to be minimized. Michigan for suffrage would have been an entering wedge for the East, and would have stopped many an argument to the effect that suffrage is merely a wild Western innovation. That the voters on Monday were radically inclined appears from their overwhelming adoption of the initiative and referendum and the recall of elective officials, all of which thus take their places in another State Constitution.

Not until party labels on municipal tickets are discarded will newspapers be apt to look at city elections from any except a party point of view. Yet nothing could be much more misleading than the bare report that the Democrats elected about two-thirds of the Aldermen chosen in Chicago last week. There, at least, it is pretty generally recognized that what counts is the proportion of winners who have the endorsement of the Municipal Voters' League, or, at all events, do not have the League's vigorous opposition. It is extremely gratifying, accordingly, to read the expressions of satisfaction in independent Chicago newspapers over the continued success of the movement for non-partisanship in city politics. A victory of this sort is the more notable this year, owing to the Democratic "atmosphere" persisting from last November, as well as the divided condition of the opposition. The number of Councilmen pulling through on the strength of their records is most encouraging. The moral of the result should not be lost upon the Legislature, which is being asked to abolish party designations in Chicago municipal elections. This idea, which has made considerable progress of recent years, might well be adopted generally.

A surprising revelation is that made by the Interstate Commerce Commission, in a report telling of the "orgy of petty graft" that has been going on in Colorado, in the shape of the giving and receiving of free passes on railways. That some violations or evasions of the anti-pass law might be taking place any one would have been prepared to learn; but when an official report states that shippers, professional men, judges, State officials, members of the Legislature, and other classes of persons were indulging in great numbers in this form of graft, one can but be taken aback at the news. Indictments have already been found against several large corporations for accepting passes and against two railway companies for giving them. What is to be done in the cases of individuals does not yet appear; but if the practice is to be permanently stopped, it is persons of flesh and blood to whom the guilt must be brought home. The legal persons known as corporations have a

wonderful capacity for absorbing punishment without visible effect upon their conscience, or what serves in lieu of conscience.

With characteristic shiftiness, Gov. Sulzer answers President Truesdale's denial of the charge that the Corning accident was due to the lack of extra brakemen by raising all sorts of other issues. The Lackawanna pays 55 per cent. dividends on its stock; Mr. Truesdale draws a larger salary than Gov. Sulzer; but Gov. Sulzer serves the people, not a corporation, and places the man above the dollar and not the dollar above the man. This is nauseating. The fact is that, in pursuance of an agreement with labor unions, Gov. Sulzer signed the "full-crew" bill which is, among other things, a deliberate slap at the Public Service Commissions of the State. In these days of scientific management the railways are condemned to pay a couple of millions annually for needless employees. Of course, Gov. Sulzer brings up the fact that there were killed last year 280 railway employees and 45 passengers, while there were injured 6,690 employees and 945 passengers. These casualties must be reduced; but what will the extra brakeman have to do with it? The Governor seems to think it will be his duty to watch the engineer and report if he is fit for duty. This is delicious nonsense. New York never had a more high-minded Governor than Charles E. Hughes. He vetoed this bill and he was utterly incapable of writing such a discreditable letter as this one of Gov. Sulzer.

A bill carefully drawn for a good purpose is that now before the Judiciary Committee of the New York State Senate, providing for the registration of architects. It is pointed out, in a statement issued by the New York Chapter of the American Institute of Architects, that the bill does not compel any one to fulfil its requirements of competency as a condition of carrying on the business of an architect; it simply creates a designation—Registered Architect—for those who *have* fulfilled those requirements, and forbids any others to use that designation. It makes a provision, too, against injustice to those already in the active practice of the profession, by admitting them to registration without examination upon satisfactory evidence of competency and of bona-fide practice. For the future, however, applicants for registration must give evidence of proper preliminary training and undergo an adequate State examination—or, in lieu of the examination, must have completed the course of a recognized architectural college or school—and must show that they have had a specified amount and kind of practical experience. Good architecture is one of the great interests of the community, and such certification of competency as is required in the bill may often prove a valuable protection.

There are many ways of serving the cause of truth, but it would be difficult to name one that combines the useful with the agreeable in more satisfying proportions than does the work of the gentlemen who carry on the Metropolitan Psychical Society, of New York. Their function is evidently not the extension of the boundaries of knowledge, but rather the prevention of alleged extensions that are not extensions at all——in accordance with Josh Billings's maxim that it is better not to know so much than to know so much that ain't so. No sooner does a young lady of ten exhibit a marvellous power of seeing through opaque obstacles, and get her achievement recognized by a learned gentleman who is hospitable to phenomena of this general nature, than the president of this modest little society offers the wonderful infant $300 if she can reproduce for him the performances that have satisfied Dr. Quackenbos. This is a primitive method of putting the question to the touch, but we doubt whether an international congress of the learned societies of Europe and America could propose a better. These downright, though skeptical, investigators understand legerdemain, and they do not hesitate to assert flatly that it is only persons who understand legerdemain that are competent to find out whether claims like this of "X-ray vision" are genuine or fraudulent. The exposure of Palladino in this city was a signal instance of success by sleight-of-hand men where men of science had been baffled.

A bill has been introduced into the Tennessee Legislature making it unlawful for "any acknowledged, self-confessed, or convicted liar or thief to publish, own, or control any newspaper" in that State. This is good, so far as it goes, but why should Tennessee lag behind Pennsylvania? At Harrisburg a bill has been introduced providing for the "certification" of newspaper men, or "journalists," as it courteously dubs them. There is to be a commission, consisting of seven newspaper men (uncertified, apparently), the Superintendent of Public Instruction, a Senator, and a Representative, who are to report upon the desirability of establishing a State Board of Journalism, which shall have the high prerogative of providing for the "education and certification of journalists." In order that the pearls discovered and polished by this commission may not go unset, it is further suggested that every newspaper shall be compelled to employ at least one certified journalist. All this is in the right direction, but let us not stop here. Who will be the first to introduce a bill providing for the education and certification of legislators?

Those who waited to see if the Parliamentary inquiry would bring out more facts in regard to the Marconi investments of English Ministers than did their suit against the Paris *Matin*, have really got no new evidence upon which to form a judgment. The Attorney-General, Sir Rufus Isaacs, has at all times hotly resented the charge that he acted upon official knowledge in buying Marconi shares, and there has been no proof whatever that he did. Indeed, the accusation of what would have been tantamount to corruption has been tacitly dropped. Not one of Sir Rufus's examiners ventured to press it. But it needed no examination to show that he had been guilty of a gross indiscretion. This was twofold; first, in purchasing the shares at all, though they were of the American, not the British, company; and, worst of all, in not having made from the beginning a clean breast of the whole transaction when the affair was first brought up in the House. By contenting himself then with a round denial of the charge that he had speculated in the shares of the British Marconi Company, at the moment entering into a contract with the Government, he necessarily gave to his subsequent disclosure of the full truth the appearance of

having something to conceal. This is what has made the unpleasant impression and given concern to the Cabinet. The affair is made all the more of a political handle, especially against Lloyd George, for the reason that, a few years ago, he himself took so high a tone about Tory Ministers going into similar financial enterprises.

A conference of the Tariff Reform League—the British protectionist organization—was held in London recently, to consider the situation created by the change of front of the Unionist party on the subject of "food taxes." It was evidently an unhappy gathering, but it exhibited a spirit of dogged resistance to the new policy. Perhaps the most ominous thing about the conference, as bearing on the future of the protectionist movement, was precisely this manifestation of bitterness of feeling. It shows that those who really care for protectionism recognize the significance of what has happened, and are convinced that the whole propaganda is in great danger of collapse. The one possible substantial basis for a protectionist policy in England is in its appeal to the agricultural interest, on selfish grounds, and to the country's desire to maintain or restore its agricultural development, on patriotic grounds. The conference accordingly adopted the following resolution, proposed by Mr. Maxse:

> That the rank and file of the Tariff Reform League adhere to the full policy of tariff reform as advocated by their leaders since 1903, and would regard any departure from it as equally disastrous to the cause of tariff reform and to the interests of the Unionist party.

The German Chancellor's speech to the Reichstag was like all latter-day defences of militarism—a confession of bankruptcy of statesmanship and a counsel of fear. What was the reason for such a tremendous burden on the wealth, prosperity, and industry of the empire as is contemplated in the new army proposals? Why, there is a war party in France; of course, the Chancellor said, it is only a fragment of the French nation, the bulk of which desires peace—but there it is. So, because of the French militarists, another hundred thousand of German citizens are to be taken from productive industry. Then, on the other side, there is the danger of Pan-Slavism. Germany's relations with Russia, the Chancellor added, were very friendly—oh, yes, quite friendly—and he is sure that the Czar is well-disposed. But the recent events in the Balkans have strengthened the hands of Russia and of the Pan-Slavist agitators, and so Germany must add to her present great army. From this, as well as the Montenegrin situation, it would again appear that war too often decides nothing. The Near Eastern situation was supposed to be settled; in place of it are fresh tension and fresh jealousies; Sir Edward Grey says that a general European conflagration was barely averted by the recent agreement of the Powers. In its place there is a vast increase in the military burdens which make a long armed peace more disastrous than a war. And no statesman sees a way out.

Does little Montenegro stand alone in her splendid defiance of the Powers, or has she the support of the other members of the Balkan alliance? The situation is curiously complicated. On the one hand, there are the Servian troops fighting side by side with the Montenegrins at Scutari. A recent report speaks of King Nicholas surrendering the command of the joint armies in Albania to the Servian commander-in-chief. On the other hand, there is the reply of the Bulgarian Government to the terms of peace suggested by the Powers. It is by no means a conciliatory answer, yet one of the two propositions which the Bulgarian Government does accept is that the boundaries of the new Albania shall be laid out in accordance with the decision of the Powers. Inasmuch as the Powers, meaning thereby Austria on one side and Russia on the other, have agreed that Scutari must go to Albania and not to Montenegro, the Bulgarian note would appear to surrender the very point in behalf of which Montenegro, with Servia's active assistance, has ventured to defy the orders of Europe. One possible explanation is that the continuance of hostilities against Scutari will be used by the Balkan allies to force the acceptance of the rest of their peace programme. When that is done, Montenegro may be persuaded to yield on the question of Scutari and receive compensation elsewhere.

Radical elements in China will view the apparent failure of the six-Power loan with something more than equanimity. It is not that the leaders of Young China count upon loans from other foreign sources. They maintain rather that the Government need not go abroad for financial relief. The *China Republican* of Shanghai, in an editorial dated three weeks before President Wilson's repudiation of the six-Power policy, comments on the official announcement from Peking that the Government is considering the possibility of an internal loan of $200,000,000. The scheme of a patriotic loan was formulated by the National Assembly at Peking several months ago, but failed to commend itself to the Yuan Shi-Kai Administration. The *Republican* is inclined to doubt whether the opportunity to float such a domestic loan has not passed. It has no doubt that the venture would have been successful if undertaken when it was first broached in the representative Assembly. It is only the most ardent patriotism, however, that will regard the Chinese Government as in a position to dispense with outside assistance. During the patriotic upheaval following the Russo-Japanese War there was a great deal heard in the south of China about the feasibility of building railways with native capital. The merchants and the gentry were called upon to go into their pockets in order that no more valuable concessions might be farmed out to the foreigner. The results were not tangible.

Recognition of the new Chinese Republic may or may not be by joint action of the Powers, as Secretary Bryan has suggested, but at any rate this Government is to hesitate no longer. If the act of recognition is popular, it will be so for the best of reasons. To it both American traditions and existing American sympathies unmistakably point. We have not always been so extremely fastidious in the matter of welcoming a republican Government in the Old World. Even to the short-lived Spanish Republic of 1873, the Washington Government made haste to hold out a hand of greeting. By all customary tests the Republic in China is now entitled to be recognized as an established régime; and the Wilson Administration does well to take the lead in entering into friendly relations with it.

THE PRESIDENT AND LEGISLATION

President Wilson's much-bruited visit to the House of Representatives last Tuesday and the delivery of his message in person are not to be thought of as a devised sensation for a day. They must have related themselves in his intention to a general policy upon which he has maturely deliberated. He is not a man to do an unaccustomed thing merely in order to set tongues wagging. If he seems to ignore long precedent—though, of course, in the present instance he simply reverted to the precedent set by Washington and the first Adams—it is because he has distant as well as immediate objects in view. The step is only the first in a long series which he means to take. If his new departure impresses the imagination to-day, its main intent is to affect the course of legislation to-morrow and the day after. The plain inference is that the President's going to Congress at its opening was a symbolic act. He doubtless plans to go again; to be often in the President's room in the Capitol. Why? As an earnest of his desire and determination to coöperate actively with Congress in the enactment of laws.

If there is anything revolutionary in this, the country has at least been a long time prepared for it. For many years past there has been in the United States a distinct tendency to exalt the functions of the Executive. We have seen it in cities, where vigorous Mayors with large powers have had a great opportunity. We have seen it in the States, where one forthputting Governor after another has risen to win the confidence of the people and to dominate the Legislature. Above all, have we seen it at Washington. Our national system of government has three centres, any one of which may at a given time become, by the accidents of politics or by the exertion of a forcible personality, preponderating. At first, the Presidency bulked largest. Then the Supreme Court under John Marshall came to be, if not the most conspicuous, at any rate the most subtly influential and far-reaching organ of government. Congress had later its time of appearing to sit at the head of the table, Senators often seeming to dwarf the President. But for long the balance of power has been swinging to the Executive. He has more and more come, in addition to his other duties and powers, to occupy the position of a Prime Minister. He is the leader of his party. He succeeds or suffers by what Congress does or fails to do, and hence he has increasingly assumed responsibility for legislation. To be in close touch with Congress has come to seem a necessity to him. The usual method of bringing this about has been to get Congress to go to the President. Now the President goes to Congress.

Viewed in this way, the change introduced by President Wilson does not seem so startling. Intimate relations and a good understanding between Congress and the Executive are the main things sought by either plan; and his has the advantage of greater directness. But it seems clear that he is thinking of something more than that. He is giving the country early and due notice that he expects to work at Washington as he did at Trenton. As Governor of New Jersey, he held himself as free to address the Legislature as he did the people on the laws that were in need of passage. As President, he will do the same thing. He will have a legislative programme, and he will omit no legitimate effort to induce Congress to carry it into effect.

This is undeniably a bold undertaking. Even to conceive of it requires courage; to put it through will demand tireless activity and unbending resolution. Whether the end will crown the work no one can yet tell. If President Wilson succeeds by this method, he will have gone far towards justifying it; if he does not, his failure will be but the more accentuated and dismal. In his great experiment almost everything will depend upon the manner. Never can there have been a case where the tone will so clearly make the song. It is easy to think of a President making himself active in legislation in a way to be both offensive and alarming. He might be arbitrary and tyrannical. His course might be made to seem deliberately mapped out in order to degrade Congress and rob it of its Constitutional powers. A President putting himself at the head of the populace and going to the Capitol to terrorize Congress into submitting to his will would be a portent from which every sober-minded American would shrink.

But no such blustering or thundering will be done by President Wilson. To the enterprise upon which he is setting out he has given the air of a quiet and business-like putting together of the heads of the Executive and Congress. Both have the same interests at heart. Both are charged with obligations and responsibilities which are in some respects common. Why should they not freely meet and freely confer together as to how to get done the things that both wish done? The thing has all along been done tacitly or secretly. Why not go about it aboveboard and as a matter of course? But, withal, President Wilson must be fully aware that behind it all there lurks a great risk as well as a tempting possibility of achievement. The time is almost certain to come when there will be not only differences of opinion, but a clash of wills. That will be the true test of the power of the Executive. And that final ordeal must have been contemplated by an intellect so forward-looking as Woodrow Wilson's, and for it he must even now be girding himself.

A MINIMUM WAGE LAW FOR WOMEN

It was stated the other day in a New York paper that for the past six months an investigation into the question of a minimum wage for women, under the auspices of the State Factory Investigating Commission, had been going on. The nature of the investigation is thus described:

> The Factory Commission's investigators, some of them graduates of Vassar, not only worked behind the counters with the regular clerks, but lived with the most unfortunate of them, the poorest of them, in their dingy apartments; mixed with their friends after working hours; learned by practical experience how girls making $3, $4, and $5 a week exist; where and how they spend their leisure hours, and what effect small pay has on the morals of the working girls.
>
> These college girls have gone into the slums to get facts and proofs; they have visited the dance halls and the saloons.
>
> These investigators, making sacrifices to learn actual conditions, lived as did the women into whose existence they were so secretly peering.

Facts thus obtained, and reported with accuracy by conscientious and competent observers, are an important part of any inquiry into the minimum-wage question. But from the outset two considerations must be borne in mind by all who appreciate the gravity and the scope of the issue involved.

The first relates to the facts themselves. It requires no argument to prove

that a woman, paying her way among strangers, cannot live decently in New York on $3 or $4 a week. At what point this does become possible is a question very difficult to determine; and the answer depends not only upon what standard is assumed, but also upon the way in which the wages, whatever they are, are used. At a given wage, say $7, there are thousands of girls and women who contrive to live in some degree of comfort, and thousands of others whose surroundings are squalid and whose life is starved and unwholesome. Nor is it to be forgotten that what is terribly depressing and injurious to a person living in a way foreign to her habits, and greatly inferior to her usual mode of life, may have a wholly different character and effect with those who have been differently brought up. This consideration is important because, in the sympathetic appeal of harrowing tales of privation, even the distinctions which should be made if the statements of facts were taken at their face value are in danger of being forgotten. A case actually made out against the lowest wages to be found is likely to be confused with one made out against any wages lower than those that we all agree would be desirable. It is one thing to decree that starvation wages shall not be permitted; it is quite another to treat all unsatisfactory wages as starvation wages. If it be decided that there shall be a legally established minimum wage, the question whether that minimum shall be strictly a living wage or a wage higher than this, but regarded as necessary for social or other reasons, is not a mere question of detail, but a question of the highest moment, both theoretically and practically. We must keep our minds open on both questions, and we must not confuse the one with the other.

But of far graver importance is the second consideration. If, by a stroke of the pen, a satisfactory wage could be insured to the girls and women who work for a living, without the introduction of any disturbing consequences, approval of a minimum wage law would be almost unanimous. Few would object to such little enhancement of prices of commodities as would result. But we cannot arbitrarily change, in a serious degree, a single important element in a widespread economic situation without profoundly affecting others. Those advocates of the minimum wage who have given real and competent study to the question fully recognize this. Perhaps the foremost of these advocates in this country is Prof. H. R. Seager. In his opinion, a minimum wage law for women would have most far-reaching consequences, vitally affecting the position in life of thousands whom it would crowd out of industrial or commercial employment. Instead of ignoring these consequences, he welcomes them. A few sentences from his paper on the subject may give some idea of his attitude:

> The first effects of such a policy would be a more rigid selection of employees from the larger number of applicants for work and a reduction of the working force, since the higher average of ability would enable a smaller number to do the work formerly performed by a larger number. . . . The entry of more girls [girls unable to find employment in shops] with self-respect and a love for independence into domestic service should quicken the process, which is already under way, of freeing such employment of its servile characteristics and elevating it to the dignity of a skilled trade with regular hours and immunity from the petty impositions which have heretofore made it distasteful to ambitious working girls. . . .
>
> It is undoubtedly true that a determination in favor of minimum wage regulations does commit organized society to a more responsible attitude toward the whole labor problem than any American State has yet adopted. For one, I welcome this prospect, and believe that the more serious attention to the questions of unemployment and its remedies of industrial education and vocational guidance, and of provision for indigent widows and orphans, for the superannuated and for defectives, which it must entail, will prove only advantageous.

But no one can say how extensive this disturbance would be, and how perversely it might operate on the very class whom the measure is designed to benefit. A low minimum, indeed, one that would simply bar out the worst cases of hardship, might create only a very slight disturbance of conditions. But any law that greatly increased the pecuniary attractiveness of the shop or the factory might draw out from tens of thousands of homes girls who now find a balance of advantage in remaining at home, and might thus make harder than ever the lot of other thousands who are dependent on their work for their living. And it is a hazardous reliance, to suppose that the hardships which these would in the first instance endure might ultimately lead to so radical a reform in the conditions of domestic service as to make this an acceptable substitute for industrial or business employment. As for the removal of those minor props to independence of which so many women—and not widows only, by any means—avail themselves, and the substitution for them of a comprehensive pension system, this prospect, so welcome to Professor Seager, will be looked upon with grave misgivings by multitudes of persons no less humane than he in their desires. But we are not passing judgment on the question. We wish merely to give some intimation, at this incipient stage of the discussion, of the reach of the issues which the proposed policy opens up.

PRESS-THE-BUTTON GOVERNMENT.

Gov. Hodges of Kansas is not the first man in this country to suggest the abolition of our two-chamber Legislatures. Some of the Oregon newspapers have made the still more radical proposal to do away with the Legislature altogether, and hand the State over to the tender mercies of the initiative and referendum. What gives the Kansas idea its force is partly the fact that it is the official utterance of the head of a State Government, and especially the circumstance that it falls in so pat with an enlarging wave of political theory. While only a small minority of our cities and towns have adopted the commission form of government, a sufficient number have done so to constitute an argument in any municipality which is debating the question. One of the considerations most prominently urged by those who have just succeeded in persuading Raleigh to try the new form was the fact that two or three hundred other cities had already done so. Could the capital of the Old North State afford to wait for the new municipal dress until everybody else had put it on? One newspaper finds in this way solace for Dayton in its distress: "By teaching the advantage of commission government, these floods may soon repay to the cities concerned more than they cost." Now we have the next step. If commission government is good for a city, why not for a State? Fashions in government, as in every other department of human activity, are catching.

With all due respect to the Chief Executive of the Sunflower State, one is impelled to say that his reasons for advocating a single Legislative Assembly

of eight or sixteen members add nothing to the native attractiveness of the proposal. He is under the embarrassment, to begin with, of acknowledging that the session of the Kansas Legislature recently ended was very satisfactory. His own words are: "I desire to congratulate the members of both branches on the magnificent work which they have accomplished." He goes on to express his belief that they "have worked harder and accomplished more than any Legislature in recent years." Almost every pledge made to the people "has been fulfilled." What motive, then, is behind his suggestion to get rid of so excellent a body? Well, the Governor, it appears, is "convinced that this magnificent record is due rather to the efficient membership of this Legislature than to the system." And so, all aboard for a system that will produce magnificent results regardless of the character of those operating it. How Burke would have rejoiced to see this splendid development of political science!

The points mentioned seem enough to commend the single-chamber Legislative Assembly of eight or sixteen members. But Gov. Hodges has other things in its favor, equally conclusive. Everybody has felt, for instance, the aching void that is created by the adjournment of a Legislature. "It is," says our Kansan statesman, "as if the head of an important department of some other 'big business' should give only fifty days every two years to its management." Accordingly, our new Legislature must sit continuously. If an economic condition should change overnight, we shall be ready the next morning without the formality of a Governor's message calling an extra session. If any citizen thinks of a law that he imagines would look well on the statute-book, a special-delivery letter will get it before the Commission-Legislature in no time. Floods and panics will lose their terrors, if indeed they dare to happen at all, when prosperity can be restored by the pressing of a button. In a word, what Cerberus was to Hades our new kind of Legislature will be to Kansas. The "biennial exhibition of inefficiency" will be a thing of the past, and in its place we shall rejoice in the continuous performance of such a Government as never was on sea or land.

It is the word "efficiency" that gives us the key to the popularity of the whole commission idea. For the moment, the old debate over the respective merits of good government and representative government is loudest on the side of the former. A century of democracy has made us only too familiar with its defects. The machine simply won't run itself, and we are a little tired of having to take so much trouble to make it go. Why not hand the thing over to experts, whom we shall be able to control by the simple device of the recall? In answer, there is no need of denying that we have hitherto undervalued the man who knew how. Still less is it necessary to deny that the ideal is neither good government nor representative government, but representative government which is also good. It is altogether possible, too, that for many cities and towns the commission form will prove successful. But the fundamental error in much of the reasoning that is presented in its behalf is the error that appears so explicitly—and so ludicrously—in Gov. Hodges's statement that it was the members of the Kansas Legislature rather than the system that gave the State the excellent results upon which it is felicitating itself. Is it impossible for us to improve our governmental machinery without losing our heads and expecting that henceforth it, and not we, will be the main element in whatever it accomplishes? If so, the carrying of the amendment for the direct election of Senators will be a grievous disappointment. This putting of the cart before the horse was crisply exposed by William Penn in the preface to his "Frame of Government" for "Pennsilvania" two hundred and thirty years ago:

> Governments, like clocks, go from the motion men give them; and as governments are made and moved by men, so by them they are ruined, too. Wherefore governments rather depend upon men, than men upon governments. Let men be good, and the government cannot be bad; if it be ill, they will cure it. But, if men be bad, let the government be never so good, they will endeavor to warp and spoil it to their turn.
>
> I know some say, let us have good laws, and no matter for the men that execute them; but let them consider, that, though good laws do well, good men do better; for good laws may want good men, and be abolished or evaded by ill men; but good men will never want good laws, nor suffer ill ones.

TROTTING FORWARD.

Mayor Gaynor's war upon the cabarets and the dancing teas raises the question whether we are not on the eve of a great awakening in literature and the arts. Our æsthetic development has been retarded by the want of a leisure class. Visitors from abroad are appalled by the chronic absence of the American business man from five o'clock tea. That reproach would seem to be in fair way to be wiped out, when the hitherto tired business man begins to find time not only for afternoon tea, but for afternoon dancing. Formerly he hustled; now he trots. Or is it from some other source than the business world and the professional classes that the mid-day dancers of Broadway are drawn? It is difficult to go behind the returns. What is established is that a leisure class is being rapidly developed in New York. Nor are the other necessary conditions for a flourishing art-life wanting. No one who has spent an hour at a Broadway cabaret can doubt that we are splendidly casting off the shackles of academicism. The spirit of caste and convention is disappearing. Ideals are mingling in delightful promiscuity. A little bit of the overworld, a little bit of the underworld, a *soupçon* of the half-world—there you have the modern synthesis of New York as revealed in the neighborhood of Forty-second Street.

Unfortunately, the old habits are hard to lose. The ideal of leisure is far from receiving universal recognition. Broadway is still imperfectly typical of America or even of New York. It is rather disquieting that the class of social workers is growing almost as fast as the class of social idlers. Deaf to the demands of the higher culture, a great many young men and women, fresh from the colleges, are going in for settlement work. Instead of devoting themselves to the unfolding of their own personality, they go to work in the canneries. Instead of recognizing the truth that duty is an outworn theological dogma, and that life consists in the free and joyful play of the faculties, not overlooking the physical, they go in for such joy-destroying interests as safety legislation in the factories and a living wage for working girls. They are obsessed with the three great D's that make such poor conversation at dinner tables—Delinquents, Defectives, Dependents. The

sad truth must be faced. A very important section of the young manhood and womanbood of New York is still in the bonds of the old "slave morality." They are making it very difficult for the cabaret to inculcate that joy of life which is the basis of all great art.

But there is room for hope. Considering how very new is our cabaret civilization, it has accomplished wonders. In the special arts of music and the dance its innovations have been epoch-making. The cabaret singer has gone far beyond Richard Strauss in bridging the gulf between human voice expression and the sounds of the animal world. He has gone far beyond Debussy in the skill with which he has divested his flowing rhythm from the least suggestion of intellectual coherence. Listen to him, and one feels the stiff armor of our artificial sensations and modes of thought drop from his shoulders and experiences the fresh heart-throb of the primitive man lost at midnight in a menagerie. "Primitive" will scarce do justice to his dancing, which calls up simultaneously *Pithecanthropus erectus* and *dementia præcox*. The cabaret influence in standardizing dress ideals, cosmetics, and the vocabulary and humor of the day needs no extended comment. We see the effects on every hand, on Broadway and on Grand Street, in dowagers and débutantes. It is one of the greatest levelling processes known to history.

Like all revolutionary changes, the cabaret movement naturally arouses hostility among the reactionary elements in society. It is too much to expect, for instance, that Mr. Gaynor should easily adjust himself to the requirements of a new epoch and a new outlook upon life. It is even possible to sympathize with his position if, for instance, he should deplore the fact that too many good women, if thoughtless, nowadays array themselves like *demi-mondaines;* that too many girls daub their faces with powders and cosmetics and so destroy the freshness of youth, which is one of the few quickening things that not even a great city can destroy; that, in general, the old distinction between the years is abandoned, stout middle-age aping the graces of youth, youth striving for the cynical knowledge and privileges of old age. Yes, one can see Mr. Gaynor's point of view. But, after all, the question is whether we are prepared to go with the times or against them.

THE CASE OF JONES.

Every one knows that it is too early for Jones to be thinking about getting to the country. His turn will come after Smith's two weeks' outing in August. For Jones is not a commuter; besides, he refuses to call New York suburbs "country." He is scornful of Smith's forward crocuses on Long Island, insisting that more genuine signs of spring are to be found in Central Park; and when Smith announced that a dead tree on his place awaited the axe of some strong man, Jones calmly asked him if it was a young peach tree. Yet for three days last week Jones was not at the office, and when he returned from his "illness" showed a surprising color and talked a good deal about robins and bluebirds and bonfires.

For Jones, the bookkeeper, there was no other way to get what he had to have. Freedom from Saturday at two till Monday at nine made impracticable the journey of four hours which was necessary to land him at the little farm in the hills. During the winter months, as a substitute for exercise, he had increased his smoking, but it hadn't worked satisfactorily. Muscles which used to bulge lay flabby with fat. But now he was coming back into his own. With axe in hand he walked a bit shyly about the tree which the farmer designated. What if he should become too blown to finish the job that morning? It was not what others would think, it was his self-respect that hung in the balance. He extracted no overconfidence from the first few strokes, which went strong and true, knowing that the test would come later; but when, with only a few resting spells, he got to the heart of the tree, there came the exultation in his strength which he used to feel. He laid down the axe in high complacency and threw a stone at a shed, fearing to choose a smaller target. He wondered if he could leap a low fence near by, but decided to postpone the attempt until the next day. In the back of his mind there was also the resolve to put himself to the trial which above all others would tell him whether age was creeping on. He went back to the city well satisfied with his "field day."

Jones is a normal young man, who enjoys the country in the way of many of his fellows. We have emphasized the physical element in his experience, not because he is insensitive to the pleasant smell of burning brush, to timid notes of early birds, or to the light on the hills. But for many city men appreciation of such things comes usually after the young animal within them has had liberty. It is their mediator between the noise of the town and rural silence. Few city dwellers can approach nature directly. In its presence one becomes self-conscious, if lacking a chance for concentration on something else, or a few accustomed distractions. Consider the amateur fisherman. What he notes of the beauty about him creeps in almost unawares, as mind and body healthily relax and expand. Neither he nor Jones would be averse to hearing a locomotive in the valley or to knowing that there was a post office at the foot of the hill. They have no desire entirely to efface the city; in fact, by feeling somewhat in touch with it they enjoy the country more. They are in search of bodily reinforcement which shall help them to outlast the other fellow. If they gain anything in excess of that, so much the better. But they would be apt to describe that excess, even to themselves, in terms of voracious appetite, physical prowess, and sound sleep.

This is quite the reverse of the poets' —many poets'—method. The elation got from exercising the body amid green fields and pure air, if mentioned at all, is subordinated, in their accounts, to easing the soul and thrilling one's sense of beauty. Perhaps that is the reason for Jones's embarrassment at poetical descriptions of rural scenery. Such details, like religion, he would say, should be felt but not talked about, and certainly not consciously sought after. He belongs to no Back to Nature Club.

There is something to be said for Jones's attitude. Nature is like a word or a face: if scrutinized at length, it becomes strangely unfamiliar. We know what insane fancies the German Romanticists read into nature, largely, we may suppose, because they knew not Jones's glee over turning a handspring. The painters, as a rule, have been wiser than the poets. They have recognized the steadying influence of a cow in the

landscape—not a poetized cow, just the usual variety, having her prosaic troubles with flies. To come nearer home than the little farm in the hills, the commuter at his garden plot is a pretty genuine lover of nature. Pottering over his roses and tulips, studying the blight on his hedge, and worrying for fear his tomatoes are not doing as well as his neighbor's, he becomes very friendly with nature. Few people play golf for the sake of the views, yet somehow the views mingle in their recollections of the game. But Jones is neither a gardener nor a golfer, and is very simple. In his crude fashion he requires the "elbow room" of open country, so he says. Why otherwise he should seek green fields for his antics, at the risk of losing his job, rather than a playground, he would find it difficult to explain.

WORDSWORTH AT BLOIS.

Wordsworth, in the "Prelude," gives only a few and for the most part vague statements of fact in regard to his long sojourn in France. His correspondence and that of his friends gives little information about it. Leaving England at the impressionable age of twenty-one, he remained in France for a year, or even longer, when the Revolution was in full career, and came home a convert to its principles. He was at Blois, as is well known, in the spring and summer of 1792, having crossed the Channel on or shortly after November 23 of the preceding year, and stayed, no one knows exactly how long, in Paris and at Orléans. He was already imbued with the doctrines of Rousseau, and was inclined, for this reason and because of his experiences on a former visit to France, to sympathize with the Revolution.

Either at Orléans or at Blois he was disgusted, as he tells us in the "Prelude," with the aristocratic pretensions of a group of royalists into whose company he fell, and at the latter place he formed an intimate attachment to a young republican officer of the Thirty-second Regiment of the line, Capt. Michel Beaupuy, a descendant of Montaigne. MM. Bussière and Legouis, in their monograph, "Le Général Michel Beaupuy," have thrown much light on the history and character of this devoted Revolutionist, whom Wordsworth ranked with the heroes of ancient Greece for patriotism and wisdom. They do not tell us, however, at what time and under what circumstances Wordsworth made his acquaintance. I do not flatter myself that I have fully solved the mystery, but I think I have discovered where and when the poet and the soldier could have met.

On making inquiries, last summer, I encountered some reluctance on the part of persons living at Blois to admit that their ancestors played a part in the Revolution. Blois is now a quiet town, *bien pensant* and conservative. But in the library at the Château I found two manuscript volumes containing the minutes of a Revolutionary club, Les Amis de la Constitution, and other manuscript volumes containing the registers of the Municipal Council, which illuminate the history of the town in 1792, and incidentally Wordsworth's life there. This information I was able to supplement with another manuscript in the archives of the department of Loir et Cher, which contains a list of the members of the club, with their ages and occupations. I received the impression that, so far as Blois at least was concerned, the Revolution was spontaneous, open for the most part in its workings, and generous in its aims. It is easier now for me to understand Wordsworth's persistent faith in it, even through the Terror.

The Society of the Friends of the Constitution met at first in the Abbey of St. Laumer, and afterwards in the Church of the Jacobins, both having been, of course, secularized. It was affiliated with the Jacobin Club of Paris, and one of its chief objects was to be to the Municipal Council of Blois what the Paris club was to the Convention—a prod, or "blower." It served also for the spread and discussion of political news. It kept in touch with the Legislative Assembly, receiving its commissioners and executing some of its orders. It assisted in recruiting soldiers. It educated the townspeople in Revolutionary doctrine and gave direction to public opinion. And, more especially in '93, it fell in with the sinister fashion of denouncing enemies of the republic. One victim of its zeal was guillotined. The waves of fanaticism which swept over it from time to time were coincident with alarming news of invasion. On the whole, the Society, while animated with the most uncompromising zeal for democracy, equality, and the rights of man, preserved a moderate tone. It sided with the Girondins, and its hero at Paris was not Robespierre, but Brissot.

The most striking personality in Blois was the great constitutional bishop, Grégoire, one of the leaders of the clergy who went over to the *tiers état* at Versailles in 1789, and now one of the most prominent members of the Legislature. Grégoire, the son of poor peasants, and a man no less democratic in conduct than in principles, lived with becoming simplicity, occupying only a single room on the third floor of the episcopal palace. Although only about forty years old when he entered upon his complex duties at Blois, he had already played an important rôle in Paris, where, both in the Jacobin Club and in the National Assembly, he had maintained that extreme democratic views were not incompatible with rational Christianity. Owing in some measure to Grégoire's influence, the work of the Society at Blois was largely educational. Month after month, sessions were held every evening, with singing of patriotic songs, recitation of patriotic poems, debates on abstruse questions, speeches by members, and the reading of addresses from Paris and other cities. Under certain limitations, the public were admitted to the regular meetings. There was a ladies' gallery, and music by "nos sœurs" is frequently mentioned. On Sundays and fête-days special educational or religious exercises were held. Speeches that had been much relished on ordinary days were repeated on these grand occasions.

It was with a thrill of gratified expectation that I read, in the register of the Amis de la Constitution, the following minute: "Session of February 3, year 4th of liberty. A member asked for a hearing and proposed two Englishmen for membership, requesting that, as foreigners and not naturalized, they should not be required to take the oath. The matter having been discussed, it was decided that they should not be received, but that, nevertheless, they might attend the sessions." On the same day, "Our brothers of the Thirty-second Regiment took the oath collectively, after the formula had been read."

I have little doubt that Wordsworth was one of the two Englishmen. Beaupuy was certainly one of "our brothers of the Thirty-second Regiment." There are frequent references to this body in the minute-book, sometimes under its old royalist name, "Bassigny." Only a detachment was at Blois, including Beaupuy's company. The rest, and I believe the larger part, of the regiment was at Tours. New members of the Society did not always take the oath immediately after their election, and I think it was Beaupuy of whom it is recorded, on January 22, 1792: "One of our brothers of the Thirty-second Regiment read a most eloquent discourse on political distrust. He made us feel how dangerous it is when it exceeds the limits of that proper watchfulness which is the duty of all good citizens." His paper was followed by a discussion of the danger and the necessity of enthusiasm. The officer's name is badly written, as if the secretary was not sure how to spell the second syllable, but looks like "Beaupny" or "Beaupuis," the latter being the form Wordsworth uses in the "Prelude." The sentiments of which we thus catch a far-away echo

are precisely those which Beaupuy is known to have entertained. On January 29 it is recorded that "M. [name not plainly legible, but very much like 'Beaupuy'], officer of the Thirty-second Regiment, gave a second reading of his discourse on distrust, which was received with fresh plaudits."

Beaupuy's company, according to MM. Bussière and Legouis, had been transferred from Tours to Blois in August, 1791. He was stationed there until July 27, 1792, when he parted from his young English friend, now a zealous convert to that religion of humanity which he professed. In any attempt to estimate the living personal influences that determined Wordsworth's character, the name of Michel Beaupuy must come next after those of Dorothy Wordsworth and Samuel Taylor Coleridge.

I have said that I have little doubt Wordsworth was one of the two Englishmen for whom application was made on February 3, 1792. In the minutes of the Society no other Englishmen are mentioned or referred to. Wordsworth himself, in his curiously disproportioned Autobiographical Memoranda, tells us that he lived at Blois for some time in 1792, and was there "when the King was dethroned," which was in August. He wrote from Blois to his friend, William Matthews, on May 17, expressing his interest in the fortunes of the Revolution and his anxiety lest its enemies might prevail against it. This is the only part of his correspondence during that year which has been preserved. After beginning to write of French affairs, he checks himself. "The truth is," he says, "that in London you have perhaps a better opportunity of being informed of the general concerns of France than in a petty provincial town in the heart of the kingdom itself. The annals of the department are all with which I have a better opportunity of being acquainted than you, provided you feel sufficient interest in informing yourself." The terms in which he refers, in the "Prelude," to his association with Beaupuy, their walks and excursions together, their long discussions, and his own gradual change, under Beaupuy's influence, from a mere friendly spectator of the Revolution to a grounded and well-informed defender of its principles, make it almost necessary to infer that he was at Blois six or seven months, rather than three. There could have been very few other Englishmen in the place, which at that time had a population of about eleven thousand. Joseph Jekyll, a young English traveller who resided there in 1775, found only one compatriot. And there was now an element of danger, which would tend to keep foreigners away from the interior of France. At no time in the eighteenth century, moreover, was there much at Blois to attract strangers. The larger cities, of Orléans above and Tours below, both offered superior charms.

George McLean Harper.

FRENCH BOOK NOTES.

Paris, March 26.

The Parisian yield of noteworthy books in the past year offers a few that fulfil Matthew Arnold's definition of literature as a criticism of life. It is the life of the nineteenth century in its heredity and formation, its authors and ideas.

"Chateaubriand" (Calmann-Lévy—350 pages, 3.50 francs), by Jules Lemaître, of the French Academy, has the alert, worldly, scholarly tone of the *conférences* in which the book was originally delivered. Such conferences are addressed to hearers who gladly learn, but who have an intelligent criticism of their own. Our author has brought this kind of literature to a high pitch of excellence, as he had already done for Fénelon, Racine, and Rousseau:

> [Chateaubriand] knew how to express with words more sensations than any one had done before him. He is the man who "renewed the French imagination" (Faguet). He is the father of romanticism and of well-nigh the whole literature of the nineteenth century. And he is the inventor of a new fashion of being sad. . . . In what concerns his glory, he has had unheard-of luck, all but equal to that of the Emperor. Among our great writers, he is the only one fully astride of two worlds, the only one who belonged to the old régime and the new, the only one who lived almost as much in one as in the other, the only one also who had travelled so much and seen so many aspects of the earth. He was born in 1768, ten years before the death of Voltaire and Rousseau. He died in 1848, when Taine and Renan were already writing. . . . Like the old France and the new, he experienced the harsh transition from one to the other. . . . He saw the Revolution and he saw the Empire. His genius received its finest shocks from reality. . . . He has bequeathed to us fashions of feeling in which we still take delight.

Note that our lecturer, in addition to his own sensitive competence, shows a nimble assimilation of the vast recent literature of erudition which has this epoch-making Chateaubriand for its object: Professor Bédier and the Abbé Bertin on the American journey with its delicious improbabilities; André Beaunier on his friendships with distinguished ladies, and Edouard Herriot on Madame Récamier; Victor Giraud on his particular religious and social bearings; penetrating political pages of Charles Maurras, the advancing prophet of Reaction; and Edmond Biré on the most perpetual of his works, "Mémoires d'outre-tombe."

The book of Chateaubriand which influenced Europe's literature at the time, as Napoleon did its social organization, may be little read now. It is a great excellence of Jules Lemaître that he exhibits such a work in its connections before and after:

> Everybody, after the great orgy of impiety, foolishness, cruelty, and destruction, bore within himself the "Génie du Christianisme," while waiting for a single one to write it out. . . . This book Chateaubriand had the luck to write. He all but invented lay religious speech—and his book began, if it did not engender, a series.

This has its English parallel in Sir Walter Scott's work, which, as Newman notes, prepared willing minds for the Oxford Movement. Unfortunately, our English criticism seldom takes the pains to peer from between book covers at the stream of ideas issuing forth and realized in life. Jules Lemaître's weakest, but to English readers novel and suggestive, chapter, Political Life, may be supplemented from a too little known English writer with views and a right to views, Henry Reeve, who was the friend of Tocqueville and long at the head of the *Edinburgh Review* and the foreign section of the London *Times* ("Royal and Republican France," Vol. II). The Comte d'Antioche has published recently the French Foreign Office documents relating to this activity of Chateaubriand in history-making.

The third volume of the "Histoire de la Littérature Française classique—1515-1830" (Delagrave—600 pages, 7.50 francs), by the regretted Ferdinand Brunetière, has been prepared for publication by devoted disciples; and it is good to know that the final volume will also be published. We have here all the qualities which won a predominant place for its author in the generation now passing—immense erudition, independence and vigor, and philosophic generalization. It is a lasting wonder that official France, in the name of science, should have denied to such a man who had already forced a way for himself in the University the crowning of his career in the Collège de France—a piece of Jacobinism in which Berthelot, the head of French science and a consistent antagonist of Brunetière's thought, refused to join. The present volume is limited to the eighteenth century; but, in accordance with the author's evolutionary method, it goes back to the weakening of the seventeenth-century spirit and the decadence of those who held by the "ancients," to Crébillon's tragedy and comedy from Regnard to Marivaux, to preaching Massillon and doubting Bayle and scientific Fontenelle, with the salon of Madame Lambert; and it goes on with the formation of the new spirit in the first period of the lives of Voltaire and Rousseau, with Montesquieu and the Abbé Prévost and Vauvenargues and the others. Next follows the new spirit

at its full in the Encyclopédie. Before the century ends we come to Beaumarchais, Delille, Condorcet, and the *idéologues* detested by Napoleon—and André Chénier, the isolated classic whose light was so long hidden.

"Le Marquis René de Girardin" (Perrin—265 pages, 3.50 francs), by André Martin-Decaen, is "the life of the last friend of Rousseau," composed from unpublished documents in the possession of his decendants. It was worth writing, this story of the eighteenth-century nobleman familiar with the courts of Europe, yet migrating in his prime from his trade of arms to the pleasures of the arts and rustic labors. Ermenonville was his creation, to content his theory of landscape gardening and bucolic philosophy; and there he provided a last shelter for the stormy-lived philosopher who had all his sympathies. There Rousseau died, leaving the Marquis the difficult heritage of his wife, Thérèse, and his glory and the pilgrims to his shrine. And all was sentiment and simplicity and return to Nature, as the marquise noted in her little green copybook. Benjamin Franklin came with the rest and varied the sentiment with electrical experiments. The Revolution followed, with all its disillusion. The friend of Rousseau as a *ci-devant* nobleman was imprisoned with his family; his property, with its landscapes loved by the dying philosopher, was sacked by the unappreciative villagers; and the fall of Robespierre alone averted the fate of the guillotine. The son admired Napoleon.

"Tableau de la Littérature Française au XIXe siècle" (Delaplane—550 pages, 3.50 francs) is an attractive and complete compendium for general readers by Fortunat Strowski, the French University professor, who is so favorably known for his great work on Pascal. It is written along the new lines of history in the University, not dogmatic like Brunetière and Taine, nor critical like Sainte-Beuve, but like Seignobos "objective" and anecdotic. It is all the more readable and contains a wonderful amount of good matter for its compass. It is easily the chief history of nineteenth-century literature in France, if only for the six finely printed, double-columned pages of its index of names. For a book dealing with so many particulars, it is excellently ordered. The first part reaches to romanticism, with chapters on the eighteenth-century inheritance; literature under the First Empire; traditionalist political philosophers (now brought back to repute by Paul Bourget and Young France); Madame de Staël and Chateaubriand. The second part deals with the romantic period, with the Restoration, and the influence of Goethe and German philosophy, and the English influence of Walter Scott and Byron; the passage from the pre-romanticism of Casimir Delavigne to the full-growth of Victor Hugo, Lamartine, and Vigny, with Alfred de Musset and Stendhal and Mérimée; and a separate chapter on the drama, history, and romance-writing. The third part takes up the Humanitarian and Positivist movement, Lamennais, George Sand, Balzac, Lamartine, and Victor Hugo again, and Michelet. The fourth is the triumph of Positive ideas under the Second Empire, with its devotion to moral problems in Alexandre Dumas *fils* (by a systematic aberration the father, romancer of the universe, is scarcely mentioned, perhaps as not belonging to professorial literature); Sainte-Beuve, Renan, Taine, Flaubert; impressionist and naturalist novels, Goncourts, Daudet, Zola, Maupassant; Parnassian poets from Théophile Gautier to Heredia, and Independents from Brizeux to François Coppée. The fifth part furnishes abundance of names and details from our contemporary period in the various branches of its superabundant literature.

"Moore en France" (H. Champion—180 pages, 8vo) is apparently a doctor's thesis at the University of Lyons. Its English author, Allen Burdett Thomas, has rendered good service to the history of literature by ferreting out the not inconsiderable influence of Thomas Moore's poems in the literary production of French romantics. Pontmartin said: "The youth of 1830 deserted Corneille and Racine to offer incense to insular gods, Shakespeare, Milton, Lord Byron, and Thomas Moore." The connection of Vigny's "Eloa" with Moore's "Loves of the Angels" is a distinct contribution, suspected by Sainte-Beuve, ignored by Brunetière. "Alfred Tennyson—son spiritualisme, sa personalité morale" (Geneva, Librairie Kündig—300 pages 8vo), by Louis Frédéric Choisy, also *docteur-ès-lettres*, will be of real help to all those who still find in Tennyson the most sympathetic expression of their doubts and hopes. In France, Tennyson may be said to have exercised no influence, although he is studied increasingly. Taine gave him a chapter, little kinder than the Olympian judgment of Emerson, and wound up by preferring Alfred de Musset. Montégut pronounced flatly the man a "dilettanto" and his poetry "fantasy." The second part of the present book is of chief interest—140 pages on Anglo-Saxon energy, dilettanteism, moral ideal, Christian religion, pessimism and doubt, the problem of immortality, pantheism, the god of love and intuition—all copiously illustrated from Tennyson in English and in French.

"Pages de Critique et de Doctrine" (Plon—2 vols., 340, 325 pages), by Paul Bourget, is a work of the author's latest and approved thought. For thirty years he has been uttering himself, in forty-five published volumes. The book is properly "miscellanies" with a teaching, such as Gladstone foresaw in Paul Bourget's "Disciple." Without the musical cynicism of Anatole France or the emphasis of Zola, and with the disadvantages of a writer seeking to penetrate deeply into his people's life, our author has fulfilled the hopes which Taine conceived of him from the first. He has become more and more a "philosopher" for the new generation. Maurice Barrès, who puzzled Taine, has become by virtue of more brilliant literature a light more immediately shining; but the intellectual reaction which is now sweeping away Young France goes back in large part to Paul Bourget. And this is the chief importance of a book like the present for a foreign public which catches up painfully with French thought. Six portraits conclude the book, the last being Melchior de Vogüé, who twenty-five years ago inspired French youth with a new spirit that was lost in the Dreyfus tempest:

> Truly, are we driven to this alternative—that we must conceive life either mechanically or mystically, that we must sacrifice either Science or Faith, logical deduction or belief? When we try to grasp mentally the movement accomplished by French thought during these twenty-five years, we recognize that all its effort, often obscure, sometimes misled, has consisted in a passionate search for a *via media* between these two extremes.

S. D.

NEWS FOR BIBLIOPHILES.

Although the organized movement against the use of alcoholic liquors is modern, there is a considerable body of literature of an earlier date mainly composed of denunciations of drunkenness and exhortations to more or less of moderation in the use of intoxicants. Such a work lies before me.

> A Treatise Against Drunkennesse. Described In its Nature, Kindes, Effects, and Causes, Especially that of Drinking of Healths, To which are added, two short Sermons Of S. Augustine's, De Tempore, Faithfully translated By Matthew Scrivener. Crimen Placuisse putavit. London: Printed for Charles Brown, Bookseller in Cambridge. 1685. 12°.

It seems a little odd that a Cambridge bookseller should go to London for a printer, but so it is.

The author is not a writer of great distinction, but some of his allegations and admissions are interesting in their relation to the social habits of the days of his "Sacred Majesty" James II. He is a man of some erudition and cites among other authors, great and small, Aristophanes, Godignus, Plutarch, Seneca, Chrysostom, Alexander ab Alexandro, Pliny, Acosta, Jerome, Chaucer, Clement of Alexandria, Origen, Augustine, Faustus, Socinus, and "that excellent Poet Oppian." From the last-named he quotes, in a translation presumably of his own making, a reference to "that high-spirited Beast the

Panther as . . . described in a merry Meeting with his Fellows":

To the enraging Fountain they approach,
Lapping brown juice of Bacchus, and then each,
First like to them who in set Dances leade
Do skip; but soon hang down their heavy head,
Their Bodies softly rucking to the ground,
By force of Wine, are on each other found,
As when like aged Lads, upon whose chin,
The tender hairs like downe to shoot begin;
Dare one another, Feasting, Cups to take,
Glasse passing after Glasse, great mirth do make,
Till all is hush: and falling on each other
Their eyes grow dim, and their wits do smother;
Thus these fierce Beasts lying all on an heap,
Do to the hunter fall a prey most cheap.

In "An Advertisement" Scrivener anticipates objections to his daring to speak on this subject, by the "Short defence . . . that it is the undoubted Right, as well as duty, of every good subject to Arm, when the King takes the Field against the Common Enemy. Almighty God, therefore, having, amongst many other Divine Resolutions, and Heroicall Motions, put into the heart of our Dread Sovereign, to make war against the Beast (as the Scripture speaks, Revel. 19:19), or, rather, Beasts of Luxury and Drunkennesse, so far invading and wasting the Nation, as I accounted it safe under so great Protection, so likewise seasonable under so wise a Conduct, to shoot this my Bolt (as the Saying is) at them also; and that forseeing how apt many will be to make that saying compleat, by calling it A Fools, and soon shot." To what particular action of James II this refers may be a matter for conjecture.

"It is now," says Scrivener, "forty years or more since I cast mine eye on a Foreign Author, who to shew his Eloquence and Wit, hath published an Oration in the praise of Drunkenness, a Subject becoming the Wit and Genious of a Netherlander: wherein I know not that any of our Nation hath imitated him, though the press here hath of late days been too frank of Scandalous Pamphlets, but, I hope, shall never be suffered to produce such a Monster" (p. 10). To what book this is an allusion, I do not know, as it is much too early for the famous "Eloge de l'Yvresse" of Henri de Sallengre.

There is no doctrine of total abstinence from alcohol in Scrivener's book, and he gives up the attempt to define Drunkenness quantitatively. He mentions the saying, "To drink like a Lord," as making it "a piece of greatnesse to be really base." He quotes Plutarch's saying, "That it is not the abundance of Wine and Roast-meat which makes Men cheerful at Feasts, but a fair hope and persuasion that God is propitiously with them, and graciously accepts what is there and then performed," and adds, "I would to God such doctrines as this were more frequent in the mouths of Christians, and their mirth more exactly regulated by such considerations" (p. 39). He complains of the erotic and bacchanalian character of the poetry of his day (p. 44). "I know not," he says, "what peculiar daring spirit is infused with Wine and strong Drinks into the mind of the Drunkard, that he answers all such attempts of reducing him to Sobriety, with jests, scoffs, threatenings, ragings, and worse a great deal many times" (p. 57). He declares that some Sectaries were accustomed "under colour of the great pains they were to take, or had taken in Preaching, to drink Wine and take Tobacco, too (such Sots were some of these sober Men I could name, to their Palates) in the Vestry part of the Church" (p. 63). He has some remarks, too, on the question whether among the Conformists or the Nonconformists there were the greater number of drunkards, and frankly says, "For I do really believe there are more Drunkards professing Conformity to the Church than enmity to it" (p. 85). The effect on the estates of the gentry is thus described:

Yea, the very Woods, Fields, and Pastures, feel the effect of his Drunken humour: For after he hath lavished out that full Stock and Store which his Friends left him, he proceeds to seize upon the very Corps of his Estate, the Annual Revenue not sufficing him to maintain two homes; the one his own House, and the other the Tavern, if he be of the greater Rank; but if of the meaner, the Ale house: or perhaps he brings the Tavern home to his own House, which is worse, and breeds more disorder and confusion in a family, than the other; and so bottle after bottle, and sometimes dozen after dozen bottles are brought forth; so that the Butteries or Cellars expences equalizing many times, and sometimes exceeding the expences of the Kitchen: the Gentleman, as the Prodigal in the Gospel, begins to be in want and falls to borrowing,—and when his credit fails there, wooes his distressed Wife a second time for to release her Joynture, and never considers want and infamy is coming upon him, as an armed man, and upon his children: In the mean time the Timber Falls, and makes the Earth groan and tremble, as it were perceiving its own fate not to be far off; and that Ax is laid on to the Entail, to cut that off, too; and the Tenements mourn and hang their heads, droop, and ready to fall; the Woods and Groves are turned into Champion; And first goes one farm, and then another; and when there remains no more to secure the Prodigal, himself goes to the country-house of such persons, the Prison!

In discussing the causes of drunkenness, Scrivener lays stress upon the drinking of healths—a custom denounced by the Puritans. Our author objects to its heathen origin. He tells the story of "A Suffolk gentleman, the only hope of a flourishing Family," who, at the Norwich Summer Assizes of 1684, was urgently called upon to drink six healths in succession and refusing, was fatally stabbed—"the author of this tragedy suffering condign punishment according to law." In another place he says: "What a grand piece of Honor it is for Kings in a Just and Righteous Cause, or for Honorable and Virtuous Ladies to have that character of Honor done to them, which we have found lately done to the blessed memory (as they call it) of that Infamous Traitor Stephen Colledge; and is commonly done by the same Zealots for Healths to Queans of Lewd Life and Conversation" (p. 137). This is an allusion to the "Protestant Joyner," one of the believers in the sham "Popish Plot," and also one of its victims, who was executed as a traitor, August 31, 1681. His other claim to memory is that he invented the "Protestant Flail," of which the modern life-preserver may be said to be a descendant.

Scrivener was not alone in his dislike of health drinking. In 1684 there appeared "The Great Evil of Health Drinking," by an anonymous author who fully corroborates the testimony of Scrivener as to the danger of refusing to drink a health. "The old form," says this anonymous writer, "which became a proverb, *Aut bibe, aut abi*, 'Do as we do, or begone,' was safe and civil, in comparison with the forms of our young masters, who swear you shall drink, or swear they will run you through, they will see through you, they will pin you to the wall, or fasten you to the ground. These can sacrifice to your health, and send you to hell; damn themselves, and you, too. It is dangerous to drink, and it is deadly to refuse."

However far the civilized world may still be from the ideal state, there has been a striking progress in the direction of temperance since the scandalous days that followed the restoration of the Stuarts to the throne of the British Isles.

WILLIAM E. A. AXON.

Correspondence

WILL THE WORM EVER TURN?

TO THE EDITOR OF THE NATION:

SIR: One of the beautiful things about our life in the United States at the moment is its great and increasing opportunities for the development of moral virtues. As a husband, as a father, as a consumer, as a business man while the tariff is changing, as a reader of the daily press, as a tax-payer, your ordinary citizen of the middle class has daily opportunity to grow in grace and to prepare himself, through tribulation and self-denial, for a better world; but I know of no other profession in which these possibilities are wider and more varied than they are in teaching.

One thing which, in my opinion, amounts to a genuine grievance is the tendency towards gratuitous and sometimes unsympathetic discussion of the teacher and his work. Men who have lifted themselves from the routine apply their new point of view to the criticism of teachers, and, naturally, with negative results. Since the views of such men have advertising value and are gladly published, instances are not hard to find. The president of the Carnegie Foundation, whose words are surely important as those of the reigning Czar of American colleges, has himself been a sinner in this direction. I quote certain words of his which, though not of recent utterance, are still characteristic of the spirit of his rule:

Any man who knows American colleges and universities is familiar with the common experience of many of the abler young men who come up through our institutions, spend a year or two abroad, equip themselves well for the work of research, and settle down into the position of an instructor or assistant professor in some institution, full of enthusiasm and ready to consecrate their lives to research work. Scientific men are human like other men. After a few years the investigator marries, the problem of family support becomes urgent, college pay is small, and, while it may pay current expenses, it offers no opportunity to lay up for the future. The candidate for research work looks about for means of turning the grindstone; and a man who has started with flying colors and a buoyant heart for a fine career in research ends by becoming a fair teacher and a patient drudge.—[President's Report, Inst. of Tech., December, 1903.

This sort of comment, with the criticism which it embodies or implies, is likely to be felt as having more of an official character than was intended: and we get it, not only from the Czar, but from most college presidents, and even from the deans! Thus the teacher finds his occupation be-

littled, and his ability called in question, in public print, by his own employers. The situation, I think, finds no parallel in commercial life. Imagine the manager of a department store who found his saleswomen unsatisfactory, and wrote about it to all the journals in which his house advertised. What happened to that man would be no more than he deserved. In business, such conditions are discussed in the manager's office or the board-room; and there, without undue publicity, remedies are devised. Any other course of action quickly strengthens the consciousness of opposing interests. The employee develops grievances. "They care nothing for you," he says, "except what they can get out of you"; and we find him grumbling because "they" reduce an allowance or delay a promotion. He makes much of his outside interests, advising his younger associates to take care of themselves, and not to put all their eggs in one basket; and all these things point to an attitude of mind that, more quickly than any other single cause, will destroy the earning power of a worker. Such is the lesson of business administration; and it should be applied in academic offices. Your college officer is a self-confessed man of affairs and of the world, a student, presumably, of scientific management. He, also, should learn to burn his own smoke.

The other suggestion which flows from the words of Dr. Pritchett quoted above is that promotion and increase of salary should depend upon accomplishment in research work as much as upon ability to teach. This points, I think, to a second grievance of teachers—and often of students as well. The principle has long been systematically applied in many of our larger universities; and has resulted in all but crowding out the teacher. As a consequence classrooms are too often entrusted to men who are impatient of detail, careless in presentation, full of their own mental processes, and unaware of those of their students. For skill in the analysis of coal-gas, or of an Anglo-Saxon root, one may be promoted to a determining voice in the council; but not as yet for skill in the analysis of character. Thus the true teacher, however adroit, doing a necessary work, though humble, and doing it well, is quite crushed with the importance of others. The eye has most emphatically said to the hand, I have no need of thee. This again has no parallel in business. An Italian may black boots well, and with honor, though he is not the inventor of shoe-polish. Our universities, too, have many boots to black. If the men who black them become in time "patient drudges," it is mainly the attitude of their employers that makes them so.

Administrative officers have frequently asserted in the public prints that too many teachers are teaching because they cannot do anything else. The obvious retort is that college administrative officers are administering colleges because they cannot administer anything else. So far as I know, this retort has never been made; and while the "patient drudge," encouraged by the preference of editors for well-known names, continues to let his superiors do all the talking, it probably never will be made.

At present, then, the teacher needs, like poor Queen Katharine, to add to all his other virtues "a great patience"; and he will continue to feel that need till our colleges elect to administrative positions men with common sense enough, and sufficient democracy of soul, to see that something may be done for the workmen, the unorganized labor, of our larger institutions. Scholarship and teaching ability are two separable and often separated faculties, the latter the more directly convertible into money. As a matter of mere business fairness, then, it would be wise to open a more useful and honorable academic career to the teacher, whose power lies chiefly in the direction of dealing with men.

A QUESTION OF PUBLISHING.

To the Editor of The Nation:

Sir: I have lost sixty cents. The amount is small, it is true, but I am one of the proverbial "thrifty" foreigners of American newspaper fame, and I hate to lose sixty cents. It would bring me *Punch* for one month, it would buy me twelve classics in the Reclam edition, and would provide me with most of Molière's masterpieces. This is the way in which I lost my money, and I wish to bring it before the high-tribunal of *Nation* readers to see whether I am right in complaining.

On Saturday, March 29, I bought a little book of less than 55 pages text, written by H. G. Wells and printed by Mr. Huebsch of somewhere on Fifth Avenue, New York. The name of the booklet was the "Discovery of the Future." On Sunday morning I bought the New York *Times*, and my first discovery of the future was the fact that virtually the whole of Mr. Wells's pamphlet (for which I had paid sixty cents) was printed on the front page of the Magazine Section of the paper. The *Times* informs us that Brother Huebsch has given it the permission to publish "the following abstract." Certainly this permission was used in a most liberal way, for omitting the peroration of Mr. Wells, the paper prints virtually everything else (for which I had just paid sixty cents). Now, it seems to me that somewhere there is something in this affair which is not quite as it ought to be. Apart from the loss of those sixty cents, I fail to see why the *Times* should first advertise Mr. Huebsch and then should take all the wind out of Mr. Huebsch's sails by printing said Huebsch's book among its many other valuable Sunday articles.

I do not understand this, and like my foreign brother Hashimuro Togo "I require for answer." Dr. H. W. Van Loon.

Washington, D. C., April 2.

THE COMPOSITE RIZAL.

To the Editor of The Nation:

Sir: In your issue of January 9, your reviewer of José Rizal's books pronounces him "a Filipino with no European blood." I fear this is another instance of writing learnedly at long range on Philippine subjects. By far the best work on all matters relating to Rizal has been done by an American member of the Philippine Academy, Mr. Austin Craig. Especially in respect to the Rizal genealogy his researches are the only ones worth mentioning, and in a pamphlet published in 1911 he prints a chart showing how composite a type Rizal was. His ancestry included indeed three Malay (Filipino) tribes (Tagalog, Pangasinan, and Ilokano), but his Spanish blood far exceeded the Ilokano and virtually equalled the Pangasinan, which will doubtless account for whatever truth may be found in the reviewer's further assertion that "the major theses of Rizal are distinctly pro-Spanish in every essential." The fact is, however, that his aspirations were towards Anglo-Saxon rather than Latin ideals. He visited England and the United States, and both by example and by precept advocated the study and use of that same English which our Government is foolishly charged with "forcing" upon the Filipinos, but which the rising generation is now engaged in acquiring with gratifying eagerness. Rizal, too, as early as 1889, in his "Filipinas dentro cien años," displayed rare foresight and familiarity with world movements by suggesting the idea that American sovereignty might one day be extended to this archipelago.

But to return to his ancestry; Mr. Craig has shown by a painstaking study of the sources, including the parish records at Calamba, Rizal's birthplace, that his Chinese blood exceeds all the rest. This fact, which was overlooked or concealed by all previous biographers, explains much, and upon its announcement the large Chinese community of Manila claimed and won, as long ago as 1909, a prominent place in the annual Rizal day parade. In fact, it would be quite as accurate to speak of Booker Washington and the other eminent colored Americans named in your editorial of the same issue as "Bantus with no non-African blood" as to call Rizal "a Filipino with no European blood."

Charles S. Lobingier,
Chancellor, Philippine Academy.

Manila, February 22.

[Accepting Judge Lobingier's correction regarding Rizal's strain of Spanish blood, I do not see how this detail in any way affects my view of the interest attaching to Rizal's novels as showing some of the intellectual possibilities of the Filipinos. As for the emphasis laid above on Rizal as a prophet of American rule, that is something entirely irrelevant to my review and to the two novels, which contain, in fact, no prophecy of American rule and no propaganda of Americanism. The thesis of these two books is pro-Spanish to the extent, and with the limitations, indicated in my review. To suggest, however, that the prophecy of 1889 had anything to do with pro-American sympathies is unfortunate, as shown, for instance, by the fact that Rizal published the document cited in Spain. As Mr. Derbyshire says, the travels in the United States "did not seem to make any distinct impression upon him." I credited Rizal with a general sympathy with Western ideals. The attempt to Anglicize him, to Americanize him, is a sample of the distortions that have always pursued the man. We have had

the Filipino patriot, and the Spanish tyrant. Now it is the turn of the American officeholder.—THE REVIEWER.]

SWIFT'S JOKE ON PARTRIDGE.

TO THE EDITOR OF THE NATION:

SIR: In reading recently Tirso de Molina's "Los Tres Maridos Burlados," I was struck by the identity of the theme of the first "mockery" (*burla*) with Swift's famous jest on poor Partridge, the almanac-maker—that of soberly publishing the death and burial of a man who is in the full possession of his faculties. It is my conviction that the world does not willingly let die a good thing once well said. I have an impression, gathered from the Memoirs, that Swift read Spanish. Is Tirso de Molina his source? Why does not some student of comparative literature give other versions of the same jest?

CHARLES ST. CLAIR WADE.

Tufts College, April 2.

"WITCH MONEY."

TO THE EDITOR OF THE NATION:

SIR: Prof. J. M. Hart, in his article on "The Adoration of the Magi" (*Nation*, March 13), comments upon the early transition of the "wise men" in popular belief from magi to magicians, and upon their special potency against epilepsy. It is a long descent from twelfth-century St. Elizabeth of Schönau, invoking for her ailments Melchior, Balthasar, and Caspar, to a Tuscan peasant of our own day; but a medal in my collection of Italian amulets seems to establish their kinship.

This wonder-working piece of brass displays on one side the three kings kneeling before the Holy Family; on the reverse are the words:

S 3 Reges
Gasp. Mel. Bald.
orate pro nobis
nunc et in hora
mortis nostrae
Amen

The medal was issued from a convent in 1908 to a young shepherdess who had led her flock for summer grazing to the Apennines. For a holiday she went to visit an aunt in a mountain village some forty kilometres from Florence. Ignorant of her kinswoman's possession of the Evil Eye, she could in no way account for her own sudden prostration with vertigo. Unable to stand or to eat, she was rescued from her unwonted plight through the wise counsel of neighbors. The aunt was a good woman, they all agreed, of generous heart and very pious; but so baneful was her glance that when she went to mass the priest might be sure of officiating for her alone. The remedy was simple—the wearing of a *medaglia delle streghe* (witch medal) obtainable from certain nuns in Prato. As the sufferer could not rise from her bed, a kindly woman lent her the necessary charm. It was none other than the medal described above.

The girl's recovery was immediate and so lasting that she tarried with her aunt in peace and comfort. In the autumn she was in Florence on her way to winter pasturage in the Maremma. Full of enthusiasm over her miraculous recovery, she had procured two medals from the sisters in Prato, and, being in radiant health, she was quite willing to exchange one piece of her "witch money" for coin of another sort.

HYNDMAN'S REMINISCENCES.

Further Reminiscences. By Henry Mayers Hyndman. New York: The Macmillan Co. $5 net.

Mr. Hyndman states that he was encouraged by the cordial welcome given to his earlier volume of autobiography (reviewed in the *Nation* of November 30, 1911) to complete his memoirs. We are glad that he has done so, because this new volume has great value. Not only is it written with the ease and frankness indispensable to good autobiography, but it shows us the leading British Socialist of his generation in the thick of the fight which Socialism has been waging for thirty years past. By reading it attentively, we get not merely the theories and ideals which Socialists profess: Mr. Hyndman shows us the motives which really inspire them and the deeds they actually do

Born to wealth; educated at Trinity College, Cambridge; one of the best cricketers of his time; a lover of adventure; versatile; full of British vigor and brusqueness, which did not, however, shut him out from contacts with persons high and low; a mining expert and investor in Australia and our West—Hyndman had lived half-a-dozen lives before he dedicated himself unreservedly to Socialism five and thirty years ago. Marx was his master, and Hyndman remains to-day an uncompromising Marxian. His reminiscences are nearly evenly divided between persons and events, with doctrines and criticisms sprinkled freely throughout the book.

He gives a sympathetic sketch of Michael Davitt, whom he ranks with Garibaldi for "sheer force of moral worth and nobility of character." Hyndman himself, being an Irish Land Leaguer, was behind the scenes, and he furnishes evidence to confirm his high estimate of Davitt. He also reports some characteristic doings of the Irish conspirators. His eulogy of Davitt is all the more magnanimous, because he believed that Davitt's views on Socialism and political economy were unsound and harmful.

To Lady Warwick, the only aristocratic woman in Europe who, disregarding her caste, her traditions, and her material interests, came out courageously for the cause, Mr. Hyndman pays a high tribute. He still retains enough of the inherited ideals of the past to write with chivalrous fervor of the beautiful Countess, whose career, he thinks, has just begun; and he defends her from the criticism of those who ask why she does not sell all and give to the poor, if she is really sincere in her desire for Socialism. That question, he says, applies "to all who are living upon rent, interest, or profit in any shape, and are taking no part in the actual direct work of producing and distributing wealth. But, as I have often pointed out, . . . surrender by one, under existing economic conditions, only means appropriation by another. The system of wage-earning and profit-taking is not to be broken down by mere personal sacrifice, no matter how noble such foregoing of wealth and position may appear from the old ascetic morality point of view."

The best of the personal sketches is devoted to Bernard Shaw, in whom Mr. Hyndman detects Heine's power of turning to you the seamy side of any subject which he has just presented from a pleasing point of view. He has several revealing anecdotes, much penetrating literary analysis, and a survey of Shaw and the Fabians, whom he regards as obstructionists and reactionaries. This is a chapter which all who are interested in the most discussed British writer of the day ought not to overlook. Mr. Hyndman concludes that Shaw is, first of all, a poseur; but that, although the mercurial Irishman deserted the Socialist cause, he is indirectly helping on the social revolution by exposing with mordant wit the paradoxes, evils, and shortcomings of the present régime. Mr. Hyndman devotes other chapters to Henry Labouchere, the quintessence of cynicism; to W. T. Stead, whom he underrates; to Walter Crane and Blatchford; to Eleanor Marx and her depraved lover, Edward Aveling; and to some of the Russian Revolutionists—including Stepniak, Lavrenius, and Azeff, whose claim to the title of most infamous of traitors seems indisputable.

Even more significant, however, is that part of the book in which Hyndman tells of the work which he has directed for nearly a generation, and criticises the evil conditions to which industrialism, as he charges, has brought England. In that, the richest of all lands, there are, according to him, thirteen million people in poverty, and of that number more than half regularly feel the pinch of hunger. Nowhere else does the hideous contrast between vast wealth and widespread misery flaunt itself so openly. The realization of the suffering and injustice has burned into Mr. Hyndman's soul. He shows a savage indignation towards the industrial system which has reduced so large a proportion of the modern world to the condition of hopeless helots; but he believes in education and progress through politics; if that fails, he would resort to violence.

We find no satisfactory statement from him of what will happen when thoroughgoing Socialism is established. His main concern is to destroy the ex-

lsting monster; reconstruction will take care of itself. When everybody has enough to eat and to wear—when the state and not a Gradgrind capitalist is the taskmaster—when the distinctions between rich and poor are blotted out—virtue, apparently, will flourish without effort. There will be no crime, because crime is simply disobedience to statutes which capitalists have framed to protect their own interests. There will be no sins—because sin is disobedience to an artificial moral law based on an obsolete supernaturalism. Just how the lazy are to be made to work, the grasping are to be transformed into the unselfish, and those who now are loyal only to their appetites will suddenly develop a consuming loyalty to the state, he does not explain. Like the extreme Abolitionists in 1861, he would probably say, "Emancipate, and let come what will."

The most repellent side of Mr. Hyndman's doctrines concerns the relations between the sexes. He never mentions marriage without sneering at it as a "bourgeois institution." Promiscuity, and even prostitution, have no rebuke from him, so long as they are voluntary. He speaks rather pityingly of his hero, Davitt, because "his inherited abhorrence of sexual laxity drew him into mistaken and injurious action towards Parnell." While this brutal frankness is more wholesome than a certain phase of English cant on the sexual question, it will not attract to Socialism those sane persons—and they are still in the majority—who recognize that the family must be the unit of any civilized society. Perhaps the following sentence gives the measure of Mr. Hyndman's insight and gospel better than many pages could: "Brahma, Buddha, Christ, Confucius, Mohammed, all the saints and prophets and martyrs who ever lived and died, have not affected the form of society so much as the invention and application of a single new engine of production."

The final value of Mr. Hyndman's book lies just here: it unfolds the ideals, opinions, prejudices of the chief English Socialist, who is much more than a narrow doctrinaire. He speaks out on all subjects. His judgments invariably refer to the Socialist cause. He detests the present Liberal Ministry; he regards Lloyd George as a trimmer and Keir Hardie as a backslider, but he apparently approves of William D. Haywood's policy of retaliation in Colorado and at Lawrence. And although Socialists generally affirm that their creed would abolish militarism, Mr. Hyndman makes an exception of Germany and preaches that England must increase her navy and organize a strong army against the German menace. Critics of American railways may be surprised to find him attributing the decline of British agriculture to the backwardness of British railway management. He goes so far as to urge the British directors to copy American methods, including those for the protection of employees and passengers.

CURRENT FICTION.

Jean-Christophe: Journey's End. (Love and Friendship; The Burning Bush; The New Dawn.) By Romain Rolland. Translated by Gilbert Cannan. New York: Henry Holt & Co.

Now that the concluding portion of this long romance—in the French version it is issued in ten volumes—has appeared, your reviewer must concede a virtue which it was difficult to feel in the previous instalments. The central personage contrives in the end to stand out clear and distinct. Nor has the author altered his method. Here are the accustomed formlessness, the congeries of incidents growing out of no organic plot (each being manufactured to illustrate whatever phase of character is uppermost at the moment), the same garrulity and preachment. Yet the reader, if he has patience, will carry away the memory of a powerful personality. The first English volume followed the life of the great musician to be—said by some to be patterned on Beethoven—from birth in a small town on the Rhine to a period in young manhood when, owing to his participation in a political disturbance, he is obliged to flee from his country and goes to Paris. In the second volume he continues, in that city, to fight for his ideals, and succeeds after direst poverty in achieving fame. The final volume sees him disdainful of the petting Parisian society is eager to bestow and still living in meagre circumstances. Yet he enjoys a rich friendship, culminating in honest love, with a lady of quality—the Grazia of Volume I—besides less worthy, though for the moment sincere, affairs with two other women. He dies in middle life, glowing to the end with the thought of the splendid battle for righteousness which life holds out to the robust and brave. Loyalty to principle and to friend is his outstanding quality.

Although M. Rolland's method of construction is open to severe criticism, it is possible that no more rigid literary form would have contained all that he desired to say. For the work as it stands is a running comment on the main tendencies of music, literature, and politics during the past fifty years. "Jean-Christophe" has the looseness of the ancient epic romance, themes provided with personal names for the most part taking the place of people. Yet M. Rolland has gone deeply into the spiritual possibilities of the present age. If he seems at times to revive the spirit of German Romanticism, he will gain some indulgence from the fact that his hero pursues an emotional profession. We can think of no one so well equipped as M. Rolland to describe precisely the delicate shades of feeling which contribute to a musician's development; he has a rare gift of language and is a skilful psychologist. "Jean-Christophe," despite its great shortcomings as a novel, is a stirring attempt to present sincerely an important message to a material-minded generation.

'Twixt Land and Sea. By Joseph Conrad. New York: George H. Doran Co.

The title is explained by the sub-titles of the three tales here assembled. The first is "a harbour story," the second "an episode from the coast," and the third "a story of shallow waters." The leading figure in each of the stories is a trading skipper of the south seas, but a skipper in some sense out of his element. Ships provide the background for some of the scenes, but they are ships at a disadvantage, unheroic; becalmed, or at anchor, or the victim of flat mischance in fair weather. Even the sea is not the deep sea of Mr. Conrad's devotion, but a broken body of water surrounding various man-infested bodies of land, and subject to indignities. A sense of uneasy and not always seemly contact between land and sea, landman and seaman, is strong in the book.

The exotic flavor of these stories is not wholly due to their setting. Though this writer long ago chose English for his medium, his masters are not more English than Polish, but French. Even the details of his style, his sentence-structure, his rhythm, often recall the great French story writers. There are whole pages in the present volume which have the effect of a translation, a very beautiful and almost concealed translation, from the tongue of Gautier and Maupassant.

> Very soon I became entranced by this blue, pinnacled apparition, almost transparent against the light of the sky, a mere emanation, the astral body of an island risen to greet me from afar. And I wondered half seriously whether it was a good omen, whether what would meet me in that island would be as luckily exceptional as this beautiful, dreamlike vision so very few seamen have been privileged to behold.

What the island holds for the narrator, captain of a freighter, is an experience, under less idyllic conditions, such as one associates with the dreamy inconclusive art of Loti. It holds, immured in a tropical garden, a daughter of unhappy parentage and of the South; a creature fierce, silent, and morbidly beautiful. Without experience of man, she is quiveringly fearful of him, a savage in a dingy wrapper, a proud and sullen animal from whom anything may be expected. Under her strange spell the skipper, idle ashore, presently falls.

He is a man of breeding, and does not succumb without an effort; but he succumbs. No tragedy ensues: their single embrace is an embrace of parting. And the smile of fortune which is the indirect result of their fragmentary amour concerns a lucky deal in potatoes which fetches the skipper out of his hazard with a substantial profit. The odd fascination of the tale, like that of its companions, is due to Mr. Conrad's faculty of creating an atmosphere—the atmosphere of a strange enchantment, or a deadly fear, or an imminent catastrophe.

Crossriggs. By Mary and Jane Findlater. New York: E. P. Dutton & Co.

Penny Monypenny. The same.

Seven Scots Stories. By Jane Findlater.

These books belong to the class vulgarly known as "gumdrop literature"—old-fashioned, harmless distractions in which one may indulge *ad libitum* with no worse consequence than a slightly uncomfortable sensation of futility.

The seven short stories have the advantage of being built on the most elementary plan. They have a certain quaintness to commend them, due partly to the homespun quality of the style and partly to the extreme simplicity of the characters and situations. They tell of life in poor people's homes, and most of them are about children; for instance, the valiant "bairn-tender," and Mysie, whose pet lamb waxed fat with too much cosseting—and butted. One would expect them to please child readers by all the little homely, uninspired touches with which the local color is laid on, and by a slightly concealed abundance of moral plums to tempt the juvenile thumb. American readers will find some things to puzzle them in the experiences of a laddie who adventurously escorted his feeble old grandmother from the Hebrides to visit her son in the States. Although the "Flat-Iron-Sky-Scraper" had already been erected in New York, Uncle Charlie, near Memphis, Tennessee, was still living on the apparent edge of civilization, in a region of "settlers" and "clearings," populated largely by "descendants of the convicts who had been sent out to the plantations in old days," and visited by roving bands of Mexican horse-traders.

The novels are more sophisticated in tone, and deal with the family problems of Scotch gentle folk for whom life is complicated somewhat by social distinctions. The heroine of "Crossriggs" is the practical daughter of an amiable visionary and the maiden aunt of a fatherless brood of six. Her sole economic resource is a beautiful reading voice which she employs in a semi-professional way. To her household burdens are added amorous woes. Besides the exemplary married friend whom she loved and was loved by with virtuously repressed passion, there was also the very young admirer whom her displeasure drove to ill-advised marriage and subsequent suicide. No wonder poor Aunt Alex kept growing thinner and thinner, paler and more headachy, from chapter to chapter.

Penelope Monypenny is a much more presentable heroine, the delicately nurtured daughter of a charming young widowed mother. The great problems of this story are to provide a proper husband for pretty Penny and a proper heir for her two crusty bachelor uncles. Eventually it is all satisfactorily arranged through the introduction of a distant kinsman, who by name and by nature is exactly fitted for both rôles. But the ending, blessed by prudence, is procured at the expense of the most likable character of the book, Penny's cousin and early sweetheart, a young consumptive genius whom it is necessary to cast into outer darkness beyond the pale of respectability in order to clear the way for his more eligible successor.

The Street of the Flute-Player. By H. de Vere Stacpoole. New York: Duffield & Co.

By the help of a sufficient amount of "local color," the plot of a short story may easily be made to serve for a novel. If any one doubts this, let him read "The Street of the Flute-Player." The scene is Athens, near the close of the Peloponnesian War; but the writer is not even compelled to draw upon history to eke out his material. It is the time of the grape-harvest in 405 B. C.: yet we hear no echoes of Arginusæ or Ægospotami. Pure description takes the place, not of sense, perhaps, but of the story. The Acropolis, the Piræus, the Agora; street scenes, banquet scenes, sea scenes—these are the staple of the book. "By his capacity for reverie," the author tells us, "you may judge the work of any critic of art, or artist." If this is true, then Mr. Stacpoole deserves to rank very high; for at the most exciting moment of his plot he is capable of dropping the story to indulge in a long reverie about the merchant ship on which the scene is for the moment laid. Readers who like modern sentiment and sentimentality in a classical setting, and are not disturbed by inaccuracies, will probably find the book enjoyable. But even these, we fancy, will find a good deal to skip.

The Gloved Hand. By Burton E. Stevenson. New York: Dodd, Mead & Co.

The author retains in this tale of mystery the central characters of his rather successful story, "The Boule Cabinet"—Lester, the middle-aged lawyer, and Godfrey, the reporter, who was formerly a member of the New York Detective Bureau. Since they are modelled after Dr. Watson and Sherlock Holmes, they furnish an acceptable means for keeping the line of reasoning leading to a solution of the plot fresh before the reader and for spurring him on to his own best efforts. Godfrey's dazzling inferences are always made from evidence presented to all, and never from secret information. There is a police captain, brave as a lion and, of course, quite as dull. In the present instance an old gentleman, living with his beautiful young daughter in a walled estate on the edge of the Bronx, has been murdered. Suspicion is cast on an Oriental and his man, who also dwell on the estate and whose religion the victim had espoused. But the bloody fingerprints of a law student, who is in love with the daughter against the father's wishes, seem to incriminate him hopelessly, especially since it is known that he had a secret meeting with the daughter on the grounds the night of the murder. Except at two points of the story the explanation of the crime is well concealed; let the reader be alert.

The Woman in Black. By E. C. Bentley. New York: The Century Co.

The author of this story is the chief editorial writer of the London *Telegraph* and presumably an Englishman; yet he can write the argot of Wall Street and Broadway with extraordinary vigor and accuracy—which for an Englishman is an almost unparalleled achievement. This accomplishment, of which Mr. Bentley may not be very proud, is a matter of some importance, since the plot of his book turns on the murder of a great despot of Wall Street who has married a British wife and is living in a quiet English country house, and one of whose secretaries is also from the financial shambles of New York.

It would be an ill service to the reader to indicate the nature of the plot. Sufficient to say that it is one of the very few good detective stories published in several years. It has its technical faults: the gentleman from Scotland Yard is rather superfluous from the beginning, and soon drops out altogether, and at one critical place the narrative gets a bit confused. But withal the plot and its unravelling are unusually clever, and the climax comes at the end with a good snap.

RAILWAY PROBLEMS.

Railroads: Rates and Regulation. By William Z. Ripley. New York: Longmans, Green & Co. $3 net.

This volume on the public relations of railways is to be followed soon by a second on finance and corporate relations. In these two volumes Professor Ripley is presenting the most exhaus-

tive study of the railway problem in the United States that has yet appeared. By his intimate knowledge of the whole field of railway operation and by his attractive literary style, he has produced a book that is likely long to remain a standard authority on the subjects discussed. However, its six hundred and fifty pages are not for the novice. The reader must have some notion in advance of the fundamentals of the subject; otherwise he will become lost amidst the abundance of detail. For if there is one outstanding weakness in the book it is lack of clear generalization. Professor Ripley has in part anticipated this criticism in his preface and has insisted that, if the only scientific method of treatment is to formulate economic principles from concrete data, then the massing of illustrative material is inevitable. We would not quarrel with the method; we would simply say that, after patiently following the author through his detailed explanation of rate adjustments, we do not meet with any clean-cut statement which fixes in our minds the underlying principle. Doubtless we are making a serious demand upon the author's powers; perhaps an impracticable one. But if generalization is difficult for the author, it is doubly so for the reader.

After an excellent introductory chapter on the history of transportation in the United States, the book is devoted almost wholly to the problem of rates. Professor Ripley displays an unwavering loyalty to the Interstate Commerce Commission. He is a frank advocate of the regulation of rates and services by such methods, and looks with evident satisfaction upon the steadily increasing administrative powers of the Commission which are freeing it more and more from judicial interference. It would hardly be just to charge him with any pronounced partisanship in his attitude towards the settlement of problems involving the conflicting claims of shippers and carriers; on the contrary, his judgments on the whole are well-balanced and dispassionate. Yet, as he freely admits in his preface, his bias, if bias there be, favors the "dim inarticulate multitude" which is in need of effective advocates.

A brief summary of Professor Ripley's position on some of the controverted points of the railway problem may be noted. He does not advocate either the value-of-service or the cost-principle of rate-making to the exclusion of the other; both principles are of equal importance and the precedence of one or the other depends upon the conditions in each individual case. The important problems still to be settled are those involving transcontinental rates and the Southern basing point system. The latter he regards as a concomitant of industrial immaturity which should finally be rejected in favor of a system of rates graded more nearly in accordance with distance. He believes a uniform classification to be probably impracticable in a country of such diversified industry, but maintains that reform of classification practice is "the greatest need of the time in the transportation field." Pooling is vigorously advocated as the only way to prevent consolidation. Attempts to perpetuate competition by legislation defeat their own end. The vigorous attacks upon the railways for their lack of efficiency do not meet with much sympathy from the author. He clearly recognizes the limitations to the application to railways of principles that have proved so successful in manufacturing plants. In the matter of rates for the future he recognizes the burden of increased prices and wages under which railways are struggling, and lays down the general principle that a sufficient surplus earning power must be permitted to insure investment in railway securities. On the question of the rehabiliment of waterways, Professor Ripley takes the conservative position which is slowly making headway, that large expenditures should not be entered upon without thorough inquiry as to whether the results will be in any way commensurate with the cost, and repeats the warning often uttered that it is fallacious to overlook construction expenses paid for out of the Federal Treasury when estimating the cost of water transportation. His prediction concerning the effect of the Panama Canal is that the railways will probably prefer to surrender some of their competitive traffic in order to maintain charges on the major portion of their tonnage; but that in the long run the development in prosperity of the entire West as a result of the canal will materially enhance railway revenues.

In a book of such great detail it would be surprising were some inaccuracies not found. A few only of them will be noted here. It is implied that Gallatin's proposal in 1808 for an expenditure of $20,000,000 related only to highways, whereas canals and rivers were the major consideration. Peter Cooper's "Tom Thumb" made its trial trip from Baltimore, not from Philadelphia. The Camden & Amboy Railroad did not cover the entire distance from New York to Philadelphia. Dunkirk, New York, not Dunkirk, Ohio, was the terminus of the Erie in 1851. The Massachusetts Railroad Commission of 1869 was not the first Commission in the country, but was preceded by several others, beginning with 1844. The statement that a physical valuation was provided for in the Mann-Elkins act of 1910 is not borne out by an examination of the statute. The discussion of Judge Humphrey's "immunity bath" granted to the beef-packers in 1906 is inaccurate in stating that the decision was rendered by the Supreme Court, and in implying that the obstruction interposed to the use of evidence obtained in general governmental investigations still exists. The decision was rendered by a District Court and could not be appealed because the Government had no right of appeal in criminal cases. However, shortly thereafter statutes were passed removing the prohibition on appeal by the Government, and providing that immunity could be procured by witnesses only when testimony was given under oath in obedience to a subpœna. Again, it is difficult to harmonize the author's statement at the beginning of chapter vii that personal discrimination has been "practically eliminated since the enactment of the Elkins amendments," with the detailed discussion of the previous chapter, in which a definite impression is left on the mind of the reader that this form of discrimination still extensively prevails. Finally, reference should be made to Professor Ripley's frequently reiterated assertion that railway rates have sharply advanced since 1900. It would not be practicable here to enter upon a discussion of this highly intricate question. So unsatisfactory is the data upon which one must rely for a demonstration that even the author is forced to admit that one is almost at a loss to strike a fair balance between the advances and the reductions. It is sufficient to state that in our opinion the assertion has not been proved.

But all these points to which criticism has been directed are minor blemishes in a treatise of high merit. Leaving out of consideration books devoted to special phases of the problem, this is the most scholarly work that has appeared on American railways since Hadley's "Railroad Transportation" in 1885.

The English Scene in the Eighteenth Century. By E. S. Roscoe. New York: G. P. Putnam's Sons. $2.75 net.

This book is attractive in appearance, it is embellished with twenty-four illustrations, and its preface invites serious consideration. Avowedly inspired by Sir Leslie Stephen's Ford lectures at Oxford, which were published under the title, "English Literature and Society in the Eighteenth Century," it does not profess to bring forward minute new facts, but "to systemize the materials which are already in existence; in other words, to form a clear and general view of the age." In the first part are presented three representative cities: London, the capital; Bath, the city of pleasure; Liverpool, the seaport. In the second are studied the "conspicuous groups": the nobility, the men of the industrial revolution, the new provin-

cial citizen, the woman of letters, the naval officer, the country clergy, the peasant. It is not irrelevant to our purpose to add that Sir Leslie Stephen approached the hazardous task of historical generalization as author of the monumental "English Thought in the Eighteenth Century," and that Mr. Roscoe has written lives of George Selwyn and of Robert Harley, Earl of Oxford.

Partly from complimentary deference to the political and legal historians who had preceded him on the Ford foundation, partly from his half-mocking native humility, the learned historian of eighteenth-century thought assigned to his own special interests a very lowly place, and for the nonce treated literature as rather responsive to social influence than socially influential. Mr. Roscoe, adopting without much reservation the economic view of progress, includes not merely literature, but politics as well, among the much overrated forces in social advancement. The one outstanding living fact for him in the eighteenth century is the development of the middle class in self-consciousness, wealth, and power, primarily through the application to industry and commerce of middle-class brains and inventions. Philosophy, art, and letters are but the dust thrown up by the whirling chariot wheels of the Captains of Industry. Aside from the industrial activity, eighteenth-century England seems to present itself to Mr. Roscoe's eyes as an operatic stage upon which troops of agreeable but unimportant actors have been drawn up in orderly lines for the drop of the curtain.

The vision of the eighteenth century which Mr. Roscoe offers to us is unquestionably general, and yet it is far from clear. It is his central thesis that in the eighteenth century a great middle class achieved for the first time solidarity and self-consciousness, yet he fails in his attempts to define the limits of that class and to segregate its characteristics. On page 146 the middle class is briefly characterized as "the Men of the Industrial Revolution." On page 149 the middle class is said to be "composed of persons nearly all of whom have an occupation for the purpose of earning a livelihood"; yet here are included not merely those engrossed by commerce, manufacture, and agriculture, but also lawyers, doctors, professors, and clergymen. Darkness thickens when on page 157 we are told that the *Tatler* and the *Spectator* "would scarcely have existed had there not been a middle class which read in them about the foibles and the weaknesses of those who belonged to their own section of society." To speak of these organs of wit and fashion and good breeding as indicative of the arrival of a new middle class still in the making is completely to confound the rising class of the Philistines or bourgeoisie with the ancient and exclusive classes of the gentlemen and the nobility to which Steele and Addison certainly addressed their efforts.

But let us grant, as Mr. Roscoe seems on page 149 to assume, that the middle class comprises virtually every one but the noble, the lower order of artisan, and the peasant. Then to declare that "most of the famous literary names of the eighteenth century belong to it," proves nothing, for the statement would be equally true of the seventeenth century or of the sixteenth. Furthermore, it might be added that this body of the people attained a fairly high degree of political self-consciousness under the Commonwealth. And certainly in the seventeenth century there existed already that *entente cordiale* and personal friendship between the English nobleman and the French aristocrat which Mr. Roscoe notes as a unique condition in international society which is only to be found during the eighteenth century. To assert that from the accession of William III to the death of George II "scarcely any one" but the peers "knew foreign languages at all" is a generalization too wild for discussion. Evidently, Mr. Roscoe has for the moment lost sight of the middle-class men who were writing and reading the Queen Anne periodicals, and has fixed his eye upon the men of the industrial revolution, who were engrossed all day by commerce and agriculture, and who made the "future of England." But the facts have to shift for themselves when one is presenting a general view. "The woman of London was"—now what can one say of the "woman of London" except that she was a woman? Mr. Roscoe does her up in half a dozen epithets as who should say, "The woman of New York is simple, chaste, and unassuming; she spends her day in seeing musical comedy and canning pickles."

By similar inductions we reach the grand generalization that the "man of the eighteenth century"—who persecuted Dissenters, adored Wesley, fought the Deists, rioted under Gordon, swore by Hume, adhered to Godwin, cultivated a taste for Pope and Ossian and Johnson and Blake, adopted the political faith of Lord North, and was hand-in-glove with "Junius," Wilkes, and Fox—that the "man of the eighteenth century," as we were saying, was prosperous, serene, and settled in religion, philosophy, morals, and taste. In our attempts to visualize the "beast," as the late William James would say, we have sometimes felt like Æneas in Hades embracing an evanishing phantom, and sometimes like Miltiades examining a photograph of the battlefield of Marathon. Somehow in its impressive migration across the eighteenth-century scene, the various red-blooded bickering multitude, moving with pace now loitering, now quickened to panic by explosions of passion and intellect, eludes the vague wide clutch of the generalizer's fingers.

Edinburgh and the Lothians. By Francis Watt. New York: Frederick A. Stokes Co. $3.50 net.

The Gateway of Scotland, or East Lothian, Lammermoor, and the Merse. By A. G. Bradley. Boston: Houghton Mifflin Co. $4 net.

These look like good examples of the glorified guide-books; but in truth they are much more. We may pass quickly in both cases from the inevitable colored illustrations, good as they are—twelve by Walter Dexter in Mr. Watt's book and eight with a wealth of line drawings by A. L. Collins in Mr. Bradley's—to the text which is the text and no mere supplement to the pictures.

Naturally, Mr. Watt's personality has less opportunity of asserting itself, so long at least as he is under the shadow of Edinburgh. Of the Edinburgh of history and tradition it is hard to say anything new. Full success can lie only in so telling the tales of the past as to evoke their ghosts in the city of the present. And that is well done here, with an abundance of detail, with imagination and force. For this is no gathering up of the ordinary old stories, the worn tags of touristry. There are many bits that will be new to most, and the linking through straggling modern names of that last great Edinburgh—the capital of eighteenth-century English literature—to the present decorous town of law and the three-per-cents is done with instinct by one who has himself, as an Edinburgh student, inherited the vanishing memories.

But away from the smoke of the city and out on the road to Queensberry and Linlithgow on the one hand, and, on the other, to Roslin, Hawthornden, the Lammer Law, and on to North Berwick and Dunbar, the figure of the wanderer appears, free of the countryside on his own feet. There are old stories still, but the quiet tracks of the Lammer Muirs and the fascination of Linlithgow, loch and palace, are of the present age. It is a pity, though, that the Edinburgh man could not remember to bring in Alexander Smith, the Glasgow poet of Ayrshire origin, whose "Dreamthorpe" Linlithgow was. Edinburgh cannot easily forgive him for writing on Glasgow a poem of sombre magnificence—the like of which neither Scott nor Robert Ferguson nor Stevenson has given to their own more romantic town. It is a curious illustration of the right of eminent domain over things Scottish which Edinburgh exerts in foreign minds, that when Lafcadio Hearn remembered Alex-

ander Smith's poem he remembered it as "Edinburgh," and not as "Glasgow."

Still more of the present and of a still wider experience and interest is Mr. Bradley's book. The "Ringwood" of sporting papers in the *Field* for more than thirty-five years—and "sporting" has a very different meaning in England; intimately acquainted with farming in the Lothians from his youth; equally in touch with American country conditions, in Virginia and in Ontario and the Northwest; an unwearied wanderer on the Welsh and Northumbrian Marches and with, in his own phrase, "a feel for a country"; a man with views of his own on the farming and laboring classes of the last two generations and on the fall in agricultural prices of the '80's; one who knows the traditions of one great period of emigration and is seeing very clearly and understandingly another in his own day; above all, a lover of field and fold, road, hillside, and stream, whose instincts lead him ever back to the soil out of which come all things and which conditions all things: he has given us here a book full of the fundamental institutes of life. Perforce he has to tell stories—formally he is writing a glorified guide-book—but his stories have far more basis both in local knowledge and in historical training than is usual, and he keeps ever turning from them to "the land." His desire is for a reader who is an "inquiring soul with an eye and a turn for rural economics and the things that make for the life of a country" (p. 147). Thus from Haddington and John Knox and Jane Welsh, he shies off over the Garleton Hills into land once marsh and now, perhaps, yielding thirty-five tons of turnips to the acre. That he passes from farming to golf, the land itself explains; "the ruthless austerity of East Lothian agriculture peters out into sandy commons and rolling dunes." But, besides that, he has a feeling for all sport if it is sufficiently of the people and of the open air, and leads round to the land. There is the delicious game of football in which the one goal was the hopper of the parish mill and the other the pulpit of the parish church; there is the team of Scottish curlers touring Canada, who, clerical members and all, kept up the convivial traditions of the game, and were "sent off" from Montreal by the local band to the tune of "We're nae that fou, we're nae that fou."

Yet there are bits, too, of fine historical imagination. Vivid phrases put Queen Mary clear out in the open, riding all day "as hard as nails," or show that sardonic humorist, Charles II, in the hands of Presbyterian divines, or Edward I as a foiled statesman. Any one who would linger on the East Coast route from Berwick north will find incitement and guidance here. And any one who would see through independent, keen eyes the eastern half of lowland Scotland, as it is and has been for the last forty years, will find ample suggestion here.

The Interpretation of Religious Experience. The Gifford Lectures for 1910-1912. By John Watson. Glasgow: Maclehose & Sons. Two volumes. $6 net.

Professor Watson, as all readers of his "Philosophical Basis of Religion" will remember, is one of those philosophers who are hampered by the habit of beginning strictly at the beginning. In his present work he has devoted an entire volume to the history of philosophy and theology from the earliest times to Hegel, before even starting to take a step of his own. And when at last we reach Vol. II—which is entitled "Constructive"—we find much more than half of it still expository and critical. In fact, the two volumes might very well have been entitled, "Refutation of all Philosophers Before and After Hegel."

For Professor Watson's book, so far as it is more than a history of philosophy, is a rather literal translation of Hegelianism into the language of the twentieth century. The familiar formulas and arguments appear with little change. The world is completely rational and completely intelligible, for otherwise knowledge would be completely impossible. From this fact we can draw certain unquestionable conclusions:

> The first and most obvious characteristic of a rational universe is that it must be an absolute unity. And this unity must be understood in the strictest possible sense. . . . It cannot be of the nature of an aggregate; its elements must be so adapted to one another as to be incapable of existing apart, so that to remove any single element would be to destroy the whole. . . . Moreover, a truly rational unity must be not only completely differentiated, but it must be absolutely perfect. The second main characteristic of a rational universe is its self-differentiation. . . . Lastly, a rational universe must be not only one and self-differentiating, but it must be a coherent system.

Each of the lower views of the world, such as realism (old and new), naturalism, subjectivism, personal idealism, and the rest, has its kernel of truth, but each is ultimately self-negating, and all are transcended by and taken up into the Absolute Philosophy, which alone accounts for everything that is and everything that can be. When this view is gained, mind and matter and all else are seen to be but manifestations of Spirit, which expresses itself in the inorganic, the organic, and the conscious, and thus includes all possible reality within an infinitely rich Unity which knows itself.

In the course of the leisurely presentation of the one true and the many false philosophies, the reader comes upon several excellent pieces of criticism—notably those directed against the new realism and against certain of Bergson's views. But the odd thing is that a warrior who sees so clearly as does Professor Watson the weak points in his enemy's armor should be so strangely blind to the many holes in his own. Surely none but a philosopher could have been so absent-minded! From beginning to end our author nobly ignores most of the recent attempts to show the impossibility of reconciling the facts of the universe with an Absolute whom men could call good. Towards the close, to be sure, the reader comes upon two lectures on the problem of Evil, and looks for an answer to the critics. The first of these lectures starts out promisingly, but before the discussion is fairly launched the historical sense, as usual, takes control, and the rest of the lecture is devoted to an exposition and critique of Schopenhauer and Nietzsche. The next lecture explains that moral goodness is a growth and that some moral evil is therefore necessary. The question of pain and suffering is not touched, nor is anything said to indicate that the author has an inkling of the real difficulties here involved for any spiritual monism. But such a noble disregard of purely empirical evil is doubtless the proper attitude for a rationalistic philosophy. As William James used to point out, the Hegelian view would be quite as demonstrable in a hell of torture as in a heaven of joy; it could prove any kind of universe, no matter how horrible we might feel it, to be "rational," "spiritual," and "perfect." Being independent of the merely empirical, the Absolute is "compatible with every relative danger."

To the true Hegelian, in this mad, sad century, Professor Watson's uncompromising volumes will doubtless be as rivers of water in a dry place and the shadow of a great rock in a weary land. But to the unregenerate its value will be chiefly historical, in the sense that it puts Hegelianism into modern terms and restates it in the light of some of the newer problems.

My Sudan Year. By E. S. Stevens. With 40 illustrations. New York: George H. Doran Co. $3.50 net.

There is no part of Africa in which the prospects of speedy development are so promising as the Anglo-Egyptian Sudan. When the contemplated irrigation works are completed, a vast region will supply Europe with cereals, first-class cotton, rubber, and valuable wood. Even the hopeless swamp of the sudd, the thick tangle of floating water plants, 35,000 square miles in extent, is

to become productive. A method has been invented of converting these plants into briquettes, having nearly two-thirds the heating quality of coal, and the company which has been formed has received from the Government a concession for the manufacture of solid fuel. Upon a vessel chartered by this company for the purpose of choosing a site for a factory Miss Stevens made the trip up the Nile of which she gives an interesting account in "My Sudan Year."

The start was made from Khartum, of which she says, "There is an indescribable feeling that the town is a camp, that its life is as artificial as the life of a city of tents." One of the incidents of her stay there was the march past Lord Kitchener of some Sudanese regiments in which were hundreds of dervishes who fought against him thirteen years before, one of the officers being a son of the Khalifa. Another son was in Gordon College, "a fine, intelligent youth," together with "two of the Mahdi's grandsons, each aged about nineteen." A girls' school which she visited had "close on two hundred pupils. There is no distinction of class, race, or religion in the school, the teaching is non-sectarian, and every little girl, whether black, brown, or white, is welcomed and instructed in the simplest elements of education—reading, writing, arithmetic, history, and English. English, however, is only taught in the upper classes, the majority of children learn in the vernacular." A significant fact recorded is that it is one of the healthiest cities in the world, "thanks to untiring vigilance" on the part of the sanitary authorities. The death-rate as recorded in the Report for 1910 was seven per thousand.

Miss Stevens's account of the upper Nile and the sudd region has many vivid touches, notably descriptions of things which do not interest a man or are likely to escape his notice. Much information is given in regard to the natives. So we have songs, ghost stories, folk-lore, and many experiences in governing. One tale relates how an old man came to an Englishman and accused another native of stealing his cattle; he had brought along his son as a witness. The accused was then summoned and asked what he had to say for himself. "The old man arose. 'Is this justice!' he cried. 'Come away, my son. This man listens to both sides!'" A curious sort of baptism was observed among the Nubas. A child of two weeks is brought to the chief, "who kills a chicken and, dipping it into a bowl of water, sprinkles the child and its relatives with it. Then he takes the child into his Arro's house, or hut, spits on it, and pronounces a name over it which has been chosen by its parents."

The southernmost point reached was the experiment station of the Suddite Company. Here the papyrus is cut by hand; it is then transported to Khartum, where it enters upon the final processes. Eventually, she was told, the work of cutting was to be done by saws run under water by motors, and a reduction factory was to be built near by. Though the hippopotamus and the crocodile abound throughout the sudd, as well as big game on the river banks, yet the vivid impression left is that "neither beast nor man had real dominion here, for this is the kingdom of the birds. The trees were white with snowy-plumaged herons; water-fowls of all kinds were busy fishing, and other bright-feathered birds filled the air and showed no fear of man." The forty illustrations, which are reproductions of photographs, are well chosen. The book has no index or map.

Notes

"The Cambridge History of India," in six volumes, of which Vol. I will be published by Macmillan during the present year, will follow the plan adopted in "The Cambridge Modern History."

It is expected that the revised edition of Funk & Wagnalls's "New Unabridged Standard Dictionary" will be ready in the summer.

The Century Co. is to issue in the immediate future a series of books on the social evil, prepared under the auspices of the Bureau of Social Hygiene. The first volume of the series, "Commercialized Prostitution in New York City," by George J. Kneeland, will appear in May. It will be followed in the summer by "Prostitution in Western Europe," by Abraham Flexner.

The following titles are in Holt's spring list: Julien Benda's "L'Ordination," translated by Gilbert Cannan; "Commercial Credit," by J. E. Hagerty; "The World Soul," by Fielding Hall, and "Marxism vs. Socialism," by V. G. Simkhovitch.

Henry Holt & Co. will also bring out the American editions of "The Dust of the Road," a picture of actors' lives by Miss Marjorie Patterson, and a translation of Rupin's "The Jews of the World," for which an introduction has been written by Dr. Joseph Jacobs.

Mr. Maurice Hewlett's forthcoming book, "The Love of Proserpine" (Scribner), is said by his publishers to be largely autobiographical.

The same house has in hand "The Life and Letters of John Paul Jones," by Mrs. Reginald de Koven, and "The Life and Letters of General Meade."

Two novels are in preparation by Lothrop, Lee & Shepard—"A Midsummer Wooing," by Mary E. Stone Bassett, and Mrs. Grace Duffie Boylan's "The Supplanter."

Among recent and forthcoming publications of the University of Chicago Press are the following: "Papers and Proceedings of the Seventh Annual Meeting of the American Sociological Society"; "My Life," by August Bebel; "London in English Literature," by Percy Holmes Boynton; "The Respective Standpoints of Psychology and Logic," by Matilda Castro; "Francesco Petrarca and the Revolution of Cola di Rienzo," by Mario Emilio Cosenza; "Lexigraphical Study of the Legal and Governmental Terms Common to the Macedonian Greek Inscriptions and the New Testament," by William D. Ferguson; "Social Programmes of the West," by Charles Richard Henderson; "Christology of the Epistle to the Hebrews," by Harris Lachlan MacNeill; Twelfth Yearbook of the National Society for the Study of Education—Part I, "The Supervision of City Schools"; Part II, "The Supervision of Rural Schools"; "The Proceedings of the Baptist Congress, 1912"; "The Duab of Turkestan," by W. Rickmar Rickmers; Fifth Yearbook of the Superintendents and Principals' Association of Northern Illinois, and "The Life and Letters of Lard Hardwicke," by M. Philip Chesney Yorke.

Longmans, Green & Co. announce: "Out of the Blue," a novel, by R. Gorell Barnes; in the American Citizen series, "Organized Democracy: An Introduction to the Study of American Politics," by Frederick A. Cleveland; "Sermon Notes of John Henry Cardinal Newman"; "The Story of the King's Highway," being a new volume in the series English Local Government from the Revolution to the Municipal Corporations Act, by Sidney and Beatrice Webb, and "Royal Spades Auction Bridge," by "Bascule."

Bobbs-Merrill has a long list of fiction for this season. It includes: "War," a romance of the Civil War, by John Luther Long; "John O' Jamestown," by the late Vaughan Kester; "The Impossible Boy," by Nina Wilcox Putnam; "The Daughter of Brahma," by I. A. R. Wylie; "The Lovers of Skye," by Frank Waller Allen; "A Step on the Stair," a story of life after death, by Octave Thanet; "The Case of Jennie Brice," by Mary Roberts Rinehart; "Seven Keys to Baldpate," by Earl Derr Biggers; "Andrew the Glad," by Maria Thompson Davies; "The Melting of Molly," the same, and "The Valiants of Virginia," by Hallie Erminie Rives.

Among the books which Dutton is now bringing out are: "The Fear of Living," by Henry Bordeaux, translated from the seventy-fourth French edition by Ruth Helen Davis; "The Philosophy of Ruskin," by André Chevrillon, translated by Andrew Boyle, and "Prayers, Ancient and Modern," by William Angus Knight.

The Revell Co. has in its list of announcements: "The Immigrant: An Asset and a Liability," by Frederic J. Haskin; "Letters of Father and Son, During a College Course," by John Douglas Adam; "The Modern Call of Missions," by Rev. James S. Dennis, D.D., and "Doc Williams: A Tale of the Middle West," by Charles Lerrigo.

J. B. Lippincott Co. is bringing out this season: "The Road of Living Men," by Will Levington Comfort; "The Maxwell Mystery," by Carolyn Wells; "A Turkish Woman's European Impressions," by Zeyneb Hanoum, edited by Grace Ellison, and "The Passing of the Turkish Empire in Europe," by Capt. E. Granville Baker.

Henry Bordeaux's "Footsteps Beneath the Snow" has been translated by Louise Sey-

mour Houghton, and in this form will be issued by Duffield.

Humfrey Jordan's romance, "Patchwork Comedy," is promised this week by Putnams.

In "My Past," announced by Putnams, the Countess Marie Larisch, niece of the late Empress Elizabeth of Austria, is said to present the true story of the tragic death of Rudolph, Crown Prince of Austria.

Mr. W. H. Woodward has discovered in Rome a second copy of the contemporary account of the events upon which Browning founded "The Ring and the Book." It is said to date from the close of the seventeenth century.

The new Universal Library, issued in this country by E. P. Dutton & Company, offers a volume of Jeffrey's "Essays on English Poets and Poetry" from the *Edinburgh Review*. Here, among others, will be found the famous essay on Wordsworth, beginning: "This will never do!" Those who have heard Jeffrey reviled for this phrase and have never really read him, will be amazed at the amount of sound criticism this volume contains.

Those interested in the game of "Coon-Can" will find a useful little book on it, under that title, by W. Dalton. It is published by Lippincott. Another volume on the same subject comes to us from Frederick A. Stokes Co., with the title, "Coon-can: A Game of Cards Also Called 'Rum.'" This second book is by the well-known authority, R. F. Foster.

That a certain amount of amateurishness is not incompatible with poetic charm is clear from a reading of Mr. Frederic Crowninshield's "Villa Mirafiore" (Houghton Mifflin). To a perfect mastery of the technique or rhetoric of his art Mr. Crowninshield seems never quite to have attained. Weak lines and inversions abound in his verse; and in particular an obvious trick of stringing clauses together to fill out his metrical framework imparts a dragging, hesitant effect even to his favorite form of composition, the sonnet. On the whole, however, these imperfections serve to add an air of artlessness to his performance and to enforce the impression of a happy disposition and character.

In spite of the fact that many of the poet's themes are commonplace, his distinctive quality is taste, as his distinctive mood is that of reminiscence. At its best his verse is picturesque rather than sensuous, reflective rather than passionate—having the quality of a painter whose mind is nourished with historical associations. At the same time his poetry is neither of the study nor of the cloister. With his interest divided between America and Italy he is concerned for his time. As an artist he regrets the modernization of Rome, while as a citizen he rejoices in its liberations. For his own country he is not without his alarms. And perhaps his best work is that in which he is aroused by his fears for its future:

When wintry winds prevail and skies are dim,
I dream of them, who leaving home and ease
Embarked upon the savagest of seas
To praise their God—perhaps the friends of him
Who sang of Paradise and Seraphim,
And faltering Man. Oh! what to such as these
Were barren wolds, or swirling blasts that freeze,
Or white-locked shores, or forests swart and grim?
How different were they who braved not cold,
But equatorial heat and fever-flame,
To clutch the unoffending Incas' gold—
Conquistadors, so called, a gory name!
And we? Are we yet of our fathers' mould?
Or do we share the lustful Spaniard's shame?

One hesitates to speak with anything but respect of labor so serious, so industrious, and, on the whole, so serviceable, as that of Miss Helen Archibald Clarke in the interest of Browning and Shakespeare. We should all study patience in the presence of one who has spent a happy lifetime with Browning. We have striven to be patient in making our way through Miss Clarke's centenary volume, "Browning and his Century" (Doubleday, Page), but we have not been happy, and we have discovered the reason why. The thought of Browning, says Miss Clarke, "has always seemed so naturally akin to my own that it has never seemed to me obscure." To employ a vigorous colloquialism, we have felt ourselves "outclassed." The following sentence, for example, is doubtless to a properly constituted mind entirely perspicuous: "These rare qualities of constancy, exaltation, and aspiration, in love sublimating *it* into a spiritual emotion, *which* was evidently the distinctive mark of Browning's personality on the emotional side, *furnishes* the *keynote* by which his *presentation* or solution of the social problems involved in the relations of men and women is always to be *gauged*."

In our simpler mind the question rises: Is this Browningese, or is it English? If English, what are the antecedents of "it" and "which"? What is the subject of "furnishes"? How can a "presentation" be "gauged" by a "keynote"? And what does it all mean? We acknowledge our incompetency to answer these questions. There are lucid intervals in the work. There is much suggestive and even shrewd and wholesome comment upon Browning and his contemporaries. The design of exhibiting the poet in relation to the main philosophical, political, social, and artistic movement of the age is commendable. But to issue a book abounding in typographical errors, grammatical solecisms, warring metaphors, and incondite sentences profiteth nothing.

Herbert H. Gowen, lecturer on Oriental history at the University of Washington, has published, with Sherman, French & Co., the first part of "An Outline History of China," embracing the period from the earliest times to the Manchu conquest. This little book of 182 pages, with a chronological table, a short bibliography of works recommended by the compiler, an index, and a few illustrations, will be found useful by readers who have not the time for a more detailed work. It fills a gap in the series of works to be read by students of Oriental history generally.

A singularly pure and perfect piece of orthodox Hegelianism of the Right Wing is Prof. H. S. Macran's "Hegel's Doctrine of Formal Logic" (Clarendon Press). An American student of philosophy, taking up the book unwarned, would be likely to suppose it a product of St. Louis in the 1870's, so uncorrupted is its orthodoxy and so little touched by recent developments even within Hegelian circles. Even in his attempt to show how other philosophers represent merely included and transcended "moments" in the Hegelian Logic, the author mentions no one more recent than Comte and Spencer. The book, in fact, emanates from Dublin, and is the work of the professor of moral philosophy in the University there; taken in conjunction with some other recent publications, it betrays the fact that the Irish capital is one of the spots where piety towards Kant and Hegel—now sadly diminished in most of its former centres in the English-speaking world—is still ardently cultivated. The volume contains a general account of the Hegelian system, which is an unusually clear, agreeable, and brief essay in Hegel-exposition; and a translation of the first section of the third book of the Greater Logic.

"In the Shadow of the Bush" (Doran), by P. Amaury Talbot, of the Nigerian Political Service, is a remarkable contribution to our knowledge and appreciation of an African race, the Ekoi of Southern Nigeria. They were a little-known people, most of whom were untouched by white influence, when the author came among them as district commissioner in 1907. His official duties consisted in going from village to village to settle disputes, to punish crimes, and to develop the resources of the country. In some things the savages set a noble example to the rest of the world. Quarrelling, for instance, "is forbidden in a house where there are little children. The latter, so it is said, love sweet words, kind looks, and gentle voices, and if these are not to be found in the family into which they have reincarnated, they will close their eyes and forsake the earth, till a chance offers to return amid less quarrelsome surroundings." The author observed only one case of harshness to a child. They are a thoroughly sober people. They have a love of beauty which shows itself in "their surprising knowledge of flowers, and their delight in the form and color of these, and even in the texture of leaves." The waterpots are moulded into beautiful shapes, and they have "many-handled, strangely graceful jars." Though there is undeniable crudeness in the wall paintings, some of their designs "show a sureness of drawing which few white people could equal." Mr. Talbot also studied carefully the fauna and flora of the region, and in the appendices has given some of the results of his researches. Out of 2,000 varieties of the flora collected, the British Museum authorities have found about 150 new genera and species, as well as many new and rare Nigerian mammals. He adds a short grammar of the language, vocabularies of six tribes, and many of the script signs with interpretations. There is a map of the district, made from his surveys, together with 123 illustrations, some showing scenes of remarkable beauty, and an excellent index.

The most striking merits of Seton Gordon's "The Charm of the Hills" (Cassell) are the unusual beauty of the binding and the excellence of the eighty-five illustrations, including a Rembrandt photogravure frontispiece of The Eagle Scanning his Corrie, that is nothing short of remarkable. The text, composed of brief articles contributed to *Country Life*, the *Scotsman*, and other British periodicals, relates to the author's wanderings in the Highlands (particularly the Cairngorm hills) in every season of the year—wanderings not without occasional unromantic "tyre troubles." In-

dulging, as he does, three hobbies at once—photography, ornithology, and the search for fine landscapes—Mr. Gordon might be expected to overflow with enthusiasm. Instead, he is gifted, in Lowell's phrase, with "an honest incapacity of imagination" that succeeds curiously well, at times, in conveying to the reader the peace of the Scotch mountains under an August sun and their inarticulate mystery when they lie silent in the light of the moon. For the most part, however, the book is an awkward and excessively sober description of scenery in the guide-book style—"Here, midway between Cairntoul and Braeriach, an extensive view of the Garbhchoire is obtained," etc., etc.—always from the point of view of the majestic "we." When the author turns, as he does at intervals, to a particular wild creature, as in "The Red Grouse," "The Nesting of the Dotterel," "A Night with the Golden Eagle," he writes somewhat less clumsily, and contrives to tell a great deal in small space. Whoever desires, without recourse to the usual books of travel, to know more of the corries and burns and the deer and golden eagles and ptarmigan of the Highlands will find profit, and even a degree of pleasure, in the well-packed little chapters that, so to speak, illustrate the photographs of Mr. Gordon's book.

"United Italy" (Doran), by F. M. Underwood, aims at furnishing a straightforward account of the history and condition from the unification of 1860 down to the present. It is quite the best popular book on this subject in English. Mr. Underwood has taken pains to inform himself; he has judgment, and he is fair. Though he may lack at times either the historian's larger grasp or the biographer's power of vivid portrayal, he possesses throughout the compensating virtue of telling plain facts in plain language. His brief criticisms of contemporary authors and artists, not less than political leaders, will be welcome to English readers. Particularly moderate is his chronicle of the relations of Church and State, including the recent phenomenon of Modernism. A chapter entitled Italian Progress in Figures demonstrates the material foundations on which the present nation rests. But his general point of view, and his comment on typical men and events, are as important as his statistics. His book will correct many misapprehensions for Americans who have not been to Italy; it ought to be read by all those who visit Italy for the first time. Some twenty illustrations, mostly portraits of celebrities, add to its attraction.

If "The Secret of the Pacific: A discussion of the origin of the early civilizations of America, the Toltecs, Aztecs, Mayas, Incas, and their predecessors; and of the possibilities of Asiatic influence thereon" (Scribner), by C. Reginald Enock, had been written after years of patient research, it would have been decidedly worth while. For Mr. Enock has travelled extensively, both in North and South America, and his style is readable, even though at times it rises to the point of being "hifalutin." Beginning with a rambling journalistic conspectus of the origin of man, he continues his pleasant way, skipping from place to place down the Pacific Coast, touching lightly on the cliff-dwellers, drawing somewhat heavily on Bancroft, and throwing in incidents of his own life as a mining engineer. He delights in suggesting vague theories and in throwing out dark hints that we may not be far wrong in thinking of Mexico as being actually related to Egypt. The most widely divergent views have been caught in Mr. Enock's net, and are pinned up before the puzzled reader, who is left without any means of knowing the truth. And the worst of it is, if the reader has any preconceived ideas, it will not be difficult for him to confirm them here. Mr. Enock has but little respect for the vast stores of information in the larger libraries. His flippancy in this matter might be pardoned if he gave any sign of being familiar with the works of Max Uhle, Saville, Bandelier, and others. But the frequent references in his footnotes to his own books and to articles in the latest edition of the Encyclopædia Britannica are only too significant. An attempt to give the general reader even a cursory account of the early civilizations of America without making any reference to, or apparently having any knowledge of, the work of the George C. Heye expeditions to Ecuador, of the Philadelphia expedition to Pachacamac, and of Professor Bandelier's work in the vicinity of Lake Titicaca, is almost ludicrous.

The volume simply serves to emphasize the fact that we are only on the threshold of the scientific study of American archæology. No subject has been more abused by amateurs. In fact, too many of the professionals seem to regard "collections" of pots and artifacts as the principal object of their explorations. Many of them have not yet grasped the significance of the related fact that, whereas a few years ago we were contented in biological science to know that a butterfly or a beetle came from Brazil or Colombia, to-day we want to know a great deal more—its exact location geographically; its habitat locally, and the conditions of its existence; the elevation where it was found; the time of year, etc. In archæology our ideas and our collections are still in that primitive stage where we are contented if we know from what country a specimen comes. The very fact that reputable publishers are willing to bring out a loose-jointed, hastily written ethnological compilation of this kind, by an author who can write of Central America and her ruins without even referring to Maudsley's charming "Glimpse of Guatemala," or to the important publications of the Peabody Museum of Harvard University, shows the present condition of this subject.

It is a pleasant pilgrimage to wander with André Maurel through the "Little Cities of Italy" (Putnam), this being the title of two volumes of essays, translated from the French by Helen Gerard, the second of which now appears. M. Maurel has all the genius of his race in elegant scholarship—an intuitive faculty for sympathetic interpretation of the past and the gift of felicitous and illuminating phrasing. Some of the crystalline quality of the original is naturally lost in the translation, although in the main that is well and carefully done. We must, however, raise a protest against such inelegancies as are contained in the following sentence: "Anyway, they made it imposing and noble, in order, perhaps, to the better mask its superfluity." The mutilation of infinitives seems to afford the translator particular satisfaction. Starting from Milan (which can hardly be called a "little city"), M. Maurel works his way gradually to Rome, visiting on his route some two-score of cities, recording his impressions of each, reviewing their histories with that charming, intimate touch that few but French writers seem able to achieve, and appreciating with the acumen of a trained critic as well as with the enthusiasm of a genuine lover of art the treasures that they contain. As typical examples of the charm and individuality of M. Maurel's style we would single out for particular notice the delightful chapters on Bologna and Perugia.

"Wellington's Army, 1809-1814" (Longmans), by C. W. C. Oman, is an interesting and valuable by-product of the well-known author's researches in connection with his great formal "History of the Peninsular War." He collected a mass of notes of most miscellaneous information, which finds no proper place in a general military narrative, but which affords excellent material for a cross-section picture of the Peninsular Army itself—its daily life, manners, composition, organization, and leaders. Professor Oman's chapters range all the way from a discussion of Wellington's character and methods to the influence of singing Methodists, the court-martialling and flogging of delinquents, and the doings of the curious and polyglot horde of camp-followers which trailed at the heels of the army. The historical investigator will find most valuable his critical chapter on the sources of information and the bibliography of Peninsular autobiographies, letters, and diaries, in an appendix. The military critic will delight in the chapters on tactics, and on the organization of the army as a whole and in its parts. The ordinary reader will enjoy the sharply drawn characterizations, not only of Wellington himself, but of the generals who fought with him from the Tagus to the Pyrenees—Hill, Beresford, Graham, Picton, and Craufurd. Some illustrations of men and uniforms, and an appendix by C. T. Atkinson, giving statistics and locations of British regiments from 1809 to 1814, add to the usefulness of the book.

In point of style and successful imitation of the spirit of the original, Prof. A. M. Harmon's translation of Lucian, the first volume of which is now published (Macmillan), is about the best thing that has yet appeared in the Loeb Library. For his text Professor Harmon is taking that of Nilén so far as available, and for the rest that of Jacobitz, with a certain number of conjectural emendations of his own. In his version he has occasionally gone a little too far in trying to mimic the sprightliness of the original, but for the most part he has caught Lucian's tone admirably. The two most important pieces in the present volume are "The Wisdom of Nigrinus" and "A True Story." The latter is one of the sources of the Rabelaisian literature; the former is one of the documents to show how the Platonic contrast between the flesh and the spirit, the visible and the invisible worlds, became emotional and morbid in the hands of the Orientals who took up the tradition of Greek philosophy, leading some to a sterile aloofness from the world and others to a nauseous hypocrisy.

One's impression on opening Mrs. Wil-

liam O'Brien's "Unseen Friends" (Longmans), and glancing at the opening paragraphs of the introduction, is that it is the work of a pious and amiable, but qualntly limited beginner in the art of essay-writing. One lays it down with the feeling that the first impression may have been true, but does not matter. Mrs. O'Brien has evidently never troubled herself about style. Her syntax is often involved or merely shiftless. She has an odd vocabulary, including such favorite words as "domesticated" in the sense of "fond of home life." Ellen Nussey, Charlotte Brontë's friend, was "a good, upright, domesticated girl," for example. The kink of Erin is not absent from her speech. Miss Branwell, Charlotte's aunt, "was, like her brother-in-law, a good, upright woman." But, having smiled at one or two of these slips, the reader will find himself taking them for granted, as he so readily takes for granted and ignores his good neighbor's diction, or his good wife's spelling. Such trifles are, after all, no real bar to pleasant companionship; and Mrs. O'Brien is very companionable. Her book is a work of love and thereby lovable. She is a devout Catholic. Ten of her fifteen papers have to do with favorite unofficial saints of her faith; women, often of humble origin, who, in one way or another, gained distinction in their religious world. A number of them are founders of minor orders and sisterhoods. The story of their lives is traced with affectionate detail, and the personality of each of them is clearly suggested. The other papers will be of more interest to the general reader, in so far as the character of her theme affects the chronicler's distinctive appeal. The essays on Jean Ingelow, Christina Rossetti, Mrs. Oliphant, and (above all) Charlotte Brontë are charming in their way.

We record with regret the death on Friday at Dublin of Edward Dowden, since 1867 professor of English literature in the university of that city. He was born at Cork in 1843, and was educated at Queen's College, Cork, and Trinity College, Dublin. At Trinity he won the vice-chancellor's prize in English verse and prose, the first senior moderatorship in ethics and logic, and became president of the Philosophical Society. In 1878 Professor Dowden received the Cunningham gold medal of the Royal Irish Academy for his writings on literature, especially in the field of Shakespearean criticism. In 1888 he succeeded Max Müller as president of the English Goethe Society. In the next decade he was a lecturer at Oxford and Cambridge. Although he is remembered best for his work on Shakespeare (whose name he insisted on spelling with the strict economy characteristic of his own countrymen), his interests embraced the wide range which was customary with scholars of the previous generation. Besides "Shakspere: His Mind and Art," the "Shakspere Primer," and his editions of the Sonnets and individual Shakespearean plays, he wrote "Studies in Literature," "Southey," "Life of Shelley," "Transcript and Studies," "New Studies in Literature," "The French Revolution and English Literature," "A History of French Literature," "Puritan and Anglican," "Robert Browning," "Michel de Montaigne," "Essays: Modern and Elizabethan," and edited the works of several modern poets, and in 1876 published a volume of poems. If Professor Dowden's judgment was not always discriminating, this defect was manifestly derived from a great love of literature, which, especially in the case of Shakespeare, easily passed to reverence. As time goes on, his scholarly achievement may be overshadowed by the memory of his character and of his attitude towards literature, which was always highly human. To workers in his fields, even to those not personally known to him, he showed almost an affectionate good will. The present writer recalls his concern, on one occasion, over a clerk in a meagre Government position who was trying to support a family of several children and to carry on Shakespearean investigations besides.

Christof Eberhard Nestle, D.D., professor at Maulbronn, Württemberg, is dead, aged sixty-one. He was born at Stuttgart. For several years he was professor at Ulm, for a time lectured at Tübingen, and since 1898 had been connected with the Evangelical Theological Seminary. He was the author of a number of works on Biblical topics.

Science

THE SCIENCE OF MAN.

Genetics: An Introduction to the Study of Heredity. By Herbert Eugene Walter. New York: The Macmillan Co. $1.50 net.

Psychology and Industrial Efficiency. By Hugo Münsterberg. Boston: Houghton Mifflin Co. $1.50 net.

The Science of Human Behavior. By Maurice Parmelee. New York: The Macmillan Co. $2 net.

Viewed together, these three volumes present an instructive epitome of the demands now being made to put human life into the harness of science. "Eugenics" is Professor Walter's motive; "efficiency" is Professor Münsterberg's, while Professor Parmelee outlines a complete science of man.

"Genetics," by Professor Walter, of Brown University, is an attempt "to summarize for the intelligent but uninitiated reader some of the more recent phases of the question of heredity"; and to the uninitiated reviewer, to whom a huge and scattered mass of literature renders the field virtually inaccessible, the attempt seems successful, though he finds the interpretation of the "seventy-two figures and diagrams" often a strain upon his intelligence. The critical reader may wonder how much metaphysics is involved in the distinction of germ-plasm and body-plasm and in the Mendelian dominant and recessive characters, or how a desirable human "character," such as honesty, industry, or æsthetic taste, would be defined for purposes of practical eugenics. In any case, the book fulfils a timely purpose. The bearing of heredity upon human conservation is shown in the last three chapters. Here we have the inevitable Jukes family, and the more recently discovered Kallikaks, confronted with the several hundred illustrious descendants of Jonathan Edwards. Unhappily, as Mr. Walter is candid enough to tell us, the grandmother of Jonathan Edwards was an adulteress and the sister of two murderers. This is not necessarily fatal to eugenics, but it suggests that we pause for thought.

"Except in the case of man himself, hardly any one is so ignorant as to allow his worst animals to breed." Mr. Walter quotes this linguistic monstrosity from Darwin. Now, so far as eugenics aims only at the elimination of the feeble-minded, we cannot question the force of its argument. But the proposal to turn all human society into a barnyard commonly forgets that in such a case man is the only animal who knows that he is being bred. This completely alters both the technique of the problem and its ethics. Domestic animals are mated for purposes not their own. Ignorant of the Mendelian laws, they have probably no ideas to offer. Nature may have her purposes with regard to ourselves, but for an animal able to make his own choice of mate, they are without authority. Our mere self-consciousness with regard to the reproductive process shifts the centre of value from a biological to a human point of view, in which the higher culture is marked precisely by the demand that the greatest deference be paid to those most immediately concerned. This is one of the points at which the science of man fails to grasp the meaning of humanity. Mr. Walter feels this dimly when he hesitates to say who are to be the judges. The real question would be, For whose ends are we to be bred? Some of the arguments against race-suicide would suggest that the purpose of eugenics may be to furnish a plentiful supply of contented manual labor.

When Professor Münsterberg forsakes the eternal values for the temporal, he is always interesting, perhaps because he brings into his subject a certain breeziness, due to a wide contact with men, and because he deals with the things that we all like to talk about. This is the case in "Psychology and Industrial Efficiency." Which of us does not enjoy talking "shop"? Yet, though the purpose of the book, for which he has consulted several hundred of the larger companies, is to demonstrate the need of a scientific (laboratory) psychologist in every business enterprise, it may be a question how far the discussion rises above the plane of genial common-sense. The first part of the book presents three illustrations, from the telephone, steamship, and electric railway service, to show the method of determining the best possible man for a

given work. The second part takes up the best possible work for a given man and reviews the attempts made to offer vocational guidance, to procure economy of movement with minimum fatigue, and to solve the problem of monotony. In the third part, under "the best possible effect," Münsterberg discusses the psychology of buying and selling and of advertising. His solution of the crucial problem of monotony seems a little too easy, though we may admit that an apparently meaningless task may have finer points for those who have to perform it and that some men are more fitted for monotony than others. Any one who has attempted to define his own attitude towards monotony must seriously doubt the possibility of measuring the taste for monotony in the psychological laboratory.

A typical illustration of the psychological method is the test of efficiency for steamship officers. Warned by naval experience, Münsterberg makes no attempt to reproduce the concrete situation by models of boats, or the like. Instead of this he confronts the person to be examined with a similar mental problem (as he conceives it) of grasping the character of a complex and unexpected situation quickly and correctly:

> I work with 24 cards of the size of playing cards. On the upper half of every one of these cards we have 4 rows of 12 capital letters, namely, A, E, O, and U in irregular repetition. On 4 cards, one of these vowels appears 21 times and each of the three others 9 times; on 8 cards, one appears 18 times and every one of the three others 10 times; on 8 cards, one appears 15 times and each of the others 11 times; and finally, on 4 cards one vowel appears 16 times, each of the three others 8 times, and besides them 8 different consonants are mixed in. The person to be tested has to distribute these 24 cards as quickly as possible in 4 piles, in such a way that in the first pile are placed all cards in which the letter A is most frequent, in the second those in which the letter E predominates, and so on.

Of course, the man who performs the task with the greatest speed and the fewest errors is the best man to steer his ship clear of an iceberg. We leave the test to the judgment of the reader, merely suggesting that, while the card test is not irrelevant, an important element has been omitted. For the main difficulty is that "there are ship officers who know the requirements excellently, but who are almost paralyzed when dangerous conditions suddenly threaten." What is omitted from the laboratory test is the element of danger.

Yet, granting the validity of the test, we must still wonder what there is here to distinguish science from commonsense; for Münsterberg himself calls attention to results obtained by the common business man (*e. g.*, p. 209) which seem hardly to differ in quality from his own. This wonder is soon extended to the whole subject of laboratory psychology. Reviewing five decades of experimental psychology, Münsterberg tells us that "an exceedingly large mass of facts has been gathered" and "the fundamental laws of the ideas and of the attention, of the memory and of the will, of the feeling and of the emotions, have been elaborated." We fear that if a malicious skeptic should ask, What facts? and what laws? Münsterberg would be in trouble. There are no psychological laws to match the Newtonian laws of motion, or the chemical law of multiple proportions, not to mention many minor laws, such as those governing the relations of volume, temperature, and pressure. The so-called Weber law is nearly a tradition. The law, or laws, of association—can any one state them without fear of denial? As for facts, we are all familiar with X-rays, with radium, with Hertzian waves; and countless parents have blessed the name of Pasteur. Even Mendelism, with all its dubiousness, stands for discovery. It contradicts our expectations to learn that, when booted and clean-shanked poultry are paired, these characters, though mixed in the second generation, are segregated in the third. The psychological laboratory is choked with facts, but so far as the facts are psychological they seem to be singularly lacking in the quality of discovery. Perhaps a typical case is that offered by Münsterberg himself in his book, "On the Witness Stand." Every schoolmaster knows that when a boy hesitates in answering a critical question he is probably concealing something. Münsterberg harnesses the boy to a chronoscope and measures in thousandths of a second his association-time; by which he learns that after suspicious words his time is longer. How much longer makes little difference, since no further facts are to be obtained by any process of addition or multiplication. Science and common-sense have then reached the same result, only science states its result in *ein bischen längeren Worten.*

A generation ago the experimentalists announced that the day of the "arm-chair" psychology had passed. Since that time a malicious observer might have noted a growing fondness among the shirt-sleeve psychologists (so to speak) for the reflective luxury of the arm-chair. Wundt, the organizer of the science—after Fechner, the founder—has devoted his later years to the production of monumental works on logic, ethics, metaphysics, and anthropology; his son is the learned author of a three-volume work on Greek ethics. Among the founders of laboratories in America, James quickly forsook the Harvard laboratory for a more radical empiricism. Cattell, of Columbia, is distinguished as an editor. Stanley Hall appears to have deserted the chronoscope for the pedagogical *questionnaire.* Münsterberg himself has wandered far from the laboratory, though he has written three or four volumes on applied psychology. Yet even here he appears to be (like the others) an organizer of investigation rather than an investigator; and in the present volume he is the organizer of a new science, to be known as economic psychology. More significant, perhaps, is the fact that the analytic, or general, psychology, which a generation ago was contemptuously abandoned to the philosophers, has of late years been jealously reclaimed. Doubtless the laboratory has had a good influence, though mainly a terrorizing influence, in forcing psychologists to be concrete; but, in the matter of facts and laws, it seems that the *science* of psychology is still a good deal made up of scientific attitude and scientific point of view.

The meaning of this attitude and point of view is very clearly and consistently revealed in "The Science of Human Behavior," by Prof. Maurice Parmelee, of the University of Missouri. With this, however, we have said the most that is to be said of the book. It is a well-written and fairly unified compendium of the chemical, anatomical, physiological, psychological, and anthropological investigations bearing upon human behavior, based upon a wide but not always well-proportioned knowledge of the literature; but we cannot see that the author has succeeded noticeably in his attempt to "make the conceptions more precise"—certainly not in the field of psychology. Significant of the whole point of view is the place assigned to consciousness. Step by step we follow the evolution of behavior from the amœba to man to see what will happen when behavior becomes self-conscious. But nothing happens. Mr. Parmelee stumbles over the meaning of the word "epiphænomenon," and then proceeds, unwittingly, it should almost seem, to make an epiphænomenon of consciousness. According to him, it seems all human behavior is determined exclusively by physical forces, and consciousness of behavior makes no difference in behavior. The so-called "power of mind over matter" is only a case where "a small amount of molecular or molar force releases a large amount of molecular or molar force."

Here Mr. Parmelee is true to the point of view implied in the science of human life. And at this point is revealed the ground of the antagonism between this science, or sciences, and the point of view of culture and the humanities. Münsterberg states the issue squarely when he says, in criticism of "the contributions from men of affairs," that "the way in which the management is accustomed to look on their

men is the practical way of ordinary life, in which we try to understand our neighbor by entering into the meaning of his mental functions and by seeking to grasp what his aim is. But such an interpretation of the other man's mind is not psychological analysis." Precisely. True "psychological analysis" ignores all personal experience of mentality. The science of psychology is, then, the finished result of what we may call the conspiracy of naturalism, in which each investigator has bound himself by a strange oath to obtain all his knowledge from observation of the actions of his fellows—"as a naturalist studies the chemical elements or the stars" (Münsterberg)—and never under any circumstances to conceive them in the light of his own experience of his living. Even the psychologist's "mental states" or "objects of consciousness" are only so many hypothetical entities read in from without. Now, it is just this rejected point of view which characterizes literary culture and the humanities. The *literæ humaniores* may be said to constitute a study of human life from the standpoint of the clearer and more vivid consciousness—always a self-consciousness—of living. In the light of this contrast we may easily understand why these would-be sciences of man, such as psychology, pedagogy, and sociology, have a tendency to excite the scorn and repugnance of all who are interested in culture. And perhaps we may understand why the party of culture is somewhat skeptical. For what is to be expected from a science of humanity which ignores all that is most distinctive of man?

Longmans, Green & Co. have nearly ready "A First Course in Algebra," by Frederick C. Kent.

"The Genus Iris," by William Rickatson Dykes, is in preparation by the University of Chicago Press.

Science books in Holt's list include: "The Living Plant," by William F. Ganong; "Science from an Easy Chair," by Sir E. Ray Lankester, and "The Child, its Care, Diet, and Common Ills," by Dr. E. Mather Sill.

The following are the science books announced by Lippincott for this season: "Private Duty Nursing," by Katharine De Witt; "When to Send for the Doctor and What to Do Before he Comes," by Dr. F. E. Lippert; "Practical Locomotive Operating," by Clarence Roberts; "Evolution of the Internal Combustion Engine," by Edward Butler; "A Text Book of Mathematics and Mechanics," by Charles A. A. Capito; "A Nurse's Handbook of Obstetrics," new edition, by Dr. J. B. Cooke; "Accessory Sinuses of the Nose," by Dr. Rose Hale Skillern; "Diseases of the Heart and Aorta," by Dr. Arthur D. Hirschfelder, new edition; "Applied Anatomy," by Dr. Gwilym G. Davis, new edition.

George F. Chambers's "Astronomy" is in the press of the D. Van Nostrand Co., together with the following works on chemistry: "Cellulose Acetate," by Edward C. Worden; a new revised edition of Prof. W. W. Scott's "Qualitative Chemical Analysis"; "Solvents, Oils, Gums, Waxes and Various Substances," by Frederick S. Hyde, and the third revised edition of "Van Nostrand's Chemical Annual," edited by Prof. John C. Olsen.

The *National Geographic Magazine* for February contains an account of the volcanic eruption of Mount Katmai in Alaska last June, "one of the most violent of historic times," by Geo. C. Martin, of the Geological Survey. He directed the researches made by the National Geographic Society, and he gives, with many striking reproductions of photographs, vivid details, especially of the extent of the ashes, in one place nearly five feet deep. The destruction of bird, animal, and fish life was very great, the most serious injury being "the possibly permanent destruction of the spawning grounds" of the salmon. Another effect of the eruption, according to C. G. Abbot, director of the Astrophysical Observatory, was the diminution of heat "in the north temperate zone by about 10 per cent. during the summer of 1912." Much useful information is to be found in Frederic Moore's "changing map in the Balkans." A leading Bulgarian statesman told him that his people had little ambition to hold Constantinople, which "has caused the ruin and downfall of every empire that has possessed it." An illustrated description of the "countries of the Caribbean," by W. J. Showalter, is accompanied by a large map on which are shown the distances of the many steamship routes in nautical miles.

Annales de Géographie for March is wholly devoted to a series of nine articles on different places in this country visited by the scientific excursion last autumn organized by the American Geographical Society and led by Prof. W. M. Davis, of Harvard. The first is on the canals of New York, "apropos of a particularly interesting episode of the contest of the railroads with the canals." Then follows an account of Duluth and the development of the iron mines in that region. The other articles are on Yellowstone Park, the lava plateaux of Washington, the northwestern American ports, Crater Lake and Meteor Crater, Utah, and the region of Phœnix and the Roosevelt barrage. There are 20 reproductions of photographs and 12 maps.

The masterful summary, in William T. Hornaday's "Our Vanishing Wild Life" (Scribner), of the destruction of wild life now going on, has appeared just at the critical moment. It was barely published when the weight of its logic and facts did much to help the Lacy bill to pass, whereby all migrating birds are protected. By a large array of statistics, Dr. Hornaday has shown how necessary it is that a beginning be made at once to conserve the wild creatures which are left to us. Hardly a page is without a moral drawn from past experience. We read of the scoffed-at bill proposed in 1857 to protect the passenger pigeon, and on the same page is a photograph of the single survivor of this species; we read of the fearful ravages wrought by introduced noxious birds and animals in islands, and of the birds which mankind has completely blotted out. Much space is given to others which are on the verge of extinction. The difficult problem of latitude and races is discussed in full; how the Southern negro profits gastronomically by the protection of birds which nest in the North, and the parallel case of the avivorous Italians in south Europe. The old tragedy of the albatrosses of Laysan is vividly told, and it is predicted that the unprotected big game of East Africa will possibly last fifteen years at the present rate of slaughter. Ten years ago the annual loss to American crops due to insects was estimated at nearly $800,000,000, and yet we go on indiscriminately shooting the birds which alone can remedy this. When one reads of the seeds of one hundred and twenty-nine species of noxious weeds which are eaten by the bob-white and is informed that a single bird will eat as many as fourteen hundred beggar ticks and thirty thousand seeds of the rabbit's-foot clover, one begins to understand the value of birds to mankind.

Some of the most important and wide-reaching sections of the book are the chapters devoted to the consideration of the game-laws of the various States; they are true, well-balanced discussions. The final chapters deal with the most vital side of the whole question, the game refuges and preserves of the world, both public and private. It is to these, after all is said and done, that we must look for final protection of wild life. Whatever advantage is gained in the passing of laws, there must always be a constant fight to keep them from being repealed; but a tract of land, a mountain, a lake, or an island, set apart and watched by a resident warden, is a perpetual haven for the persecuted. Such refuges are increasing in America, and in this and many other ways Dr. Hornaday shows that our citizens are awakening to the need of conservation. Our bison have increased from thirteen hundred in 1888 to nearly three thousand in 1912. The egret was on the point of extermination in the Southern States, whereas on one preserve in Louisiana twenty thousand pairs of egrets and other herons are now breeding in safety. Our gulls and terns have been snatched from extermination and are increasing; ducks and shore birds are still in the balance. The cumulative value of a book of this character is beyond estimate. There are certainly few parts of the civilized world where its uncontrovertible arguments will not do good. The paper and type are excellent, the illustrations are original and lucid, and there is a thorough index.

Three maps, representing ocean depths for the Atlantic, Pacific, and Indian Oceans, with their far southern extensions, have lately been issued by the Institut für Meereskunde of the University of Berlin. They are the work of Dr. Max Groll, cartographer to the Institute, and are drawn to a central scale of 1:40,000,000, on specially prepared projections, according to Lambert's scheme of preserving true areas, while moderately distorting form. Authentic soundings are given in their proper location, except that in the better-known parts of the Atlantic and along all the coasts not all soundings can be individually represented. The lands are uniformly tinted in ochre; the shallow waters down to 200 metres along continental borders have a lighter tint of the same color; then fol-

low increasingly strong shades of blue for every 1,000 metres down to 6,000; after which the greater depths are brought out vividly in purple, pink, and red, the last color representing depths below 8,000 metres. The absence of soundings over vast areas in the Pacific, as well as in the southern Atlantic and Indian Oceans, suggests that the simple distribution of depths there indicated is subject to extensive changes with further exploration. Several lines of soundings from San Francisco to the Fiji Islands demand many more irregularities in the bottom contours than are drawn in the unsounded areas. The general fact here revealed that will excite most surprise certainly is that the maximum depths of the oceans are not found near the middle of their basins, but in virtually all cases near continental borders or along the margin of island chains. Thus the deepest part of the Atlantic is a small area north of Porto Rico; in the Pacific in several interrupted troughs bordering Japan and other island chains from the Aleutians to the Philippines and beyond to New Caledonia, and in a series of depressions following an island chain northeast of New Zealand; in the Indian Ocean, alongside of Java. It would be an admirable thing if subsequent editions of these handy charts could be issued every five or ten years, so that one might keep pace at a glance with the progress of oceanographic investigation.

Prof. Adolph Slaby, electrical expert, is dead in Berlin, in his sixty-fourth year. He was at one time a co-worker with Marconi in experiments in wireless telegraphy, and on his discoveries the German system of wireless has been based. As early as 1901 Professor Slaby predicted that "the problem of direct production of electricity from coal will be solved," and that it "will be possible to apply the principle to submarine cables in such a way as to send hundreds and even thousands of messages simultaneously on the same wire."

Drama

The Foundations of a National Drama. By Henry Arthur Jones. New York: George H. Doran Co. $2.50 net.

There are few living men who know more about the theatre, before or behind the curtain, than Henry Arthur Jones, and he has never hidden the light of his knowledge under a bushel. In this volume he has collected twenty of the lectures or reviews on different dramatic topics, printed or delivered by him on one side of the Atlantic or the other, during the last fifteen years. Many of them he has revised and expanded, but, in their latest shape, they throw no new light upon his opinions, all of which are well known. The whole body of intelligent observers is of one mind with him when he deplores the undeniable facts of the existing theatrical degeneracy, the dearth of reasonably good plays, the rapid extinction of competent actors, the lamentable preponderance of the trivial, the nonsensical, or the unclean in our so-called entertainments; or when he insists upon the urgent necessity of establishing some solid relationship between literature and the drama, if the latter is to assume its legitimate position of dignity and influence. Nor will many thinking persons be inclined to disagree with him in his doubts as to whether the promoters of the projected British National Theatre—of which he has always been an ardent advocate—are going just the right way to work. The ignominious failure of the ambitious New Theatre plan in this city has taught him that something more than money is necessary to establish an institution of that kind. But he does not seem to have discerned the most salient moral of that fiasco, that an efficient company is the first and chief requisite of an artistic theatre. He is as sure as ever, apparently, that the future of the theatre is dependent upon national or municipal aid, and, of course, he cites the Théâtre Français, as do many other theatrical pundits, as proof positive of his contention, forgetting how small a part that Temple of Tradition plays to-day in French drama compared with its significance of fifty or a hundred years ago.

The fact is that, while Mr. Jones has been writing along the lines of his favorite theories, there have been developments in the literary and theatrical world which threaten to upset some of them, even if they justify others. The freshest and most suggestive chapter in his book is also the shortest. It deals with the recent dramatic movements, not only in London, but in many of the largest provincial centres in England, which, if they prosper—as there now seems every likelihood of their doing—promise to do all that the national theatre enthusiasts are still only talking about. These are the repertory theatres, of which a dozen or so have been started in large cities, and even populous suburbs, during the last year or two. They are not only furnishing opportunities for the literary play, but for those schools of acting—the only real schools of acting possible—whose destruction by the commercial system is responsible for the virtual disappearance of genuine actors—all-round artists, not specialists—from the stage. For many years London and New York managers needing young actors possessing some of the requirements of literary drama—manners, speech, and gesture, for instance—have depended mainly upon the now famous company of F. R. Benson, the only organization in the whole of Great Britain capable of conducting fitly a Shakespearean festival at Stratford. The spontaneous upspringing of these new stock companies is the most hopeful phenomenon that has occurred in the British theatrical world for decades. They and Mr. Benson, perhaps, may be able to contribute between them the trained artists of which the National Theatre, when it has been built and endowed, will be very badly in want. As for municipal theatres—if local authorities have anything to do with their direction—those who look for valuable artistic, literary, or dramatic results from them must be uncommonly sanguine.

We may expect shortly from the press of E. P. Dutton "Towards the New Theatre," by E. Gordon Craig.

Duffield's series, Plays of To-day and To-morrow, will soon include Dr. Vollmoeller's "Turandot, Princess of China," an adaptation from the work of Carlo Gozzi.

"On Ten Further Plays of Shakespeare," is the title of a book by Stopford A. Brooke, announced by Holt.

Students of Shakespeare will be interested to learn that "Cymbeline," the eighteenth volume in the New Variorum edition, is now in the press. The work was completed before Dr. Furness died. It will be published in the early summer by Lippincott. The "Julius Cæsar," as previously announced, will be issued in the spring.

"The Story of Nell Gwyn" (Small, Maynard), by Cecil Chesterton, is a very attractive little volume. It owes a good deal of its charm to the excellent reproduction of no less than seventeen of the acknowledged portraits of the famous orange girl and actress, by Sir Peter Lely, S. Harding, Wessing, Cooper, Verrhell, Dod, Gascar, and others; but the letter-press is admirable, also. Of course, Mr. Chesterton makes no pretence of having anything new to tell about his heroine, but he has sifted all the old sources of information pretty thoroughly and furnishes a sprightly and compact biography in which nothing is extenuated and naught set down in malice. Without any sentimental special pleading on her behalf, he can argue plausibly that she had substantial human virtues in which several of her more cultivated rivals were notoriously deficient. Of her cleverness and fascination the mere fact that she so long maintained her ascendency in the affections of the susceptible Charles is abundant proof. If she had not had good qualities of head and heart, she could never have risen from the gutter from which she originally sprang. Mr. Chesterton is less successful in his attempt to effect even a partial rehabilitation of her royal lover. It is somewhat late in the day to claim political genius and patriotic fervor for this witty, shifty, and unscrupulous voluptuary. But he has written a capital life of Nelly.

"The Greatest Wish," by E. Temple Thurston, which has just been produced in the Garrick Theatre, in London, is a simple tale of a foundling adopted by a tender-hearted priest and his peppery but kindly housekeeper. When, owing to a misconception, her sailor lover fails to keep an appointment, she concludes that he is false and decides to enter a convent. But just before she is to take the vows the sailor returns and she marries him instead, while the old priest discovers that the Mother of the Convent used to be his sweetheart in the days of their youth. The story revolves around the priest, in whom Arthur Bour-

chler is said to find a most congenial character. The Mother Superior is played by Maud Milton, well known here as a former member of Sir Henry Irving's companies.

"The Happy Island," which Sir Herbert Tree has just produced in His Majesty's Theatre, London, seems to be a disappointment. It is an adaptation, by James Bernard Fagan, from the Hungarian of Melchior Lengyel, and tells how an adventurer, after behaving very badly at home, undertakes to impose himself as a god upon unsuspecting Pacific islanders—in order to induce them to work a radium mine for his benefit. Ultimately he comes to believe in the faith which he has invented for them, and is killed while defending them and the mine against his original employer.

Miss Wish Wynne appears to have won the chief success at the Kingsway Theatre, in "The Great Adventure" of Arnold Bennett.

Music

Music Lovers' Cyclopedia. Edited by Rupert Hughes. New York: Doubleday, Page & Co. $1.50.

The Violinist's Dictionary. By Frederic Barclay Emery. New York: Charles Scribner's Sons.

A Practical Guide to the Modern Orchestra. By James Lyon. New York: The Macmillan Co. 35 cents net.

Rupert Hughes's "Music Lovers' Cyclopedia," originally published in 1903, is now issued in one volume and brought down to date by the addition of several thousand biographic sketches. It remains, although even now it has only 960 pages, in some respects the most comprehensive and useful of all musical works of reference, including features to be found neither in Riemann's 1,600 pages nor in the five volumes of Grove. The most important of these is the detailed plots of operas—sixty of them. Among those added to the new edition are "Thaïs," "The Bartered Bride," "Salome," "Elektra," "Königskinder," "Madama Butterfly," "Tosca," "La Fanciulla del West," "Pelléas et Mélisande," "Manon," "Le Jongleur de Notre Dame," "Ariane et Barbe Bleue," and "Parsifal," which at the time when this encyclopædia was first issued was still a Bayreuth monopoly, but which now belongs to the world. The space devoted by the editor to two of Wolf-Ferrari's operas is likely to prove wasted, as these operas seem to have had only ephemeral success. It may be said of all these condensed opera plots that they are far superior to those found in most of the books specially devoted to this subject. The story is always told as it is unfolded on the stage by exits and entrances, and the principal musical numbers are named as they appear in the score.

The most distinctive merit of this volume lies in the elimination of superfluous knowledge. While the list of biographic notices is rather larger than that of any other similar book, space is saved by keeping those of minor musicians as brief as possible. Liberal room is thus provided for about a hundred of the greatest composers. For the difficult task of summing up their characteristics in a few pages the editor obtained the coöperation of eighteen of the most prominent American and English critics, each of whom writes on the topics he is most familiar with. Some of them also contribute articles on special subjects, such as National Schools of Music, Great Instrumentalists and Singers, Acoustics, Counterpoint, Form, Folk-Song, Modern Harmony in Practice, Opera, Oratorio, etc. The editor himself gives his views on Grace, Notation, Organ, and Pianoforte. With a modesty rare in a musician, he omits his own name from his list, but he, too, is a composer, and his books on "American Composers" and "Love Affairs of Great Musicians" reveal him as an interesting as well as a scholarly writer. The encyclopædia, it should be added, includes also an excellent dictionary of musical terms, an explanation of the construction of music for the uninitiated, a number of charts—one of them, for instance, showing at a glance the principal dance rhythms of various countries—and a key to the pronunciation of musical terms in sixteen languages.

Probably no other British publisher has so large a number of books on musical topics as W. Reeves. The list takes up 48 pages of the latest addition, "The Violinist's Dictionary," which is republished in this country by the Scribners. Inasmuch as the reference works of Grove, Riemann, Elson, and many others include the terms violinists are expected to know, it seemed hardly worth while to prepare one for their special use. The editor is surely mistaken in saying that "comparatively few terms used exclusively by violinists are found in any one musical dictionary devoted to general terms." Most of the important terms are included in the books just referred to. There are others, however, which can only be found in Mr. Emery's volume. He has evidently taken pains in gathering from violin pieces all the technical terms and directions for expression occurring in the concertos, sonatas, short pieces, and technical exercises of composers of various countries. Nothing has been included that applies to piano or vocal music unless it is of direct value to the violinist. The result is a little volume useful chiefly for violin players who do not care to buy the larger dictionaries. The only flaw we have noticed is that the V. S. printed so often at the foot of a page is not properly explained. It stands for *volti subito*, turn over quickly, but while the S is explained in its place, there is no explanation of the V.

For concert-goers who wish to know something about the violin and the other orchestral instruments they hear at concerts there is a goodly list of books. The shortest of them is James Lyon's. He describes the compass and the general characteristics of thirty different instruments, from the placid flute to the noisy drums and gongs. It would have been well to include pictures of at least the less familiar of these, such as the bass clarinet, the xylophone, and the celesta. In some cases the author adds a footnote referring to compositions in which the use of an instrument is happily illustrated. In many text-books on the orchestra there are a number of citations from full scores; but as most of the great compositions can now be bought in miniature scores for a trifle, Mr. Lyon wisely chose simply to refer to the page on which a given quotation is to be found.

The United German Singing Societies are preparing for a music festival to be given at the Hippodrome on Sunday, April 27, to celebrate the one hundredth birthday of Richard Wagner. Mme. Schumann-Heink will be a soloist. Thirty German societies of New York city are now included in this organization, which held its first festival in 1852, and the last in 1909. More than 6,000 singers took active part. For years the United German Singing Societies have participated in public celebrations, and ever since 1903, by the arrangement with the Department of Public Parks, a free concert has been given every summer at the Mall, in Central Park.

Nikisch and Campanini will be the principal conductors of the Covent Garden opera season, which will begin on April 21 and end July 28. The repertory is unusually interesting. The opening performance will be "Tannhäuser," which will be followed by the first cycle of "Der Ring des Nibelungen" and the miscellaneous French and Italian repertory. The second cycle of the "Ring" will begin in April. And, as announced in the prospectus: "in celebration of the centenary of Wagner's birth (May, 1913), the management has arranged to include, besides the 'Ring,' 'Tristan and Isolde,' 'Der Fliegende Holländer,' 'Tannhäuser,' and 'Lohengrin.'" Other works to be heard will include a revival of Humperdinck's "Königskinder," Wolterhausen's "Oberst Chabert," "La Du Barry," a new work by the young Italian composer, Ezio Camussi, and, possibly, Charpentier's "Julien," written as a sequel to "Louise." A special performance of "Samson et Dalila" will be given some time in the first week in June, forming part of the Jubilee Festival in honor of the seventy-fifth anniversary of Camille Saint-Saëns's entry upon his musical career. The composer himself will be present. Among the singers engaged are Melba, Mignon Nevada, Destinn, Louise Perard-Petzl, Mrs. Saltzmann Stevens, Amy Evans, Maude Fay, Carmen Melis. The contraltos are Kirkby Lunn, Dilys Jones, Alys Mutch, Marian Beeley, Madame Bérat,

Edith Clegg, Kathleen Howard, Elvira Levcroni, and Miss Schaefer. The tenors, besides Caruso, include Heinrich Hensei, John McCormack, Hermann Jadlowker, Peter Cornelius, Hans Bechstein, Paul Franz, Giovanni Martinelli. Among the basses and baritones are Sammarco, Van Rooy, Gilly, August Kiess, Armand Crabbé, Gustave Huberdeau, and Scotti.

A bold experiment has just been attempted at the Imperial Opera House of Vienna by the production of Franz Schreker's so-called opera, "The Musical Instrument and the Princess," which may readily be classed among the most abstruse and difficult musical works ever performed. Apart from the months of study and preparation it has required and the technical problems it has set in the matter of mounting, it proved to be so tantalizing for the listeners who attempted to grasp its significance that even the abstrusest intentions of all other modern composers seemed translucent by comparison. In place of a plot or even the outlines of a story, there are shown symbolical figures and episodes, the philosophical mystery of whose fashioning is left to the imagination. How far the poet-composer's intentions go, neither what is seen nor what is heard on the stage suffices to disclose. It is supposed that Schreker's ambition was to use his musical illustration as the explanatory key to his bizarre intentions, but the score, which is on the lines of the most modern impressionistic music, does not get beyond occasional indications of a keen, though ill-balanced, appreciation for queer tone effects, and for that ill-used quality of *Stimmung* (feeling) that is employed nowadays so often to replace inspiration. The impression the new work created was one of wonderment, and an inability to cope with the grotesque eccentricity of ill-directed talent. As a *tour de force* showing what the present régime at the Opera House, under Director Gregor, can accomplish the evening meant a triumph for all concerned. It was regarded as a splendid effort in a forlorn cause.

Felix Weingartner in the last of his Vienna Philharmonics stood sponsor to a new piano concerto by Alfred von Abter, that met with a rousing reception and justified his departure from the rule of admitting no soloist at one of these concerts. The composer played his work himself, which was as wholesome, melodious, and pleasing as though it had been written long before the days of "interesting" music had been thought of.

John Thomas, one of the most eminent musicians Great Britain has produced, died in London on March 19 at the advanced age of eighty-seven. On the death of J. B. Chatterton, in 1872, he was appointed harpist to Queen Victoria, and when King Edward succeeded to the throne, the royal harpist was retained. He was born at Bridgend, South Wales, in 1826. He played the piccolo when only four, and when eleven, won a harp at an Eisteddfod. In 1861, at the Aberdare Eisteddfod, the title of Pencerdd Gwalia (chief of the Welsh minstrels) was conferred on him. In 1862 he published a valuable collection of Welsh melodies, and began a series of Welsh concerts in London. His fame as a harpist spread, and he made several successful tours on the Continent. For four decades, there was hardly an Eisteddfod of importance at which he did not appear as performer or adjudicator, and he collected a large sum, with which, in 1883, he endowed a permanent scholarship for Wales at the Royal Academy of Music in London. His compositions include a large amount of harp music. His most famous pupil was the late John Cheshire.

Art

Old-Fashioned Gardening. By Grace Tabor. Illustrated. New York: McBride, Nast & Co. $2 net.

It is easy to write generalities and sentimentalities about old-fashioned gardens. We are willing to believe that almost anything romantic might have happened in the traditionally "good" old times. But Miss Tabor has set herself a more difficult task: to determine definitely what an old-fashioned garden really was, in appearance, in use, in ideal—a most elusive thing to put into words. The gardens themselves have nearly all disappeared or changed (the very flowers have new forms and new names), and the records of their former state are few and scattered, mere hints and clues in the writings of men of an age when clearing the wilderness or fighting the Indians or saving one's soul was a matter of more immediate moment than enjoying a garden.

For the sake of definiteness, even at the cost of an arbitrary determination, Miss Tabor fixes the nearer limit of "old-fashioned" times at one hundred years ago. The further limit, as far as we Americans are concerned, is naturally the first permanent settlement of this continent by Europeans. This gives a period of some 175 years within which to trace the development of the old-fashioned garden.

As the colonists from the Old World differed in their traditions and ideas, so did their gardens differ. We can reconstruct, partly from the meagre records, partly from what we know must have been the genius of each people, five types of garden which sprang up in the New World: the careless, riotous, sun-filled, walled gardens of the Spaniards in the semi-tropics; the larger, formal, dignified, fenced, and box-bordered gardens of the gentlemen adventurers; the little, tight, trim, four-square gardens of the New Amsterdam housewives; the austere Puritan gardens, pleasant in spite of their owners, as useful plants will have beautiful flowers; and the gardens of Catholic and Quaker along what came to be the dividing line between the North and South, a type of less evident ancestry.

When we come to consider what made the spirit of these gardens, we meet a further difficulty. It is little easier to explain just what is the charm of a garden than to put into words the personal charm of a friend. But—describing what is capable of description—we can at least say this: the old-fashioned garden was enclosed, it was useful, it was a necessary part of a complete scheme. As to the design of the garden itself, Miss Tabor says:

> Simplicity first, as a corner-stone; then convenience; then such a degree of easy formality of symmetry or order as may perhaps be reduced to the old-fashioned term "seemliness"; then a play of dignified individual fancy, according to individual taste: these are the components of the Old-Fashioned Garden.

When a man has just conquered a part of the wilderness, his garden, the piece of land on which he most fully puts his own stamp, will surely be enclosed, both for the practical reason of the safety of the plants dependent on his care, and for the satisfactory feeling that here at least there shall be no hint of the untamed forces with which he has struggled in the outside world. The country household of the olden time was a self-supporting unit. There were no shops to supply the deficiencies in the family larder. What a man raised and stored up in the summer, that and no more did he eat in the winter. And the flower gardens bore their share in the general economy, producing fruits, or at least medicinal and savory herbs.

Here perhaps lies the secret of success, when success is possible, in making an old-fashioned garden in modern times. Such a garden, even if historically correct in form and flower, will not look particularly different from any other well-designed garden. Only when the development of the whole estate is harmonious with it, only when house and grounds, roads and trees and fences, form with the garden one consistent whole, is there much hope of the old honest, simple charm returning. And we should see, therefore, that when we build a certain style of "old-fashioned" house—colonial, Georgian, "mission," or whatever it may be—that we are pledging ourselves to the garden that properly accompanies the house, if we are to have a garden at all.

Miss Tabor's book gives excellent lists of flowers, one of the flowers of the earlier period, another of those coming in at a comparatively later date. There are lists also of the flowers of the five sorts of gardens: Spanish, Cavalier, Puritan, Dutch, and border-line. There are a short index and a bibliography.

Thomas Graham Jackson is publishing through the University of Chicago Press "Byzantine and Romanesque Architecture."

A translation of Eugène Fromentin's "The Masters of Past Time" is in preparation by Andrew Boyle for E. P. Dutton & Co.

"British Pictures and Their Painters" (Macmillan), an anecdotal guide to the

British section of the National Gallery, by E. V. Lucas, is a deftly compiled manual of pocket size, with a few illustrations. It is distinctly what the more intelligent tourist wants, and it provides that extraneous human interest without which any extended study of the British school must be onerous to the art lover.

Five years ago W. H. James Weale published his great work, "Hubert and Jan Van Eyck," in a fine and expensive quarto. Students will welcome the popular edition, which is now offered by the John Lane Company at $4. This is rather a new edition than a reprint, for, under the editorship of Maurice W. Brockwell in collaboration with the author, considerable rearrangements of the text have been made. These, with some condensation of documentary and bibliographical features, have brought the well-illustrated volume within octavo compass. Originally, Mr. Weale relegated to a secondary list all works not demonstrably by the Van Eycks. This arrangement, while logical, had the disadvantage of associating many negligible school pieces with those of evident authenticity. Mr. Brockwell has made his first list of twenty-four paintings out of uncontested paintings, subdividing them as they suggest the hand of Hubert, Jan, or of both brothers. To these is added a list of thirty-two pictures of doubtful authenticity, a brief record of lost works known through copies or literary sources, and finally a remarkable list of ninety-five works which in the last three centuries have been sold at auction under ascription to the Van Eycks. The index is far fuller than that of the original edition. Evidently, this new edition, which has the considerable advantage of being light in the hand, contains many improvements. Perhaps one should not object to Mr. Brockwell's severely eclectic handling of bibliographical notices. Yet, if merely for the record, the yagaries of the late Henri Bouchot might have been mentioned. Mr. Jaccaci's discovery that the Turin St. Francis has two right feet should have had due credit. Among the doubtful pieces should have been included a small Crucifixion in the Johnson collection, which is probably by the same hand as the Berlin Crucifixion, which certain critics have ascribed to Hubert. There are thirty-two plates of good execution and a few text illustrations. Generally, Mr. Brockwell's editorial judgment has been excellent, and through his pains a standard work assumes a more convenient and useful form.

Finance

MR. MORGAN AND THE FINANCIAL MARKETS.

People who imagined—and there were many of them—that news of Mr. Morgan's death would be the occasion of some sort of catastrophe in the financial markets, were ignorant, both of the manner in which sudden complications from such events are always guarded against in Wall Street, and of the extent to which Mr. Morgan, for the past two years, had withdrawn from active participation in affairs. As a matter of fact, the Stock Exchange itself, after a moment of hesitation when the news arrived last week, presently began to bid up the market, and a substantial rise ensued. For this there were other reasons—brighter skies abroad, absence of financial trouble at Berlin's much-dreaded "quarter-day settlement," and a decided waning of apprehension over our domestic politics. Yet possibly, in the mental state of a market, the fact that the ceasing of so powerful a force in American finance had failed to create misgiving, was of itself no inconsiderable influence on financial sentiment.

The longer effect of the disappearance of this massive figure in finance must probably be judged in a negative rather than a positive way. It may be said of Mr. Morgan's career, as it was said of Mr. Harriman's at his death three years ago, that it belongs in reality to a financial epoch already closed. Another Morgan could not do in the future of American finance what Morgan himself did in its past; fundamental conditions have changed too completely for that. Therefore, in all probability, the final departure from the scene of this great financier, means chiefly that the financial leadership of the future must not only be in the hands of other men, but must, in the nature of things, be in the hands of men acting on other lines.

Mr. Morgan's was one of those personalities about which legend accumulates with the lapse of time; it had, one may say, the exceptional hold on the imagination which comes to men of large achievement who have embodied in themselves and their exploits the history of a memorable period. Like all great public characters, he had many sides, and like all Wall Street celebrities, his actual way of thinking on financial affairs was not always understood, even by Wall Street. There were many curious sidelights on this point of view, even before the Pujo Committee testimony of last December.

The news that President McKinley had been shot, and that, if he died, Vice-President Roosevelt would succeed him, reached Wall Street late Friday afternoon, September 6, 1901. The huge promotions and amalgamations were still under way; their authors and participants had believed that McKinley would not interfere with the giant combinations of capital, and they knew how uncertain a quantity in that regard Mr. Roosevelt was. Mr. Morgan had remained in his office that day after all of his partners had gone, and was just about to leave for his private yacht with a box of cigars under one arm carelessly wrapped in wrinkled brown paper, when the dispatch was handed to him. Half an hour later, when the full details were brought him, Mr. Morgan was still in his desk chair, his square-topped hat on the back of his head and the box of cigars still under his arm—bending forward and silently tracing with his cane the patterns on the rug at his feet. One would like to know exactly what visions of future probabilities were passing through his mind.

Mr. Morgan was not a man of interviews; but, on the other hand, when he spoke publicly or was quoted for publication, his comments were for that reason more pointed and characteristic than the perfunctory remarks of financial authorities on "the outlook." On the witness-stand in March, 1902, he was asked why he organized the $400,000,000 Northern Securities holding company, and the similar huge combinations. His answer was:

> The capital of the Northern Securities Company is very large. I don't believe any one can ever get control of it. . . . J. P. Morgan & Co. might be dissolved. I might die, and we wanted the road to go on prospering on the old lines. It was our idea to organize a holding company with a capital so large that no rival corporation could purchase a controlling interest in it.

This answer overlooked, in a striking way, both the fact that the logical end of that process was a general holding company for everything in a given trade—which the public would certainly never endure—and the facts that somebody must originally control the big holding company, that such controlling interest might misuse its power, and yet that, by Mr. Morgan's own argument, neither it nor its successors could ever be dislodged.

In 1903, when Mr. Schwab's unlucky lapse of judgment at Monte Carlo brought a demand which proved to be irresistible for his retirement from the Steel Trust presidency, Mr. Morgan's comment was highly characteristic. It was that he should like to paraphrase Lincoln's remark to the Congressmen who demanded Grant's retirement from the Western command because of his alleged use of liquor. What he referred to was, of course, Lincoln's expression of the wish to send a barrel of the same whiskey to his other generals. Mr. Morgan left the point of the analogy open.

It was in March, 1903, that Wall Street suddenly began to talk, with something like consternation, of the danger overhanging the new industrial securities held by "underwriting syndicates" and still undistributed to the general public. Mr. Morgan was then induced to give an interview of which the salient parts were these:

> It may be true, as some of the captious critics declare, that at the present moment there are in the market many "undigested securities." But ought not the character of these securities to be taken into consideration? . . . To my mind and in my judgment, these new securities are essentially sound and stable, and those who have them are in no wise alarmed because of

their holdings. . . . You will find that in due time this phase of the difficulty—growing out of these new securities—will disappear.

This judgment may possibly be regarded as confirmed by the longer future, after an intervening season of agonized forced liquidation. But it missed the whole point of the then existing situation, which was a quite inevitable sequel to the rapid succession of enormous promoting operations which Mr. Morgan himself had fathered. In the eight or nine months after the interview there was certainly acute alarm, and signs of outright panic, which were justified by the failure of the $100,000,000 Consolidated Lake Superior, the humiliating bankruptcy of the United States Shipbuilding, and the collapse of values bringing the common stock of the United States Steel to 8⅜, with a shrinkage in its market valuation from $279,000,000 to $50,100,000, and the passing of dividends during three successive years.

The exact part played by Mr. Morgan in the panic of 1907 has been a matter of much discussion. His services to the preservation of general credit are admitted to have been of the highest value—mainly because of his personal influence over other financiers in the hour of emergency. He was certainly instrumental in bringing the panic-stricken bank presidents to their senses, when they were refusing to lend to the Stock Exchange on October 24, and he bore down every timid counsel which would have let the Lincoln Trust Company and the Trust Company of America go by the board.

Yet it is not evident to what extent he saw things with actual clearness when the storm was at its worst, and there is some reason for believing that he himself failed to understand, not only what causes such a panic, but what stops it. Judge Gary, in the Stanley Committee hearing, quoted Mr. Morgan as saying, in November, 1907, of the plan for the Steel Corporation to purchase the Tennessee Coal: "If it does not buy the stock, or unless it or some one else furnishes relief at this particular time, there is not any man on earth who can say what the result will be in the financial circles of this country." As a matter of fact, the Steel Trust did buy the Tennessee Coal; yet the *Financial Chronicle*, in its review of the very week in which that operation was effected, wrote that "the most important development of the week has been the gold movement and its effect on the bank situation, at home and abroad," and in that review it did not even mention the Tennessee Coal. Now the $30,000,000 purchase of European gold for import occurred in the week before Judge Gary's interview of November 3 with Mr. Morgan, and the Stock Exchange, by a violent recovery of four successive days, had recognized that relief from the strain which at first had seemed to threaten general insolvency was already on the way.

STURGIS & WALTON CO.
31-33 East 27th Street, New York.

COLLEGE SERMONS

By LANGDON CHEVES STEWARDSON, L.H.D., LL.D., sometime Chaplain of Lehigh University and President of Hobart College. Crown 8vo. $1.50 *net;* by mail, $1.64.

These sermons, with two exceptions, were addressed to the undergraduates and faculties of Lehigh University, Hobart College, Columbia University, and the University of Michigan. Their primary purpose was to stimulate religious experience and to develop human character and personality. It is pointed out that religion is indigenous to human nature and not an imported product, that it has many other forms besides the ecclesiastical one, and that its great function is to spiritualize the whole of human life and every one of its occupations.

School Advertising in The Nation

The Nation stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading rooms, and into thousands of families.

The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions.

SPECIAL RATE—Ten Cents a line net for thirteen times
(Minimum space three lines)

Orders may be forwarded through any responsible advertising agency, or directly to
The Nation, 20 Vesey Street, N. Y.

"At McCLURG'S"

It is of interest and importance to Librarians to know that the books reviewed and advertised in this magazine can be purchased from us at advantageous prices by

Public Libraries, Schools, Colleges and Universities

In addition to these books we have an exceptionally large stock of the books of all publishers—a more complete assortment than can be found on the shelves of any other bookstore in the entire country. We solicit correspondence from librarians unacquainted with our facilities.

LETTERS AND MEMORIALS
OF
Wendell Phillips Garrison
Editor of The Nation, 1865-1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

Price, $1.50 *net postpaid.*

SIGURD IBSEN

Human Quintessence

A fearless and radical philosophy by the son of Henrik Ibsen, treating of such subjects as "Nature and Man," "Why Politics Lags Behind," "Of Human Aptitudes and Human Art," and "Of Greatness in Man." It has been published in Norwegian and in German, and is being translated into French.

WILLIAM ARCHER writes in the London *Nation*: "An effort of pure reason . . . a stimulating appeal to the human will and the human intellect to realize their potentialities. A very luminous book . . . its thought . . . always clear, and its width of outlook very remarkable."

$1.50 *net; by mail,* $1.60.

H. G. WELLS

The Discovery of the Future

"Where there is no vision, the people perish." A book of prophetic foresight in which the author—pre-eminent among English writers of to-day—shows that by utilizing the intellectual forces which have enabled us to write the history of the past we may with reasonable certainty forecast the future. Wit, humor and the distillation of a lifetime's pondering combine to make this essay a noteworthy contribution to the season's literature. It will stimulate thought and provoke discussion. No admirer of Wells can afford not to read it.

JULIUS CAESAR

Edited by HORACE HOWARD FURNESS, Jr.

Being the Seventeenth Volume of A NEW VARIORUM EDITION of the Works of William Shakespeare

Royal octavo. Cloth, gilt top, uncut edges, $4.00 net per volume. Half Morocco, gilt top, $5.00 net per volume. Postage extra.

Tho preparation of the New Variorum Edition of the works of William Shakespeare was the life work of Dr. Horace Howard Furness, who is acknowledged to have been the world's greatest authority upon Shakespeare.

For many years he was assisted by his son, Horace Howard Furness, Jr., who has contributed two volumes to the work, and to him now falls the task of editing the remaining plays. The work will, therefore, be continued along the same lines laid down by Dr. Horace Howard Furness.

THE SIXTEEN VOLUMES NOW READY ARE

Macbeth
Revised Edition by Horace Howard Furness, Jr.
King Lear
Othello
The Merchant of Venice
Romeo and Juliet

Sardou and the Sardou Plays
By JEROME A. HART.
Illustrated. Small 8vo. Cloth, $2.50 net. Postpaid, $2.65.
A biographical sketch of the personal and literary life of Victorien Sardou, being the story of a penniless playwright who became a millionaire.
The first part is a biography of Sardou and fills half of the book; the second is made up of narrative analyses of about forty of his plays. The third part chronicles the production of such of the Sardou plays as have been given in the United States — some twenty-eight — with their casts, and notes.

Paul I. of Russia
Son of Catherine II.
By K. WALISZEWSKI
Frontispiece. 8vo. Cloth, $4.00 net.
The tragic figure of the son of Catherine the Great is one of the most enigmatic in history. Mad monarchs have been common enough. But was Catherine's son really mad? In the answer to this question to a large extent lies the inner history of the internal and foreign politics of Russia at that time. The problem is discussed fully in this volume.

A TIMELY BOOK

The Passing of the Turkish Empire in Europe
By CAPTAIN B. GRANVILLE BAKER
Profusely illustrated. 8vo. Cloth, $3.50 net
The author is a man of wide experience and has served in both the British and German armies. He has, therefore, had peculiar opportunities of getting behind the scenes in Europe. The present work is not an ordinary book about the war, but deals more particularly with the results of the conflict, and also the diplomatic causes which have gone to bring the Turkish Empire to its knees.

VOL. XCVI—NO. 2494 THURSDAY, APRIL 17, 1913 Reg. U. S. Pat. Office PRICE TEN CENTS

THE STORY OF MY BOYHOOD AND YOUTH

By JOHN MUIR

In "My Boyhood and Youth," John Muir begins the long and eagerly awaited story of his unique life. Born in Scotland and brought at an early age to the Wisconsin Wilderness, educated in a Western University during the time of its picturesque beginnings, Mr. Muir's boyhood was varied and full of interesting and characteristic adventures. He tells the story with the vividness and absorbing interest that readers of his books well know and with the added fascination of autobiographical narrative that should give this volume an even wider public.

"This is one of the autobiographies that will live long and be ever new."—*Pittsburgh Gazette Times.*
"There is nature in it, of course, and plenty of human nature, too. Mr. Muir gives his reminiscences in happy fashion and the interest in the narrative, early aroused, suffers no check."—*Newark News.*
"Every page is fascinating and its quaint beauty is thrilling."—*Lexington (Ky.) Herald.*
"To this book belongs a singular charm, the charm of brilliant, adventurous and wholesome boyhood—boyhood spent among the great forests and broad plains of a land that had not yet learned the weary lesson of civilization."—*New York Times.*
"From the rich storehouse of his experiences he has drawn liberally in all his writings, but in none of them more entertainingly than this, his latest and long-anticipated book."—*Waco Tribune.*

$2.00 net. Postage 14 cents.

The Fall of the Dutch Republic

By HENDRIK WILLEM VAN LOON

"The book delights me. It is eminently readable. But its bluff honesty, its insight, its humor, its bold perspective, its keen sense of what a modern reader (and above all, an American reader) can care to know, and withal the whimsical but high-souled companionable personality of its author, give it qualities higher than readableness."—*Professor George L. Burr of Cornell University.*

$3.00 net. Postage 18 cents.

The Making of Modern England

By GILBERT SLATER

"This book contains a lucid and authoritative account of the economic, industrial, and social forces that shaped the development of England during the nineteenth century."—*New York Times.*

$2.50 net. Postage 15 cents

With the Victorious Bulgarians

By LIEUTENANT WAGNER

"The book is excellent. Herr Wagner was brought up to the Balkan languages. He knows the country well, has studied war, and by some influence or other has obtained a good deal of special information. His accounts of the Bulgarian people, their history, character, objects, leading men, and generals, are altogether admirable, and still of vital interest at the present time."—*The London Daily News.*

$3.00 net. Postage 20 cents

A Wayfarer in China

By ELIZABETH KENDALL

"The indomitable spirit of adventure that stirs American women to venture into strange places is demonstrated in Elizabeth Kendall's 'A Wayfarer in China.' . . . Her impressions are those of an uncommonly observant woman who has strong sympathy for the Chinese."—*New York Sun.*

$2.50 net. Postage 17 cents

The Old Law and the New Order

By GEORGE W. ALGER

"Mr. Alger is a clear and original thinker and an instructive writer."—*The Lawyers' Magazine.*
"The papers deal with live subjects in a thoughtful manner and are to be commended."—*Law Notes.*

$1.25 net. Postage 9 cents

Pan-Germanism

By ROLAND G. USHER

"Professor Usher's book is one of great value. Nowhere else can a student of modern history find a more comprehensive and searching account, or a more acute analysis of the history of the past quarter of a century and of the actual situation."—*New York Times.*

$1.75 net. Postage 13 cents

Psychology and Industrial Efficiency

By HUGO MUNSTERBERG

"He establishes directly the connection between psychology and industrial efficiency in a most convincing manner which leaves no doubt in the mind of the reader that the methods of the psychological laboratory, so far from being vague or indefinite, are highly practical and useful complements to the workshop."—*Industrial Engineering and Engineering Digest.*

$1.50 net. Postage 13 cents

The English Lyric

By FELIX A. SCHELLING

"It is as it stands a keen, incisive, comprehensive and scholarly study of an opulent subject."—*New York Sun.*
"His criticism of the quality and achievement of the lyric poets of England is as finely appreciative as it is incisive and well informed."—*Ithaca Journal.*

$1.50 net. Postage 10 cents

FOUR NEW NOVELS BY THE ENGLISH AUTHOR

RICHARD PRYCE

Author of "Christopher"

"He advances no moral, but his attitude toward the right is beyond question and his characters move us as though actually alive."—*Chicago Record-Herald.*
"An English novelist who is a true artist in the creation of the semblance of life in the construction and development of plot, in the adaptation of his manner to his subject matter, and in his command of words. . . . He is worth reading, and one wishes him success."—*New York Tribune.*
"He is distinctly a novelist."—*Boston Transcript.*
"One cannot fail to be impressed in reading one of Pryce's books with the clean, sane, right feeling of the man. He is a realist with a heart: and one is inclined to suspect he comes a good deal nearer being a great novelist than some of the men who are producing 'best sellers.'"—*Kansas City Star.*

Time and The Woman

Published May 17

"Anyone, having read the first page of this book, will not be willing to put it down until the last word on the last page has been read."—*A Critic.*

Elementary Jane

"The story of a naïve, wholesome girl. . . . Mr. Pryce is not merely an interesting, readable novelist; he is a writer of distinction."—*Boston Herald.*

Jezebel

"'Jezebel' is a book of power as well as of insight and understanding and sympathy."—*New York Tribune.*

The Burden of a Woman

"The touch of the author is sure, and his keen, brief, unlabored analyses of feminine characteristics are extraordinary."—*Minneapolis Journal.*

Each $1.35 net. Postage extra

WEBSTER'S SECONDARY-SCHOOL DICTIONARY

Full buckram, 8vo, 864 pages. Containing over 70,000 words, with 1,000 illustrations

$1.50

This new dictionary is based on Webster's *New* International Dictionary, and therefore conforms to the best present usage. It presents all words and phrases likely to be needed by any student. It is a reference book for the reader and a guide in the use of English, both oral and written. It gives the preference to forms of spelling now current in the United States, in cases of doubt leaning toward the forms that may be coming into use. In the matter of pronunciation such alternatives are included as are in very common use, but the one that is preferred is clearly indicated. Each definition is in the form of a specific statement, accompanied by one or more synonyms. In addition, this dictionary includes an unusual amount of supplementary information of great value to students.

School and Home Gardens

By W. H. D. MEIER

Head of the Department of Biology and School Gardening, State Normal School, Framingham, Massachusetts.

8vo, cloth, 319 pages, profusely illustrated, 80 cents.

Meier's "School and Home Gardens" gives practical instruction for planning, planting, and caring for plants that are grown in the house, yard, or garden. The directions are explicit, the problems confronting the student in cultivating each individual plant being considered, one at a time, and definite directions being given to meet them. The book serves the purpose equally well as a textbook for grammar grades or as a handbook for the home gardener. Primary and intermediate-grade teachers will find in it ample material from which they may select.

NEW MACMILLAN OUTDOOR BOOKS

FARM MANAGEMENT

By G. F. Warren, Ph.D., N. Y. State College of Agriculture, Cornell University.

A timely volume dealing with business principles in farming, or the science of profitable organization and management.

$1.75 net, postpaid $1.93

THE BEGINNER IN POULTRY

By C. S. Valentine, author of "How to Keep Hens for Profit."

"As full of information as an egg is full of meat; thoroughly utilitarian; all the phases of poultry-keeping dealt with fully and clearly." *Profusely illustrated.*

$1.50 net, postpaid $1.62

FARM AND GARDEN RULE BOOK

By Prof. Liberty Hyde Bailey, Director N. Y. State College of Agriculture, Cornell University.

"A rural classic. An up-to-date manual of ready reference, comprehensive and invaluable for every agriculturist." *Illustrated.*

$2.00 net, postpaid $2.18

MANUAL OF GARDEN-MAKING

By Liberty Hyde Bailey, Director N. Y. State College of Agriculture, Cornell University.

The standard practical guide to the making of home garden grounds and the growing of flowers, fruits, and vegetables for domestic use. *Illustrated.*

$2.00 net, postpaid $2.17

MANUAL OF FARM ANIMALS

By Merritt W. Harper, Asst. Professor of Animal Husbandry, N. Y. State College of Agriculture, Cornell University.

A practical guide for the choosing, breeding, feeding, the care and management of horses, cattle, sheep, and swine. *Illustrated.*

$2.00 net, postpaid $2.18

INJURIOUS INSECTS

How to Recognize Them and Control Them

By W. C. O'Kane, Professor of Economic Entomology, New Hampshire College.

"The largest and most complete book published on the subject of insect control. A large number of valuable illustrations help to identify the pests."

$2.00 net, postpaid $2.17

THE FARMER OF TO-MORROW

By F. I. Anderson.

A forecast, crystallizing much practical information on farming problems. Of great importance to all actively interested in agriculture. *Ready shortly.*

$1.50 net

CROPS AND METHODS FOR SOIL IMPROVEMENT

By Alva Agee, M.S., Director of the School of Agriculture, Pennsylvania State College.

"A worth-while book; sound, helpful, practical, common-sense methods and suggestions for the raising of crops and the conservation of soils."

Illustrated. *$1.25 net, postpaid $1.36*

TREES IN WINTER

By A. P. Blakeslee (Connecticut Agricultural College) and C. P. Jarvis (Storrs Agricultural Experiment Station).

An authoritative manual on the selection, location, and planting of trees for different purposes, and their care throughout the year. *Illustrated.*

$2.00 net

SUCCESSFUL HOUSES AND HOW TO BUILD THEM

By Charles E. White, Jr.

An authoritative work on house-building for the house-owner. Illustrated with over four hundred half-tones and line drawings.

$2.00 net, postpaid $2.22

MILK AND ITS PRODUCTS

By Henry H Wing, Professor of Animal Husbandry, N. Y. State College of Agriculture, Cornell University.

An entirely new work by this standard author on the nature and qualities of dairy milk and the manufacture of cream, butter, cheese, ice cream, etc.

$1.50 net, postpaid $1.66

COÖPERATION IN AGRICULTURE

By G. Harold Powell.

A practical guide for those who desire to organize coöperative societies for the successful handling of agricultural products, and who wish to escape the usual pitfalls. *Illustrated.*

Ready shortly. *$1.50 net*

The Nation

NEW YORK, THURSDAY, APRIL 17, 1913.

The Week

The Sundry Civil Appropriation bill was introduced in the House on Monday. It is in the same form that President Taft vetoed. That is to say, in appropriating $300,000 for the special use of the Department of Justice in prosecuting violations of the Anti-Trust law, the proviso is inserted that "no part of this sum shall be spent in the prosecution of any organization or individual for entering into any combination or agreement having in view the increasing of wages, shortening of hours, or bettering the condition of labor." A similar exemption is accorded organizations of farmers. Now, the Anti-Trust law itself is universal in its language. It says "every person." It denounces as criminal "every combination" to restrain trade or commerce. And it lays the binding duty upon the Attorney-General and all Federal District Attorneys to prosecute *all* violations of the Anti-Trust law. But all this is to be changed. Where the law reads "every person," the addition is to be made "unless he be a workingman or farmer." The statute now arrays the whole power of the United States against certain practices, and commands the officers of the law to prevent them; but hereafter misdemeanants are to go scot-free if they happen to work in a shop or on a farm.

This attempt President Taft met and broke with his veto. No official statement of President Wilson's intentions has been made, but the Washington dispatches assert with great positiveness that he will not refuse to sign the bill if passed again in the same form as before. If the President does agree to exempt laboring men from the equal operation of the laws, he will, in our opinion, make an enormous mistake. This we say not only on the general principle that no excepted class ought to be tolerated, but because of the peculiar claims just now put forth in the name of organized labor. It is not merely to the Anti-Trust law that it professes to be superior. The laws against violence, even those against murder, labor-union agents, in various parts of the country, have been defying, and acting as if they were never intended to compel the obedience of workingmen. The time is eminently one that calls for the firmest denial of all these pretensions. And there is no better way of beginning than by permitting no exception to the law which forbids every kind of oppressive combination and conspiracy, labor or otherwise.

Only one threatened foreign complication has as yet had to be faced by President Wilson, and in his attitude towards this he has shown the cardinal diplomatic quality—patience. It would have been easy to blow into a flame the smouldering trouble over the proposed California law denying the right of Japanese to lease land in that State. A provocative line, with resulting excitement, could have been taken in either one of two ways. There could have been a loud remonstrance addressed to California. She might have been told that she was violating a treaty of the United States, and warned that she must at once cease imperilling our international relations. Or, on the other hand, there might have been a lot of tall talk about Americans making their own laws to suit themselves, with intimations that if Japan wanted to come on she would find us ready to give her rather better than she sent. But the actual course of the Administration in the matter has been both wise and quieting.

The President has not sought trouble with either California or Japan. He has assumed that a sovereign State ought not to be interfered with in advance of actually passing an act in derogation of a national treaty, and has pointed out that, in case the legislation proves to be of this sort, there is no call for coercion by the general Government, but only for annulment through the Federal courts. And President Wilson has also turned to Japan to ask what is the status of *her* alien laws. If, as he is reported to have discovered, Americans are not permitted to own land in Japan, though entitled to do so under the treaty, the force of the Japanese protest against the action contemplated by the California Legislature is broken.

At the dinner of the National Democratic Club in New York city on Saturday night, the Vice-President of the United States seized what he doubtless regarded as a favorable opportunity for giving the wealthy men of the commercial capital of the country a needed lesson and warning. What the lesson was, we confess we find it hard to make out. If Mr. Marshall imagined he was saying something that would be new to his auditors when he declared that there is a great deal of discontent in the country—that socialistic notions are making headway, that the vast magnitude of many private fortunes is one of the causes of popular unrest—he is either not himself a reader of the newspapers, or is under the impression that the men he was addressing are so busy with their private affairs that they haven't time to look at so much as the headlines of the daily press. We can hardly suppose either of these things; and, as he gave not the slightest indication of what he thought the rich men had better do about the matter—except that they had better not be getting so rich—we are driven to the conclusion that the talk contained nothing of any consequence in the way of instruction or guidance.

Whether it is true or not that "we need a national Department of Public Works, whose executive head should be a member of the President's Cabinet," as Mr. Isham Randolph declared in an address before the National Drainage Congress at St. Louis last week, it is certainly true that the problem of river floods is a national problem, and that it is incumbent on the nation to take measures which shall stop the recurrence of such disasters and dangers as we have been witnessing this year. A commission to study the subject ought to be created at the earliest possible moment. A bill for that purpose would doubtless be passed promptly by Congress, and receive the President's approval. In a dispatch to the St. Louis meeting, he spoke of the "imperative and immediate necessity for a comprehensive and sys-

tematic plan for drainage and flood control." It is stated that among those at the meeting the proposal of a Department of Public Works threw into the background the idea of the appointment of a commission. But the creation of a new department of the Federal Government ought to be a matter for careful deliberation, whereas the inquiry into the ways and means of flood prevention should be set on foot without hesitation or delay.

As a practical question of legislation, it is not necessary to take seriously the bill introduced in the United States Senate by Mr. Chilton, of West Virginia, prescribing a minimum wage of $9 a week for all women and girls employed in work which goes into interstate commerce. But it may serve as a peg on which to hang a moral of wide application. The idea of the bill is in keeping with that of the Beveridge child-labor bill, which attained considerable prominence some years ago, and it is one that is almost sure to come up from time to time. Quite apart from the merits of the minimum-wage proposal in itself—or, in the other case, of the child-labor proposal in itself—the vital objection lies against such a bill that it implies an almost unlimited right of coercion of the States by the Federal Government. If the interstate commerce power may properly be used for the purpose of forbidding child labor in the various States, or for the purpose of compelling the payment in all of them of wages of a certain magnitude, it may with equal reason be used for the purpose of compelling total abstinence, or Sunday closing, or anything else that Congress may regard as socially desirable. It is possible that such uses of the interstate commerce are within the competence of Congress, so far as the letter of the Constitution is concerned; but they evidently run counter to its spirit, and to the fundamental character of our whole political system.

The Navy League plainly got cold comfort out of the remarks of the Secretary of State and Congressman Fitzgerald at its annual banquet. Mr. Bryan remarked significantly that, while the League was working for battleships, he should be working to make battleships unnecessary. Truly, no finer opportunity ever confronted a statesman than is now Mr. Bryan's. With a possible agreement between Great Britain and Germany in the matter of armaments, it is just the hour for Mr. Bryan to assure both nations of our sympathy with Mr. Churchill's practical proposal that all the great navies should suspend construction for a year. As for Congressman Fitzgerald, he was unassailable in his contention that the fault of the big-navy, and for that matter big-army, men is their uncertainty when it comes to facts. Never do estimates hold good. Mr. Fitzgerald told of a case of a General Staff request for an $800,000 appropriation which soon grew into $8,000,000. He could have given instance after instance to prove that the army and navy jingo is never satisfied. In 1886, for instance, the Endicott Fortifications Board assured us that for a couple of hundred millions we could protect the coast without a fleet. Now we learn that, after investing far greater sums, we also need at least forty-five Dreadnoughts and an army of 250,000 men to protect our harbors alone.

To refer to a measure just passed by the Ohio Legislature as providing for mothers' or widows' pensions is to sacrifice accuracy to conciseness. Motherhood has not been "endowed." As in New Jersey and one or two other places, the State is merely giving some assistance to needy children and older persons while allowing them to remain at home, instead of following the more usual procedure of putting them into an institution. The "pensions" are not to be spent at the free will of those who receive them, as an old soldier may spend his, but under strict regulation by the courts. They are payments for certain purposes rather than pensions. For such an arrangement there is much to be said. Where a mother has the strength and the capacity to take care of her children, but cannot do so if she must employ her time away from home in earning their bread, it is surely wiser to give her the money that will enable her to make useful citizens out of her children, than to turn them over to professional caretakers, however worthy the latter may be. Nor will there be objection to such payments to indigent widows without children as will keep soul and body together, if the whole matter is carefully supervised. Preservation of the home is worth all it may cost in this way. But let us not carelessly talk as if a new and large section of society were about to be pensioned for life.

There was only one speech against the bill, and Mr. Matt, of Bedford, replied that the bill was so simple it needed no explanation.

The bill referred to went through the Pennsylvania House of Representatives by a vote of 166 to 7. What an excellent measure that must be, which arouses only one speech against it, and needs no explanation! Some of our readers may be a bit surprised to learn that the bill appropriated $1,500,000 for pensions for soldiers, sailors, and marines who served in the Civil War from Pennsylvania. Are not these men, they may ask, sufficiently provided for by Congress? Did not that patriotic body add no one knows just how many millions to the pension budget last year? We can only reply that it is impossible to overpay those who fought for their country. New York defeated such a bill not long ago, but shall Pennsylvania, with the field of Gettysburg within her borders, forget her noble sons? Not while they and theirs have votes to give, and there are legislators who want them.

Not a passenger was killed on any of the twenty-seven railways in Colorado last year. The 318 persons in the country who met their deaths while travelling by rail were distributed among the other forty-seven States. In Colorado, as elsewhere, most of those who were killed by trains were either trespassers or other persons who were neither passengers nor employees. The Pullman Company fared still better, being responsible for no deaths whatever, either of passengers or employees. In the entire country, one employee out of 330 especially exposed to accidents was killed, and one out of between eight and nine injured. In Colorado, these figures were 510 and between 25 and 26, respectively. No reason is suggested for Colorado's much greater exemption than her sister States in these respects. Throughout the country, the railways are making an effort to get laws enacted which shall tend to minimize the greatest single cause of loss of life, that resulting from trespassing. It is not tramps alone, or even chiefly, who suf-

fer in this way, but persons who find the railway track the most convenient path to their work.

We know something about how much fires cost us every year, but has any one ever calculated the loss to the nation from colds? It has been done for Great Britain, and the figures are arresting. During the eight weeks of March and April, reasons the statistician, probably every other person in the nation suffers from a cough or a cold, or both. All that remains is to find out what 23,000,000 colds cost. The expense of a cold varies, of course, with different individuals. The ten-dollar-a-week clerk who loses one day from his work, and has his efficiency lowered 10 per cent. for three days more, has cost somebody very nearly $2.50. A Cabinet Minister who is confined to his room for two days, and does a reduced amount of work for two days more, may have cost the country as much as $200. It must be remembered, too, that eighty colds in every hundred are colds in the head, and not very serious; the remaining twenty attack the throat or the chest, and often the head also. Two colds in every thousand lead to bronchitis, pneumonia, pleurisy, or something of the sort; and one in a thousand results in death or a considerable shortening of life. Taking all these factors into account, and not forgetting doctors' bills, we have the following statement:

Direct cost of 23,000,000 colds..	$28,750,000
Loss by absence from work....	15,625,000
Loss by lowered efficiency	12,000,000
Total loss	$56,375,000

Multiply this by four, since it represents the loss in March alone, and March is responsible for one-fourth of the colds; then double the result, since our population is twice that of the United Kingdom, and you have a total that deserves a place in the imposing tables of how much we spend on liquor, tobacco, jewelry, pensions, educations, and foreign missions.

The "hunger strike" works as well in this country as in England. Indeed, with the infusion of noise and prayer, it succeeds much more quickly here. Nor are its benefits limited to women. Two women and one man were arrested in Zion City, the sacred community founded by Dowie, for leading a march upon an ungodly electric plant, where men used tobacco. The three spent the day in jail without food or water, but with an abundance of disturbance. In their own words, they were holding a prayer-meeting. Their screams could be heard a block away. The gist of their petitions was that an earthquake might be sent to shake down the jail walls. The earthquake did not come, but their prayers were answered nevertheless. The chief of police, being a tender-hearted officer, was uneasy over the prospect of his charges going to bed hungry, and still more anxious over the effect that a continuance of the racket would have upon the slumbers of the other prisoners, who certainly had a right to a night's rest. He ultimately yielded, therefore, and opened the doors of the jail. The Zionists followed up this victory by obtaining an order restraining the officers from interfering with their public meetings. For the first time in three years, accordingly, they are praying on the street-corners in peace.

Rumors of an Anglo-German agreement with regard to naval armaments will not down. The latest hint comes from Berlin, where it is reported that, as soon as the Balkan War is over, the British Government intends to approach Germany with a proposal to suspend shipbuilding operations during the fiscal year 1914-15. This may be an indirect invitation from German quarters addressed to Winston Churchill. Or it may be a bit of playful irony on the part of the German press. But let the advocate of the strenuous naval life recall that such a suggestion to slacken up Dreadnought production for a year is not silly Utopianism. One may be convinced that war is the first law of nature and the first occupation of a gentleman, and yet admit the desirability of an occasional breathing spell. They were no mollycoddles in the early Middle Ages, but even the mediæval baron consented to lay aside his spear and sword for a few days and seek recuperation under a Truce of God.

The general strike which began in Belgium on Monday under Socialist leadership and with the sympathy of the Liberal party is not the kind of general strike of which we have heard so much of late in connection with the Syndicalist or I. W. W. movement. Syndicalism is a revolt against industrial agitation through politics. The Syndicalist argues that the conflict between labor and capital must be fought out on the industrial field, by means of boycotts, strikes, sabotage, and other methods of guerrilla warfare, until the time is ripe for the general strike—*le grand jour*—when the laborers of a nation will fold their arms and the control of industry will pass from the capitalists to the workers. In such a scheme there is no place for the Parliamentary palaverer. But this Belgian general strike has precisely a political aim. Its purpose is to force the Catholic majority, which has so long been in control of the Belgian Government, to concede manhood suffrage and do away with the absurd system of plural voting which enables a minority of the electorate to intrench itself in Parliament.

Of the two most notable experiments with the general strike in recent years, the one that had a political object in view succeeded; the one that was fought on economic grounds failed. The first strike was, of course, the general upheaval of the Russian people in October, 1905, when communal life was brought almost to a standstill by a strike of factory operatives, railway and telegraph workers, physicians, lawyers, judges, university and high-school students. After three days the Government yielded, and the Czar promulgated the Constitution of October 30, which in greatly modified form is still the basis of such political liberties as Russia may be said to enjoy. The second strike was that which broke out in Sweden in the summer of 1909. It developed out of disputes in the paper and iron industries. A lockout of 80,000 workers was followed by the proclamation of a general sympathetic strike which brought out no less than 285,000 men, out of an estimated industrial population of 460,000; a notable showing involving a higher percentage than the Belgian unions will probably be able to rally. But the railway workers refused to come out, and there was little response from the agricultural laborers. Civic life in Stockholm was paralyzed for several days, but the Security Brigade of volunteers succeeded in carrying through the essential public services and maintaining order. After five weeks the strike collapsed.

CONGRESS AND THE CABINET.

President Wilson's innovations regarding his relations with Congress and the new seating plan of the House of Representatives will probably give impetus to the movement to seat the Cabinet in House or Senate. If it is so easy for a tactful President to establish human and personal relations with Congress, why, it will be asked, should not the members of his Cabinet follow suit? Already they are entitled to seats on the floor of the Senate and House at times of ceremony. Why, then, should they not drop in regularly, and perhaps gradually begin to answer questions, even if the right to debate is for the present withheld? It all sounds so very simple, and suggests not only a saving of time but more of government in the open. Moreover, as Mr. Taft expressed himself in favor of the change just before leaving office, and it has been generally assumed that Mr. Wilson has favored this change ever since the appearance of his "Congressional Government," we are sure to hear a good deal more about it in the near future.

The rearrangement of the House of Representatives somehow naturally suggests a "front bench" for Ministers and one for the Opposition leaders. For decades this reform has been urged, and now at last the desks are out, and with them go many excuses for inattention to the speakers, such as letter-writing, newspaper-reading, etc. The seats will not be so comfortable, and since it will not be as easy to immerse one's self in correspondence or other distracting matters, it is quite likely that the actual numerical attendance of Congressmen may for a time fall off. But a legislator who is a "dinner-bell" empties the benches in London, Berlin, and Paris as well. On the other hand, when important matters are up, it is quite possible that the standards of debating and speaking will improve. Time alone will show just what the effect of this innovation will be. If a new atmosphere is created and genuine debating becomes not the exception but the daily order, the desirability of having Cabinet officers at hand is likely to become more apparent.

The best argument for it is the one of government in the open. It is not to be denied that the Cabinet members are frequently in touch with Congress through the committees, before which the President may also appear, if he so desires. But committee-room hearings are very different from what would happen if the Cabinet were to appear upon the floor. It is plain that there can never be obtained the same publicity for what goes on in committee-rooms that is even now accorded to events on the floor of Senate or House. Frequently, vitally important statements of policy made by the Secretaries to standing committees fail to attract the attention they deserve —usually, unless there is under consideration a matter of capital national importance. But it is the English custom of questioning Ministers which particularly appeals; ridiculous as some of the questions asked in the Commons are, as a whole they serve the useful purpose of smoking out the Government. Anybody who recalls how difficult it was to obtain facts about what was going on in the Philippines during the war there, must see the point. And to pass a resolution of inquiry often avails little. The Secretary inquired of may send back a batch of documents requiring endless labor to analyze, and sometimes confusing the issue; or he may decline all information on the ground that it is against public policy, when he would find it hard to show what the public policy was if he were compelled to explain on his feet under a cross-fire of criticism.

Mr. Wilson as Governor desired a close relationship between Executive and Legislature because he felt that the Governor was leader of his party and should have the right personally to advocate the passage of the legislation for the obtaining of which he asked the suffrages of the voters. The weak point in such a change is obviously the fact that the Governor of a State is by no means always the leader of a party which has a majority in the Legislature. Take Massachusetts, for example; it has the habit of simultaneously electing Democratic Governors and Republican Legislatures. This happens frequently elsewhere. The Governor, if he had the right to enter a legislative debate, would find himself, under these circumstances, merely the leader of the Opposition seeking to obtain for himself a majority by aid of outside opinion. Plainly, it is impossible to conceive of the English system of a responsible Ministry being exactly duplicated in this country, for the Governor is chosen for a fixed term, and cannot stand or fall with his legislative programme. It is an adaptation of the English plan to our own which we can at most hope for, if, little by little, this appears desirable.

But a closer relationship between the Executive and the Legislature, as between the Executive and the public, does seem desirable and probable. Mr. Hughes illustrated the power of the just Governor who in righteous causes appeals to the public. Mr. Wilson in New Jersey had intended to go regularly to the various county seats and meet the voters face to face. The support given him by the voters of the State rendered this unnecessary, and besides his Presidential candidacy intervened. He must ache to be back for a few weeks, and try once more the value of that direct personal appeal, now that his jury bill is defeated, just as he must have wished that he or Gov. Fielder could have entered the New Jersey Senate before the close of the session to advocate their bill on the floor and expose the influences which brought about its defeat. In the last analysis, the success of any *rapprochement* between Executive and Legislature will depend on the character, ability, and manners of the Executive. Where Mr. Wilson has succeeded another might make such moves appear ridiculous, or as the despotic attempt of an Executive to aggrandize himself at the expense of a coördinate branch of the government.

THE SEVENTEENTH AMENDMENT.

Close upon the heels of the income-tax amendment, the amendment providing for direct election of United States Senators has obtained its requisite quota of three-fourths of the States of the Union. It is less than ten months since the amendment was passed by Congress, and this rapidity in the process of confirmation disposes of the long-standing notion that the difficulties in altering the Federal Constitution are almost insuperable. The truth, as brought out in the history of the two amendments just ratified, is that changes in the Constitution can be made with reasonable promptness—indeed, it would hardly be too much to say with expedition—whenever there arrives that degree of general and fixed recognition

of its desirability upon which a change of the organic law ought to be based. Before this latest amendment could be adopted, it had to obtain the approval of two-thirds of the United States Senators, who were always supposed to cling with extraordinary tenacity to the existing method; and it had to obtain the assent of the Legislatures of three-fourths of the States to the abandonment of a function which was naturally valued as giving importance and prestige to membership in those bodies. Yet, as soon as the question had been thoroughly settled in the minds of the people at large, the personal preference either of Senators or of Legislaturemen ceased to play any part whatever.

Some men of high intellectual qualifications, but not of a type to win popular support, may be kept out by the new method, as well as men who have owed their seats to no qualifications at all except those connected with the pulling of wires and the management of political machines. But the benefit of the change that has been accomplished is not to be measured simply by an assessment of the personal qualifications of the Senators. To have got rid of a prolific source of intrigue and corruption is, in itself, an incalculable gain. And along with this will go benefits of the first order, both as regards the national Government and the State Governments. The six-year term of Senators has acted, and ought to act, as a balance-wheel in our governmental system; but the choice in the first instance should represent a real act of selection, upon public grounds, and not that hole-and-corner manœuvring which, in so many instances, it has become. Under the new régime, the Senate will command a kind and degree of respect which, a few years ago, it was evidently in imminent danger of losing. And elections to State Legislatures will be freed from a disturbing element that has gone far towards paralyzing all efforts to improve the quality of those bodies. With the election of United States Senators eliminated from the problem, it is not too much to hope that we shall, before long, acquire the habit of choosing members of our Legislatures on the basis of State issues and the personal merits of candidates, instead of following party labels and playing into the hands of machine politicians.

That the personal quality of the Senate will, however, in the long run, be improved is not too much to hope. No inference on this head can be made from the results that have been attained in a few sporadic cases of the application of a method similar to, or approximating toward, that of the outright direct election of Senators. To be one of the two men representing a State in the small and powerful upper branch of the Congress of the United States is intrinsically a great distinction and a great privilege. Whether party nominations be made by direct primaries—as they doubtless soon will be, in nearly all cases—or by conventions, the final decision will be made by the people at large, and parties will have this fact in mind from the outset. To suppose that, when this has become the established situation, the survival of the unfit will be anything but an occasional exception is to have very little confidence in democratic institutions.

The doctrine of the virtual unamendability of the Constitution has had, in these latter years, two salient consequences. For several years it was quite the fashion to decry respect for Constitutional restrictions as a slavish subserviency to the rule of the dead hand; the rights of the present generation, it was declared, could not be overridden by a lot of antiquated provisions which were set up by men of a past age, and which, not foreseeing this age of steam and electricity, they had made it virtually impossible to alter. The logical, and indeed the inevitable, outcome of this attitude, if it had prevailed, would have been the virtual nullification of the Constitution; and its failure to gain headway may be regarded as a proof that the country was by no means disposed to accept this as desirable. A later development was the agitation for the reversal of judicial decisions on Constitutional questions by popular vote. This proposal has always been bound up with a most curious confusion of thought. It was ostensibly directed at State Constitutions only; but everybody knows that the amendment of State Constitutions is a process of very great facility. The actual force behind it, whether perceived or not by the agitators in its favor, was the difficulty of amending the Federal Constitution; and the prompt incorporation into that instrument of two popular amendments can hardly fail to have a disastrous effect upon the propaganda. That we should have no written Constitution is a tenable position; that the courts should have no power to declare laws unconstitutional is a tenable position; but the notion that the Constitution of the United States should be easily changed from year to year, and the proposition that the courts' interpretation of it should be subject to annulment by a count of noses on election day, strike us as wholly devoid of sober political sense.

THE INCOME TAX.

It is natural that, in discussions of the pending tariff bill, public attention should thus far have been directed chiefly to changes in the import duties and their effect on trade conditions. This part of the problem is familiar; the questions arising from the income tax are not. For such a Federal tax we have only the two precedents of the Civil War levy, which, as a pure emergency tax, was not discussed on the broadest principles, and the proposals of 1894, which were declared unconstitutional by the Supreme Court. The recent ratification by the States of a Constitutional amendment, framed to remove the obstacles which were encountered by the act of 1894, has sufficiently demonstrated the country's approval of the income tax in principle, and its incorporation in the Underwood bill had, therefore, been taken for granted. But the very fact that the situation is in many respects new makes it less easy to be certain at the start as to the real significance of the details of the bill.

The position taken by the authors of the pending measure, that citizens should contribute to the expenses of government in accordance with their several incomes, and not merely in proportion to their consumption of dutiable merchandise, appears to meet with general acceptance. There is, however, this criticism on the income tax as a source of public revenue, that the limitations on excessive taxation of that nature are never so clearly in evidence as in the case of customs or excise taxes. Excessive customs duties will shut out importations altogether, and thus reduce, instead of expanding, the public revenue. Excessive excise imposts will raise

prices directly and visibly to consumers, and will in many instances actually check production.

But a tax on incomes produces none of these visible results. If, at a certain point, it bears with undue hardship on certain classes of the community—if it brings about inequality; if it embarrasses the free movement of capital into industry—the connection between cause and effect will not be easy to determine for the community as a whole. We are not calling attention to any particular provisions of the bill in its present form, but are merely stating general facts which the history of income-tax legislation, especially in recent years, has brought to light in other countries than our own.

One thing which that experience has taught is the bearing of the income tax on public extravagance. For the reasons above set forth, it is possible for Governments to increase repeatedly the rate of such a tax, without being stopped by its sudden non-productiveness. Purely from the point of view of revenue, this is an advantage; but its danger, especially in an era of governmental extravagance, is that the framers of appropriation bills, the projectors of increased national armaments, the log-rollers, and the pension grabbers, may imagine themselves to have discovered the philosopher's stone. Until 1905, England's income tax rate never exceeded one shilling in the pound sterling, except in time of war or in the period of debt-redemption immediately after war. It has not been below that rate since 1905, and has in fact been increased during the more recent years, and the increase has gone hand in hand with England's extravagant and politically unfortunate "Dreadnought policy."

This consideration draws attention to the House committee's fiscal calculations. The sugar duties, which have been producing upwards of $50,000,000 annually, are to be at once reduced, and presently abolished, and this, with other reductions in the revenue through changes in the tariff, is to be more than compensated for by the $100,000,000 revenue roughly calculated from the income tax. The estimate may turn out to be correct; yet it points to dangerous possibilities if the appropriation committees are forthwith to untie the purse-strings.

The revenue plans of the McKinley bill of 1890 went to wreck through exactly this procedure of throwing over the surely productive sugar tax for other experimental taxes, in the face of increased appropriations. Of the Wilson law of 1894, the correctness of the original plan is debatable, inasmuch as the income-tax provisions were never put into effect, and inasmuch, also, as the Senate restored a portion of the sugar duties, which the House had voted to abolish altogether. The actual Treasury deficit, in the first full fiscal year after the Wilson bill, was $25,200,000; it would have been $56,000,000 had the sugar tax been abolished. But the estimate drawn up for the Senate by the Bureau of Statistics named $39,000,000 as the maximum annual yield of that year's income-tax provision—which contemplated a higher basic rate than does the pending bill.

We call these sufficiently well-known facts to mind in order to show that there are certain very possible snags ahead in this new legislation levying an income tax. Of the administrative provisions for the tax, there will be much more to say hereafter. The idea of "collecting at the source," through requiring employers and investment corporations to deduct from the salaries, wages, and interest coupons, payable by them, the amount due by the beneficiary for his income tax, is an ingenious plan for preventing evasion of the tax; but the administrative clause is crowded with technicalities, and will unquestionably cause great confusion. It can hardly be said to have been drawn in a way to clear up the actual requirements, either of employer or employee, corporation or investor. We imagine that this part of the pending measure will be the focus of much perplexed discussion, in and out of Congress, before its actual scope and meaning are made altogether clear.

POLICING A STATE.

The Buffalo street car strike called into service 3,000 militiamen, some of whom, after being fired upon, wounded a woman and a schoolboy. Auburn, too, in this State, has just had its strike and rioting, and there are still two companies on duty there. Every couple of months or so these scenes are repeated, witness Glens Falls, and as regularly there is complaint on the one side of a failure of the constituted local authorities to preserve order, and on the other of flagrant abuse of official power in the way of the denial of the Constitutional rights of free speech and assembly. It should seem as if the time were more than ever ripe for the establishment in New York of a State Constabulary on the lines of the Pennsylvania organization which has been so successful.

Primarily, such a body of trained men takes a place between the local authorities and the military. Pennsylvania used to work her militia harder than any other State. Strikes in the coal or steel districts frequently kept whole brigades under arms three months at a time, at a heavy expense to the State. In the seven years since the establishment of the Pennsylvania Constabulary, militiamen, if we remember correctly, have been ordered out for riot duty but once; on all occasions of disorder the Constabulary are called upon. Though numbering but 228 officers and men, they have successfully handled such dangerous outbreaks as those connected with the strikes at the Pressed Steel Car Company's works, at Chester, and in Philadelphia—not without cost to themselves, for they have lost seven killed and nineteen dangerously wounded, seven of the latter crippled for life—since first they took the field. At the time the militia appeared they were the sport of the crowds, for they had had no experience whatever in handling mobs. The Constabulary find rifles "inconvenient" in such work; they use only the long night-sticks that hang at their saddles, and so great is their reputation for knowing how to deal with riots that half-a-dozen men have frequently driven off thousands.

This force does not, of course, exist merely for emergency duty. In 1912, so writes their able superintendent, Major John C. Groome, in his annual report, his men, "by their quiet fearlessness, energy, and good judgment, have not only apprehended thousands of criminals and enforced law and order throughout the State, but have largely reduced the number of crimes, and in many localities prevented disorder and lawlessness." Their arrests in 1912 numbered 1,144 for eight different crimes—twenty-three for murder—and 80 per

cent. of those arrested were convicted. Obviously, they are increasing the respect for the law throughout Pennsylvania. Not only do they ride into remote districts where no police authority was visible before, but they provide machinery for bringing to justice offenders who formerly went scot-free because of incompetent or favor-seeking sheriffs, or the lack of coöperation between localities. Thus the Constabulary covered no less than 401,398 miles on patrol in 1912, visiting 2,370 towns or boroughs in sixty-six different counties, and they did this despite interruptions for special duty and the detective service they are constantly called upon to perform. All this was at a cost to the State of a trifle above $300,000.

To illustrate the detective work of his men, Major Groome cites several cases of coöperation with United States authorities, and captures made outside of the State. To pursue a platinum thief, one constable was sent to New York, New Jersey, and Massachusetts, eventually capturing the criminal in Maryland. Another offender was run down in Buffalo, and still others in Alabama and Virginia. Altogether, no less than 2,592 requests for assistance were received by the Constabulary from judges, sheriffs, chiefs of police, mayors, district attorneys, and other officials. This fact alone justifies the existence of the Constabulary, if it needed justification. Yet it is severely criticised by labor unions and their sympathizers, and by those who see wrong in the use of any force. The labor unions have thus far succeeded in preventing a much-needed increase of the constables. Not that they can allege that the State police have taken sides; they simply do not wish any efficient authority at hand when they think it time to strike. Last May the coal strike called out part of the Constabulary; less than 150 men kept order in five counties, where, prior to their appearance, the strikers were assaulting miners, pump-men, and engineers to their hearts' content. "After the first day," writes Major Groome, "there was no serious trouble, and the daily patrols from the fifteen sub-stations and the barracks at Pottsville and Wyoming were able to put down lawlessness and maintain order"—150 men upholding the law in five rural counties by day and night! Such is the value of special training for a given duty.

We have frequently dwelt upon the services of this body of police because it demonstrates that Americans can have police of a high order of efficiency and honesty if they choose to go to work the right way, and because we believe it to be one of the best antidotes for American disregard for law and authority.

A STUDY IN DEGENERACY.

By the New Jersey Department of Charities and Correction a remarkable report has just been submitted to Gov. Fielder. It embodies the studies of certain degenerate families, or strains, made during the past two years by Miss Elizabeth S. Kite. Fitted for the work by previous training and experience, and with a sufficient native endowment of tact and skill, she went to a section of Burlington County where degraded men and women lived in something like promiscuity, and little by little worked out the life-history of selected cases. The results are startling. It may be that this proof of inherited degeneracy, with its consequent burdens on the State, is not so overwhelming as it was in the famous case of the "Jukes" family years ago, but it is surely enough to arouse the deep interest of the philanthropic people and the authorities of New Jersey.

The work was done under the direct sanction of the State. An appropriation "for research" was given to the Department of Charities, for the express purpose of undertaking such inquiries as that of Miss Kite. The reason and justification for the State's investigating this matter is plain. In New Jersey, one in every 206 of the population is a ward of the State—either a prisoner for crime, or insane, or feeble-minded, or diseased. Burlington County has the highest proportion of these delinquents or dependents—one to every 155 of the population. This is one reason why the study was made there. It was believed—as the evidence fully confirmed—that mentally defective and vicious and criminal classes were in some places allowed to propagate their kind dangerously. A spot called "The Pines" was notorious. Decent people living near it were aware of the facts and called for help. Even from within the degenerate community itself an occasional appeal would come to the charity officials. "Can't yer do som'thin' with Beck and Ida?" It was to this region that Miss Kite went, and for two years explored conditions there. They are almost unspeakable; and it gives one a shock to find that they are possible in one of our oldest States. But what the report sharply emphasizes is the fact that the State cannot afford to neglect such an open sore. From it infection radiates. Not only so, but the pollution, even if confined, means steady additions to the imbeciles and insane and criminals for whom the State has to care.

The report gives fictitious names to the persons whose lives she investigated. Among these, two or three families—or, at least, fathers and mothers and children—stand out prominently. One of these is called "The Lackey Family." In it 292 individuals were charted up and down for three generations. It is a dark record. Out of the whole number only six are put down as entirely normal. As many as 174 were illegitimate. There were three outright imbeciles; while those whose history led to the almshouse and prison numbered scores. Another family is designated the "Dixon-Osborn"—names not the real ones. Here 199 individuals were recorded, and the facts are summarized as follows:

RECAPITULATION.

Individuals recorded.	Male.	Female.	Total.
Normal	10	3	13
Normality in?	2	2	4
Unknown	2	5	7
Normal and criminal	1	..	1
Degenerate	60	64	124
Degenerate and almshouse	3	3	6
Degenerate and criminal	15	5	20
Degenerate, almshouse, and criminal	1	1	2
Degenerate, illegitimate	6	9	15
Degenerate, illegitimate, and almshouse	..	2	2
Degenerate, illegitimate, and criminal	2	..	2
Illegitimate normally in?	1	..	1
Illegitimate died in infancy	1	..	1
Died in infancy	..	1	1
	104	95	199

It was the business of the agent of the Department of Charities and Correction only to ascertain and report the facts. The Commissioner, Mr. Joseph P. Byers, undertakes to set forth a part of their significance. First of all, the State must be informed. This is the object of publishing such a report, in itself so depressing. Until we know the sources of contamination, we cannot

intelligently go about the work of drying them up. Commissioner Byers remarks that the energy of the State has been mostly expended in quarantining, as it were, against these diseased classes of the population, instead of curing them. He would have such cases of plain degeneracy isolated, just as if they were infectious diseases. It may be that special laws will be necessary to bring such breeding of imbecility and criminality under restraint, but an enormous amount can be done by better enforcing the laws which we already have.

THE TEACHER'S QUANDARY.

"There was applause from the audience," so runs the report of the talk given the other day by the teacher of Helen Keller, "when Mrs. Macy said that after trying her own method in teaching she had finally followed the initiative of the child, never made her follow anything until she was weary of it, and that she believed that to be the proper way of educating children. 'I did not see then, and I do not see now, why a child should study something in which it is not interested. It is a waste of energy.'"

This view has been attracting a great deal of attention in recent years. One thing that has stimulated this interest is the remarkable stories that have come out from time to time about the achievements of a few individual children—particularly the son of Professor Wiener of Harvard and the son of Dr. Boris Sidis—who, educated by their parents upon a plan wholly different from that current in the schools, have shown extraordinary attainments at an early age. Professor Wiener has recently described in print the way in which he conducted the education of his children, collaterally with their attendance in the public schools. Like Mrs. Macy, he would have everything turn on the child's voluntary interest in his studies; his attitude on this point being perhaps clearly enough indicated by one incident in the school life of his son Norbert:

> He learned to read at a very early age. In many other respects, however, he was not as quick as plenty of children of the same age. I sent him to the public schools of this small town. Presently I was informed that he did not know the multiplication tables. I replied that he would know them fast enough when he was ready to apply them. For three mortal weeks I reasoned with this schoolmaster, and the only reply I could get from him was: "But your son doesn't know the multiplication tables." In despair I removed him from the school and set him to work at advanced mathematics: algebra, geometry, and trigonometry. He soon discovered the multiplication tables for himself.

In truth, however, opinions on the general question of educational method derived from individual experiences of this kind are entitled to extremely little weight. Professor Wiener protests that his boy is not unusually gifted, just as John Stuart Mill declared, in his autobiography, that he was a man of ordinary endowment, and that the apparently amazing things he had done in his early childhood and youth could be done generally under like teaching. But every teacher of mathematics knows the almost infinite differences among different pupils in their capacity for that study; and if every child that shies at the multiplication table, or finds in it no appeal to his sense of the useful or the beautiful, were to be allowed to postpone acquirement of it until he had been stimulated thereto by his interest in algebra, geometry, and trigonometry, that humble accomplishment would be missing in the repertory of a very respectable number of adults. Still less is the experience of Helen Keller a safe guide for dealing with the multitude; for, whatever may be the case with young Wiener, there can be no question whatever of the extraordinary character of Miss Keller's native gifts of mind and spirit, not to speak of the talent, skill, and devotion of her teacher. The few striking examples of success attained by the operation of the spontaneous interest of keen-minded children, guided by specially able and sympathetic teachers, are brought to public notice again and again; but of the great army of the commonplace, inert, unintellectual children, with whom the rank and file of teachers have constantly to labor, we hear nothing. "Why don't you select a course without mathematics in it?" asked a college professor of a faithful fellow who had failed again and again in calculus. "I like it about as much as anything," was the unexpected and unanswerable response.

Of the importance of making school work interesting to the child there cannot be too full a recognition. The waste and detriment that come from stupid and mechanical drudgery, where real intellectual life might be, is enormous. What we object to in the simple doctrine to which we have been referring is not its overestimating the value of mental interest, but its assumption either that this can be had for the asking or that in its absence nothing should be attempted. Conceivably all this might be true if an unlimited amount of individual attention were available for each child; though even then we believe the doctrine would have its limitations, for it is by no means certain that the discipline involved in mastering difficult, uncongenial tasks is without a great value of its own. But under the actual circumstances, the teacher must strike such balance as he can between the needs of those pupils whose interest is easily excited and of those whose intellectual curiosity is slight; of those to whom mastery of a subject comes with little difficulty, and those to whom it is a painful effort. The alert and able teacher will manage to make the subject interesting to many, while not neglecting to instil a fair knowledge of it into the minds of the others. And he will welcome any plan by which the waste attendant on this rough adjustment can be diminished. Some efforts in this direction are being made by school superintendents, and much more should be done. Rapid promotion for able students, more elasticity in the school routine, an increase of individual discretion on the part of the teachers, above all a higher standard of teaching ability, will help. But the problem will not be solved by the mere introduction of a new doctrine, or the mere adoption of a new attitude; for no one doctrine, and no one attitude, fits the complicated variety of young human beings for whose intellectual welfare the teacher is called on to care.

MISCELLANEOUS GERMAN BOOKS.

The new popular edition of Dr. Paul Schlenther's "Gerhart Hauptmann" (Berlin: S. Fischer) is such a thorough revision of the first edition, which dates back fifteen years, as to be virtually a new work. It is a valuable commentary on the development of Hauptmann during this last decade: it discreetly alludes to crises in his life which affected his work, confirms the impression that the poet's growth has reached a period of transition, and explains some of his recent failures. In the "Jungfern vom Bischofsberg," which

was hailed by his antagonists as evidence of his decline, he had intended to glorify the halcyon days of his youth spent at Hohenhaus, where the three sisters dwelt that were to become the wives of Georg, Carl, and Gerhart Hauptmann. Women of culture and character they were, and faithful aids of the two poets in their years of storm and stress. But the vein of pure comedy is not strong in Gerhart Hauptmann and the memory of that great happiness had somewhat faded. Thus Schlenther accounts for the weakness of the play which had all the elements of a dramatic success. "Gabriel Schillings Flucht" and "Ratten" were also probably too long delayed and, when at last written, left his workshop before they were ready. In Schlenther's opinion, "The Fool in Christ" seems to indicate the zenith of his powers in those last trying years.

Among the most attractive features of that excellent and now long suspended weekly conducted by the late Theodor Barth, *Die Nation*, were the contributions of Felix Poppenberg. This writer penetrated, as did no one else, the spirit of new authors, and his style had a rare personal flavor. Such qualities make the volume of his essays, entitled "Maskenzüge" (Berlin: Erich Reiss), one of the most interesting of recent publications. The first part is called "Menschlichkeiten." Out of the letters of Hans von Bülow the author has constructed a life-like picture, and has used the correspondence between Bismarck and his wife for a similar purpose. Of curious interest is the chapter entitled "Mein Fürst" and devoted to the famous eccentric, Pückler-Muskau. Poppenberg also pays tribute to Therese Huber, one of the first "advanced" women of Germany in the eighteenth century, and draws a peculiar parallel between her and the type embodied in George Moore's Evelyn Innes and Jakob Wassermann's Renate Fuchs. Some fifty pages are given to studies of several volumes of love letters which the "psychological" inquiry of our time has dragged forth from the past. Poppenberg's comments upon this epistolary literature abound in pungent thought. Caroline Schlegel and Rahel Varnhagen could hardly be better characterized than by his words: "Carolinen-Genialität steht gegenüber das theoretische Liebestalent der Rahel."

Karl Scheffler is a writer who challenges attention by his seriousness and simplicity. His "Gesammelte Essays" (Leipzig: Insel-Verlag) begin with "Die Moral der Qualität," which contains some remarkable statements. Scheffler finds in the nation that daily talks to itself about religion and morals, art and beauty, and tries to prove to itself what is beautiful, moral, or strong, a symptom of its uncertainty and poverty. He deplores the sophisticating power of foregone abstractions and the frantic attempts at producing new forms of culture:

> Die deutsche Nation besteht fast nur noch aus "Gebildeten." Und das ist eben der Grund ihrer Unproduktivität in allen Idealen. Denn die Herrschaft von Theorien und Begriffen bezeichnet stets einen Zustand des Stockens oder Versiegens der eigentlich schöpferischen Kräfte, einen Zustand der Schwäche. . . . Die einzige würdige Kulturpolitik ist die Selbsterziehung des Einzelnen zu reiner und gefühlsstarker Unterscheidungskraft.

For the second group of papers the editor of *Kunst und Künstler* stands sponsor. They deal with the grotesque, with ornament, with German architecture, with the picture-book, and the Christmas tree as works of art, with artists in social life and with those that died young. Scheffler produces a startling array of names to prove that the art of painting lends itself to early development and realization. The paper on "Nationalphrasen" contains this noteworthy passage:

> Je schwieriger der Sinn einer Zeit zu fassen ist, desto reicher geht die Saat der Nationalphrasen auf; je verwirrter ein Geschlecht ist, desto mehr versteckt es seine Unsicherheit hinter falschen Sicherheitsgedanken. Wir sehen die Phrase darum heute regieren und opponieren, befehlen, gehorchen und sich auflehnen, schwärmen und höhnen; sie hat Gastrecht im Lager der Konservativen, der Liberalen und der Sozialdemokraten, im Reichstag und in der Volksversammlung, im Theater und im Gerichtssaal. Nur in die Werkstatt dringt sie nicht, ins Kontor, nicht dahin, wo das wirtschaftliche Leben mit eisernem Zwang absolute Sachlichkeit und produktive Nüchternheit fordert.

The book closes with a paper on youth which is an earnest protest against that German education which trains the intellect at the expense of the body, removes the child further and further from contact with nature, and fosters opportunism. At first sight the rising generation raises hopes. The quantity of talent has enormously increased, but the quality is disappointing. It is "Nerventalent" and a product of greater susceptibility and irritability. Although it is combined with keenness of intellect, Scheffler misses in it the naïve creative element, the manly.

Hermann Bahr's facile pen is also represented by a volume of "Essays" (Insel-Verlag). These papers on an amazing variety of subjects bear traces of having been republished with little or no changes from a newspaper column. But Bahr is exceedingly well informed on everything pertaining to modern letters, music, and art. Nor does he confine himself to the German-speaking part of the European Continent; he deals with Goethe, the Goncourts, and Tolstoy, Klinger, Manet, and Zuloaga, Brahms, Wagner, and Strauss, Sven Hedin, and even Walt Whitman. He says of the last:

> Whitman is the first poet since Goethe who has given art a new motive. All other poets are contained in Goethe. But Whitman discovered a new human realm. He represents the thoughts and emotions and the new rhythm awakened in man when he steps from his isolation into the life of the community. He has discovered the democratic man for art.

In one of the essays he emphasizes the difference between the European and the American attitude towards nature, which makes of Thoreau a unique figure among the nature-writers in any language, and envies Americans for having so much earlier than the Europeans learned to live nature. Like Scheffler, Bahr is seriously concerned about the German conception of "Bildung." He denies that knowledge and learning solve the problem. He wants education to become a more vital element of life, one that will give us strength to do and to suffer:

> Dies ist Bildung; kein Besitz von Kenntnissen, sondern immer mit aufnehmender Seele bereit zu sein und sich aller Erscheinungen des Lebens zu bemächtigen.

He refers to Goethe, Schopenhauer, Nietzsche, and Paul de Lagarde in support of his opinion, and quotes the late Moritz von Egidy: "Kunst und Wissenschaft nicht mehr neben unserem Leben, unser Leben selbst." His own conception of the mission of education Bahr formulates thus: "Aus theoretischen ästhetische Menschen zu machen, das ist die Aufgabe der Zeit"; and in surveying the work of the German university he comes to these pessimistic conclusions:

> Ich bin im Innersten sehr mistrauisch, ob unser Universitätswesen überhaupt noch irgendeiner Zukunft fähig ist. Es wird heillos viel Kraft vertan, und man kann vor lauter Chinesentum kaum mehr atmen. Rettung ist nur durch die Studenten möglich. Aber nur dann, wenn sie sich entschliessen, ihren absonderlichen Hochmut aufzugeben und am Leben der Nation teilzunehmen. Ihre Zukunft ist beim Volk.

Peter Altenberg is an Austrian of quite different character and calibre. He incarnates the essence of that over-refined intellectuality and over-sensitive emotionalism by which young Austria has added a note of its own to modern German literature. The titles of his works suggest their contents and their quality, "Wie ich es sehe," "Was der Tag mir zuträgt," "Prodromos," "Märchen des Lebens," "Die Auswahl aus meinen Büchern," "Neues Altes," and "Semmering 1912" (Berlin: S. Fischer). They are all intensely personal. His vivisection of the soul produces astonishing results. A group of aphorisms is entitled "Noch nicht einmal Gedankensplitter," and the last part, "Noch nicht einmal Splitter von Gedanken.' This characterizes the hair-splitting analysis to which Altenberg subjects his own men-

tal process. If his "ideation" produces nothing but "splinters," his emotional life knows nothing but "nuances." Altenberg is a pathetic specimen of a world that has so long scorned direct contact with unspoilt nature that it has become completely estranged from the fundamentals of life.

A library of political and sociological literature is in process of publication by Eugen Diederichs of Jena; it contains a score of very timely works by scholars of eminence. One of the most recent of these publications is Gustav F. Steffen's book, "Die Grundlage der Soziologie." Contrary to the tendency of some modern writers to apply the standards of natural science to all the sciences, Steffen contends that sociology calls for a different treatment from that given to science of inorganic nature. He says in his introduction, in which he acknowledges his indebtedness to Bergson, Wundt, and the Viennese logician, Stöhr:

In der Biologie (oder Physiologie) hat es der Forscher mit einem Gemische des Lebendigen und des Leblosen zu tun. Die Soziologie aber hat zum Gegenstande reines Leben, d. h. nichts als menschliche Bewusstheit und die Wechselwirkungen zwischen den Gedanken, Gefühlen, Bestrebungen des einen Menschen und denen anderer Menschen. Deswegen wird diejenige Methodenfrage, welche schon in der Biologie auftaucht, erst in der Soziologie (und Psychologie) aktuell.

He divides his "system" of sociology into seven parts. The first is contained in his book, "Der Weg zu sozialer Erkenntniss," and the second in "Die Irrwege sozialer Erkenntniss," both published by Diederichs; the third deals with the position of sociology among the sciences, the fourth with the psychic fundamentals of social life; the fifth is called "Das Naturmilieu des sozialen Lebens"; the sixth deals with social groups, and the last with sociological laws.

A. von Ende.

NEWS FOR BIBLIOPHILES.

We have turned the pages of some thousands of sale catalogues, but seldom have we been so deeply impressed by the personal interest of the books and manuscripts described, as in our first eager going over of Sotheby's Catalogue of their sale of May 1 to May 8 next. This collection, sold by order of the executor of the late Robert Wiedemann Barrett Browning, comprises the intimate belongings, literary and artistic, of his parents, Robert Browning and Elizabeth Barrett Browning.

We are not among those who decry the sale of such material, though we may be thankful that the son did not himself in his own lifetime send his family treasures to the auction block. Nor are we one of those who regret that the collection was not given to a public institution. Public institutions are grand helps to culture; they are storehouses of the accumulated treasures of ages; but they have no hearts. These manuscripts and letters of the two Brownings—these books given to them by their friends, fellow torch-bearers of "life and love and light"—will, as they become scattered, give inspiration, or exaltation, or, at the least, a keen pleasure in possession, to many a future owner, some true and sincere admirers and lovers of the Brownings and their writings, others, perhaps, mere collectors of literary rarities.

The catalogue is in five parts, the first, paintings and engravings, containing among others a drawing by Rossetti, the Portrait of Tennyson Reading Maud, and several portraits of Mr. and Mrs. Browning; the second, the manuscripts and letters; the third, the books, and the last, the objects of use or ornament, comprising such personal relics as Mrs. Browning's writing case, as she left it on June 29, 1861; her table, upon which she is said to have written "Aurora Leigh" at Casa Guidi; and a reliquary containing a lock of Milton's hair.

The manuscripts and books interest us most. At the head of all is lot 166, the Love Letters, two hundred and eighty-four letters from Robert Browning and two hundred and eighty-seven from Elizabeth Barrett Browning, the only letters which ever passed between this pair, for after their marriage husband and wife were never for a day apart.

The manuscripts of most of Robert Browning's books are in the library of Balliol College, Oxford; one important volume, the collection of poems printed under the title of "Dramatis Personæ," is in the J. Pierpont Morgan library, and one is offered in this sale. This is Browning's last book, "Asolando," published on the day of his death, December 12, 1889, ninety-three pages of manuscript. An equally priceless manuscript is "A Last Word to E. B. B.," six pages, first printed with the title "One Word More" as the final poem in the collection "Men and Women," published in 1855.

There are other Robert Browning manuscripts in the sale, but they are scrappy in character. The poet, many years before his death, destroyed the manuscripts of many of his early writings.

But an unsuspected wealth of Mrs. Browning's manuscripts has been preserved, first in importance being the complete autograph manuscript of "Aurora Leigh," 410 pages, octavo. Of less bulk, but no less precious, are the forty-three "Sonnets from the Portuguese," the printer's copy used in the edition of 1850; also earlier drafts of twenty-seven of the Sonnets. Two manuscripts of "An Essay on Mind," both incomplete; manuscripts of "Prometheus Bound," "Casa Guidi Windows," and "Poems Before Congress" are other important lots. Besides these, there are numerous note books, some containing very early poems, and several parcels of odds and ends of manuscript. Robert Browning seems to have collected his wife's letters from their recipients, and here they are—between three and four hundred to Miss Mitford; two hundred and forty to Hugh Stuart Boyd, the blind scholar; fifty-five to Mrs. Jameson, and others. Many of these are unpublished.

Among letters to the Brownings are series by Carlyle, Landor, Ruskin, Swinburne, Tennyson, Rossetti, Leigh Hunt, Locker Lamson, Lord Lytton, B. W. Procter, and others, besides one letter from Dickens and two from Thackeray. Of the greatest literary interest is Rossetti's first letter to Browning, in which he tells him that, two or three months before, he had found at the British Museum a poem, published in 1833, entitled "Pauline: A Fragment of a Confession," which, not being able to procure from the publisher, he had transcribed entire. From its analogy in style to "Paracelsus," he surmised it to have been written by Browning.

The most valuable of the printed books is a copy, in the original boards with label, of this same "Pauline," Robert Browning's first book, but its proper companion, Mrs. Browning's first book, "The Battle of Marathon," of which fifty copies were printed in 1820, does not appear. There are several copies of some of her later books, and for the most part they are inscribed copies. Of "An Essay on Mind" (1826) there are the copy given by Miss Barrett to her mother, the copy given to her sister Arabel, and a third with autograph signature of Robert Browning. Of the "Poems Before Congress" (1860) there is the copy given by Mrs. Browning to Robert Browning, with interesting manuscript matter inserted, and another copy given by Robert Browning to their son. Several of Browning's own books are presentation copies to the son, whom they called "Pen" or "Penini."

The library contains a few old books picked up from time to time by Mr. or Mrs. Browning (one, as he has noted, bought by weight), mostly bearing the signature of one or the other; but the principal value lies in the nineteenth-century books, given to Mr. or Mrs. Browning by their several authors. These include books with inscriptions by Tennyson, Landor, Carlyle, Meredith, Ruskin, Rossetti, Matthew Arnold, Leigh Hunt, William Morris, and Thomas Hardy. Among Americans are presentation copies of books from Lowell, Hawthorne, Whittier, and Bret Harte.

Correspondence

THE NEW POETRY.

To the Editor of The Nation:

Sir: In various current discussions of the work of the cubist and futurist painters it has been remarked that there are signs of similar efforts in the field of literary composition. Thoughtful observers are beginning to be conscious that in poetry, as in music, the principles of Futurism have come to be accepted in theory and attempted in practice by a significantly respectable number of persons, and that their effect upon the present and future of these arts cannot be left without consideration. In saying this I do not venture to assume any complete understanding of what the principles in question are. Judged by their fruits, however, they may be summed up under the several formulæ which students of literary history recognize in connection with the familiar types of the morbid hypertrophy of romanticism—for example, these: (1) the exaggeration of the importance of a personal emotion; (2) the abandonment of all standards of form, and (3) the suppression of all evidence that a particular com-

position is animated by any directing intelligence.

These remarks are suggested by a rather painful bit of recent evidence in the field of poetry. A year ago there appeared a new periodical, called *Poetry, a Magazine of Verse*, which was heralded as an organ which should at once prove that poetry still lives in these United States and help to make it live the more. It was said to be endowed; it was to pay all contributors; it was to emanate from Chicago—all these things suggested a fine hopeful vigor. A year has passed, and the magazine has seemed, on the whole, to maintain the hopes it excited; it has, at least, been able to present a considerable amount of new poetry from writers both known and unknown. But at the end of the twelvemonth the editor expresses some discouragement with the offerings that have come to view. The causes of this discouragement deserve attention. The young poets, it seems, are "pathetically ingenuous" in their attitude; they seem "as unaware of the twentieth century as if they had spent these recent years in an Elizabethan manor-house or a vine-clad Victorian cottage." And by this it is not meant that they are not alive to the current interests of the race, but that they write "in old forms which have been worn thin by five centuries," instead of forging new "chains for the English language," as if it had never before been subdued to poetry. Even Mr. Alfred Noyes tries to keep alive epic and ballad measures, and even Mr. Masefield swings into the stride of Byronic verse. The younger generation, we may infer, has not yet been made sufficiently immune to the stimuli of the poetry of the past. They cannot, to be sure, read Greek—there is no complaint of sapphics and hexameters, as there would have been in other days—but they do seem still to read their Shakespeare, Wordsworth, and Tennyson, and to have lighted their fire from these poets, instead of viewing them as a builder of a modern casino ought to view "an Elizabethan manor-house or a vine-clad Victorian cottage."

In order that we may be in no doubt as to what the editor of *Poetry* welcomes, in contrast to these trite effusions, the same number gives more than half of its poetic pages to a collection of what may safely be called futurist verses. They open thus:

> Will people accept them? (*i. e.*, these songs);

they refer with elaborate indecorousness to the reporters, professors, and pretty ladies who will *not* accept them; they flaunt occasional indecencies which are at once harmless and inexcusable, because unconnected with passion; they are guiltless of form, as form is known to masters or students of the art of poetry—in short, they exhibit with wanton richness all the signs of what I have called the morbid hypertrophy of romanticism. That they are not without certain merits is not to the point just here.

I am firmly of the opinion that the morbid banalities of Futurism are better ignored than attacked, and should not think of addressing this letter either to the editor or the constituency of *Poetry*. But for those of us interested in the present state of the arts, and still in allegiance also to the old laws, it cannot fail to be a matter of concern that the younger generation, aspiring—as always—to do for us what others have done for other ages, should be nurtured in part upon the undoubtedly sincere nonsense of the editorial I have outlined, and probably insincere nonsense of the verses that form its background. There is a moral here, of some sort, for all who can exert any influence upon the young. As I have already hinted, I do not think it is to the effect that we should raise the cry against the false prophets and their art—"Tear them! Ho! fire-brands! Burn all!"—but rather that we should renew our energies in teaching the right principles on which all true art is founded, and so enable our children to test and throw aside the products of distorted imaginations, even if they are fascinatingly novel and full of color and noise.

I have one other humble aim in writing this letter. Being at present an eligible witness from the great Middle West whence the magazine *Poetry* arises, I wish to offer my testimony that hereabouts, as elsewhere, the old poetry is still what is wanted by the two kinds of readers that alone count in the long run; the great mass of the plain people, and the great mass of the truly cultivated—the readers and teachers of literature. When Mr. Noyes was lately here, his Elizabethan ballads and Victorian lyrics were received with really notable enthusiasm—not because he is a great poet (whether he is or no is not implied), but because he speaks the language, metrical, emotional, and ethical, of our race. If the contributor to *Poetry* were to appear among us, urging his songs to

> Dance and make people blush,

without the riot of advertising which preceded the paintings of the kindred school, his work would also attract two classes of admirers, but two classes which are fortunately small in number—the frankly lascivious and the devotees of *art nouveau*. "So hath it been, so be it," whether in the vicinity of Chicago or the antipodes.

The University of Illinois, March 11.

EXCHANGE PROFESSORS.

To the Editor of The Nation:

Sir: Many subjects were offered for discussion at the interesting conference of college French professors, which was held recently in New York, and was honored by the presence of his Excellency the Ambassador of France to Washington, M. Jusserand, and by Prof. J. Bédier, of the Collège de France, a special delegate of the French Government for this occasion. One of these questions—that of exchange professors—is of general interest.

Prof. Hugh Smith, of the University of Wisconsin, gave an impressive picture of the conditions prevailing in some of the Western universities regarding the difficulty in arousing interest in certain subjects, when the university was left to its own resources; he mentioned the system of the exchange professorships as a means of coping with the difficulty.

After speaking of the foreign exchange professors—an idea familiar to us all—he suggested the idea of domestic exchange professors. This has been for a long time a pet idea of mine, and possibly for this reason the paper of Professor Smith appealed to me particularly.

Our students can hardly be said to get all the benefit possible from a foreign exchange professor. The question of language is always a difficulty, except for English scholars. Few Continental professors know English well enough to give the full measure of their attainments. And if they speak their own language, they are not understood by many. We need not deceive ourselves on this point; many go to lectures of foreigners to see, not to hear. Moreover, a professor from abroad can seldom have the necessary insight into the mind of the American student; whereas, evidently, a man who has taught in America and who knows the conditions, can bring about better results, even if he should not be as scholarly or as original as his European colleague.

Suppose, then, that instead of taking a foreign scholar, we take a professor of some other American university, let us say a Columbia man exchanging with a Wisconsin man, the chances are that there will be nothing but profit for the University, for the professor, and for the student.

For the college: A new man is always an inspiration. And he can be that without disturbing the equilibrium of a department; since only frequent changes in the regular staff would be harmful. If the visitor is better than the man he is exchanged for, he stimulates; if he is not so good, he acts none the less as a stimulant—indirectly—by allowing the people of the institution to realize their superiority, and prompting the desire to maintain the standard, and even to raise it higher.

For the professor: To face another set of students than those he is used to in his own classroom at home, has a most stimulating effect. Those of us who have done summer-school work have felt this keenly. Summer-school work is perhaps not to be encouraged because it only adds summer fatigue to winter fatigue. But the good effect without the ill could be derived from a system of exchange.

For the student: With the present arrangement of the college curriculum, it is difficult for our students to go from one institution to another, as they do in Europe, and thus to obtain the advantage of variety of teaching. By the occasional exchange professorships, a college would render the student the service of forcing him to change, and preventing him from limiting his experience of instructors. Even should the student still prefer the first professor, he would by comparison realize better why he likes him and not the other—a result by no means negligible. ALBERT SCHINZ.

Bryn Mawr College, April 12.

THE AMERICAN DISCOVERED.

To the Editor of The Nation:

Sir: Are we not safe, even in a popular scientific monthly, from the cocksureness of the generalizer who knows by the actions of two or three what *all* Americans do? Herr Henning, of Denver, has confided to the Berlin periodical, *Himmel und Erde*, that the "average" American has neither liking for nature and its beauties nor understanding of them. This he proves by stating that Americans prefer to go to Europe with well-filled purse, and play the

"noble." We do not care for our own country. The "considerable number" of tourists which the railways carry to our various natural sights are almost entirely from Europe. Not even do we take walks for scenic pleasure or geologic study. Our mountain clubs, merely for sport, do not compare in any instance with the European clubs, especially the Deutsch-Oesterreichischer Verein. We have "no popular scientific literature of any kind," and descriptions of travel are to be found "höchstens" (!) in a few of the better magazines which cater to a small public. Herr Henning sums this up as conclusive proof that we are not won over to nature, but prefer to give all our time to amassing dollars.

This is followed by a few paragraphs of personal experiences to show even more decidedly how black our ignorance is. While one is genially disposed to grant the ignorance, one cannot help feeling assured that in these particular instances the good professor has been the butt of an impertinent American waggishness. The American wears not only his learning lightly, but also his ignorance.

In answering his question, "Why does the American know so little of what is A B C to even the German yokel?" Herr Henning comes to the heart of the matter. Our "education!" *Ach weh!* It suffers the ignominy of quotation marks. We have no education—that is, what we have is "virtually the same all over the country" and is on the "lowest thinkable level." The cause is the total inefficiency of our teachers, women teachers, that is. This he proves by one example of incapacity of one teacher in Milwaukee. Teacher, textbook, and superintendent of public instruction are all political institutions, here today, gone to-morrow, never adequate to the situation. The superintendent, by the way, is "in most States a woman."

As for the high schools, they are "boys' and girls' clubs," serving merely for sports and flirting. Learning, if at all, is poor and secondary in importance. No pupil knows anything when graduated. Proof of this is seen from the description of Darwin by a young lady graduate. She called him a "traitor against Scotland in the time of Mary, Queen of Scots."

Darwin reminds him of modern philosophic conceptions. We haven't any! They are forbidden, it seems. The church, which we thought separated from the state, holds us in its grasp, and will not let us study science, especially geology.

Herr Henning now comes to his conclusion with the acknowledgment that though there are many, many flies, there is a little ointment after all. The United States Geological Survey is a "grossartige" institution, and six of our universities are commendable. The men in these institutions have studied at "real" universities here, or—more probably—have learned true science ("echte Wissenschaft") in a German university. Herr Henning calls upon us to oust the females ("Frauenspersonen") from their desks and replace them with educated men teachers, and then we may hope to raise our standard. Then light may come "ex-Oriente" over the Western mind. HARRIET ANDERSON.

New York, April 12.

LIVINGSTONE AND STANLEY.

TO THE EDITOR OF THE NATION:

SIR: I was struck, upon reading your appreciative article on Livingstone, by the concluding paragraph:

> Americans of a generation back got their most vivid knowledge of Livingstone through Henry M. Stanley. The remarkable influence which Livingstone exerted upon Stanley, in the time they were together, has not often been noted, although the latter freely confessed it. But the fact is that Stanley was thereafter a changed man. He had been simply a keen and somewhat jaunty newspaper correspondent, ready to face hardship and go anywhere in order to get a sensational bit of news. But it seemed as if virtue went out of Livingstone to Stanley; for thereafter he entered upon the phase of his life which, with all its unhappy mistakes, brought out his qualities and won him his place on the list of African explorers. It all dated from that historic meeting in Ujiji.

It is quite true that Livingstone left a lifelong impress on Henry M. Stanley, but if you will look back at your files of 1871 I think you will find that you expressed doubt of the whole story of Stanley's discovery of Livingstone, because the style of Livingstone's letters, which Stanley brought back with him from the heart of Africa, were so utterly different from Livingstone's previous writings as to stamp the whole story as a fiction. Livingstone had had no intercourse with the white man for years, had not spoken the English language, and his letters were interlarded with the newspaper slang which Stanley at that time used. JAMES DOUGLAS.

New York, April 2.

Literature

A LEADER OF MODERNISM.

Autobiography and Life of George Tyrrell. In Two Volumes, Arranged with Supplements, by M. D. Petre. New York: Longmans, Green & Co. $6 net.

The duplex authorship and nature of this book are shown by the wording of its title. It is both an "autobiography" and a "life," the second beginning where the first leaves off. The Autobiography, which fills the first volume, was written in 1901, when Father Tyrrell was forty years old, and covers the period from his birth to the death of his mother in 1884. The Life, which fills the (much larger) second volume, is written by Miss Petre, a woman who knew Father Tyrrell intimately, and who has, by a very generous use of his letters to friends and foes, made the latter part of the work as autobiographical as possible.

The Autobiography is a rather strange work. It was not intended for publication, and Tyrrell's purpose in writing it seems to have been to make clear to himself, if possible, how he came to be a Catholic and a Jesuit. The work gives one the impression that throughout the years recounted, and, in fact, even while writing the book, the author was puzzled with himself. And, whether this was the case or not, certainly the reader who tries to understand Tyrrell's drift from Protestantism into the Society of Jesus will be puzzled. But the puzzle itself makes the Autobiography a peculiarly interesting document. The details of Tyrrell's outer life during these first twenty-three years are dull enough, to be sure; the interest is altogether centred in the strange spiritual drift towards a goal which, he assures us again and again, frequently repelled him. Born and brought up in a strongly anti-Catholic atmosphere in Ireland, he was as a child almost lacking in any religious sense, and at ten ceased, as he says, to be even a "non-believer" and became an "unbeliever." According to his own account, he had few redeeming features even of an intellectual or moral sort—"untruthful, violent, irreligious, idle, and good for nothing except ineffectual tinkering." But at about fourteen two new influences came by the merest chance into his life, which eventually were seen to mark the beginnings of his one real interest. He happened, namely, to read Butler's "Analogy" and so to gain a new respect for religion, and he happened to drift into a high Anglican church in Dublin, apparently because it bore the euphonious name of "Grangegorman."

Grangegorman interested and pleased him from his first visit, why, he hardly knew, except that he "felt instinctively that the difference between an altar and a communion table was infinite." And when his mother criticised some features of the service he flew eagerly to its defence, and his liking for it grew as a consequence. "Thus," he writes, "my first interest was in the very fringe and extreme outskirts of Christianity, and from these I was gradually driven, by force and need of consistency, to the centre and core. The wish that the whole system might be true, the wish that I could pray and believe, was soon strong in me, and made me disposed to catch at any shadow of justification for belief." And though for years he still felt considerable repugnance at the "tawdriness" of the Irish Catholic churches, and was also quite unable to accept intellectually the Catholic doctrines, he determined at this early time to enter the service of the Church—and, if possible, of the Catholic Church—and to give his life to the cause of religion.

It was, apparently, the genuine desire to be of service, coupled with the "will to believe," that led him not only out of boyish "infidelity" into membership in the Anglican Church, but out of that into the Roman fold. For if, by any chance, the Catholic claims *were* true, then in its service would be found the greatest opportunity for usefulness. In 1879, under the influence of Father Dolling, Tyrrell left Ireland for a short visit

(as he thought) in London; though as it turned out he was never to revisit his native land. In London he saw both Anglo-Catholicism and Roman Catholicism at greater advantage, and here the wish-to-believe had its full sway with him. "I felt," he says, "it would be Rome or nothing. I knew dimly that I had not any real *faith* in Rome—only a great wish that I could believe."

The same desire for service and will-to-believe that led him into Catholicism took him over, at the same time, the whole distance into the Society of Jesus. It was characteristic of his big nature to do thoroughly whatever he did at all. He knew little about the Society, but to his boyish imagination there was a glorious halo of self-devotion around it; and his belief that Protestants had foully maligned it and that its one great aim was unstinted service in the cause of religion and the cause of truth settled the matter for him. In an impulsive moment he turned both Catholic and Jesuit.

No sooner was Tyrrell within the Society of Jesus than the inevitable process of disillusion began. On nearer acquaintance it turned out to be anything but what he had expected; and the last six chapters of the Autobiography form a rather sad account of the struggle of his still brave will-to-believe against the disappointing dearth of the spirit and of any sort of enthusiasm for the defence of truth, coupled with the "wooden and mechanical" exercises and uninspiring tone of the community, to which he could not fully blind himself.

The Autobiography ends in the midst of his struggle to make himself into a good Jesuit—a struggle carried on while teaching in Jesuit schools in Cyprus and Malta, and while studying at Manresa and Stonyhurst—and the Life takes up the tale in the same rather sad epoch.

The interest of most readers in this second volume will centre upon Tyrrell's continued efforts to be an orthodox Catholic and a good Jesuit, the gradual wearying of even his stout will-to-believe, his final rupture with the Society, and at last his break with Rome. The beginning of the end came at about the time he wrote his Autobiography—namely, in 1900, when his article on "A Perverted Devotion" (an attack upon the dogma of Eternal Punishment) was censured by the Jesuit authorities. Not only was his work condemned; but he was forced to publish what he calls "an absolutely fatuous and unmeaning" retraction of it, and was restricted both in his writing and in his work as a priest. For a time he endured these conditions, but before long he found that life in the Society of Jesus was for him unendurable, and he applied for a release, accompanying his request by several long letters to the General in which he expresses in no uncertain terms his feelings of disgust towards the Society which had been suppressed so long. The request was temporarily withdrawn before it was technically granted, but in 1906 he was suspended from the Society on account of a certain heretical and unsigned article of his which had come to the General's notice. Once out of the Society, he was in a rather anomalous position. No Bishop would receive him into his diocese. Hence, though a Catholic priest of good and regular standing, he could not *act* as a priest anywhere. And though for some time he made futile efforts to regain the "celebret," he seems to have felt really much happier out of the priesthood than would have been possible for him under the restrictions which an active priest is bound to observe. In fact, from now on to the end we find Tyrrell more and more the militant champion of truth, nothing loath for any encounter in its defence, and with the old desire to subject himself to authority quite gone. The wish-to-believe had played itself out.

In this militant mood Tyrrell could take but one attitude towards the Pope's Encyclical Letter "Pascendi" of September, 1907. In characteristically bold fashion he published an answer to the Pope in the *Times* and the *Giornale d'Italia*. And to this attitude of Tyrrell's the Vatican could make but one response, namely, to deprive him of the Sacraments—which it did in October, 1907. In spite of this virtual excommunication, however, and in spite of all the faults and weaknesses in the Catholic Church which he so plainly saw, he persisted in calling himself a Catholic to the very end. The Anglican Church, to be sure, had strong attractions for him in his later years—so strong that he seems at times to have considered seriously the step of returning to it. The fact is not without significance that when the end came, in July, 1909, the Church of his adoption refused to admit his body within her consecrated ground, and he was buried, by a Catholic abbé, in the hospitable soil of the Church of his baptism.

To write the life of such a man was no easy task, and Miss Petre has done her work well. In spite of her friendship for Tyrrell, she has in no place indulged in anything like panegyric. She has stated the facts of his spiritual history in almost coldly simple terms. And if the reader feels at the end (as he probably will) that he has been led into something warmer than mere admiration for George Tyrrell, it will be due to the genuine nobility and sweetness of his nature. His life was a strange one, exhibiting the struggle between two fundamental human tendencies, the will-to-believe and the love of truth. Had the former of these not enjoyed undisputed sway in his earlier years, George Tyrrell would never have entered the Catholic Church, and would have led a much happier and more peaceful life. But had he done so his unique service to the cause of liberal religion, and let us hope to the Catholic Church itself, would never have been performed.

CURRENT FICTION.

Deering of Deal. By Latta Griswold. New York: The Macmillan Co.

To the child of any age and of either sex a story of a boys' school makes perennial appeal. The prevailing note of this one justifies its sub-title, "The Spirit of the School." Possibly, few others have so emphasized this motive as tingeing not only the boys' work and play, but the morale and tradition of the school, and supplying a permanent court of appeal for boys and masters. If discipline seems a little brutal at times, a little lax at other times, the instances are superficial and not of the substance of the book. A fine manliness is the code on the whole, and the boys make interesting portraits. There are thrilling ball games, wonderful feats of swimming, adventurous visits to delightful pirate caves in the woods, with all the joys of cryptic cooking—a poor thing, but their own. There is hazing cleverly met and cruelty signally punished. There are the ups and downs of boy friendships, the purblind teacher, the hopeless boy. But Tony Deering and his little knot of friends are good and pleasant company, while the masters, for the most part, the prefects, and the fine old Head inspire even the casual reader with a fondness for Deal School. Mr. Griswold distinctly states that the school exists only in his imagination, though sharing certain topographical features with the school at Newport with which he is connected. In the atmosphere of sea and beach, river and wood lies not a small part of the charm of the story, nor the least of the influences on the spirit of the school. We may hope that it is the scapegoat proof-reader and not the author who continually lets "whom" take the place of a nominative; and writes of "exceptionable" privilege and "unctious" enjoyment.

Stella Maris. By W. J. Locke. New York: John Lane Co.

As most readers will already know, the heroine who gives her beautiful name to this book is a young girl who, owing to some weakness of the spine, passes her days lying on her back in a chamber whose windows look out over the ocean. Her life is a kind of fairy

dream to herself, and to her kinsfolk and friends she is the star of the sea, Stella Maris, a gleam from some fairy sky. The friends are two young men of London, one an idealistic actor, the other a burly writer for the press whose wife has been sent to jail for vicious cruelty, and who takes into his charge the victim of her mania, a homely orphan girl. Of course, Stella Maris is cured of her weakness, and becomes an object of more human devotion to the two young men. The plot therefrom develops logically, but not without some surprises and some melodrama.

Mr. Locke reaches a deeper tone in this story than he has ever done before. The whimsicality of his manner is in evidence, but there is a strain of strong feeling running beneath it all, passing through horror to tears. The book is a success; and yet, after it is laid down and the first swell of emotion has subsided, one begins to wonder whether there is not somewhere a false note in the appeal, something hollow in the fabric. Perhaps these questions are provoked by the author's style: it is clever, but with a certain petulance; it is on occasion poetical, but the effects have been obtained by cunning and do not rise from a quietly nourished imagination. A more serious artistic defect is the inability of Mr. Locke, as of most of our modern writers when earnest, to speak from a large and immediate sympathy with humanity. There is sympathy in abundance, but troubled and deflected by humanitarian philosophies and prejudices.

But, withal, the first impression of a novel in these days is the thing. And the charm of "Stella Maris," if somewhat equivocal to a slower judgment, is quick and entrancing to the impressionable reader.

Pilgrims of the Plains. By Kate A. Aplington. Chicago: F. G. Browne & Co.

The diary method of story-telling has gone out of fashion, but it has its advantages. It is especially appropriate to this tale of a journey over the Santa Fé trail in the forties; it gives a verisimilitude which could not easily be obtained in any other way. It also brings out unobtrusively the quaint and quiet charm of "Deya," the diarist-heroine, a delightfully old-fashioned girl. These are the two great merits of the book. There is not much plot, and the heroine is not remarkably successful in characterizing other people; but she gives a naïvely attractive account of herself, and her story of the caravan and its progress over the plains has a reality which recalls Parkman's narrative.

This is partly due to the author's mastery not only of local color, but of what we may call temporal color. In style and substance the book is steeped in the atmosphere and sentiment of mid-Continental and mid-century America. The dress, the manners, the language, the songs of that earlier time are all there; generally not forced upon the reader's notice, but part of the story. The author has been especially interested in the songs of the period, and has included the words and the music of many of them. In their diversity they suggest the widely variant elements of the people; they are English, Scotch, Irish, German, African, and Indian. There is an interesting version, with music, of "Lord Thomas and Fair Eleanor"; there is "Captain Kidd," and "Martin Halligan's Aunt," and "The Battle of Point Pleasant." We cannot resist the temptation to quote "Robin Tamson's Smiddy," with its admirable sneezing chorus:

Last Monday night at sax o'clock,
To Mirren Gibbs' I went, man,
To meet wi' some old cronies there,
It was my sole intent, man.
So down we sat wi' right good will,
Syne I pu'd out my sneeshin' mill.
And took a pinch wi' right good will,
O' Beggars' Brown, the best in town,
Then sent it round aboot the room
To gie ilk' ane a scent, man,
Yi-den-derry, Yi-den-derry,
Yi-den-derry, yaw, man!
Yi-den-derry, Yi-den-derry,
Yi-den-derry, yaw, man!

The Story of Stephen Compton. By J. E. Patterson. New York: George H. Doran Co.

It is surprising to see how few novelists are primarily interested in human life and character. The author of "Stephen Compton" regretfully admits in his preface that in a novel, "after all, the bulk of the matter must be a human story," but it is clear that he is chiefly interested in weightier affairs. He has written a rather odd mixture of old-fashioned Sunday-school book and sociological novel-with-a-purpose. We meet the old friends of our childhood; the two brothers—one a cripple, endowed with all the virtues, the other just as generously equipped with all the vices. The virtuous Stephen, though he is peculiarly attractive to women, on more than one occasion fairly out-Josephs Joseph. After a long struggle upward, during which he supports the worthless and vicious Amos, Stephen becomes Prime Minister, and puts through an extensive programme of reform legislation. His main idea seems to be the nationalization of land with its improvements. Amos, the wicked, comes to a suitably discreditable end. The *deus ex machina* by whose aid Stephen is enabled to realize his great ambition is an American multi-millionaire who for some unexplained reason is desirous of reforming England.

The style of the book is wordy, involved, and inaccurate. One sentence will serve as a sample: "Hence the two men went down together—while Mahafferty, now also at the Bar, journeyed to the north, on a political trip of his own—Bryanstone being gloomy and depressed, to fits of which he had been subjected recently." The volume can be recommended with confidence to teachers of rhetoric in search of horrible examples.

Poor Dear Margaret Kirby. By Kathleen Norris. New York: The Macmillan Co.

In "Mother" and "The Rich Mrs. Burgoyne" this writer expressed a wholesome philosophy of unworldliness. She holds a brief for the old-fashioned woman, who prefers the ancient and blessed duties of wifehood and motherhood, and even of housewifery, to the ardors of social emulation. The excitements of bridge and the activities of the women's club fare equally ill at her hands. The fruitless and exhausting process of keeping up with one's neighbors is a particular object of her quiet ridicule. There is no sharpness in her satire, since it is based on pity rather than scorn. It is her task to show that all the really happy women in America are the contented wives and mothers and housekeepers who stick to their jobs and make the most of them. The bridge players and the social strivers, the women who follow "culture" or political privilege, are simply outsiders and unfortunates. This is all very reactionary, but it evidently appeals to a large constituency of readers. It is, we dare say, of a piece with the "return to the soil" motive in popular literature.

The short stories here collected were published in magazines, ranging from the *Atlantic Monthly* to the *Metropolitan*. Read together, with the two longer stories of the same character in mind, they pall a little. They are likely to remind the most devotedly domestic of readers that a vein of sentiment, however wholesome, must be worked with caution if it is not to run out in sentimentalism. Children are not at all hours creatures of delight. To the household toiler even the women's club may offer a refreshing change of drudgery. People are not always made happier by losing their money. But in hundreds of thousands of homes among our striving fellow-citizens, the doctrine of home no doubt needs preaching. And to give a sermon power over a miscellaneous audience requires iteration and a heightening of emphasis which the mere artist avoids. If these tales are tracts, they are tracts in the best sense, presented with skill, and inspired by real feeling.

GREEK METRIC.

The Verse of Greek Comedy. By John Williams White, Professor of Greek Emeritus in Harvard University. London: Macmillan & Co. 12s. net.

When Schmidt's "Leitfaden" was published (1869), Professor White welcomed the system offered in that work and in 1883 published a translation of it. Since that time he has published several works, including articles in journals, on the subject, and he has been for a number of years working on Aristophanes. He came, therefore, to the present undertaking exceptionally well equipped. The extent of the change that has taken place in his views can best be understood if one compares his translation of the "Leitfaden" (which he fully endorsed) with the book under review. It would be difficult to find any other two works on any one subject as diametrically opposed in thesis. This fact does not necessarily discredit the later work, which is an important contribution to the New Metric.

Professor White relies chiefly on the testimony of the ancients, and on their theory of the origin and history of the various verse-forms, filling gaps by means of a careful study of the extant poetry. The book is not adapted to the use of undergraduates; but for Greek scholars, whether they accept the author's views or not, the work is indispensable.

In the Introduction is given a brief history of the modern doctrine of ancient metres, beginning with Hermann. We should have expected some mention of Bentley, since he originated what Hermann afterwards named anacrusis, and discovered the synaphea of anapæstic systems. In the rest of the work every topic pertaining to comic verse is fully discussed, and in the treatment of the various metres virtually exhaustive statistics are given to illustrate all the phenomena about which any question might arise.

A brief comparison will show the difference between the author's former and his present views. In his earlier work the greatest importance is attached to "ictus" in the modern sense of "stress"; several pages are devoted specially to it, and in the treatment of every kind of foot and verse it plays an important part. Some ictuses are stronger than others, and one foot may have two or even three ictuses. But now the author denies that there ever was any ictus (stress) in ancient Greek music or poetry. That Schmidt's hair-splitting distinctions between ictuses of different strength rested on no foundation was obvious to many, nor is Professor White the first to deny that there was any stress at all. There is no mention of stress in extant ancient works, and it is true that if one reads any of the familiar metres, making long syllables really long and short syllables really short, the rhythm will take care of itself. The rhythmical sense being aroused, the reciter will observe the quantity more exactly than in reciting prose, and the feet will be unconsciously equalized. Still, it is difficult to believe that, when spondees replaced anapæsts, they were recited exactly as they were when they replaced dactyls, or that dactyls replacing anapæsts were exactly like true dactyls, or that a series of resolved trochees or iambs was recited simply as a series of short syllables. Professor White himself seems unconsciously to recognize stress when (p. 55) he says: "The penthemimeral and hephthemimeral pauses so divide the trimeter that the second rhythmical phrase always begins strongly with a thesis." What does "strongly" mean here?

In the author's earlier work all rhythms were "descending," those that begin with the arsis being "treated with anacrusis" or analogously; but in the book before us there is no anacrusis, or basis. We could wish that the author had been more explicit here. The anapæst he divides into arsis and thesis; but the *measure* is the dipody or monometer, which is likewise divided into arsis and thesis, and points, indicating the "down time," are placed over *both parts* of the second foot. But, surely, the thesis of the second foot, that is, its ictus in whatever sense we use the term, must agree with that of the dipody. Soldiers marching certainly planted their feet as the thesis of each anapæst began. Analogous difficulties arise in the case of other metres, especially iambics.

In the treatment of cæsura, the author seems to us to have insisted too strongly upon the necessity of a grammatical pause and upon considering such pauses as having rhythmical significance. Even in elegiac verse there is often no grammatical pause, but close connection, at the point where the verse is invariably divided. The fact that a late writer of unknown date says the cæsura in hexameters falls at the close of a "thought," need not concern us. We have the Iliad and the Odyssey, and can see for ourselves. To appeal to such an authority is like citing Aristotle to prove that comets are atmospheric phenomena connected with earthquakes.

Too much importance seems to be attached to Hephæstion. This author does not reveal any acquaintance with Aristoxenus, as he treats all the metres known to him and yet gives no hint of that "irrationality" which Aristoxenus fully explains. Some scholars, indeed, believe that irrationality is mentioned in the "Enchiridion," but they obviously misinterpret the passage in which it is supposed to be mentioned.

There are several other matters concerning which the views expressed seem open to question. Of this fact the author himself is aware, and not rarely indicates the tentative nature of his theories.

The book is well printed. We noted only two or three errors in the Greek examples and as many in the accompanying metrical schemes.

The Story of My Boyhood and Youth. With illustrations from sketches by the author. By John Muir. Boston: Houghton Mifflin Co. $2 net.

John Muir's account of his early years, printed serially in the *Atlantic Monthly*, has now been published in book form. It is a notable piece of autobiographic writing—the story of an unusually interesting boyhood and youth told with an energy and an eye for the diverting and significant that distinguish it at once from the slipshod garrulity of most books of the kind. One may open the volume at any page and be confident of striking either a passage of extraordinarily vivid description or an entertaining episode that closes with a curious solemnizing effect. As a literary artist, Mr. Muir sins at times through using loose constructions and phrases of doubtful reputation, and his galloping style on occasion quite runs away with him; but although the ruthless future may choose to forget the book on account of these weaknesses, the generous present will find them unimportant in comparison with the excellences.

The first fifty pages are devoted to the author's boyhood in Dunbar, beside the North Sea—the discipline of his simple life at home, under the eye and the switch of a sober, "all-Bible" father; his learning by heart the entire New Testament and three-fourths of the Old; his lessons in self-reliance through daily and more than daily fist fights; his precious holidays in the country, listening to the skylarks and running ten or twenty miles at a stretch; his early skill at climbing, manifested, on one occasion, by his perching astride of the dormer roof when his mother had left him sleeping like a gude bairn; and his instruction at school by the old-fashioned Scotch teachers. "We were simply driven pointblank against our books like soldiers against the enemy, and sternly ordered, 'Up and at 'em. Commit your lessons to memory.' If we failed in any part, however slight, we were whipped; for the grand, simple, all-sufficing Scotch discovery had been made that there was a close connection between the skin and the memory, and that irritating the skin excited the memory to any required degree."

At the age of eleven he accompanied the family "to the wonderful schoolless, bookless American wilderness"—"Oh, that glorious Wisconsin wilderness!

Everything new and pure in the very prime of the spring when Nature's pulses were beating highest and mysteriously keeping time with our own!" They settled a dozen miles from Portage, before a lily-rimmed pond which they named Fountain Lake, and here, by dint of an extraordinary energy even exceeding that characteristic of immigrants, had soon established a prosperous farm. Eight years later they moved to a larger tract of land in the neighborhood and the relentless labor began once more; "even when sick we were held to our task as long as we could stand." Yet these were the happiest of days. The chapters that form the bulk of the volume (A New World, Life on a Wisconsin Farm, A Paradise of Birds, Young Hunters, The Ploughboy) describe with a twofold enthusiasm, that of the impressionable boy and of the venerable man looking into the past, the joys of those early days in a strange land—the passionate response of his young heart to the beauty and fulness of life that confronted him at all seasons and all hours.

Having reached the age of fifteen or sixteen, the lad was visited by an ever-growing desire for knowledge. In spare minutes he studied mathematics, and read books borrowed of neighbors or purchased by his father. When the rest of the family had gone to bed, he lingered in the kitchen with a book and candle, endeavoring to read till the inevitable command issued from his father's room, and thought himself lucky in stealing "nearly ten minutes, magnificent golden blocks of time," two or three times in a whole winter. Finally he contrived to get permission to rise early, which he interpreted to mean one o'clock, so that he found himself master of five solid hours before the day's labor began. These hours he spent in inventing wooden machines—hygrometers, pyrometers, an "early-or-late-rising machine," a self-setting sawmill, a clock that indicated the day of the week and month and started fires. At the age of twenty-two he took the advice of a neighbor who proposed that he should display his inventions at the State Fair in Madison, as a means of admission to the wide world. Carrying "two clocks and a small thermometer made of a piece of old washboard, all three tied together" —a combination pronounced by one villager "a machine for taking the bones out of fish"—he boarded the locomotive of a train and soon found himself in Madison achieving a great renown at the fair. The sight of students in the little university town having keenly roused his appetite for education, he entered the University of Wisconsin, where, by means of money earned in the summers, he was able to spend four years in studying and in devising curious machines. The interruption in his education due to the emigration to America did not, in that day of solid achievement, prove to be a serious matter: "After an interruption of a dozen years, I began my Latin over again where I had left off; and, strange to say, most of it came back to me, especially the grammar which I had committed to memory at the Dunbar Grammar School."

The Mikado's Empire. By William Elliot Griffis, D.D., L.H.D. In two volumes. Twelfth edition, with eight supplementary chapters, including history to beginning of 1912. New York: Harper & Bros. $4 net.

The first appearance of this compendious work, in a single bulky volume, twenty-seven years ago, was welcomed by all who desired an interpretation of Japan. The writer had seen from the inside the marvellous reconstruction of a feudal state, which found itself called upon suddenly to adjust itself to modern requirements. For a time he lived in a daimio's castle in the interior, and then went up to the capital to serve on the faculty of the Imperial University. His close association with Dr. G. F. Verbeck, for some years Superintendent of Education at Tokio, was invaluable in giving him a statesmanlike view of the situation. Of Verbeck he makes a hero—"greatest in moral force of all the European foreigners who in any century came to Japan." Both believed in the Japanese, entertaining high ideas of what they were, and what they would surely accomplish. With some pardonable pride the author points to the fulfilment of the prognostications he made in the winter of 1903-4, just before the breaking out of the Russo-Japanese War: that no Russians would land in Japan except as prisoners; that a well-equipped army would be in the field across in Manchuria within one year; that Russia would meet disaster on the sea; and that the spirit of the Samurai would inspire the whole of the Japanese forces. The settled policy of the empire, from 1870 until the present, is rightly referred by Dr. Griffis to the momentous decision taken by a conclave of Japanese statesmen who met in Verbeck's house in July, 1870. Part of them were for trusting in the goodwill of the nations of Europe, and for devoting the whole of the national resources to education and internal improvements. It was the advice of their Superintendent of Education, a Protestant missionary, to nourish no such hopes. "War is the history of mankind. . . . I advise you to fortify your coasts, to raise a national army, and give all classes the opportunity to participate in patriotism."

It is odd to have to lay the responsibility of the military policy of the Japanese Government in great measure on the shoulders of an American pastor of the Dutch Reformed Church. The reviewer remembers an address delivered by Verbeck before a Japanese audience in Tokio, in which he recommended Christianity for the empire. "Who but Christian nations can build great warships?" was one appeal that excited the astonishment of a critical auditor. Dr. Griffis holds that the future of Japan lies in the direction of commerce and industry, that her leaders have always realized this, and that the military phase is only due to her belief that without military strength and prestige commercial and industrial expansion is impossible.

Dr. Griffis has sought to keep his work up to date by adding successive chapters from time to time, as new editions appear. The time has come, however, when this new material should be woven into a consistent whole, with a single point of view. Awkward inconsistencies crop out. For instance, in supplementary chapter iv (p. 622) he states that "Frenchmen reorganized the army," while "the Germans have directed the higher medical education of the country." At page 702 he tells us that one of the first acts of the victors of the Yalu was to "send a telegram of gratitude to Meckel." This pupil of Von Moltke was their German instructor, and the incident points to the change of policy in the early eighties, when the military system came to be modelled in all its details, even to the uniforms, upon German methods.

The particular value of Dr. Griffis's book ceases, indeed, with the period of the seventies, when he was actually on the spot. In his résumé of the years from 1880 to 1890 he fails to notice the monetary crisis of 1882, when the flat paper currency fell to 80 per cent. discount, and national bankruptcy seemed imminent. The crisis was ably met, and four years later specie payments were resumed. Nor has he anything to say of the world-tour taken by Ito and his associates at this very time, to investigate the constitutions and parliamentary working of foreign governments. The tour resulted in an attack of what was facetiously termed "German measles." The Imperial University in Tokio was reorganized in 1886—absorbing Verbeck's University—when half of the foreign professors were brought out from Germany; only one American, the professor of law, remaining. This is left unnoticed. He fails to describe the intense anti-foreign movement of 1889-91, when there was an insistent call for revision of the treaties. The *soshi*, or political bravo, then asserted himself, a term Dr. Griffis uses later, incidentally, and without adequate interpretation. The map, facing page 17, is now out of date.

He has nothing to say of Count Okuma in connection with the founding of Waseda University, nor of Fukuzawa's University, the Keiogijiku; and yet he refers to these men at some length, and also incidentally to "the universities of Tokio." This sin of omission is actually associated with blunders, when he speaks of "Dr. Divers, founder of the College of Engineering," at page 658, and at page 712 rightly credits Dr. Henry Dyer, author of "Dai Nippon: a Study in National Evolution," with its organization. Divers was the immediate successor of Dyer as its principal; it was merged in the greater University. There is also the misspelling of the names of Walter Dickson and H. W. Denison. The account of Yezo or Hokkaido, the northern island, is inadequate without mention of the coal mines of Poronai, which give their importance to the ports of Mororan and Otaru. There are three blunders in one line of page 653, which deals with the subject: "Hokodate (Hakodate), farther to the east (south), can hold a hundred (ocean-liners). Hotaru (Otaru) is the next port of importance."

But these blunders are few. More irritating, as detracting from the value of an admirable compendium, is the frequency of tawdry rhetoric, ill-balanced periods, and sentences that won't parse: *e g.* (p. 608), "Then, in a long course of war, the soldiers, finding nearly permanent employment, keep sword, spear, and armor; while the farmers clinging to hoe and hook, two classes are formed out of the masses of inhabitants beyond the court and beneath the nobles."

King Edward in His True Colours. By Edward Legge. Boston: Small, Maynard & Co. $4 net.

The writer of this edifying book has sufficient discretion, taste, and skill with the brush to suffice him in his task of whitewashing a royal memory. Whatever can be effected by splashing with a thin material over a large surface is here effected. We begin with the assumption that King Edward, and more particularly Albert Edward, Prince of Wales, was a much underrated and even maligned person in his own day, and is still pictured by the world in false colors. The method is to rehearse the old charges—to build up, one by one, the ancient half-forgotten men of straw, and then to assault them in force. That the Prince was an idler, a spendthrift, a gambler, a person of common tastes and pleasures, is indignantly postulated and denied. For example, the writer rehearses in detail the circumstances of the Baccarat scandal—in detail, but, as always, without clearness. We get the impression that he is furiously indignant at a world capable of criticising a prince for the commission of a fault which cannot be denied. The odd workings of this commentator's mind may be indicated by a passage, from another chapter, alluding to this scandal:

> The "young man," as Bismarck always called William II, had taken it into his head to write a very impertinent letter to the Prince of Wales protesting against any one holding the position of a Colonel of Prussian Hussars embroiling himself in a gambling squabble, and playing with young men young enough to be his sons. The communication was very ill-advised on the part of the Kaiser, for, not only did it arouse the anger of his uncle, but it made Queen Victoria perfectly furious—the more so because she found it impossible to justify her son's association with "such people" as the defendants in the Tranby Croft case.

That the nephew's reprimand was ill-advised is clear enough; it was anything but impertinent, as Mr. Legge's own account of the incident sufficiently shows. The comment of the *Nation* at the time probably suggests as fair an apology as could or can be made for the Prince:

> Neither his education, nor his mental powers, nor his place in the British hierarchy offered him assistance in abandoning the life of "a man of pleasure" which the English political and social conditions imposed on him almost as soon as he reached his majority; in fact, the hereditary monarchy in England at present provides no serious pursuit for the heir to the throne.

That the Prince had from youth one grave and important study, in which he was sedulously coached, and for which he showed remarkable aptitude, is the chief serious contention of the present book. Here Mr. Legge takes violent issue with Sir Sidney Lee's memoir of King Edward in the Dictionary of National Biography. The judgment of the memoir that the King exercised no powerful diplomatic initiative, that he was not directly responsible for the successes in dealing with foreign Powers which marked his reign, becomes an object of staccato ridicule. Mr. Legge has more than the manner, and less than the logic, of a Scotch reviewer. The tributes to the King's diplomatic ability by such men as M. Poincaré, Comte d'Haussonville, and Professor Vambéry, here cited, are of interest. But which way are we of the twentieth century to look when we find our champion, after his prodigies of skill and valor, throwing up the sponge in this cheerful fashion?—

> But even if Edward VII were proved on oath to have been *"un esprit médiocre," "une grande capacité méconnue,"* "a statesman of the second class," a man who was "no reader of books," because "he could not concentrate his mind upon them," "a man who lacked the intelligent equipment of a thinker," a Prince who for years was not allowed to be initiated into State secrets because his mother feared he would divulge them "over country-house dinner-tables"; even if all these were sworn to on the Holy Book; even then, the millions who owe fealty to the British Crown and who have enshrined King Edward in their loyal hearts would say with the friend of the glorious Dead: "The legends woven by the People round their Sovereigns ought not to be destroyed."

Yet if there is anything (beyond the authority of the Dictionary of National Biography) which this book appears to be seeking to destroy, it is the body of legend woven by the people round Edward of Tranby Croft, of Paris, and of England!

The Mahā-vamsa, or Great Chronicle of Ceylon. Translated into English by Wilhelm Geiger, Ph.D., Professor of Indogermanic Philology at Erlangen University, assisted by Mabel Haynes Bode, Ph.D., Lecturer on Pali at University College. London: Pali Text Society; New York: Henry Frowde.

The Government of Ceylon could have selected no one to re-translate the Great Chronicle so well suited to the task as the eminent scholar who had just completed his edition of the text. It was indeed high time that a new translation should be made, since Turnour's translation dates back to 1837, and the Chronicle is of sufficient importance to be presented with an accuracy impossible to attain seventy years ago. Well-considered, too, was the resolution not to translate into verse the metrical original, but to keep to literal prose. As a work of literary excellence the Chronicle is negligible; as one of the few attempts of the Hindus (Ceylonese) to write history at all, it is worthy of an exact reproduction into English.

There has been no little discussion as to whether the Great Chronicle is really a trustworthy source of information. The facts appear to be these. About the close of the fourth century A. D. there existed a history of the island "from the beginning," that is, the history of the island as a settlement of Buddhists, the "beginning" reaching back to the sixth century in India. Originally it extended only to the arrival of the missionary who introduced Buddhism into Ceylon; but it was continued, as time went on, and a small Chronicle in Pali verse represents the first "clumsy redaction" of this history, afterwards extended and refined and known as the Mahāvamsa, which represents an intentional rearrangement of the small Chronicle, called the Dipa-vamsa. The date of the Great Chronicle would be about the sixth century A. D.

As to the real value of the present work for historical students, opinions differ. Granting that the local statements may be correct, have we any reason for supposing that statements in a Ceylonese chronicle six hundred years

after Christ are at all likely to illuminate the history of events six hundred years before Christ in India? Franke says no; Vincent Smith says it is very doubtful; Rhys Davids, however, declares that the Ceylon Chronicles are as trustworthy as the best of those of England or France, and Geiger, in his admirable introduction to the present work, shows that, after due allowance is made for the marvellous, the traditions recorded are supported in many instances by outside testimony, a fact which should, of course, serve to convert them into really historical material even when not so controlled. Thus the Ceylonese date of Buddha's death is 483 B. C., and apart from the Chronicle there are traces of a Ceylonese era dating from that year.

The Chronicle, apart from the history of the extension of the faith in Ceylon, which is its main content, is incidentally full of interesting and entertaining matter. As a history it starts with Buddha himself, gives an account of the Councils, the conversion of the world, the arrival in Ceylon of Mahinda (the miraculous way in which he arrived and propagated the religion being the subject of several cantos), and then recounts the story of wars and great deeds (the making of the relic-chamber, etc.), concluding with the history of groups of kings, arranged by dozens and disposed of somewhat summarily. As a store of general information, often given incidentally, it is perhaps even more valuable than as a formal history. Thus the contention that the Buddhists won their victories by wholly peaceful means receives a proper rebuff when it is told how a king slew thousands and was comforted with the thought, "They were heretics, to be esteemed as wild beasts." Another king cuts off the toes and noses of his victims (in India it is usually the ears and noses). One king thinks it would be amusing to pretend that his guard is king; so he instructs the court and soldiers to do all that the fellow commands, while he himself wanders disguised about the town. On his return the imitation king cries, "Seize this fellow; off with his head," and so one dynasty changes hands—or heads. Here, too, we learn that "gifts to the monks lengthen the giver's life," and much more that smacks of what is common in Hinduism, but is not often so plainly put in Buddhism. Here, too, the old Hindu Pantheon still keeps its grip on the imagination, if not on the faith of the people. The chief god is Brahman, and Indra and his angels are still apparently real, if subordinated to the new divinity of Buddha. The kings fight for glory of the doctrine and use deception to obtain holy ends, just as the sectarian Hindus did. The festivals, too, are quite in the old style; the feasting and dancing and music are thoroughly heretical in tone; even the decorated tree, once object of worship, is preserved and decked with ornaments, and offerings are made to it; much as the Christmas tree retains the flavor of its heathen origin. One example only can be given of the wit of this Great Chronicle: To test the wisdom of a man, the most wise one asked, "What name does this tree bear?" "This tree is called mango." "Is there another mango besides this?" "There are many mango-trees." "Are there other trees besides this mango and other mangoes?" "There are many trees, but those are trees that are not mangoes." "And are there, besides the other mangoes and those trees that are not mangoes, still other trees?" "Yes; there is this mango."

We have noticed only one error in the notes. On p. 144, Dhatarattha is given as the guardian of the East. It should be of the North.

Notes

Putnams publish this week "The Fringe of the Desert," a story by Rachel Swete Macnamara, and "Little Thank You," by Mrs. T. P. O'Connor.

Forthcoming books of John Lane Company include: "The Invincible Alliance," a volume of essays by Francis Grierson, and "Changing Russia," by Stephen Graham.

A combined German grammar and reader, "Deutsches Lern- und Lesebuch," by Prof. W. E. Mosher and Dr. Florence G. Jenney, is in the press of Heath.

In "The Book of Job," announced by Sherman, French & Company, Homer B. Sprague offers a new translation from the Hebrew, besides special studies of the work.

Upton Sinclair will publish shortly, through the John C. Winston Company, a new novel, entitled "Silvia." It deals with social problems.

John Stuart Thomson announces that his book, "China Revolutionized," will be out in a fortnight.

April 26 is the date set by Houghton Mifflin for the publication of the following titles: "Polly of Lady Gay Cottage," by Emma C. Dowd; "Gettysburg: Stories of the Red Harvest and the Aftermath," by Elsie Singmaster; "Brass Faces," a mystery story by Charles McEvoy; "The Value of Organized Speculation," by Harrison H. Brace; "A Naval History of the American Revolution," by Gardner W. Allen; "Strange Stories from the Lodge of Leisures," translated from the Chinese by George Soulié; "The Youth of Henry VIII," by Frank Mumby; "The Kindergarten," by Susan Blow, Patty Hill, and Elizabeth Harrison; "College Life," essays by Le Baron Russell Briggs, Riverside Literature series; "Riverside Seventh Reader," edited by James H. Van Sickle and Wilhelmina Seegmiller; "Preparing for Citizenship: An Elementary Textbook in Civics," by William Backus Guitteau; "The Second Book of Stories for the Story-Teller," by Fanny E. Coe; "New Ideals in Rural Schools," by George Herbert Betts, and "The Teaching of History," by Ernest C. Hartwell.

Winston Churchill's new novel, "The Inside of the Cup," will be ready in May. Macmillan is the publisher.

The same house has in hand "The Larger Aspects of Socialism," by William English Walling, and "With the Bulgarian Staff," by Noel Buxton.

With May begins a new English literary and artistic monthly, announced by Martin Secker. Middleton Murry will be the editor. On the literary side will be Gilbert Cannan, Frank Swinnerton, and Hugh Walpole; Albert Rothenstein will be art critic, and Edward J. Dent will attend to the music.

Prof. Arthur Livingston, of Columbia University, has in preparation for issue next year a translation of the Italian dialogues of Giordano Bruno, with selections from the Latin works.

In a letter to the London *Times*, Mr. Edmund Gosse contributes a note of some importance on Swinburne. It appears that for the past fifteen years critics of the poet, Mr. Gosse among them, have accepted as Swinburne's juvenilia a dozen pieces of verse contributed to *Fraser's Magazine* between March, 1849, and June, 1856, and signed "A. C. S." But these poems, it seems, are included in a volume of "Metrical Miscellanies" which has just turned up. It was printed for private circulation in 1854. "Curiously enough," says Mr. Gosse, "it was printed by Savill and Edwards, who printed some of Swinburne's early books. But we now know who the author was, and that he had nothing whatever to do with Algernon Charles Swinburne or with any of the Swinburne family."

A work on land forms, "Die erklärende Beschreibung der Landformen," by Prof. W. M. Davis, of Harvard, recently published in Leipzig, is the subject of the opening article in *Die Erde* for March 15. This is followed by an illustrated account by Prof. H. Pohlig of the famous mining district of Batopilas in Mexico.

The possibility of a war between Russia and Turkey for the possession of Armenia leads *Petermanns Mitteilungen* for February (just received) to furnish in its military department a strategic description of the frontier, with a valuable map, by the Prussian Gen. E. v. Hoffmeister. It is the result of personal observations made in 1910. Considering the preparations of the Russians, especially in the building of roads and establishing fortified posts, and the utter failure of the Turks to make similar defences, he is convinced that the Russian conquest is assured. Among the other subjects treated are the present condition of Antarctic research, as shown by the results of the last German and English expeditions, and the law which controls the concentration of population.

The "Annual Index" of the London *Times* for 1912, just issued, consists of 1,845 pages. Its value and usefulness as a chronicle of the leading events of the year cannot be overestimated. Fourteen pages, for instance, are devoted to aeronautic facts, thirty to the political, industrial, and financial history of this country, and thirty-six to the

Balkan War. The record of the literary output of the year fills twenty-six pages.

We are glad to see that Henry Osborn Taylor's "Ancient Ideals," first published in 1896, justifies a second edition (Macmillan), as it is always pleasant to learn that a book of earnest and wide-reaching scholarship can hold its place in the stream of current publications. We are bound to add, however, that it is scarcely creditable in an edition advertised as "revised" to allow words and book titles in foreign languages to flaunt such indifference to the accepted rules of spelling and accent.

Three of Woodrow Wilson's essays have been reissued in a volume of the Riverside Press series (Houghton Mifflin). The essays are "Mere Literature," first published in the *Atlantic* in 1893; "The Author Himself," which had already appeared in the same magazine; and "On an Author's Choice of Company," published in the *Century* in 1896. The edition is limited to 550 copies. The book is a tall, thin octavo, printed on handmade paper, and bound uncut in dark paper boards, with cloth back and gold title—a fittingly handsome form.

The experiences related in Samuel G. Blythe's "The Making of a Newspaper Man" (Altemus) have been paralleled in the lives of many another of the craft. Unlike the usual narrative of newspaper failures and successes, this one has to do almost entirely with non-metropolitan journalism. For the most part, it is entertaining. Like one kind of romance, it stops when, at the age of thirty-two, the author "arrives."

In "Symbol and Satire in the French Revolution" (Putnam), Mr. E. F. Henderson has put into more permanent form a part of the interesting material which he has given at various times in the form of illustrated lectures. It is a valuable contribution to the study of the Revolution because it contains one hundred and seventy-one well-selected and well-printed plates reproducing the curious cartoons and engravings of an epoch unusually rich in symbolism and satire. Mr. Henderson's illustrations are almost all new and fresh. He has not even borrowed illustrations from the excellent volumes of Armand Dayot. On the contrary, most of his material has been photographed from the original prints in Paris. Some three hundred pages of text serve both as an outline sketch of events in France from 1789 to 1795, and as a running commentary upon the illustrations, interpreting the subtle or significant points in the cartoons.

There is nothing particularly thrilling in "The Romance of the Rothschilds" (Putnam). Certainly there are no sensational revelations, such as rumor led us to expect, calculated to embarrass the present representatives of the family. The tale told by Ignatius Balla is for the most part a plain, straightforward narrative, and if the original German was marked by any particular graces of style these certainly do not appear in the translation. The story of the family is remarkable enough: Maier Amschel, a humble Jew, living in the Ghetto of Frankfort, a man without even a surname (the patronymic Rothschild probably originated from the "red shield" which distinguished Maier's house), gradually built up a banking business in connection with the court of Hesse, and on his death-bed sent forth his five sons to carry on his enterprises in five great cities of the world, Frankfort, London, Paris, Vienna, and Naples, enjoining them strictly to conduct their affairs in common, to remain faithful to their religion, and to marry within their own family. These injunctions have been obeyed, so far as has been possible, by successive Rothschilds for close on a century, and the result of their united efforts is a fortune that can hardly be estimated in figures. The author does justice to the financial integrity as well as to the financial acumen of the Rothschilds, which enabled them, especially during the first half of the nineteenth century, to play so important a part in the history of Europe. Among the anecdotes given is one version of the disputed story of Nathan Rothschild's operations after Waterloo, and in the chapter on James Rothschild, of the Paris branch, are included some racy quotations from Heine which make good reading. One instance, not an isolated one, of carelessness is at the bottom of page 242, where "English" should probably be read for "German."

The last volume, just published in Richmond, Va., of the "Journals of the House of Burgesses of Virginia," embraces the period from March 19, 1702-3, to January 31, 1711-12, almost the whole of the reign of Queen Anne. In the history of Virginia it includes the latter part of Gov. Nicholson's term, the term of Gov. Nott, and the first part of the term of Gov. Spotswood, one of the best and ablest Governors Virginia ever had. There were four sessions of the Assembly of 1702-3—1705, one session of that of 1705-6, and two sessions of that of 1710-12. It is to be hoped that, when the publication of these volumes is completed, some one will condense the work into one volume. Gov. Nicholson is said to have made himself personally disagreeable to many leading men of the Colony by his autocratic and violent manners; he had the ambition to unite all the English colonies in America under one Governor-General. Gov. Nott, who came next, was not sufficiently supported by his predecessor's followers, and though he was tactful, his term of office was very brief, and he died soon after retiring. Of Gov. Spotswood the editor says that he "was possessed in the highest degree of courage, ability, energy, and persistency, and was by these qualities enabled to accomplish, despite his irascible and dictatorial temper, in the twelve years of his administration, more for the lasting good of the Colony probably than is to be credited to the account of any other Chief Executive of colonial Virginia." Gov. Spotswood suggested a postal system for the Colony, which was later adopted, helped to decide boundary disputes, erected forts, provided for the education of the Indians, improved the jails, etc. The proceedings of the session are described in Spotswood's Letters, Vol. I, Collection of the Virginia Historical Society, which furnish a commentary on the "Journals of the House of Burgesses," and are very useful for illustrating them.

"A Curtail'd Memoir of Incidents and Occurrences in the Life of John Surman Carden," written by himself in 1850 and now printed for the first time, with notes by C. T. Atkinson (The Clarendon Press), is a vivid, though somewhat ungrammatical and strangely spelled, narrative of a vigorous but comparatively little known English Admiral. Born with Irish blood of a Gretna Green marriage, he began a career in the English navy at seventeen on the India station. He was keenly interested in all that went on around him, and alive to a naval man's opportunities for observing men and things in many lands; his comments on India and later upon Egypt, when he assisted at the removal of the remnants of Napoleon's ill-fated expedition, are not always absolutely accurate from the point of view of zoölogy and archæology, but are full of interest. Returning to England in 1793, he shared in Lord Howe's victory in the Battle of the First of June, of which he gives a narrative, simple but vivid with falling masts and flying pieces of human bodies. In the War of 1812, in command of the Macedonian, he valiantly gave chase to Decatur in the United States, but when he overhauled him, found to his sorrow that the American was a ship of 1,578 tons, 58 guns, and 478 men, as against his own vessel of only 1,080 tons, 46 guns, and 259 men. He made a gallant fight, but finally had to strike his flag to the superior force. This misfortune virtually closed his active career, though he lived for nearly half a century longer. His description of this battle brings out some points not noticed by Capt. Mahan or Col. Roosevelt, or by the naval historian James. Mr. Atkinson thinks that Mr. Roosevelt, relying on the untrustworthy narrative of Leech, who had served in the Macedonian and then deserted to the American service, is unjust in representing Carden as a "merciless disciplinarian," guilty of an "unsparing use of the lash." One noteworthy fact, often overlooked in connection with the War of 1812, is the large percentage of British men in American vessels who had been splendidly trained as British seamen. Carden states this as one of the causes of his defeat, and says many of the crew of the Macedonian were recognized as old messmates by the crew of the United States. One of the English crew even found his own brother among the crew of the enemy, but when urged by that brother to enter the American service, replied, according to the English tradition, "If you are a d——d rascal, that's no reason I should be one."

The State of Wisconsin has several agencies, all under the able management of Dr. Reuben G. Thwaites, through which historical investigation may be pursued. One of these, the Wisconsin History Commission, established in 1905, has just published two more volumes on the period of the Civil War. The "Civil War Messages and Proclamations of Wisconsin War Governors" contains only selected passages from the documents, and furnishes a valuable contemporary picture of the activities of the State Executive for the maintenance of the war. The second volume, "A Narrative of Service with the Third Wisconsin Infantry," is the narrative of the experiences of Major Julian Wisner Hinkley, of the Army of the Potomac, and later with the Army of the Cumberland. Historians may be somewhat suspicious about the trustworthiness of this account, for the History Commission has amalgamated the narrative from a manuscript diary, several contemporary letters, and a manuscript narrative

written by Major Hinkley several years after the war, without indicating the source of the particular statements, although the final form has been submitted to the ostensible author for his approval. The narrative in its modern form is readable, but the publication of the originals would have been more acceptable to historians.

From 1795 to 1912 is the period covered by Dr. Kemp P. Battle in his "History of the University of North Carolina," the second and final volume of which has just been published at Raleigh, N. C. Besides having prepared exhaustive reference lists for the alumni, he has told in the form of a series of short biographies almost the whole story of the "Old North State." A characteristic of the book is its continuous personal note. Probably no other North Carolinian has first-hand knowledge of so many fellow Tar Heels as Dr. Battle, of whom it is said that he remembers every student who attended the university while he was its president, and nearly all who have been there since he laid down the reins to become professor of history twenty years ago.

Smith's Bible Dictionary, in the original four volumes and in the later one-volume abridgment, was one of the best-known aids to Bible study a generation ago. "The International Bible Dictionary" (John C. Winston Company), edited by Rev. F. N. Peloubet, assisted by Alice D. Adams, is based upon Smith, and purports to embody "the most recent and accepted research." This claim is not justified. There are frequent references to archæological discoveries, many interesting reproductions of photographs of present scenes in Palestine and other lands mentioned in the Bible, but the established results of historical study of the Biblical documents are either ignored or dismissed as unimportant. As a work of reference, therefore, this dictionary is misleading, although as a repository of names of persons and places mentioned in the Bible, with full Scripture references, it will be found useful. The work is of convenient size, low in price, but the paper is heavy.

To the spirit tired to death of the "very latest" and the "most efficient," few things are more restful than a big tome with a Latin name. And when the volume is a brand new one dealing with the vocabulary of a great master of modern literature, and is, furthermore, a product of our finest American scholarship, restfulness is tempered with pleasurable excitement. Our tariff laws may have caused us much vexation, but they have at least, by their discrimination against books printed in English, procured for our eyes the delight of such a title-page as this: "Dantis Alagherii Operum Latinorum Concordantiæ. Curante Societate Dantea quæ est Cantabrigiæ in Nova Anglia ediderunt Eduardus Kennard Rand et Ernestus Hatch Wilkins quos adiuuit Alanus Campbell White." The handsome volume is issued "Oxonii e Prelo Clarendoniano," and, as intending purchasers may be glad to know, may be had "Londini et Novi Eboraci apud Henricum Frowde." A dedication to Charles Eliot Norton, in elegant elegiacs, is followed by a modest "Præfatio," in which the plan of the work is briefly expounded in connection with an enumeration of the very slight deviations from the Oxford text. For this Concordance, like its immediate predecessor, is based on Moore's "Tutte le Opere di Dante Alighieri," although the compilers have accepted Rajna's corrections in "De Vulgari Eloquentia," Shadwell's in the "Quæstio de Aqua et Terra," Albini's in the Eclogues, and, as far as that *libello* came under consideration at all, Barbi's revision of the "Vita Nuova." Boffito's tentative edition of the tenth Epistle has not been utilized, nor, it should seem, Bertoni's emendations in the third. For the Letters and the "Monarchia," then, Moore's text has been followed absolutely, barring four corrections made by Dr. Moore himself and a few changes in punctuation. A much fuller exposition of principles and methods is to be found in Vol. XXIX of the "Annual Report of the Dante Society."

The Concordance includes not only the Latin vocabulary of Dante's Latin works, but also the Italian words cited in these same writings, and the Latin words occurring in his Italian prose and verse. The Italian side-heads are printed in italics. The quotations are long enough to show how the word is used. In this volume there is, of course, no division of the page between prose and poetry, such as was found expedient in Professor Sheldon's. The arrangement is intelligently conceived and consistently followed, and the print is clear and correct. A creditably short list of "Corrigenda" occupies p. 577, at the end of the volume. In preparing this work, as well as the Concordance of the minor Italian writings, two unsurmountable difficulties had to be faced: the bad condition of much of the text, and the uncertain authenticity of several of the parts. The only thing to do was to keep to one established edition; and this course has been pursued in both cases. The present work may, indeed, contribute as good evidence as any yet brought to bear on the vexed problem of the genuineness of "De Aqua et Terra" and the tenth Epistle. A survey by Professor Rand in the above-mentioned "Report of the Dante Society" shows that the linguistic usage of these two treatises is closely akin to that of Dante's unquestioned Latin prose; it offers also some indication of the probable chronological sequence of his principal Latin compositions. This publication brings to a close the admirable series of Dante Concordances begun by Fay and continued by Sheldon and White. It adds a new and notable achievement to the already proud record of the American Dante Society, in which Norton was so long the central figure; and it will win for its authors the everlasting gratitude of all lovers of the "altissimo poeta." *Benedicti in æternum Eduardus Kennard Rand et Ernestus Hatch Wilkins nec non Alanus Campbell White!*

John Brooks Henderson, ex-United States Senator from Missouri, who drafted the Thirteenth Amendment to the Constitution, abolishing slavery, died on Saturday in Washington. He was born in Pittsylvania County, Virginia, in 1826. One book bears his name, "State Banking and Railroad Laws," written early in his life.

Prof. John Westlake, for twenty years professor of international law in the University of Cambridge, is dead in London. He was born in Cornwall in 1828 and was educated at Trinity College, Cambridge. At one time he represented the Romford Division, Essex, in Parliament, and was a member of the International Court of Arbitration at The Hague. Professor Westlake's writings include: "A Treatise on Private International Law, or The Conflict of Laws," which went through several editions; "Chapters on the Principles of International Law," "International Law, Peace," and "International Law, War." He was decorated with the order of Commendatore of the Iron Crown, Italy, and with the Japanese Order of the Rising Sun.

Science

Starving America. By Alfred W. McCann. New York: George H. Doran. $1.50 net.

With the exception of Dr. Wiley, no one has done more valiant service than Mr. McCann in behalf of the cause of pure and wholesome food. For a time he worked with that great chemist and reformer at a task for which previous experience had fitted him. As advertising manager of a large food industry he had come into daily contact for five years with food inspectors, chemists connected with the national and State departments, manufacturers, importers, jobbers, and commission men, thus enjoying opportunities for glimpses behind the scenes such as come to few. His book is the outcome of this specialized knowledge of food conditions. What struck him particularly was the insufficient attention given to the mineral ingredients of our daily rations. Dieticians were dividing foods into four groups: carbohydrates, proteins, fats, and "ash." The division of "ash," he remarks, was always exasperatingly ignored when he tried to get information regarding it. It "apparently had little if any meaning for the dietician, and was not considered by him as significant or important." Gradually he learned that a diet of pure carbohydrates, pure proteins, and pure fat would not support life unless a sufficient amount of ash, that is, mineral salts, was also supplied.

"Starving America" is the result of his investigations and experiments along this line. According to the official figures, as many as 235,262 children under ten years of age died in the United States in 1910; this forces on him the conclusion that, "as a nation, we have been busier building tunnels, subways, railroads, skyscrapers, bridges, air-craft, and Atlantic liners, and living in luxury, than in developing healthy, normal bodies." The 270 pages of Mr. McCann's book are concerned mostly with the attempt to prove that this premature loss of life is due chiefly to the use of foods from which the mineral ingredients necessary to sustain health have been removed by ignorant or greedy manufacturers, with the result that in the midst of abundance, we are actually starving

—stunting bodies and minds and shortening life. Our Government wisely prohibits the exportation of our limited supply of phosphate rock, because a soil without phosphates produces scant or dwarfed crops. But the food manufacturers are allowed with impunity to remove any or all of the sixteen minerals our bodies need, in common with animals and with the farmer's soil. Wheat, barley, oats, rice, corn, are robbed by millers and breadmakers who "do not know the trail of wreckage which they have left in the wake of their mineral contempt." Barnyard fowl thrive if fed on rice alone, provided it be rice from which none of the mineral salts have been removed; but if fed on the polished and talcum-coated grain of commerce they die. Mr. McCann describes (pp. 69-75) experiments on men made in Oriental countries which proved that the disease called beri-beri is caused by eating demineralized rice. Yet such rice is the only kind on sale in our markets. Sometimes the veneer of glucose and talc is left off, in order that the rice may be sold as "unpolished"; but while this is an improvement, it is not what we need, for the minerals are still removed by the millers.

Physicians cannot supplement the lacking minerals in our cereal food by giving them as medicines. A rational diet of foods rich in organic compounds of phosphorus, such as peas, beans, wheat bran, barley polishings, and corn phytin (which is removed in milling), when added to the demineralized foodstuffs, would improve matters; but we usually throw away the liquid in which vegetables rich in minerals have been cooked, so that starvation is not averted. Our meats also are too often demineralized, and we throw away the bones or feed them to the animals, although we know that our dogs, if they get no bones, have decayed teeth and the rough coat of ill health.

Such is the principal message of Mr. McCann's book, delivered in a rambling way and without much literary art, and yet impressive by the weight of facts that bear out his reasoning. He also has pages on the treatment of experts and reformers, like Wiley and Cassidy, and on the adulterations which—in addition to the demineralizing—go on unchecked in spite of pure food laws, which seem to have been made in favor of manufacturers rather than consumers. No farmer who raises animals for market would dream of mixing with their feed coal tar dyes, benzoate of soda, sulphurous acid, and diverse other chemical preservatives which the law allows any one who chooses to put into food made for women and men, children and invalids.

It is interesting to note what remedy for this state of affairs the author suggests. Most of the conditions described in his book being unknown to our legislative bodies, he thinks it will be a long time before Congress can be educated to act as it should. In the meantime he declares that the reform work may be done in schools by teaching the boys and girls in the chemistry classes to analyze foods and to know the danger to health of eating those that are adulterated and denatured, following the method of Professor Allyn, of the Massachusetts State Normal School. In his preface, Mr. McCann expresses a doubt whether manufacturers can do much in the way of educating the public how to choose wisely in buying foods. In this he is mistaken. Some of the large manufacturers have been much helped by their advertisements declaring that they use no chemical preservatives and dyes. In a chapter entitled An Ideal Restaurant, our author himself cleverly points out ways by which caterers could help themselves by taking patrons into their confidence and disclaiming the use of various ingredients by which consumers are elsewhere deceived and injured.

An undertaking in the "Who's Who" field, which serves a useful purpose, is "Who's Who in Science" (Macmillan). Its scope is international and its tabulated information, over and above the biographical directory of scientific men, is compendious and convenient. The edition for 1913 is nearly twice as large as that for 1912, the new space being partly accounted for by the addition of a section on the scientific societies of the world, partly by the inclusion of psychology and geography among the sciences represented in the work, but doubtless mainly by greater completeness in the body of the book. With a view to supplying any omissions that may still remain, a "recommendation form" is given. The value of the book would be considerably increased if, in the case of the more eminent of those who, upon application for biographical data, fail to respond, the information desired were obtained otherwise; though apparently the failure to do so is attributable to an honorable motive, the desire not to appropriate matter obtained by the compilers of other works of reference. The result is that a large proportion of the greatest scientific men outside the English-speaking world are represented by only the briefest possible notice. The policy of translating into English the titles of all books and papers, and the names of all institutions, we regard as unfortunate. But the whole work has evidently been executed with care and conscientiousness.

Library catalogues as a rule are not read with great eagerness. They belong rather to the books which a certain German teacher of medicine, long since gone to the realms where disease is unknown, used to recommend to his students as potentially useful in the treatment of insomnia; his list also included city directories and works on philosophy. Be that as it may, the last volume of the "Index-Catalogue of the Library of the Surgeon-General's Office, United States Army" (Vol. XVII of the Second Series) certainly contains some very interesting matter. It ranges from Suaheli, in eastern Africa, to Testut, a contemporary French anatomist of distinction, taking in Surgery, Syphilis, Teeth, Tapeworms, and many other topics. As an introduction we have a tabulation of the additions to the medical periodicals to be found in the library. Among them are the titles of forty journals which have come into existence since the publication of the previous volume of the catalogue; of these the number credited to Italy is ten, a most surprising development. The intelligent general reader who happens to long for special information may be glad to know that there is a journal of very recent origin on each of these subjects: Malaria, Radium, Tumors, Chemotherapy, Vaccine Therapy, Neuropathy, Pathopsychology, Social Diseases, School Child, School Hygiene.

Further on in the volume, ninety pages, above one-ninth of the entire book, are devoted to a most attractive list of "Texts illustrating the History of Medicine," which with a few changes were well worthy of republication as a separate booklet. It is not quite clear on what principle the selection has been made, but it seems to be the outcome of an effort to bring together for nine different "periods" (Pre-Hippocratic, Greek, and Græco-Roman, Byzantine, and so on to the Modern Period of the Nineteenth Century and beyond) the fundamental books and articles in periodicals which may be read in the library of the Surgeon-General in Washington. In most of the periods there is a further grouping according to certain general divisions of medicine. Modern editions of old writers and translations are mentioned only in a few cases. The arrangement is frequently somewhat confusing, and it is often necessary to hunt further than the abundant cross references suggest. These are of course matters about which uniformity is almost impossible, and some kind of abbreviated reduplication becomes unavoidable. Full as the list is, some titles are lacking which in importance are comparable with those that are given. Quite apart from these omissions, concerning which the vision of the specialists may be perverted, it is at least regrettable that the section on modern medical bibliography, which does contain the Index-Catalogue, does not include the Index Medicus, the new English catalogues, and those of the Concilium Bibliographicum at Zürich so far as they touch subjects included in these lists. Another omission is very striking, and to some may seem much more serious. We have not been able to hit upon any reference to the records of that system of hygiene which is among the oldest known. We are forced to the conclusion that the new administration should at once furnish the Surgeon-General's Library with a copy of the Bible or at least of the Old Testament.

No human invention has rendered greater service on the sea than radio-telegraphy; and recent progress has so extended its grasp that there are few ocean areas where a vessel with proper equipment is beyond the reach of wireless signal. With the first of July a system of international time distribution will be in force, which will greatly enhance the accuracy of navigation and put all sailors on a virtual equality with landsmen; for, instead of forecasting the weather from their own isolated ob-

servations, they will be able to make a far more accurate judgment by deduction from radio-telegraphic data. About ten wireless towers of long range come within the scope of international convention, of which the Eiffel tower was the first to transmit information of immediate use on sea. Each transmitting station will send out a general description of the air movements over a wide area, and with particular reference to wind velocities in storms of violence. Barometric pressure and the state of the sea also are within the scope of the compactly coded messages. Not less significant are the time signals which the Paris convention spent much effort in elaborating, with agreement as to hours of sending whereby there should be no interference. Virtually no hour of day or night will be without a signal whereby the ships' chronometers can be corrected with precision of a high order.

With the anniversary, April 15, of the loss of the Titanic, interest in the drift of ice in the North Atlantic is revived. The year has been fertile in suggestion as to reasons why the fatal berg was not earlier seen, but nothing has developed that would very much help a ship speeding through known ice-fields at twenty knots. Still, with the obvious improvement in naval architecture whereby every closed bulkhead becomes a compressed air caisson, capable of being entered and repaired in case of accident, it is contended that ships can now be built unsinkable in virtually every type of emergency. Ice has, indeed, made its appearance off the Banks, as shown on the April "Pilot Chart of the North Atlantic," just issued conjointly by the Hydrographic Office and the Weather Bureau of the Government. There are already icebergs and field ice to the east and southeast of Cape Race, though not so far south as to fall within the area of the shifted transatlantic lanes. Present indications place them, however, within the region of highly prevalent fogs, through which even the keenest lookout would be unavailing, unless there were marked reduction of speed.

One of the greatest zoölogical wonders of the world and also, alas! a vanished race, the passenger pigeon, is described in *Bird-Lore* for March-April. Much of the information given is drawn from old records dating back as early as 1672. The size of the flocks only fifty years ago is almost incredible. An observer in the Mississippi Valley saw during five hours huge migrating flocks at intervals of a few minutes, the whole amounting to some 600,000,000 birds. In swiftness of flight, a mile a minute, they outstripped every bird of their size. So complete has been their destruction, chiefly by man, that only one, a captive in Cincinnati, is known to exist. The school department shows an increasing interest in bird-study on the part of teachers and children. The Educational Leaflets describe the emperor goose and the crested auklet. Each of the articles is illustrated with reproductions of photographs, three in color.

Addison Brown, for twenty years Judge of the United States District Court for the Southern District of New York State, who died last week, aged eighty-three, had long been interested in astronomy and botany. His observations on the corona in the solar eclipse of 1878 were published by the Smithsonian Institution, as well as his address in 1891 before the New York Scientific Alliance on the "Need of Endowments for Scientific Research and Publication." He was a friend of Dr. Asa Gray, had long been a contributor to the collections and work of the botanical department at Harvard, and from 1890 to 1902 was president of the Torrey Botanical Club of New York. In the years 1896 to 1898, he published, in conjunction with Dr. N. L. Britton, Britton and Brown's "Illustrated Flora of the United States and Canada," in three volumes, with 4,200 cuts. He had completed a revision of this work just before his death. In 1902 he received the degree of LL.D. from Harvard, from which college he had graduated in 1852, a classmate of Joseph H. Choate.

Drama and Music

Irish Plays and Playwrights. By Cornelius Weygandt. Boston: Houghton Mifflin Co. $2 net.

All persons desiring to know something of the work of the so-called Celtic Renaissance will find this volume both useful and interesting. Mr. Weygandt possesses at least one excellent qualification for the task he has undertaken, an intimate acquaintance with the facts. He has not only been an enthusiastic student of the subject himself, but has been aided in his researches by many of the men and women active in the movement. The consequence is that his record of the origin and development of the Irish National Theatre Society—better known, perhaps, as the Abbey Theatre Company—is uncommonly full and precise. His critical comments are less trustworthy, because, with all their occasional acuteness in the comparison of literary or dramatic excellence, they are, as a rule, written in a vein of enthusiastic eulogy, altogether incompatible with judicious discrimination. Nearly all his geese are swans.

Of the Abbey Theatre itself, of course, he has not much to tell that is absolutely new, but his description of one of its earliest rehearsals, with half-a-dozen enthusiastic but totally inexperienced amateurs in the poorest and roughest of halls, furnishes an object-lesson to those who believe that an elaborate and learned organization is a necessary preliminary to the establishment of a national theatre. It is true that W. G. Fay and his associates, after they had made their start, did receive substantial aid from Miss Horniman for some years, but it is sufficiently plain that the enterprise succeeded mainly because of the zeal behind it and its direct racial appeal. That it has now assumed the form of a permanent and essentially national institution can scarcely be doubted, although the acting capacity of the company must be enlarged before it can discharge the highest functions of the artistic theatre. At present it is only in the realistic folk drama, and not always in that if a tragic note be called for, that the present players meet every artistic requirement. To imaginative situations they exhibit a strange insensibility. The suggestion—quoted by Mr. Weygandt from Mr. Yeats—that this seeming unresponsiveness to emotion is a sort of classic repose, the result of Mr. Fay's having seen Bernhardt and De Max in "Phèdre" at the Français, is fantastic. In any case, nothing could be more absurd than any attempt to apply the French rules of traditional classic gesture to the interpretation of Irish peasant drama or romance. The simple truth is that the Irish Players have been trained as yet in one style of acting only. In that they are remarkably efficient, and it is worth noting that from the first their instructors have been most insistent upon their faithful observance of the characteristic rhythm of peasant speech and upon a resolute avoidance of exaggeration. These are admirable rules in themselves, particularly when a special end is in view, but on the stage they are not of universal application.

Much of Mr. Weygandt's space is given to biographies of the Irish dramatists—Yeats, Synge, Martyn, Lady Gregory, and others of lesser note—with synopses of many of their plays. This review is well done, constituting a compact and convenient summary. The bulk of the work produced during the dozen years or so that the Abbey Theatre and its kindred societies have been in existence, is remarkable, and the quality of much of it most encouraging for the future, if not quite so precious in its entirety as Mr. Weygandt pronounces it to be. With his general estimate of the product of Yeats and Synge few readers will disagree. As might be expected, he professes a somewhat contemptuous opinion for those who fail to recognize in "The Playboy of the Western World" a perfect masterpiece, but the force of his argument is weakened by his admission that irony, grotesqueness, and extravagance are prominent characteristics of Synge's genius. These, of course, are just the features which invalidate the legitimacy of "The Playboy" even as satirical comedy. One of the most interesting, and most truly critical, chapters in the book is the last, on William Sharp, in which he refuses to entertain the notion of any dual personality in his case, arguing that his talent was essentially imitative, that his assumption of the alias of Fiona Macleod was—though he puts it somewhat less bluntly—a deliberate commercial trick, to attract attention to a style of composition in which he was proficient; and that while using it he constantly betrayed himself, to careful read-

ers, by writing from his own male point of view.

"Plays of Old Japan (The Nō)," by Dr. Marie Stopes, with a colored frontispiece and other illustrations from Japanese woodcuts, is announced by Heinemann, London. The plays were mostly written in the fourteenth and fifteenth centuries. Included in the volume will be translations of four of the plays, made by the author and Prof. Joji Sakurai, of Tokio.

By arrangement with the heirs of Henry W. Longfellow and the publishers of Longfellow's "Evangeline," Arthur Hopkins announces that he will produce next season in New York a stage version of the poem. The dramatization, made by Thomas W. Broadhurst, has been approved by the Longfellow family, and will be interpreted by a cast of seventy-five persons, headed by Edna Goodrich. The scenes will portray four stages of Evangeline's life in Acadia and seven stages of her wanderings. Incidental music, both orchestral and choral, has been composed by William Furst.

Annie Russell's Old English Comedy Company, which has been visiting the principal Eastern cities since the end of its New York engagement, will close its first season in Montreal the first of June. Miss Russell has ambitious plans for next season. The first week in August her Comedy Company starts on a transcontinental tour, which will include the principal cities of the United States and Canada not visited this season. Returning East soon after the Christmas holidays, Miss Russell will prepare for her second New York engagement, when she will offer, besides "She Stoops to Conquer," "The Rivals," and "Much Ado About Nothing," several revivals, including Knowles's "The Love Chase" and Sheridan's "The School for Scandal."

Messrs. Vedrenne and Eadie are to give a series of special matinée performances at the London Royalty Theatre. The first of these will occur on the 22d inst., when an original one-act play by Rudyard Kipling, called "The Harbor Watch," will be given, in connection with a posthumous comedy by St. John Hankin, called "Thompson," which has been finished by George Calderon. Of Kipling's piece little is known, but it is said to be thoroughly characteristic of its author, and to deal with soldiers and sailors.

The plans of Ethel Irving at the London Globe Theatre include a revival of Somerset Maugham's "Lady Frederick," and the production of a new English version of "La Tosca" as well as of "Years of Discretion."

The third number of the *Manchester Playgoer* opens with a lively paper on Mr. Gordon Craig and the Universe, by John Palmer, which is characterized by a vigor and common sense not always observable in the utterances of the professors of advanced theatrical ideas. There is truth, also, in an article on "The Dramatic Artist," by Philip Carr, who writes:

This intellectual invasion of the theatre is a healthy thing. It is bracing, it is cleansing, it has activity. One might say it has life, and from the side of the intelligence, it has life. But for all its cleverness, it misses out something which is a part of life, and that is, perhaps, why it does not attain to a complete expression in art. In its anxiety to avoid sentimentality, it leaves out sentiment, and sentiment is a part of life. In its anxiety to be novel, it forgets simplicity, and simplicity is not only the most vital thing in life, but the most eloquent and enduring thing in art.

H. B. Irving sends word to England that he has produced Stephen Phillips's poetic play, "The Sin of David," in Johannesburg with great success. He promises to present it in London next winter, during his engagement at the London Savoy.

"Playgoers" is the name of a one-act piece by Sir A. W. Pinero which has just been produced in the London St. James's Theatre. It tells of the experience of a philanthropic young married couple who tried to make their servants more contented with their lot by sending them to see plays of a thoughtful and inspiring character. The result is that they succeed only in offending every one of them, so that they all give notice except the odd man. The skit is said to be very amusing. Presumably it has a satirical import. Sir Arthur, in writing it, probably had in mind the troubles of a dramatist who is desirous of pleasing all his critics.

At Pozsony (Pressburg), the ancient capital of Hungary, a memorial service was held on the 15th of March in honor of the late Francis Korbay. Liszt's Mass was sung at the Cathedral, which was crowded to the doors. At the close of the Mass the Hungarian National Hymn was sung amid a scene of great emotion, most of the congregation being in tears.

The Boston Symphony Orchestra ends its thirty-second season in Boston on Saturday evening, May 3, and will begin the thirty-third season in Boston on Friday afternoon, October 10. In this season just drawing to a close it has given one hundred and nine concerts, with two additional concerts in aid of its pension fund. The season has been altogether the most prosperous the organization has ever had. The return of Dr. Muck has restored it to all its old-time brilliancy. The illness of Dr. Muck, which incapacitated him for several weeks, brought into prominence its new assistant conductor, Otto Urack, whose work met with most gratifying success. In the season of 1913-14, the Boston Symphony Orchestra will give one hundred and ten concerts.

Saint-Saëns, the oldest as well as the greatest of French composers and writers on musical topics, is out with a new oratorio and a new book. The oratorio is "The Promised Land," based on a libretto by Hermann Klein. It will have its first performance next September at a music festival in Gloucester, Eng. The book is entitled "Ecole Buissonnière" (Pierre Lafitte & Cie.), and is made up of articles which first appeared in the *Echo de Paris*. It includes sketches of Pauline Viardot, Delsarte, Rossini, Massenet, Meyerbeer, Offenbach; articles on diverse artistic and church questions, and scientific fantasias.

Least known of Liszt's works are those for the organ, yet Saint-Saëns goes so far as to call his fantasia on the choral from "Le Prophète" the most extraordinary composition in the literature of that instrument:

It lasts forty minutes, and the interest does not flag for a moment. As Mozart in his Fantaisie and Sonata in C minor anticipated the modern piano, Liszt writing this Fantaisie more than a half-century ago seems to have foreseen the instrument we now possess with its thousand resources.

When Verdi died he left a large sum for building a home for superannuated, indigent musicians. Once a year the inmates give a concert in memory of their benefactor. This year special pains were taken because it marked the Verdi centenary. There was a chorus of twenty-two former soloists, and arias from Verdi's operas were sung, one of them by a baritone of sixty-eight, another by a soprano of eighty-one. The critics were not invited.

When an opera is really successful in Paris it is likely to be given at least a hundred times the first season. How far Debussy's "Pelléas et Mélisande" has been from such success is shown by the fact that it required eleven years to reach its hundredth repetition. Nevertheless, the event was celebrated by a supper at which Paul Dukas, Xavier Leroux, Jean Périer, and other prominent musicians were present, besides the composer and his wife.

It was expected that either Pohlig or Wetzler would be appointed as Paur's successor as conductor of the Royal Opera in Berlin; but the post has been given to Robert Langs, of Essen.

Dora Duty Jones died a day after the publication of her excellent book, "Lyric Diction." Her first book, "The Technique of Speech," has for its theme vowel resonance. She held that "resonance, being the only quality characteristic of the voice in both speaking and singing, is the only natural link between speech and song." Her method is based on her discovery "of a definite point of control in the muscular action of the tongue, from which the movements of that organ may be directed easily and naturally through the sense of touch." After teaching lyric diction in New York for some years, she went to Europe, teaching successively in Florence, Berlin, and London.

Art

NEW WORKS OF RAPHAEL'S.

ROME, April 4.

Commendatore Adolfo Venturi has just announced at the University of Rome a most important discovery, which sheds light on many unexplained phases of the early work of Raphael, and in particular on the character of his relations with Perugino.

Down to the middle of the nineteenth century, critics were accustomed to suppose that Raphael's education was derived altogether from Perugino. Giovanni Morelli, however, pointed out conclusively how much Raphael's forms reflected the influence of Timoteo della Vite. Lately, a third possible master has been found in Evangelista Pian di Meleto, mentioned in documents as the assistant of Raphael's father, Giovanni Santi. According to the document published by Magherini-Graziana, Evangelista painted in 1500-1501 the Coronation of S. Niccolà da Tolentino for the Church of S. Agostino, at Città di Cas-

tello, in collaboration with the youthful Raphael. Three known fragments of this ancona, an angel now in the gallery at Brescia, the Eternal Father, and the Virgin in the Naples Gallery, appear to be altogether the work of Raphael, and it is probable that the name of Evangelista Pian di Meleto may have been introduced into the document on account of Raphael's extreme youth. So poor an artist could hardly have done more than guide the first steps of the greater genius. The lasting influence which Raphael received from Urbino came from the favorite pupil of Francesco Francia, Timoteo della Vite, who had just returned to Urbino, young and successful, bringing with him the new and more developed forms of the Bolognese School.

At this period, the greatest painter of Umbria was Pietro Perugino. Raphael's father had already felt his influence, and Raphael must have become familiar at an early age with the great anconas of Sinigaglia and Fano, because at a later time he reproduced the motives of the predella of the Fano picture.

The Stanza dell' Udienza del Cambio in Perugia is generally believed to have been painted by Perugino in the year 1500, by reason of the date in the inscription under the master's own portrait. The two lunettes on the wall at the left of the entrance representing the Heroes of Antiquity, and the decoration of the vault, show Perugino's forms of this period; but there is much reason for supposing that the Transfiguration and Nativity on the back wall, and the Prophets and Sibyls on the right, were painted at a later date. The series of subjects represented on the various walls lack unity; for we have first two panels representing the Heroes of Antiquity, then the Transfiguration and Nativity, and finally the Sibyls and Prophets. Having treated the Heroes according to the request of the Corporation of the Cambio, Perugino, on continuing the work after a lapse of time, might naturally have returned to his more accustomed Biblical subjects. The figures themselves of the Transfiguration and Nativity are modelled with stronger chiaroscuro, exhibit more rounded types, and in every way suggest a later date than those of the first two panels. There is also evidence that the last payment for the Cambio frescoes was not made until 1507. Professor Venturi therefore believes that the entire series was not completed before 1506.

In the lunette on the right wall, representing the Prophets and Sibyls, the composition is as unlike as possible to the Heroes of Antiquity. In the former fresco the figures are arranged in a horizontal row, in which each figure is unrelated to its neighbor, and they repeat the overworked types of Perugino's earlier and grander compositions. On the other hand, in the Prophets and Sibyls we find a closely knit and balanced arrangement in which each figure plays its part in the total composition.

In comparing the figures of this panel with those of all the others, we find in the Prophets and Sibyls an overwhelming superiority in drawing, force of chiaroscuro, and power of expression. The noble Eternal Father has no parallel in the old men among the Heroes, and the dominating heads of the David and Solomon make the earlier forms of Perugino seem to be of pasteboard. On the other hand, the Sibyls reflect Leonardo and Timoteo della Vite. These nervous, sensitive heads and rhythmical bodies have nothing in common with the spiritless, oft-repeated types found in all Perugino's work of this period. The landscape, too, with its higher horizon and colder cliffs, bears little resemblance to those of Perugino, but rather recalls the landscapes of Timoteo della Vite and Giovanni Santi.

We find, then, in this fresco a genius much more profound than Perugino, and a painter who, while reflecting the forms of the Urbino School and Timoteo della Vite, and influenced by Leonardo, nevertheless seeks to bring to life the deeper feeling of the Perugino of the Sistine Chapel in forms of the beginning of the sixteenth century, and with a force which bears him to heights which Perugino never approached. In this fresh genius Professor Venturi has discovered the forms of the youthful Raphael. It is Raphael after he has painted the Sposalizio of the Brera, has worked in Florence, and has been inspired by Leonardo's Battle of Anghiari and Michelangelo's cartoons for the Signoria.

In the Uffizi is a drawing for the Moses of the Sala del Cambio also given to Perugino; and here again is a force of chiaroscuro and expression very unlike that master's. A comparison with the drawing for the Socrates, also in the Uffizi, will immediately show the superiority of the former.

In the earlier work of Perugino on the left wall of the Cambio, Professor Venturi finds another figure by Raphael —the charming Fortezza—the third in the series of personifications of the Virtues. She has the same fresh, youthful head which we see in the right-hand figure of the Vision of a Knight in the National Gallery; and we also find here the same forms as those of the recently discovered fragments of the Coronation of S. Niccolà da Tolentino, fresh from the influence of Timoteo and less Peruginesque than in the Sposalizio. We have no evidence except this head that Raphael was in Perugia in 1500, but we know that at this date he was absent from Urbino.

Another picture which Professor Venturi holds to be unquestionably a work of Raphael, and which still bears the name of Perugino, is the Ecce Homo, in the Galleria Vannucci in Perugia. This picture has always been difficult for the critics to explain, as it has, together with the strong chiaroscuro and developed forms of the beginning of the sixteenth century, the sincere devotion never found in Perugino's later works, and displays a knowledge of anatomy very unlike that exhibited in his other figures. This head is similar to Raphael's Christ on the Cross in the collection of Mr. Ludwig Mond of London.

STANLEY LOTHROP.

Henry R. Poore's new book, "The Conception of Art," is soon to be published by Doubleday, Page & Co.

John Lane Company will issue in the near future a vellum *édition de luxe* of a volume of nearly a hundred miniatures by Charles Turrell, the English artist. The issue will be limited to one hundred copies at $100 a copy. Dr. A. C. Williamson will furnish an introduction.

It seems long ago that Gilchrist, in 1863, described Blake as "pictor ignotus"; today he has become a subject of study for normal college students. Many have written of him as author and artist—Ellis, Fuseli, Wicksteed, Ruskin, Chesterton, De Selincourt, Miss E. L. Cary—and his genius has been appreciated both rhapsodically and sanely. But it remained for Mr. Archibald G. B. Russell to devote a monograph to his engravings in black and white ("The Engravings of William Blake": Houghton Mifflin). Blake was an experimenter in various media; he painted in oil and in fresco, engraved on copper, etched metal for relief printing, did woodcuts of strength and richness, despite—or because of—their rude simplicity, tried lithography, and produced many color prints, which, as the late S. R. Koehler pointed out, were essentially monotypes. But he began with line engraving, learning his craft under Basire, and ended with it in his last great undertaking, the "Book of Job." In this work the somewhat heavy, undistinguished technique acquired under Basire had developed into a freedom of handling which caused Dante Gabriel Rossetti to pronounce the engravings in the "Job" and the "Ballads" of Hayley "the only good medium between etching and formal *line* that I ever met with." In his early work one feels some of the spirit of British book-illustration of the day—as exemplified in the drawings of Stothard, Westall, or Smirke. And later there was a reflection of the Fuselian pose. But these were insular traits which faded somewhat in time. The chief influences, as Mr. Russell points out, were Gothic architecture and Michael Angelo.

Blake understood and appreciated the essential nature and function of the engraved line; he collected prints, and admired and cherished the engravings of Dürer, Lucas van Leyden, Bonasone, and other masters of the art. Mr. Russell records his love of "precision of form," and cites his dictum that "engraving, by losing drawing, has lost all character and expression." This

segregation of his black-and-white line work, executed with the incisive precision and formality of the burin, from that based on the free use of color in printing, sets in a clear light a significant side of Blake's activity which has possibly been somewhat overlooked through preoccupation with his highly imaginative qualities.

The present carefully compiled and annotated catalogue, with its full information regarding variety of states and the whereabouts of original drawings and studies, will be indispensable to the Blake collector, who will be happy if he has in addition the excellent little catalogue of the Blake exhibition at the Grolier Club in 1905.

Finance

THE TARIFF BILL AND THE FINANCIAL FUTURE.

With the assembling of the Sixty-third Congress last week, and the presentation of the long-awaited tariff-reduction bill, an opportunity was at length provided to see how the financial markets would receive it. Their verdict, as expressed in the movement of prices, ought to have given some clue to the feeling in high financial circles regarding what the effect on trade, industry, and general prosperity is to be. But they have given no very positive intimation. When the bill was published, the Stock Exchange market hardly moved.

Apparently, it was waiting to see how business men would take the proposals for altered duties. From such quarters, the response was somewhat slow; in the end, however, while many protests and warnings were heard, the comment was characterized in an unexpected degree by composure and equanimity. This led to much interested discussion. One somewhat frequent remark was, that a stock market which advanced in last summer's political campaigning days, when Wall Street was betting 4 to 1 on Wilson, and which would not decline on the news of his election—though on both occasions the tariff-reduction policy was taken for granted—had no special reason for declining when the legislation was actually proposed.

The non-committal attitude of the markets presently revived a good deal of interesting reminiscence as to what the Stock Exchange did when other previous tariff revision bills were laid before Congress, and what the financial sequel to debate and vote was on those previous occasions. One such occasion was 1909, when the Payne-Aldrich bill was introduced in March. In April, one of the country's leading financiers predicted financial and industrial recovery, but only when the tariff discussion should be over. It was not over until August, but the trade revival and the boom on the Stock Exchange were vigorously under way by the end of May.

The Dingley bill of 1897 was introduced in March, and finally passed July 24. Trade and the markets had been hesitating, but a very rapid revival was in progress by the end of May, which grew to a boom before the year was over. That, to be sure, was a bill for a higher tariff; but if this fact was the real cause for the recovery, there was the McKinley Tariff bill of 1890, an ultra-protectionist measure, which had an altogether different sequel. That bill was introduced in January and enacted in July. The markets were extremely depressed while it was pending; they advanced sharply in the two months after its enactment, but thereafter lapsed into great disorder, with a Stock Exchange panic in November.

Here are confusing precedents enough. Perhaps, after all, the clue to them rests in something other than tariff debates. For instance, 1909 was a year in which after-panic depression had at length worn off; 1897 was a year in which, by midsummer, an extraordinary agricultural windfall came on a market, with prolonged economy and conservatism behind it; while the characteristic story of 1890 was one of overdone speculation on a basis of tight money. But all such considerations bear most pertinently on yet another tariff-revision year.

A very great part of such misgivings as have existed since last November, over the "tariff session's" probable effect on business, was undoubtedly based on recollections of 1894. That was the last real downward revision of the tariff, and history tells the story of disordered markets, severe trade depression, and a continuous deficit in the public revenue, during and immediately after its enactment. If that was the sequel to the last attempt at general downward revision of the tariff, why not a similar sequel now?

The Wilson bill was in many respects closely similar to the pending Underwood bill; but the circumstances under which it was introduced and passed bore very little resemblance to those which now exist, and this fact almost certainly explains the unexpected composure with which last week's announcements have been received in the business community. The tariff of 1894 was introduced six months after the crisis of the panic of 1893. Its provisions were first read by business men when they had begun to grasp the fact that the country's consuming power was paralyzed and the country itself largely insolvent.

This was not all. The debate proceeded in the face, first, of the demoralization of the Treasury's finances and the threatened collapse of the gold standard; secondly, of the bankruptcy of our largest railway corporations; thirdly, of a revolt of labor which led to the invasion by "Coxey's Army" on the one hand and to the seizure of Chicago's transportation facilities by the American Railway Union on the other; finally, of a disastrous failure of the country's corn crop. None of these spectacular events originated in any sense from the tariff controversy, but they greatly depressed and embittered the business public in its views regarding tariff revision.

Other circumstances aggravated this feeling. The debate on the Wilson bill was angry and prolonged. It began in December, 1893; the House passed the bill at the end of February; the Senate passed its own bill in July, and not until late in August did the two houses agree on the measure. In July a widely signed petition of bankers and merchants was presented to Congress, expressing desperate indifference over the character of the bill, but pleading for speedy enactment, so as to give the season's business plans a chance. For, during all these seven or eight months, American merchants and manufacturers were trying to dispose of the load of surplus stocks with which they had been caught in the panic of 1893, while Europe, where almost equally severe depression prevailed, was unloading its merchandise at a sacrifice on our markets.

Such was the story of 1894. It is a question to consider, just how much resemblance those surrounding circumstances bore to the present well-guarded Treasury, sound currency, prosperous corporations, and well-employed labor, with five years of industrial retrenchment behind us, home stocks of merchandise at low ebb, and European manufacturers at present wholly engaged in keeping abreast of the demands of their own home trade.

JUST READY

The New Philosophy of Henri Bergson

By EDOUARD LE ROY, authorized translation. $1.25 *net, by mail* $1.35.

An authoritative and simple outline of the general trend of Professor Bergson's Philosophy which will make it easier to read and understand his works.

PROFESSOR BERGSON, in a letter to the author, says:

"Underneath and beyond the method, you have caught the *intention* and the *spirit*. . . . Your study could not be more conscientious or true to the original. Nowhere is this sympathy more in evidence than where you point out the possibilities of further developments of the doctrine. In this direction I should myself say exactly what you have said."

Henry Holt & Co., 34 W. 33 St. New York

Royal Spades Auction Bridge

By "BASCULE." Fcap. 8vo, pp. xii+180. $1.00 *net* (postage 5 cents).

A treatise by the Bridge Editor of the "Illustrated Sporting and Dramatic News" on the game of Auction Bridge, as it is now very generally played, with the new method of scoring. The author's aim has been to supply a guide to the new game which shall be suitable for anyone who is taking it up, whether already familiar with Auction Bridge or not. As in the case of Bascule's "Rules and Principles of Auction Bridge," the text of the Portland Club code of rules has been added with the Author's explanatory notes, which give the gist of all important decisions by the Portland Club Committee.

LONGMANS, GREEN, & CO.

The Love-Seeker

By MAUD CHURTON BRALEY, author of "Modern Marriage and How to Bear It."

A brilliant and daringly frank book, full of worldly wisdom, fit for those married or single and in or out of love. *12mo. $1.00*

Heroines of Modern Progress

By ELMER C. ADAMS and WARREN D. FOSTER.

Brief, vivid biographies which tell the story of the part a group of women played in the world's progress of the last century.

12mo. Illustrated. $1.50 net

STURGIS & WALTON CO.
31-33 East 27th Street, New York.

"The volume is written from the evolutionist's standpoint by a man who has made a careful study of it and who thoroughly believes in it."—Chicago Tribune.

AN UNORTHODOX CONCEPTION OF BEING

A Synthetic Philosophy of Ontology

By WM. ELLSWORTH HERMANCE

8vo. $2.50 *net. By mail,* $2.75.

The author's conceptions are Idealistic in theory, Materialistic in fact, Dualistic in energy, and Monistic in being. His contentions in many cases run counter to the more orthodox school of philosophy and give the reader an opportunity to pass upon the validity of some of the more common theories that are held to-day.

Important New Macmillan Publications

THE ECONOMIC INTERPRETATION OF THE CONSTITUTION

By CHARLES A. BEARD, Author of "American Government and Politics," "The Supreme Court and the Constitution," etc.

A work indispensable to a complete understanding of the Constitution. A careful and valuable analysis of the original records, sources and other facts which influenced the shaping of that important document. $2.25 *net.*

AMERICAN SYNDICALISM: THE I. W. W.

By JOHN GRAHAM BROOKS, Author of "As Others See Us," "The Social Unrest," etc.

A careful, sympathetic and critical study of American syndicalism as represented in the order named the Industrial Workers of the World.

The theory, or philosophy, of this syndicalism is given, a review made of the practical experiences of the movement as it has expressed itself here in the last few years, and a review sought of its possible destinies in the United States. $1.25 *net.*

THE GOVERNMENTS OF EUROPE

By FREDERIC AUSTIN OGG, Ph.D., Author of "Social Progress in Contemporary Europe," etc.

A comprehensive review of existing governments, their historical origins, and their development. "No such concise and intelligible conspectus of European systems of administration has been available hitherto. The book neatly fills a conspicuous gap in the broad and weighty literature of political science."—*Philadelphia North American.* $3.00 *net.*

CO-OPERATION IN AGRICULTURE

By G. HAROLD POWELL, General Manager California Fruit Growers' Exchange, former Assistant Chief Bureau of Plant Industry, etc., U. S. Department of Agriculture.

A valuable work with the latest information on the principles that govern the organization and management of the American co-operative associations in agriculture.

A practical guide for those who desire to organize co-operative systems and wish to escape the usual pitfalls. *Illustrated.* $1.50 *net.*

ESSAYS IN TAXATION

By Prof. EDWIN R. A. SELIGMAN, Author of "The Income Tax," etc.

A new book by this well-known expert on taxation and its most recent problems. The present volume summarizes the result of years of investigation and study on all phases of the taxation question by Professor Seligman. The work is vital in its discussion of the new and recent tax problems.

"The volume constitutes the most important contribution to the science that has yet appeared."—*Annals of the American Academy.* $4.00 *net.*

THE LARGER ASPECTS OF SOCIALISM

By WILLIAM ENGLISH WALLING, Author of "Socialism As It Is," etc.

The most important of recent works on Socialism. An examination of the underlying foundation upon which Socialism rests, its roots in philosophy, science, history, sociology and morality, and a review of its far-reaching consequences—its effects on philosophy, science, religion, morality, education and the relation of man to woman. $1.50 *net.*

HISTORY AS PAST ETHICS
An Introduction to the History of Morals
By Philip Van Ness Myers

A Review:
"This book completes a series of historical text-books approved in more than thirty years' use for their balanced judgment and lucid eclecticism. It is designed for advanced classes, but will appeal strongly also to the well-informed reader for the new co-ordination that it supplies to the main facts of world history. The development of ethical ideals is traced from the dawn of consciousness in the kinship group to the evolution of morals under democracy."—*The Churchman, April 12th,* 1913.

The Week

It is difficult to speak without contempt of proposals to abrogate out of hand the treaty under which the United States acquired the right to build the Panama Canal. The only reason assigned is that we now find the treaty an obstacle to our doing what we solemnly agreed not to do. Therefore, tear it up! There are regular methods of superseding or modifying treaties We got rid of the Clayton-Bulwer treaty by negotiating the Hay-Pauncefote treaty to take its place. But no country that did not wish to advertise itself as faithless and shameless would undertake to serve notice that it did not any longer consider itself bound by a treaty into which it had freely entered, and which in the view of both law and morals is absolutely binding. The stark power to do this need not be questioned. We can, if we choose, declare the United States a pariah among the nations, and give warning that none of our international engagements are to be kept if we find it inconvenient. But a mad rush into infamy is inconceivable.

Washington dispatches state that some errors that have crept into the income-tax section of the Underwood bill are to be corrected, particularly the one by which proceeds of life-insurance policies were unintentionally subjected to the tax. But apart from any downright errors it may contain, the wording ot the section is of such extraordinary character that something ought to be done, and done soon, to give the public a fair chance to find out what it means. Everybody knows, of course, the general effect designed—that $4,000 shall be exempt, that the amount of income above $4,000 and under $20,000 shall be taxed 1 per cent., the amount above $20,000 and under $50,000 2 per cent., and so on. They also know, in a general way, that the Government intends, so far as possible, to collect "at the source" —on dividends through the corporation tax, on salaries through the officers of corporations paying them, etc. But the mechanism of the collection is a matter of no little importance, and yet to any ordinary reader devoting less than a solid week to the study of the bill it must remain a sacred mystery. The sentences in which the procedure is laid down have a beginning, but can hardly be said to have an end, for the most surprising turns are encountered when you think you have got through. Thus you read and read and read about the necessity of disclosing all your private affairs to the cashier of the corporation that employs you, under penalty of losing your exemption; and then all of a sudden, with only a comma to separate it, you find what looks like an escape from all this, but you are not quite sure that it is.

It is not easy to reconcile the President's action in regard to the Directorship of the Census with the elementary principles that should govern in the filling of such offices. The present Director, E. Dana Durand, was appointed in June, 1909. His experience before that time was as follows: Legislative librarian N. Y. State Library, 1895-7; assistant professor administration and finance, Leland Stanford University, 1898-9; secretary U. S. Industrial Commission, 1900-2; special expert U. S. Census Office, 1902; special examiner U. S. Bureau of Corporations, 1903-7; Deputy Commissioner of Corporations, 1907-9. The qualifications of Mr. W. J. Harris, as given in the press dispatches, are as follows: "William J. Harris is a business man of Atlanta, Ga., who had several years' experience in Washington as secretary to Senator Alexander S. Clay." We do not add the fact that Mr. Harris is chairman of the Democratic State Committee of Georgia, because that does not seem to us to constitute any part of the qualifications of a Director of the Census. If, as is generally believed, Mr. Durand is a thoroughly fit head of that great statistical organization, why not continue him in the post? And if he is not, why not substitute for him a man whose qualifications, including special training and experience, are unquestionable?

Vice-President Marshall apparently regards it as his special duty to tell the country what "men are saying" about social and economic conditions, but he seems to have great difficulty in understanding what men are saying about *him*. They are not objecting to him as a radical; there is no particular reason to suppose that he is a radical. What they object to is the spectacle of the Vice-President of the United States chattering about great questions in the manner of a corner-grocery Solomon, telling a lot of gaping yokels what wonderful or terrible things are going to happen if something or other doesn't happen to prevent. His talk about the people being two to one for this or that extreme measure directed against the rich is precisely on a par with the familiar campaign talk about how the election would go "if a vote were taken to-morrow"—the safest and about the most futile of all kinds of election prophecy. Mr. Marshall adds nothing to the country's stock of knowledge about either the law or the alleged state of public opinion; and as to the merits of any proposed remedy for the evils concerning which he rambles on, he does not profess to have an opinion.

A mistake in filling the Collectorship of the port of New York would be one of the most damaging that the Administration could make. This would be true under any circumstances, but it would be preëminently true at the present time, owing to the remarkable record made by Collector Loeb. The performance of whoever goes into that office will be watched with keen interest throughout the country, and will be compared with that which has been familiar during the past four years. It takes a man of splendid vigor, of fixed principles, and of unflinching firmness, to administer that office as it should be administered. Good intentions and mediocre ability will not suffice to cope with the pressure of a thousand kinds that is brought to bear in the custom-house. As for the appointment of any man whose character or affiliations would suggest a reintroduction of politics, that would be little less than a calamity. An appointment clearly meaning the opposite of all this would powerfully strengthen the hold of the Administration.

Is the entire sugar business of the United States now centred in Washington? One might think so who glanced at the Washington newspapers and noted the extraordinary amount of advertising of sugar which they have been printing. These advertisements are mostly in the nature of burning appeals to the public not to be deceived by what "they say," but to "get the facts." And then the facts are spread out in bewildering variety—and uncertainty. The inference is clear that the public really appealed to is, not the housewives of the District, but the Congress that is about to revise the sugar tariff. There are at least four sugar "bureaus" now established in Washington. They are variously known, and some of their titles are sounding. The one that we like best is the "Refiners' Congressional Advisory Headquarters." That suggests something at once friendly and businesslike. All this activity naturally costs money. Letters are sent out asking for funds; and a firm in receipt of one of these appeals forwards it to the *Nation*. It states: "We have hesitated about calling upon you, but as we are now overdrawn at the bank it is absolutely necessary that we have funds at once." It seems sad that any association should be reduced to such straits when its one aim is to "save the sugar industry."

The insurance rate on postmasterships must have fallen sharply after Postmaster-General Burleson's pacific announcement regarding Republicans who happened to be holding these offices. Especially must it have brought relief to the friends of Postmaster Murphy, of Augusta, Ga., and any others in his delicate position. Mr. Murphy used to be a Democrat. Nevertheless, when Mr. Burleson's predecessor was looking for a good Republican for the job, he was asked by citizens of Augusta to overlook politics, and appoint "Old Murph." Augusta was President Taft's "winter capital," and he yielded to the request. Mr. Murphy, in return, could do no less than throw over his inherited convictions, and vote for Taft last November. Here is where he got into trouble. Having voted against Wilson, how could he expect reappointment, even if he was still a Democrat at heart? For a time, it looked very much as if Mr. Murphy's natural gratitude to Mr. Taft had operated to injure him, but now, we suppose, all will be well. The hazards of politics are terrible.

For a Socialist, Mr. Victor Berger is much more kindly disposed to Democratic tariff revision than so many non-revolutionary citizens of Republican and Bull Moose affiliations. The latter foresee no beneficial effect on the cost of living. The former Socialist Congressman from Milwaukee admits that there will be some relief, perhaps as much as $4 per head of the population; nothing to get excited over. Mr. Berger's figures illustrate one difficulty that reform must always encounter. The muckraker's work is essentially dramatic; the reformer's work is nearly always commonplace. When it is a question of the predatory nature of the tariff one habitually writes that the nation is robbed, even at Mr. Berger's modest estimate, of $400,000,000 a year—a respectable sum. When the tariff interests are made to disgorge, they do it at the rate of $4 per inhabitant of the United States—a totally unimpressive sum. The exactions of a Gas Trust, at a dollar a thousand feet, are luridly described as running up into millions. But the saving to the people under eighty-cent gas is described as amounting to 16 cents per month per capita. Undoubtedly, the nickels and the quarter-dollars of the masses make up the million-dollar surpluses of the Trusts, but the friends of reform must learn to get their legitimate dramatic effects by not speaking in nickels. Four hundred million dollars a year saved to the country by tariff revision is the way to speak of it.

Jersey City is the second largest municipality in the country to adopt commission government, New Orleans having voted for it in September. It is also the fourth city of above 200,000 population to take this step, the others being New Orleans, St. Paul, and Denver. Yet Jersey City will actually have her new form of government before some of these other places, owing to the New Jersey law which provides for a special election within a month of the adoption of the commission idea. St. Paul, for instance, although it voted for commission government nearly a year ago, will not get it until next January. There were actually fewer votes for it in Jersey City than in 1911, when the plan was defeated, but the vote against it was almost cut in two. So we have the familiar story of 11,000 electors deciding the form of government for several times as many of their fellows. Ten cities of above 100,000 population now have commission government. The total number of such cities is well above 200, containing a total of more than 5,000,000 people.

Another Legislature has performed the impossible by putting progressive laws in the statute-book without the aid of Progressive members. All but two of the 138 Texas legislators are Democrats, and those two are Republicans. Yet the Dallas *Morning News* says: "In the matter of enacting social or ameliorating laws, we have had no Legislature that can rival the last one." It proceeds to give specifications, as follows:

> Among the laws of this class passed by the last session of the Legislature was the Suspended Sentence act, the Employees' Compensation act, the Wife Abandonment act, the act limiting the working hours of women, the act prescribing a more effective and humane manner of trying lunacy charges, the Married Women's Property Rights act, the act creating a State Bureau of Child and Animal Protection, the bill creating a training school for delinquent girls, the Indeterminate Sentence act, and the act making the previously enacted Juvenile Court law effective provisions of that law.

Despite the multiplying declarations of Progressives that the name of the party doing the work does not count, the stony silence of the Colonel upon this point must make everybody outside of Texas view the above record with grave misgivings.

It is not surprising that the terms of Mr. Morgan's will should have made a deep impression on the public. The document is so largely conceived as to give a fresh indication of his large and foresighted nature. Attention is rightly called, also, to the serene confidence which he reposed in those associated with him in business, and to the ample discretion which he conferred upon his executors. Certain of the charities to which he contributed in his life-time they are to continue to aid as long as they may think it "necessary." No precise disposal of Mr. Morgan's art collections is made by his will, yet their ultimate destination, as a treasure for the

use and instruction of the general public, is clearly indicated. We do not doubt that his heirs and executors will duly attend to this carrying out of his intentions, so perpetuating his memory. Mr. Morgan's will makes a striking confession of his implicit Christian faith, and those who knew most about the religious aspect of the man assert that this is merely of a piece with his constant attitude. But it is perhaps a little unwise for clergymen to seize upon this, in the way in which so many of them did in the pulpit last Sunday. Their praise could easily be perverted into an apparent belief that what the world most needs is to have an overwhelming demonstration that godliness is profitable. There are other Christian doctrines more in need of emphasis just now.

The death of John B. Henderson removes one of the few survivors of the fifty-six Senators who, in May, 1868, voted finally on the impeachment of President Andrew Johnson. Mr. Henderson was one of the nineteen who voted that the charges had not been sustained; Messrs. George Edmunds and William Sprague, two other survivors, were of the thirty-five who voted that they had. The popular feeling was so intense, and the lines were so sharply drawn in the Senate, that every one would have been able to forecast the result but for the uncertainty surrounding the position of Ross of Kansas. He had held his peace throughout the informal discussions incidental to the trial, but eventually voted with the minority. Had he gone the other way, he would have reduced the minority to eighteen and raised the majority to thirty-six, the two-thirds required by the Constitution. Benjamin Wade, of Ohio, would then have succeeded to the functions of the Presidency, and the subsequent history of the United States would nave been different. Ross's later career was full of vicissitudes: from time to time he emerged from obscurity, but the closing years of his life were passed in New Mexico, following his trade as a journeyman printer. Mr. Sprague has remained in absolute retirement on his Rhode Island estate so long as to create a widespread impression that he is dead. Mr. Edmunds is now a leading citizen of Pasadena, Cal. In spite of his eighty-five years, he takes the liveliest interest in all governmental affairs, contributes occasionally to the press, and—in some respects most wonderful of all his accomplishments—reads every issue of the *Congressional Record* as faithfully as he used to while it was still a daily chronicle of his own public activities.

How slow we have been in meeting the physical needs of the boys and girls whose mental development has been our chief interest, is shown by the report of a Minnesota inspector to the Bureau of Education at Washington. He found that four-fifths of the children in country schools drink tea and coffee; that two-fifths of them suffer from almost constant toothache; and that one-fifth have frequent headaches. "When I ask how many have a toothbrush," this inspector writes, "nearly all say they have, but when I ask, 'Did you use it this morning?' there is little response." Simple questions about the children's eyesight brought out the fact that one-fifth of them suffer from eye-strain. Another defect is indicated by the statement: "Four or five per cent. of the children simply do not hear what is going on, and are therefore put down as stupid when they are not." The commonest principles of hygiene are frequently neglected. In one school, the stove was keeping the temperature of the room at ninety degrees, while outdoors it was ten below zero. Plentifully fed, the children do not get the right kind of food. Fresh air is carefully excluded from the houses—a condition, by the way, that is held partly accountable for the loss of reputation for good health that the country has sustained in comparison with the city. Fortunately, much can be done to remedy these conditions by the teacher, without resort to elaborate medical methods. Nor should a great deal of legislation be necessary. A little enlightenment ought to be sufficient.

What the actual merit of Dr. Friedmann's treatment for tuberculosis may be, is a question just about as open as it was when he began his vicissitudinous career in this country. The only thing certain about it is that it is getting an enormous amount of diversified advertising without expense to its author. Senator Penrose was entirely right in saying, apropos of the motion of Mr. Hughes, of New Jersey, that the Senate was "going out of its way to give him advertisement." The New Jersey Senator had asked unanimous consent for the consideration of his bill to give the doctor the right to practice in the District of Columbia without examination; but objection was made by Senators Gallinger and Penrose. The proposal was peculiarly objectionable in view of the fact that the United States Government is making a scientific examination of the merits of the treatment, and that its investigators are extremely careful to give no indication of their judgment until their inquiry has been completed. It is difficult to keep track of the changes in Dr. Friedmann's programme, which have been numerous. But at no stage of the proceedings have his actions presented the outward appearance of a dignified professional attitude; and so long as the doctors have not come to a conclusion, laymen may well adhere to a position of skepticism and caution.

Peace in the Balkans is definitely in sight. The allied nations, with the exception of Montenegro, have accepted the terms of the latest note presented by the Powers, with reservations that will not militate against the signing of a treaty. Thus under rather undramatic circumstances an historic campaign is drawing to its close. Yet the material for continued strife is not wanting in the Balkan peninsula. Peace with Turkey is virtually attained. War among the Powers over the question of Albania has been definitely averted. But there remains the possibility of friction among the allies when the distribution of spoils is under way. Rumors of open conflict between Bulgarians and Serbs, and Bulgarians and Greeks, are rife. From Sofia come dispatches which seek to minimize the rôle played by Bulgaria's partners in the war. But though the disposition of Salonica and the apportionment of territory on the Serbo-Bulgarian line in Macedonia are very likely to bring about debate, the dispute can hardly go beyond that. The magnitude of the victory over Turkey has inflamed the ambitions of every one of the allies. But then the magnitude of the spoils is such that there ought to be enough for everybody —with a little grumbling.

TARIFF MONSTROSITIES.

In the process of threshing out the new tariff bill, the Democratic caucus reached Schedule K, and by a vote of 190 to 42 decided to put wool on the free list. This has many significant aspects. Two years ago the Democrats in the House could not screw their courage up to advocating free wool. Indeed, in the original form of the present bill a small duty was retained. Mr. Underwood has frankly stated this, and has also explained that President Wilson took the responsibility for removing the tax entirely. That this was a step in which the party is now ready to follow him, was shown by the overwhelming majority in the caucus. But the vote for free wool is only one of many signs that impatience and disgust with the old system of tariff taxation are growing on all sides. The greatest pressure now put upon the Democratic leaders in Congress is, not to make the rates higher than the bill proposes, but to make them lower. The free list has been much extended, but it is plain, from all that comes out, that it could be made even larger to the satisfaction of the rank and file of the party.

The country is still, unfortunately, in the midst of the tariff jungle. We have to begin by cutting a few openings. The whole noxious growth of a century cannot be cleared away in one year. It took English statesmen fifty years to get rid of all their tariff monstrosities, and we shall have to be long at the task. For a beginning, the Underwood bill is probably the best that can now be had. But no man who approaches its study from the standpoint of scientific taxation, or takes it up purely as a project of law, can fail to see that it staggers under a dead weight of inherited and inveterate evils. If we knew nothing of its antecedents, nothing of the enormous difficulties now in the way of drafting a customs law that shall be at once clear, just, and productive of revenue, we should say, on simple inspection, that the bill now before Congress was an object of amazement and even horror.

Take the brute mass of it. In the hands of every member of the House were placed two bulky documents. One was the bill itself—218 printed pages. With it went a Tariff Handbook, containing no less than 816 pages of texts, comparisons, statistics, indexes. And all this wilderness of detail in order to raise some $230,000,000 of revenue for carrying on the Government! Six or eight items alone, under a law capable of being written on one sheet of paper, raise $100,000,000 of customs revenue in England. Yet that country had in 1815 a tariff nearly as cumbrous and vicious as ours. It contained 1,400 items. With a meticulous ingenuity like that of our own tariff-makers, it sought to levy a special tax on every conceivable variety of human production. All this has been swept away in England, to the great advantage of her Treasury, and to the durable satisfaction of her people.

But Americans, even in their revised tariff, are caught in the old complexities and endless subdivisions of tariff legislation. Open the bulky volume that is called a law almost at random, and you find yourself in a Mandarin atmosphere. "Single yarns made of jute, not finer than five lea or number." "Cotton cloth, not bleached, dyed, colored, stained, painted, printed, or mercerized, containing yarn the highest number of which does not exceed number nine." Are such things suitable for a statute? Do they fit into any rational idea of taxation?

What the explanation is of this terrible mass of tariff legislation, everybody knows. It began as a tax and ended as governmental oversight of every branch and form of human industry. Little by little, every established canon of taxation was departed from. Step by step the notion of subsidy and favor crept in. Thus two things that do not belong together became hopelessly mixed up. If you are merely going to lay a tax, you can do it in a few and simple words, following Adam Smith's four rules. But if, while pretending to lay a tax, you are going to undertake a minute and fatherly supervision of the business of every man in the country, it is inevitable that you shall lose yourself in a myriad of phrases, and make your tariff bill look more like a dictionary than a law. The resultant confusion, waste, misunderstanding, bickering, litigation, complaint, tinkering, scheming, log-rolling, corruption, are frightful. As we have said, we think that the Underwood bill makes a brave beginning of clearing away the huge tangle. We do not assert that more could wisely be attempted at the present time. But let us not delude ourselves into imagining that we are more than emerging from the tariff morass. Many years will have to be devoted to the labor of draining and making habitable that Serbonian bog where armies whole have sunk.

MAKING OVER OUR SEA-LANGUAGE.

It is clear that the simple-spellers are not to have it all their own way, for here is a board of admirals at one fell swoop cutting out two of the commonest words in the seaman's vocabulary. For port and starboard, read left and right hereafter. Shades of Marryat and Fenimore Cooper, yes, and of John Paul Jones! So much of the romance of the sea went when the steam-kettle came in and the great square-rigged windjammer began to disappear that at least the language of the ocean might have been spared and left to undergo no more violent transformation than that wrought by the natural changes of time. But there are traitors in the seaman's own camp, it appears, and starboard and port are to go by the board—or, should we more properly say, "pass out of the left gangway"? After this, nothing is safe; front and rear will soon take the place of fore and aft; and the fore-and-after which graces our coasts, will she become the forward-and-rearer? There is much more about the terminology of our battleships that could be civilianized. Thus, if port and starboard must go, let the sponsons be called bay-windows and the turrets merry-go-rounds. "Go below, sir" will now read, "Walk downstairs," and piping an officer over the side will doubtless read "whistling an officer in (or out) of the left or right-hand door to the ship."

The object of the abolition of port and starboard is stated to be to simplify matters for the hosts of landsmen who man our floating machine-shops and gun-bearing vessels. Now, in the old days of sailing craft, it usually took a smart officer, with the aid of a rope's end, only about two watches to lick into the veriest landlubber the fact that starboard is right and port left, even if the recruit was as dull as the historic Irish lookout who, when asked what he made of an approaching red and a green light, said: "I tink it's a droog store, sirr." A man like this might find it hard to

know the difference between a patent-log and a range-finder, and he would surely find himself on the battleship Florida in a fog of the technical terms in which mechanical, electrical, and ballistic engineers rejoice, beside which port and starboard are mere a, b, c's. But if we must make navigation easy for the masses, why, reform always did love a shining mark.

But what fate is in store for the yachting reporter who undertakes to write his descriptions of the coming Lipton America's Cup contest in the new sea-lingo? Are we to learn that at 2:10 "Shamrock was close-hauled on the right tack," and then to be told that this was the *wrong* tack from the point of view of scientific seamanship? Worse than that may come. Shall we not read that "Shamrock came about to right at 10:12," with the explanation for the layman that she was then headed to the left, taking the wind over her right bow, beam, or quarter? If this does not mean confusion worse confounded, we know not whereof we write. And what is to become of the classics of our sea literature? Must we edit "Pinafore" like a play of Shakespeare and change the good old song from "larboard watch ahoy" to "left-h-a-a-and watch ahoy"? And the sea novels in which the romance or the tragedy always happened by the light of the moon in the port-watch—must we recall them now for fresh and revised editions? The bells, of course, will go next. It will no longer be eight bells and the watch below, but four o'clock and afternoon tea with patent clocks to strike the hours on the ship's bell like any tame grandfather's clock on the front stairs in the old home on the farm.

We are reconciled to the passing of the mizzentopgallant brace, the spanker brails, the cross-jack lifts, the spanker-gaff, and the monkey-gaff vangs. The parting with them was softened by the thought that we should have found it hard to define them offhand without a sly resort to that diagram of a full-rigged ship which graces almost every dictionary. We know, with resignation, too, that the ship's eyes have gone the way of the ship's husband and the ship's corporal, and that the day of the fo'castle and the quarterdeck is drawing to its close. But when you take away starboard and port you deprive thousands of landsmen and landswomen of the easiest way of showing how familiar they are with boats and the men that go down to the sea in ships. You rob us, Secretary Daniels, of two of our oldest verbal friends—friends of the never-to-be-forgotten days when one lay on the nursery floor and read of the Sea Rover and the Sea Lions and Midshipman Easy, and thrilled over such a tale as this:

> At 2 A. M., being in 4½ fathoms water with Bald Head Light bearing E. ½ N. and Bug Light N. E. ¾ N., saw a suspicious looking, very small, dim, bluish white water crossing our stern to westward. We soon made it out to belong to something that looked like a large whale with the water washing over either end of it. I supposed it to be the torpedo boat then on our starboard quarter and standing toward us. I started ahead on one bell to bring our starboard broadside gun to bear upon him, and fired as soon as possible; then started full speed ahead. He soon made his appearance upon our starboard quarter as before, and then I rang one bell. We soon brought him abeam, fired starboard gun again. In about twenty minutes found him again on our port quarter, turned the ship toward him until abeam and fired port broadside gun at him. . . .

Must this read hereafter: Fired our *right* gun on our *right* quarter? Heaven forbid! A Tarheel Secretary fresh from the smell of printer's ink may order what he pleases. Custom, time, romance, and the eternal fitness of things make against him. The navy that despises sails and knows but tools and turbines may say and do what it is told to do. But your true sailors, your real windjammers—yes, the tramp and the liner, who's a lady, too—upon these we count to stay the progress of these linguistic vandals who think that to shipwreck a custom of centuries they need but call it dead. The very spirits of the sea they have yet to reckon with.

BUSINESS AND WAR.

On this side of the water the interest taken in our blatant Navy League by battleship builders, organizers of Ship Trusts, and producers of nickel-steel, is well known. It has plenty of money, and maintains offices in Washington, where its recent banquet called forth such salutary anti-militaristic remarks by Congressman Fitzgerald and Secretary Bryan. But in Germany the Social-Democratic leader, Dr. Liebknecht, has been fortunate enough to throw a light upon the recent war-scare in that country and France which ought to rouse the utmost indignation wherever men are thinking seriously upon this curse of modern times—armed peace. Dr. Liebknecht and his party's organ, the *Vorwärts*, have proved that a great Essen firm which is competing with the Krupps for the business of supplying war material, had actually been maintaining an agent in Paris to induce the French press to attack Germany, and so to cause the German Government to place more orders for guns and munitions. By some piece of good fortune, the *Vorwärts* is in possession of the instructions given to the Paris agent to "leave no stone unturned" in persuading some widely read Paris newspaper to print a statement that France intended to double her orders for machine guns. Then the German company was to appear at the War Office in Berlin and cite the Paris article as a reason why a large order for machine guns should be given.

Could anything be baser? This is not merely a bit of sharp business practice: it is playing with fire of the most dangerous sort. For from this kind of article, with the ensuing competition, arises immediately a dangerous tension between the two countries. We have seen it all in this instance. The publication of this story of increased purchases of guns by France and similarly belligerent articles in the *Figaro* and other Paris newspapers was followed by the extension of the two years' compulsory service in France to three. Thereupon Germany answered with its tremendous war-levy and an increase of its standing army and navy to no less than 870,000 men. This in itself is enough to bring about a dangerous condition of affairs; and then happened the misadventure of the Zeppelin dirigible in France and the attacks on German citizens near the frontier. The fearful aspect of all this is that those who are playing this game are playing with human lives. Perhaps a half-million human beings would perish or be maimed should Germany and France fight again under modern conditions. And yet, for the sake of increasing its dividends, the Deutsche Munitions- und Waffenfabrik of Essen is ready to take the chances of precipitating such a frightful national catastrophe.

But this is not the only guilty company. The Krupps, too, have been revealed by Dr. Liebknecht as maintain-

ing a lobby in Berlin, agents with plenty of money to bribe officials and to subsidize the purchasable press to print articles attacking France and England and creating war-scares. No one knew that behind these articles which preached Pan-Germanism and the necessity of national defence was, as the *Morgenpost* puts it, "sheer lust of gold." More recently the War Minister has risen in the Reichstag to explain that the necessity for such a great increase in the army was not the French militarists or the alarmist articles in the French press, but the rearrangement of things in the Near East and the strengthening of Russian influence. Where do these Krupp revelations leave him? Either he was ignorant of what was going on, or he was helping to conceal the play to coin more money out of the taxpayers' fears which the Krupps were staging so cleverly and masking under talk of the new danger to Germany in the Balkans.

Altogether there is no sadder picture of the exploiting of the masses by special privilege than this presents. The lower classes are staggering under a frightful burden of taxation and are compelled to give two or three years out of their lives to the Government. Then the privilege which their money has fortified in Essen declares 30 per cent. a year in dividends made in creating, not weapons of industry, but weapons designed solely to slaughter human beings.

Well, these Berlin revelations will help a little; they certainly place the Government, now asking the Reichstag for vast new sacrifices of treasure and of economic power, on the defensive. They ought to open the eyes of many who have been blinded heretofore by the familiar cant and humbuggery of the imperialist—manifest destiny, race entity, preserving peace by arming for war, paying merely insurance on a nation's welfare, etc., etc. All these and other stereotyped phrases have befuddled the taxpayers. But the time is coming when the people will insist that their Prime Ministers and Presidents are hired primarily to insure peace by their conduct of national affairs, and will decline to dance further to the tune of the gun-making piper. There is really no adequate penalty for such offences against the peace of the nation as are now revealed in Germany; the press is speaking out at last, even the Conservative wing, and a few of the go-betweens will doubtless pay the penalty. But the makers of guns and powder will survive.

A FEDERATION OF NEGRO SCHOOLS.

The conference in New York city of the representatives of some forty Southern schools and associations concerned with negro education, which ended Friday, resulted in the formation of an association for mutual help. For years the smaller schools, which are offshoots of Hampton and Tuskegee and are more or less patterned after them, have been looking for leadership and aid to the larger schools, and particularly to the great funds for education which have been created by Mr. Rockefeller and others. So far, their hopes have not been realized, though the opportunity must have seemed tempting indeed. Last week's conference was called by the principals of six rural industrial schools for negroes in the South, who desire to wait no longer, but to see whether by organization and coöperation some betterment of the conditions under which they are struggling cannot be obtained.

These schools, it must be remembered, although private institutions, are born of a terrible necessity. Take that at Snow Hill, Alabama, for instance. It is situated in Wilcox County, in which there was expended in 1910 but $9,339.70 for the education of 10,758 negro children and $30,612.75 for that of 2,000 white children—ten times as much for one-fifth the number of white children. Per capita, these figures are but 32 cents for the negro child and $15.50 for the white. That is, if a negro child were to go to school for ten years, its whole education would have cost only three dollars and twenty cents! What a mockery of education this is appears plainly enough. Is it any wonder that brave spirits like Mr. Edwards have sought by private initiative to make up in some slight degree this shameless failure of the State? Naturally, he has had to turn to the North for aid; but he, like others, has found the usual round of begging more and more difficult with the passage of years. More and more of such praiseworthy beggars are in the field, and some who do not deserve praise as well. Usually they make the same rounds, interfering with one another and chilling their welcome from those who appreciate the need of the work but are appalled at the variety and the increasing number of the demands made upon them. As a result, there has been a growing conviction that the Northern gold mine was in danger of pinching out. Under the circumstances, it is not surprising that the conference was most interested in the discussion led by Mr. Clarence H. Kelsey as to whether there was not some way of coördinating the financial activities of the several schools, of devising new ways of support, and establishing a clearing house whose certificate of character, when bestowed on a school, would at least simplify the task of the would-be donor.

From this point of view alone the desirability of the new organization is obvious. If it could maintain an office in New York at which questions as to the standing and worth of the more than 200 schools of this character in the South could be answered, it would render a genuine public service. Equally desirable would be the establishing of pedagogical standards and of a rational and uniform system of accounting. It is the experience of all who have been in the work that there has been surprisingly little dishonesty as a whole. One fraudulent person, who was utterly unfit to be entrusted with the supervision of children, recently obtained a gift of $30,000 from the widow of one of our best-known statesmen. The money could hardly have been placed in worse hands. But, as we have said, this is exceptional; the chief waste has been through the misapplication of funds because of the ignorance of those in charge. It is a difficult thing to regulate the costs of such an enterprise and to ascertain exactly what the returns are. All the more desirable is it, therefore, that the leaders among them should voluntarily adopt the simplest possible system of bookkeeping, under proper supervision, so that a mere statement of adherence to it would certify the proper accounting of funds.

The standardizing of the course of study the conference found a more difficult problem, and naturally so. The curriculum that is suited to a school in the Mississippi Delta is not necessarily suitable for a school on the seaboard of South Carolina. What is good for a Tuskegee is not necessarily good for a

small school. But certain fundamentals there are for all these enterprises, and the necessity for proper coördination of book and manual training is obvious. Under the circumstances, therefore, the new association will have to feel its way slowly. We are firmly of the opinion, however, that a model curriculum, subject to local modifications, can be worked out as a guide for those whose aim is a thoroughly practical training in the three R's.

Still another result of the coming together of these men and women who are seeking to lead their people onward, will be a fresh discussion as to the best means of obtaining additional State and Federal aid. The *Nation* has not forgotten that a generation ago it led the opposition to the Blair bill, which would virtually have relieved the Southern States of all responsibility for education of this kind. It may well be, however, that the time has now come for a reëxamination of the question. Upon this the new Association, after it has found itself and recruited its numbers, may be able to speak in a way to illuminate the whole subject.

OLD GREECE IN THE NEW.

The spirit that animated the Balkan allies to take up arms against the Turk pervades the narrative of a Greek lad, recently settled in Boston, who has published his recollections of "When I Was a Boy in Greece" (Lothrop, Lee & Shepard). Of Greek parentage, George Demetrios grew up in Macedonia, not so far from Mount Olympus, where ancient traditions clashed with Turkish rule. The tale of oppression is not overdone. To a boy the memory of Turkish officials riding through the town, firing off revolvers, and of Greek youth being obliged to carry weapons in self-defence and on occasion going to deserted places for the fun of bombarding a hillside, can hardly be more terrible than picturesque and romantic. Yet the smouldering discontent is not concealed, especially in the patriotic songs handed down from the Greek war for independence in 1821 and cherished as priceless. But the author's greatest grievance shows amusingly in his distasteful recollection of a sop thrown to visiting Turks at the exercises on the occasion of his graduation from the gymnasium. He and another boy were compelled to enact a dramatic dialogue in Turkish, to prove that the language was not neglected. He left his country too soon to witness its recent triumph, but a letter from his sister, "bearing the Greek stamp" (published in this volume), gives a vivid picture of what was going on in any of a hundred villages towards the beginning of hostilities:

> And when the people of Naoussa saw them approaching [deputies of the Greek army], they all shouted "Hurrah!" and the band began to play. . . . People did not know what to do for joy. There was bread to be sent, but after that nobody seemed to sleep that night, the band playing, and the people following it here and there, shouting "Hurrah for liberty! Hurrah for King George! Hurrah for the Crown Prince! Hurrah for the Greek soldiers!".

Tersely but significantly the girl describes the change which has come over sights familiar to her brother: "You remember the little Church of St. James, occupied by the descendants of the Turkish hodja. They were driven out." His uncle, the country doctor, was captured, but escaped, etc.

The reader of Demetrios's artless narrative can hardly fail to be grateful that this particular region has at length won its liberty. The links with the past are still quaint and numerous. The great god Pan is dead, as well as the bright deities on Olympus. But many of the old legends live. On the first of March, we are told, the boys celebrate the return of spring, going about from house to house with a carved wooden swallow at the end of a stick, and singing the song that Sappho herself may have heard:

> She is here, she is here!
> The swallow that brings us the beautiful year;
> Wide open the door!
> We are children again, we are old no more.

The dead at burial still receive the piece of money, or *obol*, to pay Charon for ferrying them over the black river; and songs designed to placate that remorseless being go the rounds. Grown people, with the newer demands of Christianity, have learned to call him the Angel of Death, but for young folk his ancient name and origin are permitted to remain undisturbed. Fate, too, stalks through "the children's hour" after its manner in classical tragedy, and one of the stories to which our young author listened of a winter's night before the fire is not far removed from a version of "Œdipus." In the imagination of Greek boys, wood nymphs and nereids still cling to their ancient homes.

Legend has done much in Macedon to preserve the old flavor. But even the account given of the daily occupations of this simple community reads like a chapter from the Odyssey. M. D'Estournelles de Constant, in one of his visits in a Greek island village, found "the white oxen with short legs and powerful shoulders so familiar in antique bas-relief." Demetrios in his own village remembers "the gathering of the sheaves when dry and the loading of the donkeys, and we boys trotting by their side as they bore their fragrant burden to the stacks near the threshing floor, and the fun of riding them back to the fields for a fresh load. And then came the time for treading out the corn." The evening meal that followed was not such as King Alcinous served to Ulysses, but in the account given of it one is haunted with a sense of familiarity with its simple but established formality, the deference to elders and men of importance, and its leisurely charm. It has not the strangeness, for instance, felt by the Westerner for many an Oriental ceremony. Philip of Macedon brought Greece to terms, but Greece retaliated by imposing on that land a restful culture which the rule of the Turks has apparently not obliterated.

Americans will also be tempted to read into one episode of Demetrios's education something of the spirit which in ancient days sought wisdom from a goddess. When twelve years old he was anxious to become head of his class and to beat a boy of his own age. Shortly before the examination he went secretly to the little church to burn before the shrine of the Virgin an eight-cent candle, "which looked very big in comparison with the one-cent candles that the villagers usually burned." But there was another eight-cent candle already burning there—his rival's. He adds modestly, "We both passed our examination." Oddly, not until he went to the Boston Museum did he get a glimpse, through photographs and replicas, of the ancient works of art whose underlying legends he seems to know so well. That glimpse and subsequent experiments have made him decide to become a sculptor, as we learn from the friend who translated his narrative.

BEAUMONT AND FLETCHER.—I.

The Cambridge University Press has brought us no better gift these latter years than the complete works of Beaumont and Fletcher, "those renowned twins of poetry," exactly edited by the care of Arnold Glover and A. R. Waller.* No one now would style these volumes, as James Shirley styled the first folio edition, "without flattery, the greatest monument of the scene that time and humanity have produced"; but they contain an inexhaustible body of entertainment, and, as Shirley said to the reader in that "tragical age where the theatre [had] been so much out-acted," so we may say to the reader in these duller times: "Congratulate thy own happiness, that, in this silence of the stage, thou hast a liberty to read these inimitable plays, to dwell and converse in these immortal groves, which were only showed our fathers in a conjuring glass, as suddenly removed as represented."

I.

The earlier Elizabethan tragedies had as a rule been based on a single master passion, which by its excess led both the persons possessed by it and their victims into acts of blood and madness. Comedy meanwhile had been largely a thing of adventure and amusement, an escape from fact and passion into a world of happier fancy, until, by introducing the master passion in the form of humors, Jonson changed fancy into satire and set comedy on a parallel with tragedy.

That was a change momentous alike for literature and philosophy; but about the same time another step, no less notable in its consequences, was taken by Beaumont and Fletcher. Hitherto tragedy and comedy, when united in the same play, had, for the most part, stood together as mere alternations from one *genre* to another. A more essential union of the two was prepared when our twin dramatists (if we may give them all the credit) altered the theme of tragedy from a single master passion to a number of loosely coördinated passions, thus relaxing the rigidity of the tragic structure and permitting the fancy to play more intimately through all the emotions. Such, in a general way, would seem to be the origin of the new form, which lay in germ in some of the earlier plays, but was developed in the first decade of the seventeenth century into the well-marked *genre* of the romantic drama.

The possible beauty of this new form of drama is familiar to all the world from "The Winter's Tale" and "Cymbeline," if not from the work of other writers; it is of a kind, indeed, to appeal with peculiar cogency to ears accustomed to modern romance. But with the faults inherent in the *genre* it is different. Ethically these are so involved in the obscure currents of the age that their real source and gravity are likely to be overlooked, and æsthetically we have become more or less blunted to them by long familiarity. Yet there has been no lack of protests against the sudden conversions of character and quick shiftings of motive which are the most striking manifestations of a deeply-lying corruption. There are still readers and spectators who, however they may be borne along by the magic of Shakespeare's style, are brave enough to admit that they are disconcerted by the inartistic abruptness of such changes in passion as those of Leontes in "The Winter's Tale"; and one critic at least, who wrote not so very long after the efflorescence of the romantic drama, was so bold or, if you will, so insolent, as to enlarge the censure of these faults into virulent abuse of the whole Elizabethan drama.

There is an offensive undertone of buffoonery in old Thomas Rymer's diatribe against "The Tragedies of the Last Age"; his taste was vitiated by an insensibility to things beautiful in themselves and by a hard pseudo-classic canon of decorum, but one is bound to admit that his criticism of "The Maid's Tragedy" (not to say of "Othello") finds the weak points of the play with diabolical shrewdness. "This may be *Romance*, but not *Nature*," he exclaims, after setting forth the irrelevance of the motives that Beaumont employs. And he is justified. Consider, for example, the speeches of a single actor in that tangle of lust and love, loyalty and effrontery. We first become acquainted with Evadne in a scene (II, i) characteristic of the age, when her ladies are disrobing her after her marriage to Amintor. Here she displays delicacy of feeling which might befit a Desdemona; yet immediately afterwards, to repulse her husband, she avows her lust, her engagement to the King, and her acceptance of Amintor merely as "one to father children":

Alas, Amintor, think'st thou I forbear
To sleep with thee, because I have put on
A maiden's strictness? Look upon these cheeks,
And thou shalt find the hot and rising blood
Unapt for such a vow. No; in this heart
There dwells as much desire and as much will
To put that wished act in practice as e'er yet
Was known to woman; and they have been shown
Both. But it was the folly of thy youth
To think this beauty, to what land soe'er
It shall be called, shall stoop to any second.
I do enjoy the best, and in that height
Have sworn to stand or die: you guess the man.

To the King himself (III, i) she admits only her calculating pride, declaring that she loves with her ambition, not with her eyes, and that if he were thrust from his throne she would forsake him for his supplanter. Later, though she has expressed a certain pity for Amintor (II, i), she is heard laughing with the King over the way they have cozened him. In the great scene (IV, i) in which her brother charges her disgrace upon her and demands the death of her paramour, there is perhaps justification for her deep repentance; certainly in the magnificent sweep of the emotions here portrayed the reader is not likely to feel anything false to nature, if such exists, even in her transition from abject self-abasement to a kind of self-pity:

Here I swear it,
And all you spirits of abused ladies
Help me in this performance.

But the same cannot be said of her words to the King when she prepares to murder him in his bed-chamber (V, ii). There is something in her "mere joy" in killing that jars with her previous mood of chastened grief, and when one considers her avowed reasons for deceiving Amintor, one has almost a feeling of revulsion at the tone of her accusation:

I am as foul as thou art, and can number
As many such hells here. I once was fair,
Once I was lovely; not a blowing rose
More chastely sweet, till thou, thou, thou, foul canker,
(Stir not) didst poison me.

Chaste and sweet—if the lady and the dramatist have forgotten her first confession to Amintor, the reader certainly has not. Nor can the reader quite stomach her next mood of sudden and overwhelming love for Amintor (IV, i), however deep her aversion to the King may have become. The simple fact is, here are but a succession of womanly passions, each indeed cunningly conceived and expressed, but giving us in the end nothing we can grasp as a whole and comprehend; no woman at all, unless mere random passionateness can be accounted such. And this sense of incoherence would be magnified if we should analyze Amintor and the other persons of the drama in the same way.

II.

Evadne is presumably the creation of Beaumont. For the typical work of Fletcher in this *genre* we may turn to "Valentinian." If there is anything in reputable literature more revolting to the ethical sense (as the Greeks conceived *ēthos*) than the conclusion of that play, I cannot now recall it. All through the first four acts we see Maximus and his friend Aecius acting as high-minded Romans. The Emperor Valentinian, a base, libidinous creature, lures the beautiful and chaste wife of Maximus to the court, and there rav-

The Works of Francis Beaumont and John Fletcher. Ten volumes. The Cambridge University Press. New York: G. P. Putnam's Sons. 1905-12.

ishes her. Nothing could be nobler in the old heroic sense than the first scene of the third act, in which the two friends learn of her ruin and part from her as she goes out with the determination to purify her stain by death:

Lucina. Farewell for ever, Sir.
Maximus. That's a sad saying,
But such a one becomes ye well, Lucina.
And yet methinks we should not part so lightly;
Our loves have been of longer growth, more rooted,
Than the sharp word of one farewell can scatter.
Kiss me: I find no Cæsar here; these lips
Taste not of ravisher in my opinion.
Was it not so?
Luc. O yes.
Max. I dare believe thee,
For thou wert ever truth itself, and sweetness;
Indeed she was, Aecius. . . .
Aecius. The farewells, then, of happy souls be with thee,
And to thy memory be ever sung
The praises of a just and constant lady.
This sad day whilst I live, a soldier's tears
I'll offer on thy monument, and bring,
Full of thy noble self with tears untold yet,
Many a worthy wife to weep thy ruin.
Max. All that is chaste upon thy tomb shall flourish,
All living epitaphs be thine, time, story;
And what is left behind to piece our lives
Shall be no more abused with tales and trifles,
But full of thee, stand to eternity.

Shakespeare himself would barely have expressed a pure and steadfast love more finely, and there is nothing in these scenes to mar the effect. The one desire of Maximus now is revenge upon the Emperor. To this end he is obliged to break through his friendship for Aecius; and again the conflict between his affection and his deadly purpose is portrayed in the noblest manner. But what happens then? Aecius is tricked to his ruin, the Emperor is murdered, the saintly martyr is scarcely buried, and then, suddenly and without warning, we find Maximus (V, iii) a coarse plotter and traitor:

Maximus. Gods, what a sluice of blood have I let open!
My happy ends are come to birth, he's dead,
And I revenged; the empire's all afire,
And desolation everywhere inhabits.
And shall I live that am the author of it? . . .
You that but stept before me, on assurance
I would not leave your friendship unrewarded,
First smile upon the sacrifice I have sent ye,
Then see me coming boldly.—Stay, I am foolish,
Somewhat too sudden to mine own destruction;
This great end of my vengeance may grow greater:
Why may not I be Cæsar? Yet no dying;
Why should not I catch at it? Fools and children
Have had that strength before me, and obtain'd it. . . .
If I rise,
My wife was ravish'd well!

I do not know, considering what has gone before, that there is a viler and more disheartening line than this last in the whole Elizabethan drama. And it gives the keynote of the huddled scenes that follow—the usurpation of the throne and the hideous wooing to that end of the widowed Empress. The only consolation in the thing is that the Empress poisons him for his villany.

I have dwelt at some length on these two plays of Beaumont and Fletcher respectively because they offer examples, though glaring ones indeed, of the sort of moral inconsistency that is characteristic not only of their plays, but of the whole drama of this later period. It may be possible occasionally by aid of a desperate casuistry to reconcile the contradictory passions of these plays, to explain the debasement of Maximus, for instance, as the crudely conceived result of vengeful desires working in a troubled soul; but the dramatist himself gives us no such ease, and one cannot read many of these plays without feeling that the fault lies deeper than any mere crudeness of literary procedure, and touches, in fact, the very conscience of the writers and of the people who encouraged them. The nature of the fault can be shown by comparing together three different ways in which the passion of love has been treated dramatically.

III.

We have seen that the principal step from the older tragedy to the romantic drama was taken when a number of passions were employed as motives instead of a single dominant passion; but to understand the gravity of that change we must look still further into the past: we must go from "The Maid's Tragedy" or "Valentinian" to such a play as "Romeo and Juliet," and from that to such a play as "Hippolytus."

Euripides has built up his plot on a manifestation of love as devastating and as morbid as any dramatist of the Renaissance could have desired. The action turns on the fatal relation of two persons, Hippolytus and Phædra, each intrinsically virtuous, but each carried away by excess of passion. Hippolytus has dedicated himself to an austere ideal of chastity. No doubt, the pure abstinence of his life is painted in glowing colors, but the real thought of the dramatist is conveyed in the words of the servants who rebuke Hippolytus for his exclusive devotion to Artemis and for his overweening contempt of mortal nature. In the same way Phædra is condemned and falls into the calamities of crime because she yields her soul to the excess of the opposite passion. So the chorus, when they have heard her unwilling confession of love for her step-son, cry out, "May no unmeasured love come to us!" and Phædra herself, after she has resolved on escape from shame by death, exclaims, "By bitter love I shall be beaten!"

Now, the bloody dénouement of the plot springs indeed from the clashing of these two passions of inhuman chastity and morbid love; but the real tragedy of the play, that which stirs our emotions, depends on no such external conflict, but on the inner drama of the two souls who are the prey of these passions. More particularly Phædra, the protagonist, does not appear as a mere personification of a passion, but is by many touches represented as a person existing apart from the passion that assails her. Deep in her bosom, lies the *aidós*, the sense of honor, modesty, reverence, the inner check whose office is to oppose a restraining force upon inroads of excessive or unlawful emotions, and which forms the elemental basis of that mysterious entity called character. To emphasize this distinction between character and passion and to bring out more clearly the field where the real tragic conflict takes place, Euripides has developed the old mythology of his people into a kind of allegory. Artemis and Aphrodite, as we see them here acting, are no longer the enlarged human persons we have known in the earlier poets, but have been transformed into symbols of the irrational, emotional powers that sway the human heart. In Artemis there is something of the superrational, so that submission to her sway is not portrayed as evil in itself, but as a thing perilous to those who in this earthly life would walk by a law which transcends the common measure of mortality. Aphrodite, on the contrary, stands as the embodiment of unrestrained and instinctive desire. The nurse, who represents a pure naturalism, may encourage Phædra to yield to the dæmonic power:

Cease your violent pride (*hybris*); for it is only such pride that bids you wish to be superior to the *dæmons*. Love boldly; so the god wills.

But the Queen looks higher, and knows that the integrity of her character depends on her power to withstand these dæmonic assaults. "My mind," she says, "has been broken by unholy loves, by a terrible disease from Aphrodite." And at the end Artemis declares that "Cypris, the crime-doer, has contrived these things." In a word, the play of "Hippolytus" is essentially moral, just because the tragic pity and horror are based on this distinction between passion and the inner citadel of character.

If we turn to "Romeo and Juliet" we shall find ourselves in an entirely different atmosphere. Shakespeare, too, has made love the theme of his drama, and he has painted it with a luxuriant beauty and a deep understanding such

as no other poet, perhaps, has ever equalled. There is no ill in that; but he has done an ill thing in bringing this fair passion wantonly, or ignorantly, to a tragic end, and has proved thereby that to this extent he stands on a lower moral level than his Greek predecessor. Nothing shows that he thought of this love between the two young hearts of Verona as criminal by reason of its own excess; rather in its very unreflecting intensity lies the seal of its charm and justification. Nor is there any breath of conflict in the bosoms of these brave lovers; rather they are all one passion, mere instruments to sound the sweetest cadences of innocent love. Why, then, the bloody and horrid conclusion? The quarrel of Capulet and Montague might well have been used to draw out the plot of the play, and by offering resistance to the course of true love might have added a deeper note to its blissful end; but to make this purely external circumstance the cause and source of tragedy is to pass from the realm of moral cause and effect into a region where emotion is accidental and bears no relation to character. Now "Romeo and Juliet" is typical of the early Elizabethan tragedy. In other plays the passion in itself is unlovely, and so may seem to belong more properly to tragedy than does Shakespeare's theme; but in almost all cases, and indeed with varying degrees, if the action is examined, it will be found to omit the essentially moral element, and to bring before us a personified passion rather than a character overcome by passion. I have taken one of Shakespeare's plays as an example, and rightly, I think; but it is also true that in his greater tragedies Shakespeare stands quite apart from his age, rising above it by the very strength in him of this moral sense which was so generally weak in his rivals. In "Macbeth" he belongs with Æschylus and Euripides, and the audience which was moved by the passion and woe of Agamemnon would have understood and applauded the evil doom of the Scottish king. Though romantic in detail and in complexity of form, and though, it must be admitted, sometimes barbarous in the handling, the greater plays of Shakespeare are in their substance profoundly classic.

IV.

In the earlier Elizabethan drama the employment, for the most part, of a single passion as the tragic motive, even where the sense of character was weak or wanting, lent a superficial consistency to the acts and words of the protagonist which gave to him at least the semblance of character. With the romantic drama, in which the action shifts unaccountably from one passion to another, even this illusive consistency is lost, and the play appears no longer as merely non-moral, but too often as completely wanton. The punishment came heavily and publicly. From the first there had been preachers of the Puritan stamp to denounce the "flexanimous enticements" of the stage, and with the growth of Puritanism and the degeneracy of the drama these denunciations became more violent and more voluminous, reaching their maximum of both in the huge and clamorous "Histriomastix" (1632) of William Prynne.

I doubt if anybody in this generation has been able to read through that leviathan of objurgation, and for imposing such a monster on the world Prynne well deserved to have his ears cropped and to be branded on the cheeks as Seditious Libeller: the punishment did the cause of righteousness no harm, and it wrung from a sour pedant one of the best puns ever made in England, when he interpreted the letters S. L. as *Stigmata Laudis*. In the vigorous language of the "Histriomastix" (p. 41) these plays, which we are criticising so mildly, "had their Alpha, and Omega; their beginning, and end: their birth, *and use from Hell;* being not only invented *by the Devill himselfe:* but likewise by his owne speciall command, and his greatest minions advice"—the devil, if I understand Mr. Prynne, being the Dionysus of the Athenians in whose honor plays were first performed and whose lewdness still presides over the stage. As for the comedies of his age, the Puritanical critic thought (p. 62) that "the stile, and matter of most popular, (especially Comical) Stage-Playes, is Amorous, Scurrilous, and Obscene"—and he might have proved his point without a page and a half of references to the Fathers. "The stile, and subject Matter of our Tragedies," he adds (p. 73), "are Bloody, and Tyrannical"—whereupon follows a list of all the passions, beginning with envy and ending with revenge, which formed the substance of the romantic drama. He comes closer to a philosophic criticism when he complains (p. 177) that "men in Theatres, are so farre from sinne-lamenting sorrow, that they even delight themselves with the representations of those wickednesses, which the originall Authors of them now deplore in Hell." After the charitable fashion of his tribe, Prynne saw only the evil and nothing of the good of what displeased him, and his palpable ignorance of the stage, together with his assurance that any page of Latin from one of the Fathers is a better argument than the actual comprehension of what he was writing about, almost deprives his book of value.

Nevertheless, Prynne does, in the last charge quoted, approach the real evil of the late Elizabethan drama. In saying that the audiences took delight in the representation of wickednesses without sin-lamenting sorrow, he has merely changed into what we may be pleased to call religious cant, the fundamental literary criticism that these plays deal with the expression and interaction of passions in themselves with little sense of character. For it must be observed that moral judgment and literary criticism here go hand in hand. There is no doubt much to condemn in Beaumont and Fletcher from the direct standpoint of public decency; but, on the other hand, they are full also of moral sentiments magnificently expressed. The real moral indictment under which they lie is rather the more central charge that in ignoring that element of our being which stands apart from the passions as a governing power, they loosed the bonds of conduct and left human nature as a mere bundle of irresponsible instincts.

That is the preacher's moral judgment, and the literary criticism is but the same thing in different words. There is much in these plays that offends any canon of taste, but, again, they are replete with passages and whole scenes of exquisite beauty and superlative wit; if any balance of this kind is drawn, they must be rated very high as literary productions. The real criticism comes when we begin to reflect, and, reflecting, feel the want of that profounder pleasure of the imagination which springs from the intimate marriage of the emotions and the understanding. We understand a thing as we see a principle of unity at work within or behind a changing group of phenomena. We understand human nature in the same manner: we may in a way respond in feeling to emotions, we understand only character. We respond deeply to the emotions of the "Hippolytus," and at the same time we understand the background, so to speak, of character upon which they are thrown. We feel as keenly the long emotional beauty of "Romeo and Juliet," and the impression of that pleasure remains clearly and firmly implanted in memory, though the deeper joy of the imagination has been lost from the play with the disappearance of character. Our heart is still touched by the exquisite painting of the emotions in "The Maid's Tragedy," but it must be admitted also that its incomprehensible tangle of the passions weakens to a certain extent the sympathetic echo of each within us, and in the end leaves an indistinct and blurred impression in memory. So clearly do intellectual comprehension and moral judgment flow together, and so at the last do the censures of the Puritan theologian, Prynne, and the Restoration critic, Rymer, though each is unjust and even foolish in its excess, clasp hands in a curious way and justify each other.

The discussion of the causes of this degeneracy I must leave for another week. P. E. M.

NEWS FOR BIBLIOPHILES.

The following errors and omissions occur in the Bibliography of John Gay which appears in the "Cambridge History of English Literature," Vol. IX, pp. 529-30.

Under "(1) Collected editions," subhead "Poems," the compiler cites the edition of 1727. To the best of my knowledge, such an edition does not even exist. The item was probably given on the authority of the British Museum Catalogue, but if the compiler had used the copy in the reading room of the Museum at any time within the last year and a half, he would have noted a pencilled correction by the cataloguer, and on calling for the book would have found the date to be 1737.

The next section, "(2) Poems published separately," subhead "Fables," gives the edition of "1736." The copy of the British Museum Catalogue in the reading room gives the date as follows: "MDCCXXXVI [or rather MDCCLXXVI?]." The latter date is far more likely to be correct, as is shown by internal evidence. Even granting that the date 1736 is correct, the compiler had evidently never examined a copy, for if he had done so, he would have found that it contained *both* series of the "Fables" and should have been placed under his next subheading, "Fables complete."

This subhead "Fables complete" has mention of Austin Dobson's 1882 edition of the "Fables," and it is described as having a "bibliography." As a matter of fact, it contains only a "Bibliographical *note*" concerning the first edition of each of the two series and the briefest mention of three other editions. It has, however, what the compiler has failed to note, a most valuable and stimulating memoir of Gay.

The following subhead is "Gay's Chair . . . with a sketch of his life from the manuscripts of *Butler*, J. . . ." Even a student of Gay might be excused for failing to recognize Gay's nephew Joseph *Butler* under that annoying misprint.

The noteworthy omissions in the section of Gay's "Poems published separately" are (1) "A panegyrical espistle to Thomas Snow," 1721; and (2) "Molly Mogg," [1727?]. Not noted here by the compiler are some ten other poems of Gay's which made their first appearance in other places before being gathered into any collected edition of his works, but a strict definition of the heading of this section might properly keep them out.

No mention is made of his prose contributions to the *Guardian*, and to Swift and Pope's "Miscellanies"; or of his five pamphlets, the most important of which is "The present state of wit," 1711. Of this, the late J. Churton Collins said, "It is written with skill and sprightliness, and certainly shows a very exact and extensive acquaintance with the journalistic world of those times."

The fourth and last section, that on "Biography and criticism," is notable chiefly for what it omits. None of the numerous contemporary pieces which relate entirely to Gay's "Achilles," the "Beggar's Opera," "Three hours after marriage," and the "What d'ye call it?" and which are indispensable to a correct understanding of them, are even hinted at. Nor does he mention that some one hundred of the letters to and from Gay are to be found in Arbuthnot's Works, ed. Aitken; Pope's Works, ed. Elwin and Courthope; Suffolk Letters; and Swift's Correspondence, ed. Ball. Needless to say, Gay's correspondence throws much valuable light on his own life.

Of the living editors or writers on Gay, he fails to note Aitken, Hansen, Plessow, Regel, and Wright. The omission of Aitken and Wright is especially to be regretted. For to G. A. Aitken, all Gay students are deeply indebted for his scholarly articles on Gay's life and works which appeared in the *Academy*, the *Athenæum*, and the *Westminster Review*. As to W. H. K. Wright, he is known to have edited one of the three best editions of Gay's "Fables," in which he has given us a valuable memoir based on the new material brought to light by the Gay bicentennial, and a very comprehensive "Chronological list of the various editions of Gay's Fables." This omission is the more strange as (if we except the Gay items in the British Museum Catalogue) it is the only printed bibliography of Gay or any of his works that is worthy of the name.

Of course, it is both impossible and inadvisable for such a work as the "Cambridge History of English Literature" to give a complete bibliography of Gay in the space at its command. Indeed, all that the editors claim to give is a "sufficient" bibliography, but I think these notes show what it does give is "sufficient" for neither the student nor the general reader of Gay.

ERNEST L. GAY.

Correspondence

EDWARD DOWDEN.

TO THE EDITOR OF THE NATION:

SIR: I was an intimate friend of the late Professor Dowden, of Trinity College, Dublin. He was all his life an extremely handsome man. When a student of T. C. D. his beauty had a certain girlish distinction and purity; his color changed quickly; his dark shy eyes had a way of suddenly brightening that was very attractive. He looked the poet and primarily was the poet. In any other age than that of Herbert Spencer and George Eliot, and in any country not wholly given to oratory, as was then the case with Ireland, Dowden would have written poetry, and left prose to others. He apologized to me by letter for not sending to me his great book on Shakespeare, just published, by saying it had become alien to him. These prose books were not his love children.

This silent and self-contained man allowed himself to become a speaker from political platforms. To see his distinguished figure among the politicians was to me a dreadful sight. G. B. Shaw thinks that men in their present unregenerate state are "worms"; an admirable creed for a politician and a satirist, and a reformer and socialist. To enter Dowden's house—even to meet him by chance on the roadside—was at a touch to recover one's crumbling self-esteem; I have talked with his friends on this subject, and we have all agreed that after meeting Edward Dowden peace would fall on the troubled spirit. But he was a recluse, about him always a magic circle difficult to pass; one hurried towards him and then hurried away with affection in the heart. He loved his friends but seemed to fear them; not by word or look would he repel any one, yet you fled and wondered why you did so. Was he like Michael Angelo, who loved his friends so much that he avoided them; lest, as he said, they might "filch him from himself"?

His brother John, the Bishop of Edinburgh, found his "peace" by going out into the world and warring with the enemies of the Church. We know that if we rub sticks together there will be flame, thus the Bishop got heat and light by mingling with his brethren. I've spent many weeks and months in his company and was often made the target for his wit. But if his raillery hurt it was cured by the laughter which followed so quickly—the victim's own laughter being the most heartfelt; for it was a liberating wit that seemed to let in the daylight and brighten the circumambient air. Besides, was he not a Dowden, with subtle care that no one's self-love should be rudely bruised?

It seems but yesterday that I was an anxious student in T. C. D., where the two Dowdens shone the brightest stars in the undergraduate sky. Have all our hopes been fulfilled? Edward Dowden has written prose classics. He has given us but one small volume of poetry, yet all his love went out to that slender book. He once told me that when he wrote poetry he did it secretly and could not do it otherwise. For in the Ireland that he knew, men did this kind of good deed by stealth. It is so no longer. Thanks to the Irish literary movement, modern Nationalist Ireland, from which he shrank and which shrank from him, is now a land of poets. The orators are out of commission.

T. C. D. teaches the great Protestant doctrine of getting on. T. C. D. also is the home of competitive examinations—its students can beat any student from any other college in the wide world. When a man reads a book for his own delight he receives an intellectual impression of which nine-tenths will be from the operations of his own mind—from the recollection of other books and from the conversation of his friends, and only one-tenth out of the book itself; when he reads for a competitive examination, there will be nothing in his mind except what comes out of the book. Such a course of study weakens the organs of original thought and vital creation. All through his college course, Edward Dowden headed all the competitions and at his final examination, competing for the medal for ethics and metaphysics, obtained higher marks than were ever given before or since. No intellect could come unscathed from such an ordeal. His victory was an undoing, and ever after his mental pulse went slowly. No, Trinity College, Dublin, is not a nursery for young poets. I would advise also that young poets should not follow the example of the doctors and marry early. The poet who would know all the secrets of his calling must make many pilgrimages to the shrine of beauty, or, like Jacob, take the long and painful pilgrimage, since not otherwise can he reach the heights of lyrical ardor. Dowden married early and henceforth had an eye too much for moral and abstract beauty; while towards sensuous beauty he was stony-hearted. George

Eliot, whose admirer he was, completed the mischief. This woman author, with her chilly east wind of science and agnosticism, was a wintry frost to all of us, in those faraway days. J. B. YEATS.

New York, April 19.

ADVICE TO STUDENTS.

TO THE EDITOR OF THE NATION:

SIR: An admirable article on the "Unity of Knowledge and the Curriculum" in the current *Educational Review* calls attention to what I believe to be one of the most important of the newer lines of college activity, namely, the direction of the student's course with the idea of more nearly adapting it to his abilities and aims. In the secondary schools we are constantly doing more in the matter of vocational guidance and in personal supervision of our boys and girls, interesting ourselves not only in their studies, but in their activities of every sort; and we find that the net results are more than sufficient to pay for the extra time and energy involved.

What knowledge I have of college conditions and the opinions of college students as they come back to visit us, leads me to believe that much work along similar lines can be done with good results by the colleges. This should involve, in my opinion, two features—first, a system of advisers who really advise; much progress has been made in this direction of late, and it is now fortunately no longer possible for an adviser to meet his students on the opening day of the freshman year and then forget their existence: secondly, a series of lectures such as Professor Smith advises, which will give the students a comprehensive view of the intellectual, social, and moral possibilities of a college course, introducing him to lines of thought of which he has hitherto not known the existence, opening possibilities in the line of future career, and awakening his interests along the greatest possible number of sides, which, after all, is the chief aim of a college course. At Reed College, in Portland, Ore., President Foster has included such a course in his curriculum and takes charge of it personally, although delegating some lectures to members of various departments. In it he attempts to tell the freshman "a lot of things of the kind of which you and I wish some one had told us when we went to college."

WALTER D. HEAD.

Haverhill, Mass., April 17.

EBERHARD NESTLE.

TO THE EDITOR OF THE NATION:

SIR: Your brief mention (April 10) of the death of Eberhard Nestle, following one I had already seen in the *Deutsche Literatur-Zeitung*, recalls to my mind my association with him in Tübingen forty-three years ago. He and I were members of a small group of young men who were studying Arabic with Dr. Merx, whose death occurred some few years since in Heidelberg. As there were not above eight in our company, we met in the professor's study and not in his lecture-room. Nestle was at that time a resident of the so-called Stift, where the candidates in Protestant theology have for centuries been housed. My rooms were only a few doors distant, and we often walked to our quarters together. The examinations through which young Württembergers are admitted as students in theology, while somewhat antiquated and pedantic, have aided many young men in gaining an education. Among Stiftler who in after years abandoned theology for other departments of scholarship were Hegel, D. F. Strauss, E. Zeller, together with not a few other men of almost equal note. The fact that Württemberg has probably produced a larger number of eminent scholars than any other part of Germany, or perhaps of the world, of equal size and population, is largely due to the inducements its Government holds out to choice young men to devote themselves to theology.

Young Nestle, though at that time hardly more than a boy, was much the best scholar in our coterie, not only in Hebrew, but also in Latin and Greek. He wrote some of his books in Latin. Dr. Merx used to assign to us two or three score of new words to learn by heart at a lesson. Partly, at least, for the reason that I had much other work on hand I could not do it. But I was much encouraged when in comparing notes one day with Nestle he told me that he could not do it either. Although rather slight of build, he had a voice so strong that it seemed as if it should belong to some person of larger physique. I was informed several years ago that Dr. Nestle had in some way incurred the displeasure or distrust of the appointing power, and for this reason never obtained the official recognition among his countrymen that his abilities merited. His first published work was "Israelitische Eigennamen nach ihrer religionsgeschichtlichen Bedeutung." It was a prize essay, and was issued in Haarlem while its author was a temporary resident of England. Among his works are a Syriac Grammar, which has been translated into English, as also his Introduction to the Greek New Testament. His "Novum Testamentum, Græce et Germanice," has gone through six editions, and his "Novum Testamentum, Græce et Latine," through two. His death while still almost in the prime of life is a distinct loss to scholarship. CHARLES W. SUPER.

Literature

THE REVOLT AGAINST REASON.

Vital Lies, Studies of Some Recent Varieties of Obscurantism. By Vernon Lee. New York: John Lane Co. $3 net.

The late William James and the Modernist Father Tyrrell, Ernest Crawley, the anthropologist, and Georges Sorel, the philosophic advocate of Syndicalism, are the four new-style obscurantists upon whom Vernon Lee wreaks a relentless wit. The zest with which she harries her victims, the keenness of her destructive analysis, the pungency of her illustration, make this one of the most readable books on general philosophy written in our time. For its like in brilliant solidity one must go back to the theological tracts of Lessing. Indeed, Vernon Lee recalls in other respects the great German critic of the Enlightenment. Like him she is a skeptical rationalist, a foe of loose feeling and thinking, a scorner of loose rhetoric. On this score the four anti-rationalists who are the subject of her attention afford her most admirable material. Whatever the merit of their theories, the diction of William James and of Ernest Crawley seems expressly created to be ridiculed by Vernon Lee. At first blush one regrets that the ammunition so generously expended upon the four obscurantists could not have been reserved for the greatest of the tribe, Henri Bergson. Yet an anti-Bergsoniad, however desirable, would have been harder reading. Moreover, the fourfold division of Vernon Lee's counterblast makes for clearness quite as much as it does for picturesque effectiveness.

James, Tyrrell, Crawley, and Sorel are chosen as typical obscurantists, first because they all agree on the necessity of Vital Lies, next because that doctrine gains new and significant applications as it passes from champion to champion. It was William James who fished up the murex of pragmatic truth with which all subsequent anti-rational philosophies have been tinged. "Truth is what works," and, again, "Truth is agreeable leading," are his most characteristic definitions. Thus truth is neither, objectively, correspondence of opinion with facts, nor yet, psychologically, the endeavor to attain such agreement. Truth fades impressionistically into the will to please one's self, to get along, to be agreeably led. Such is the fundamental dye-stuff. Father Tyrrell, the excommunicated Modernist, had the high distinction of making only a minimum use of what threatened to become a universal ethic of expediency. Up to the point of his religious life, he remained a stickler for rational evidence. There he asserted the validity of a supra-rational religious sense which makes its own necessary affirmations. But these affirmations are to be tested solely by their mystical value, and need in no wise correspond with facts. Indeed, the issue of fact is held to be irrelevant and superfluous in the spiritual life. While a Pragmatist of the William James type seems in all concerns free to ignore outward fact and waive inward sincerity so long as no inconvenience results from such waiver, a Modernist of Father Tyrrell's stamp claims such liberty only in the field of religion. At bottom the position was not so unorthodox. The church has always held that without such mystical and supra-rational affirmation there can be no true religion. But the church has also held that that evidence is at every stage available—and worthless. It can convict the sinner of error, but cannot

produce a state of grace. Father Tyrrell merely adds to the Aquinate the pragmatic notion that admittedly ineffectual evidence should be ignored. In contrast with the Holy See, Vernon Lee treats Father Tyrrell most benevolently, and he deserved such consideration.

Towards Mr. Crawley, whose "Mystic Rose" and "Tree of Life" ground all our morality and religion in grossest magic practices, our author assumes an Olympian levity. Mr. Crawley is a devotee of the subconscious. Believers are subconsciously religious, and, oddly enough, know they are, but so are unbelievers subconsciously religious and don't know it. This blissful subconscious state has grown out of a conscious one. Because a cannibal once consciously thought it well to eat his friend or foe in order to absorb their strength, a good Catholic now takes comfort, whether consciously or subconsciously is not apparent, in eating the sacramental bread. Moreover, we must hold to the mystical element in religion lest dry reason overmaster us and humble folk begin to question the prerogatives of their betters. Such in brief is Mr. Crawley's argument and tendency. Concerning both we can only say that we share Vernon Lee's contempt of the subconscious as a universal loophole of escape. The stress that much modern thinking sets upon the automatic self merely indicates a temperament too slack to analyze obscurer mental processes, or too indolent to control them.

Georges Sorel has carried the Vital Lie, or, as he terms it, the *mythe social*, into the realm of politics and reduction to the absurd. Without certain dynamic illusions, which are essentially mythical and contrary to fact or probability, mankind would lack inducement to resolute collective action. The early Christians were in error as to the imminency of the Last Judgment, but without that stimulating social myth Christianity would never have conquered Europe. So the Syndicalists have shown a true sagacity in framing and believing the social myth of the general strike. It may or may not come off, but something certainly will; meanwhile the myth keeps class hatred in a lively and hopeful condition, and makes possible some sort of a future proletarian triumph.

Obviously, all these eschewals of evidence, analysis, and old-fashioned truth may be viewed in terms of Bergson's expansive *élan vital*. But he is shrewd enough to keep an ancillary reason in close attendance. Thus his Vital Impulse has a more ladylike look—as it were travelling with her maid—than James's Will to Believe, or Sorel's Social Myth. Changing the metaphor, Bergson's Vital Impulse seems to have the rare merit of being a gentleman who does seem heroic to his valet. We should be glad to see Vernon Lee pitched against this more worthy antagonist.

It is easy for her to show the fundamental vice of all these obscurantist exaltations of impulse into authority. The Vital Lie flourishes only on condition that it be taken for truth. The moment we have the philosopher honestly urging people to act on what he admits may be falsehood, because to do so is useful or comfortable, that moment vitality and following will depart from the lie. In short, mankind has always lived and died by what it took for truth. If St. Paul, in that wonderful chapter of Corinthians, had carefully explained that the resurrection was merely a useful and heartening social myth, the early Christians would hardly have faced the beasts of the circus. But M. Sorel expects his Syndicalists to die at the barricades for what he tells them in advance they will never attain. In short, consciously, unconsciously, or subconsciously—we desire to make all the humane allowances—the advocates of useful illusion and the lie vital are in the invidiously favored position of augurs, tongue to cheek, exquisitely rolling under enlightened tongue the salutary error to which meaner morals are happily prone.

In general, Vernon Lee's argument seems to us formidably cogent. It is the most drastic overhauling that the impressionistic philosophies have yet had. Here and there she makes the common slip of confusing the conceptions of fact and truth; but the force of her aggression is hardly impaired by such minor tactical solecisms. For the reader's pleasure a couple of extracts are given. One will hardly recognize the Vernon Lee of "Euphorion":

> As regards Pragmatism it does not furnish us with a Pluralistic Universe, but with a thinker who interrupts his thinking, an experimenter who breaks off his experiment, whenever it suits his feelings. Pragmatistic thought resembles the artist's thought, in so far as both not only build for the Heart's Desire, but also (as Omar Khayyam forgot to mention) break off and sweep away its own construction whenever the logical necessities, *i. e.*, the peculiarities independent of his wishes, begin to bore or annoy it.
>
> I have even caught myself wondering whether Human life has really ever required lies. But it has wanted certainties where certainty was unattainable, hopes and consolations where there was reason for neither. Above all, Human life has wanted rest for tired minds before they had got to a rational resting place, and freedom for busy ones to think of something else. So, when all is said and done, Vital Lies represent human weakness, human sloth, and human dulness, above all perhaps human impatience, which cuts down the tree to eat the fruits. In other words, it seems as if Vital Lies meant the need of the moment and the individual against the need of the race and of the future.

If Vernon Lee's analysis is right, the Vital Lie and Social Myth are essentially lethal and anti-social. Perhaps the recent obscurantist theories find their clearest condemnation when applied to history. Shall we regard human history as merely the substitution of one set of Vital Lies for another? Or do we see collective errors falsely believed to be vital gradually yielding to truths? Such is the issue in briefest words. History gives no doubtful answer, and, indeed, the distinguishing mark of the modern anti-rationalists has been their lack of the historic sense.

CURRENT FICTION.

New Leaf Mills. By W. D. Howells. New York: Harper & Bros.

This is the Howells of "A Boy's Town," the Howells who was born and "raised" in Ohio, and whose memories of Middle Western types and conditions in the fifties have not been dimmed by time or absence. The period of the chronicle is precisely that of the writer's boyhood. The Mexican War is in the past, and the new Fugitive Slave law is a burning issue of discussion, especially in the borderland between North and South. The cause of Abolition is still a new cause, and its champions form an unpopular minority. To it, like the grandfather of the "Boy's Town" boy, belongs the Owen Powell of the story; like him, too, he is proprietor of a "book and drug store." Like the "Boy's" father, he is a Swedenborgian, and thereby further isolated from most of his fellow-townsmen; and like him he is a man of cheerful spirits as well as of serene faith. Among his children is a youth lightly but clearly sketched as "the Dreamer," whom it is not difficult to identify with the chronicler's memory of himself.

Owen Powell, the father, is a dreamer unconscious of his limitations. The failure of the book and drug business only paves the way, in his fancy, to success in a more congenial form of enterprise. He "sells out," to some small profit and with the proceeds and the vague promise of his brothers' coöperation, buys a back-country property, including grist-mill and saw-mill, which he pleasantly dreams of converting into a fortune-making paper manufactory, with "a settlement of communal proportions about it." . . . "Owen Powell believed that a responsive feeling would be awakened in the neighbors when they saw that the newcomers did not wish merely to make money for themselves, but to benefit all by improvements that would increase the price of land and give employment to their children." A chance phrase of one of the brothers gives the name, "New Leaf Mills," to the enterprise. The new leaf, such as it is, remains for Owen

and his little family to turn alone. The man and his wife have both spent their youth in the rough country. To him leaving the town is an escape, a return not only to nature, but to the romance of frontier life. To her it is a relapse, a reversion to conditions painfully outgrown.

It is, in fact, a log cabin in which they spend their first winter, Powell being tolerated and laughed at, and in some sense liked and respected, by the neighbors he means to benefit. A wooden house is projected and even "raised" with the aid of the neighborhood; but the Powells are not destined to take root: there are other new leaves for them to turn, and we leave Powell, at the end of the narrative, about to return, wistful, defeated, but not crestfallen, to town life, and the New Church bookshop which is faintly looked to as a restorer, or, rather, originator, of the family fortunes. The gentle irony of the whole story, or episode, culminates in the closing paragraph:

> Powell himself, while holding fast to the principles of justice in politics, now confined his assertion of them to aiding the escape of fugitive slaves from Kentucky, whom he enjoyed hiding in the basement of his store till he could forward them to some other underground station. He did not relinquish the ideal of the true state of things which he and his brothers had hoped to realize at New Leaf Mills, but he was inclined to regard the communistic form as defective. The communities of Robert Owen had everywhere failed as signally as that of New Leaf Mills, which, indeed, could scarcely be said to have passed the embryonic stage. But he argued, not so strenuously as he used to argue things, but as formally, that if some such higher conception of society could possess the entire state, a higher type of civilization would undoubtedly eventuate.

The Flirt. By Booth Tarkington. New York: Doubleday, Page & Co.

In Capitol City, "that smoky illuminant of our great central levels," Mr. Tarkington presents one of those Middle-Western "metropolises" which have so frequently afforded a setting in recent fiction. And again we find ourselves in contact with a past, with a city which has had time to shift its architectural enslavement from mansard and cupola to the gables and jig-saw decorations of "Queen Anne," and thence to more varied if not more sensible fashions: "The Goth, the Tudor, and the Tuscan had harried the upper reaches to a turmoil attaining its climax in a howl or two from the Spanish Moor." Manners have changed to match. It is in one of the mansard survivals, however, that Valentine Corliss, returning to Capitol City after many years abroad, finds a high product of civilization. Cora Madison is beautiful, low-voiced, perfectly dressed, a coquette to the manner born. Beneath the surface she is a quite vulgar and heartless person, but so she would have been in the Paris or Naples of Mr. Corliss's choice. She has jilted a number of her fellow-citizens, and is half-engaged to one of them at the moment; but she at once arranges her cards for the newcomer. Though he appears to be an easy victim, however, he is really an old hand, and the result of the contest is a drawn game. Offset against this sufficiently unpleasant and luckless pair are other two, whose story, in so far as it can be detached from that of the flirt and her rascal, is simple and romantic enough to have been conceived by the author of "Little Women." And there is a bad boy who is considerably more amusing and somewhat less incredible than his kind. The excellence of the story lies in its style rather than its matter.

Comrade Yetta. By Albert Edwards. New York: The Macmillan Co.

This is the story of the growth of a strong and interesting character. For background it has the swarming life of the sweatshop region on the East Side; there are strikes and rumors of strikes, and much talk of Socialism and syndicalism. Yet the book is not a piece of "novelized" sociology. These things are included because they are part of the life of the characters; in a sense, they adorn the tale, but they only incidentally point a moral. Yetta Rayefsky is the daughter of a Russian Jewish immigrant, an educated man who keeps an unprosperous second-hand book shop. He dies when she is fifteen, and she goes to live in the family of a disreputable uncle, who soon sets her to work in a vestmaker's shop. Here she becomes the "speeder," whose duty it is to set the pace for the other workers. All her earnings are taken by her uncle and aunt. Her good looks expose her to the dangerous attentions of Harry Klein, a "cadet," or professional seducer, who easily persuades her in her innocence to become engaged to him. She is saved from him through the accident of her insisting that he go with her to the "skirt-finishers' ball" instead of to the dance-hall. At the ball, which is held to raise money for the striking skirt-finishers, she meets Mabel Train, a college graduate, who is secretary of the Woman's Trade-Union League, and Walter Longman, Mabel's persistently rejected lover. Through their help, and that of Isadore Braun, a young Socialist lawyer and newspaper writer, she becomes a leader among her former fellow-workers, and gains a sort of informal education. The story is unconventional and has a striking verisimilitude; it is as real as Mary Antin's autobiography, which may indeed have suggested it. The principal characters are vigorously drawn and sharply distinguished, and they are not disposed of in the tradltional way at the end.

General Mallock's Shadow. By W. B. Maxwell. New York: D. Appleton & Co.

The question, "Can they really be as dull as they seem?" often suggests itself about people in stories as in real life. As to the story people, the question is relatively easy to answer. When we have finished the book we can often say with conviction: "Yes, they are, if possible, even duller than they seemed at first." This is true of the highly respectable group of English men and women whom we meet in "General Mallock's Shadow." And the reason is not far to seek. These people are dull because the author was not really interested in them. They are there to serve as padding: to eke out the short-story plot into a novel of respectable dimensions. An old general, disgraced twenty years before for alleged cowardice in surrendering a frontier post in India, and grown morbid through brooding over his wrongs, redeems his reputation and regains his self-respect by a desperately gallant defence of a quarry foreman who has taken refuge in his house from a mob of armed strikers. This situation gives the book its one good scene. The rest of the story is concerned with the love affairs of the General's daughters, which are considerably less exciting than those of Miss Austen's heroines, and are set forth without the help of the comic spirit.

THE NEW REGIME.

Republican France, 1870-1912: Her Presidents, Statesmen, Policy, Vicissitudes, and Social Life. By Ernest Alfred Vizetelly. Boston: Small, Maynard & Co. $4 net.

Mr. Vizetelly is an Englishman, but he has had exceptional opportunities for writing of French history with sympathy and understanding; and he has, in fact, produced a fascinating book on France during the Third Republic. A young man pursuing his studies in France when the war broke out, he was in Paris during the siege, and afterwards resided there for many years as political correspondent for the *Pall Mall Gazette*, the *Illustrated News*, and other London papers. His business and his ability brought him into close contact with many prominent men of the time; he became a familiar figure in the political salons; and he thus acquired a direct, personal knowledge of men and events which, supplemented and corrected by wide and careful reading, gives his book, with its vivid description of characters and its wealth of incidental detail, the value of a contemporary source—the value of memoirs written by an excellent observer who has no

record to justify, or cause to celebrate.

Interested, like Bachaumont, though in a less degree, in the "indiscretions of history," Mr. Vizetelly allows us to see the actors with the mask off. No book in English contains more excellent descriptions of the leading men and women of the time, who are revealed all the better for being sketched in various poses rather than painted in finished portraits. Here is the "little man," Thiers, shrewd, almost crafty, courageous, and patriotic, resolute bourgeois always; and Madame Thiers, bourgeois too, "wearing a little black lace cap, and usually gowned in black also," not altogether at ease as the first lady of the land, "going hither and thither, speaking to her guests with a kind of anxious solicitude." Here is Gambetta, with offensive table manners, with ill-fitting black coat worn all shiny, growing conservative and politic (for him), and losing his influence, as time passes. Here is the upright MacMahon, marching with military stride along the boulevard, with hands in pockets, smoking a cigar; and Monsieur le Président Grévy in the billiard-room of the Elysée palace, "playing for a 'hundred up' in his shirt sleeves, now against Lord Lyons, the British Ambassador, now against Le Royer, President of the Senate, or M. Andrieux, Prefect of Police." And a hundred other great folk, very human after all.

Yet the past is here, too. In this eager bourgeois world, the derelicts of the *ancien régime* take their place, standing apart. At the official receptions in the time of Thiers, "the most highly placed ladies," we are told, "preferred to congregate in the Gobelins drawing-room, forming a circle, as it were, around the Orléans princes, Paris, Nemours, and Joinville"; and there, too, was the "violet-robed Papal Nuncio, rarely, if ever, stirring from the ladies' circle"—of the world, but not in it, princes and women, with the priest in the midst, drawing their skirts about them. A striking picture, and significant of much French history in the nineteenth century. While the chief value of Mr. Vizetelly's book is in the wealth of concrete incident through which the age receives its form and pressure, the narrative also reveals to the discerning eye, though without bringing them into sharp relief, the persistent issues of French politics.

As a rule, Englishmen have not excelled in writing the history of France since 1789. They do not understand the kind of conservatism that is French, but only the kind that is English. The delusion persists, in America as well as in England, that the French people, having been infected with the doctrinaire spirit of the eighteenth century, have never quite recovered sanity in political affairs, and that as a consequence their history, through the nineteenth century, has been little more than a series of footless revolutions—"Unstable as water, thou shalt not excel."

As a matter of fact, English institutions have probably changed as much since 1815 as have those of France since 1789. But it must be confessed that the two people conduct their revolutions after a different manner. Englishmen persuade themselves, indeed, that they are not revolutionary at all, because they do not barricade the streets, and because they rarely learn that a change has been effected in their institutions for a generation after it has occurred; aware at last that something has happened, they formulate an hypothesis that accords with the facts. Frenchmen, on the contrary, wrote the theory of their revolution before they began it, and then consciously set about to make the facts square, as nearly as might be, with the theory—"*La Révolution était faite lorsqu'elle éclata*," if one may apply the famous epigram of Chateaubriand in a somewhat different sense from what was originally intended.

Hence *la Révolution*, of which they speak in France, being an active or guiding principle rather than a concrete event, is always with them; and it may be as effective for conserving institutions as for overturning them. For a decade after 1789, the Revolution involved far-reaching changes in social arrangements; but by 1808 France was essentially what it has since remained —"a democratic society whose affairs are managed by a centralized administration." It is true that since 1808 the form of the government has been altered seven times. But these "revolutions" have been altogether superficial, touching, in respect to the changes which they effected, only the surface mechanism of political procedure, undertaken in defence of the essential principle of the Revolution, the principle of equality—undertaken precisely to maintain *la Révolution*.

To preserve the Revolution at home, whether under monarchy, empire, or republic, and abroad to tear up the treaties of 1815 and 1870—these are the motives which give consistency to French history in the nineteenth century. Mr. Vizetelly's grasp of French history as a whole is not very evident, and his discussion of the politics of the Third Republic is, besides, too informal and fragmentary to bring out these persistent issues as clearly as one might wish. Yet his knowledge of French character, and particularly his sympathy with the average middle-class sentiment, sometimes enable him, in the treatment of crucial events, to hit the mark with admirable precision.

Take, for example, the Tunis affair. By establishing a protectorate there in 1881, "France had virtually achieved her first conquest since the reverses of 1870." Jules Ferry, who accomplished this result, should have been immensely popular, one supposes. Not at all. "The minister was guilty of every crime, and it was necessary to depose him as soon as possible." The explanation Mr. Vizetelly finds in *la Revanche*, which "still predominated in France. The strength of France must not be frittered away in any rash colonial enterprises; it must remain entire, ever available, so as to contend with the great peril which might come, at any moment, from beyond the Vosges!" It was this sentiment, too, which contributed to prevent France, "despite the views of some of her ablest statesmen, from coöperating with Great Britain in the occupation of Egypt." Yet "England became hated for her action in that respect." This is perhaps the very key to French diplomacy in the nineteenth century: for the sake of *la Revanche*, France has conceded much to England; yet underneath the *entente cordiale* a jealous irritation remains because England, until recently not aware of the need of French aid, has made the most of these concessions.

In respect to domestic politics, the author is not at all distressed, as an Englishman is likely to be, by the apparent lack of distinct party alignments, or nonplussed by the frequent changes of Ministry, or too much disturbed by the evidence of explosive social forces which trivial events seem always about to release. If the significance of the Commune is not very well understood, at least the meteoric rise of Boulanger and his pathetic collapse, the Dreyfus affair, so inexplicable to the average Anglo-Saxon mind, appear to Mr. Vizetelly in the light neither of paradox nor of mystery. These manifestations, he seems to say, are always possible in France, but one need not despair of the Republic for all that. They are possible, indeed, because *la Révolution* remains always the vital issue: one has only, as MacMahon said, to set up the white flag—or, one might perhaps add, the red flag—against the tri-color, and "the Chassepots go off of their own accord." It should be said that Mr. Vizetelly has no liking for the red flag and little respect for the white: his point of view is from the middle ground, his sympathy is with the average conservative sentiment of the nation.

The Episodes of Vathek. By William Beckford. Translated by Sir Frank T. Marzials. With an introduction by Lewis Melville. Philadelphia: J. B. Lippincott Co. $5 net.

Beckford's *libellus* has had, in truth, a fate of its own—and a strange one. Written in impeccable and very characteristic French, it is virtually known to the world in an English version made by a pedantic and disloyal tutor. And now these supplemental Episodes, drawn

at last from the charter room of Hamilton Palace, appear in their original French in this book in small type as a kind of appendix, and are preceded by an English translation by no means remarkable. A perverse fate still follows Beckford, and he is never to be allowed to speak simply for himself.

And yet his Oriental tale stands in a class by itself and marked an epoch. It could not have come much earlier or any later. Just as the life of Beckford corresponds almost exactly with that of Silvestre de Sacy, who gave to Oriental studies in Europe an entirely new and scientific basis, so his story is among the last of the Oriental eighteenth-century unrealities, and yet shows in the choice of its hero and in much of its detail the beginnings of a search for reality through contact with the East. For Beckford had made Oriental studies; he had read Turkish poetry and had bought MSS. left by Wortley Montague—including an odd volume from the MS. of the Arabian Nights now in the Bodleian—from which he intended to publish translations, and did, in fact, publish one. Yet he was held, too, in the tradition of the past. That his collateral ancestor, Count Anthony Hamilton, wrote in French his parodies of the Oriental stories then current, probably dictated his choice of language. Beyond this and a touch of Gallic salt in expression—not always seemly—that influence did not go. Beckford took the East more seriously and did not write a parody, but an imitation: his horrors were meant to be real. And so, too, his remorse. The moralizing influence of the "Tales of the Genii" is heavy on the latter part of his story. There, also, the Gothic terrors of "The Mysteries of Udolpho" have overcome his levity and lifted his style to the stately glooms of the catastrophe. The flaming hearts were conveyed from "The Mogul Tales" and transformed in the conveyance from the absurd into perfect art. But the Hall of Eblis was his own, a memory of that at Fonthill, "simple, lofty, loud echoing," as it had blazed with lamps and fires for the three-day festival of his twenty-first birthday. And though his creation of Eblis owes much to such disparate influences as Milton and Jean Paul Bignon, it owes more—and its essence—to his own genius, anticipating the Byronic romanticism.

It is tolerably plain that the Episodes for "Vathek" were conceived at an early stage—there is a reference to them in a letter of January, 1783—and that Henley knew that they were to form a part of the story in his hands. But Beckford, on his side, owes two things to Henley's action. It is highly probable that he would never have published if his hand had not been forced. And, further, if by any chance he had finished his Episodes and published the whole, the effect would not have been comparable with that which the sole story of "Vathek" by itself affords. In their *genre* the Episodes are admirable; but only in certain respects is their *genre* that of "Vathek." The action of "Vathek" is simple and direct; its windings do not entangle the reader, for the road is clear. But in the Episodes there is need of a constant effort, only short of that required by Count Anthony Hamilton's fantasies. Beckford's imagination is still working, but under a strain. The vivid scenes, the sardonic flavor, the resource of picturesque detail, the use of character, are all there; but the youthful flash of inspiration which made "Vathek" that strangest of all compounds, an Oriental tale and a dramatic unity, is utterly lacking. He is driving himself to furnish three other unified actions, failing in the effort and sinking towards the level, so far as unity is concerned, of the stories he read in his childhood. And even if these added tales had been as direct and clear as "Vathek," the violent intrusion of them would have hopelessly blunted the effect. At the point where they would have come there could be no delay, nor might anything turn us from those figures which we had followed so long, and in whose fate there lies a real *katharsis* of pity and fear. But for Henley—unwitting what he did—that would have been ruined. Some feeling of this may have developed in Beckford himself, for when, in 1833, an opportunity for the inclusion of the Episodes in an edition of "Vathek" presented itself, he imposed such financial conditions on Bentley, the publisher, as were impossible. The reason could not have been that he felt unable to complete the third Episode, for he had already in the Paris edition of 1787 dropped entirely the fourth Episode (mentioned in the preceding Lausanne edition of the same year) and found a means, in the sudden breaking in of the catastrophe, to avoid the completion of even the third.

Mr. Melville's introduction is adequate, and all interested in the influence of the East on the West are in his debt for this edition.

The Doctrine of the Person of Jesus Christ. By H. R. Mackintosh. New York: Charles Scribner's Sons. $2.50 net.

Jesus. By George Holley Gilbert. New York: The Macmillan Co. $1.50 net.

The Historic Jesus. By Charles Stanley Lester. New York: G. P. Putnam's Sons.

The Christological controversies and the ecumenical councils are the traditional *pons asinorum* of students of theology. According to the orthodox dogmatics, the positive elements of the creeds of Nicæa and Chalcedon were implied, if not explicitly asserted, in the New Testament, but Satan stirred up the minds of certain bold and rebellious spirits to question and deny first one and then another of the tenets which culminate in the doctrine of the Trinity, and the entire series of councils was necessary for the putting down of the various heresies and the perfect definition of the truth. For the convenience of the theologue, Providence arranged the matter so that there was in each case one error, one heretic, one champion of orthodoxy, and finally, in the decision of the council, one element of the perfect Christian creed. The only difficulty in mastering the subject was to get the right heretic opposed to the right champion, and fix in the mind which council attended to Arius and where Nestorius and Eutychus met their several defeats. The master hand of Baur opened new possibilities in the treatment of this era of human thought, and the fresh handling of the subject by Adolf Harnack in his "History of Dogma" stimulated renewed interest. The influence of these scholars is manifest in a comparison of Professor Mackintosh's history of Christology with the older dogmatics. In the present volume one follows a real and vital movement in religious thought, made necessary by the problems and temper of the times, whose results are fair subjects of criticism.

In several important respects the views of popular orthodoxy concerning Christ find correction in the pages of Professor Mackintosh. He maintains that it is unnecessary that we should clothe our ideas respecting Jesus "in the formulas of conciliar theology." This is a departure from Luther and Calvin and from prevailing Protestant, as well as Catholic, belief. He does not hesitate to say that "the doctrine of two natures, in its traditional form, imports into the life of Christ an incredible and thoroughgoing dualism." "The doctrine of two natures," he insists, "if taken seriously, gives us two abstractions instead of one reality, two impotent halves in place of one living whole." The definition of the two natures in the Westminster Confession is distinctly repudiated. Notwithstanding the classic condemnation of the monotheletic heresy, Professor Mackintosh declares that "we cannot predicate of Him two consciousnesses or two wills: the New Testament indicates nothing of the kind, nor is it indeed congruous with an intelligible psychology." The popular notion, according to which Jesus was half-God and half-man, which of course was never the serious thought of the church, could not find more vigorous refutation than in these pages.

Nevertheless, Professor Mackintosh is orthodox, alike in his analysis of the New Testament material, in his history of Christological doctrine—the major

portion of his volume—and in his reconstructive doctrinal statement. He maintains earnestly the sinlessness of Jesus, arguing from general considerations to historic facts, like a true child of scholasticism. He does not stumble at the term Godhead applied to Jesus, and he maintains that "each new conception of Christ we form, only to dismantle and reshape it later on the score of inadequacy, gives place to one always more broad and deep and high." Like Herrmann, whose "Communion with God" he calls "a priceless volume," he is certain that in Jesus we are face to face with "a redeeming act of God."

This treatise will doubtless be hailed as a triumphant vindication of evangelical orthodoxy by a master of free inquiry, who accepts cordially modern principles of criticism and philosophy. That the work is able, fearless, and at many points suggestive cannot be denied, but it may also be predicted that its conclusions will not long stand. The fundamental defect is failure to reckon with the New Testament criticism of the last twenty-five years. "The Christ depicted in every part of the New Testament is *radically* the same Christ," the author urges.

The analysis of the synoptic narratives he dismisses as "nebulous." Various phases of opinion concerning Christ in the New Testament authors are recognized, but not radically distinct stages of opinion, including legend and myth.

That legend and myth must be reckoned with, such a study as that of Professor Gilbert makes manifest. He devotes nearly a third of his volume to analysis of the sources, and to distinguishing their relative historical value, and another third to treatment of the "legendary Jesus." It is impossible not to believe that these results in historical criticism will have an effect upon the doctrine of the person of Christ. To construe that doctrine without reference to such distinctions among the sources as Professor Gilbert makes clear is as fallacious as to attempt to portray the religion of early Israel without reference to the pentateuchal analysis, on the ground that the religious faith of the documents is "radically the same." Yet this is what Professor Mackintosh has done.

Mr. Lester's volume is an attempt to popularize the results of scientific inquiry with respect to the life and teachings of Jesus. He essays to answer the question, "What may we teach the boys?" in view of the work of higher criticism in the field of the gospels. The attempt is doubtless sincere, but the author does not show sufficient scholarship for his task. He has read the critics with too great credulity and has not always understood their meaning. He announces as established results views which are still under debate. One might assert on his authority that all interpolations in the preëxilic prophets are in Aramaic, that Jesus was of Indo-European stock, either Amorite or Greek, that the Semitic mind is incapable of monotheism. More serious even than such glaring distortions of fact is the author's want of appreciation of the historical significance and religious greatness of Jesus.

Notes

We may expect shortly from John Lane: "Memories," by Stephen Coleridge; "The Invincible Alliance," essays by Francis Grierson; "The Silence of Men," a novel by H. Provost Battersby, and Evelyn Brentwood's novel, "Henry Kempton."

Moffat, Yard & Co. announce "The New Morality, an Interpretation of Present Social and Economic Forces and Tendencies," by Edward Isaacson, and Mrs. Ethel Watts Mumford's "Out of the Ashes," a novel of New York life.

Among the books shortly to be published by Putnams are the following: "The Knave of Diamonds," a story by E. M. Dell; "The Southland of North America," by George Palmer Putnam; "The Friendly Enemy," by T. P. Cameron Wilson; "Zones of the Spirit," being a translation by Claud Field of Strindberg's latest work; "The Old-Fashioned Woman—Primitive Fancies about the Sex," by Elsie Clews Parsons, and "The Primitive Family as an Educational Agency," by Arthur James Todd.

Mr. Ralph Stock, son of the London bookseller, is about to issue "The Confessions of a Tenderfoot," which includes accounts of the Canadian Northwest, American lumber camps, etc. Holt is the publisher.

We are asked to announce that the second session of the Congrès Mondial des Associations Internationales, which meets once in three years, will be held at Ghent and Brussels, June 15-18, next. The purpose of the Congress is to establish permanent relations among the directors of large organizations having international bearings.

Persons possessing letters of the late Clara Barton are requested to send them to Mr. Stephen E. Barton, No. 85 Water Street, Boston, Mass., for use in connection with the preparation of the authorized biography of Miss Barton. All letters sent will be carefully handled, copied, and the originals will be promptly returned to the owners.

The Godkin Lectures at Harvard will be given this year by Mr. Herbert Croly, author of "The Promise of American Life." The five lectures, under the general title of "Democracy and Responsibility," will be as follows: April 23, New Tendencies in Democracy; April 25, The Old Democracy and the Constitution; April 28, The New Democracy and the Constitution; April 30, Direct versus Representative Government; May 2, The Mechanism of Popular Representation.

A long article by Prof. A. Schinz in the *Revue d'histoire littéraire* gives some interesting information in regard to Rousseau's "Contrat Social." As that work now stands, the body of it can, with a few minor changes, be adapted to either an atheistical or a religious view of the state. But the manuscript first draft of the treatise, which has been discovered at Geneva, contains an introductory chapter of purely "philosophical" tendency, arguing that society must be reorganized without religion. When, eight years after the date of this draft, the work was published, this chapter was dropped and a new chapter was added at the end, contending that a strong society cannot be established except on a religious foundation.

The Oxford Press issues a reprint of the Kilmarnock edition of Burns's Poems, dating from 1786, with an introduction and notes by M. S. Cleghorn. The service of these Oxford reprints, to which Mr. Frowde has given serious thought, can hardly be overstated. We regret, however, that the present edition, which has stiff paper and green boards, is not more securely bound.

So much has been written about Panama since the American canal builders began their work that it is almost impossible for any one to find new material and avoid repetition. Farnham Bishop has not attempted the impossible. In "Panama Past and Present" (Century), a compact volume, with a generous number of illustrations, he has treated the subject in a popular manner, making the old adventurers fight their way across the Isthmus and back, and telling the story of the Panama Railroad, the French fiasco, the uprising against Colombia, and the coming of the Americans, first to wipe out fever, then to dig. There are chapters on the remarkable sanitary work of Col. Gorgas, the building of the canal, the daily life of the men who are doing it, under the benevolent guidance of Uncle Sam, and an appreciation of Col. Goethals, who sits in his office every Sunday morning "to give justice to all who come and ask for it."

Of the making of books about golf there is no end. All champions have written them, or have been asked or have promised to write them, and in "The Art of Golf" (Outing Publishing Co.), by Joshua Taylor, we have the work of a brother of a champion—himself also a professional. About his book there is nothing distinctive, unless it be a homely directness of style in making plain his sound and approved views of the game. The one novelty of the volume is a chapter on the "Evolution of the Bunker." This is contributed by J. H. Taylor, formerly open champion, and traces the successive theories of golf hazards. He does not, however, bring out very clearly the modern idea of arranging bunkers and traps on diagonal lines, so as to give the short driver a chance, while retaining for long hitters their due advantage.

Strindberg did a greater service to the medical profession than to the general reader by keeping an accurate record of his hallucinations during those terrible years spent in Paris in the nineties of the last century, when his mind faltered and gave way. "The Inferno," as he called this diary, has now been published by Putnams in a translation by Claud Field. Because of the Swede's large personality and broad intelligence the picture of himself which is here presented may well inspire horror. As he wanders about the streets alone, people

stare at him, he fancies, and even go out of their way to inflict petty persecutions. He shuts himself up in his small hotel, and with an improvised furnace in his room attempts to transmute the baser metals into gold. It is a day in July and the additional heat of the fire almost prostrates him, and does indeed burn his hands and wrists so badly that he is obliged to go to a hospital. But even in his experiments he cannot lose himself. A mysterious person in the next room can be heard doing everything that he does, simultaneously. His most trying hours are those just after midnight. Often at two o'clock he wakes up, choked by an electric stream which he supposes to be manipulated by some enemy. The following is a typical experience:

> For three hours I lie awake with open eyes to which sleep refuses to come; then a feeling of uneasiness takes possession of me; I am exposed to an electric current which passes to and fro between the two adjoining rooms. The nervous tension increases, and, in spite of my resistance, I cannot remain in bed, so strong is my conviction: "They are murdering me; I will not let myself be murdered"

He changes his room for that night, being put directly under his foe. "I hear my enemy overhead get out of bed and place some heavy object in a box which he locks. He is concealing something then! Perhaps the electric machine." Having cast a gloom for the reader over the sunny Latin quarter, Strindberg removes to Sweden and then to Germany, experiencing a series of persecutions the ingenuity of which recalls the manner in which he has tortured stage characters of his own creation.

With its dedication to the Archbishop of Canterbury and its preface by the Bishop of Liverpool, "The Prayer Book Dictionary" (Longmans) may be said to have almost the *imprimatur* of the church. The volume, edited by George Harford, Morley Stevenson, and J. W. Tyrer, extends to something beyond eight hundred pages, and attempts to do for the Book of Common Prayer what various dictionaries of the sort do for the Bible. It is full enough and learned enough to be of use to the clergy, but it will also have great value for those who are in any degree interested in the Episcopal service. The sources of the Book and all things connected with the ritual are explained historically and dogmatically.

Six thousand letters of appeal, written to Mrs. E. H. Harriman by individuals, churches, hospitals, charitable agencies, universities, etc., from all parts of the world have been studied by the New York Bureau of Municipal Research; and one of its directors, William H. Allen, has put the results, along with some conclusions, into "Modern Philanthropy: A Study of Efficient Appealing and Giving" (Dodd, Mead). The volume is a presentation of the science of getting and bestowing aid. The reader will probably be amazed at the ingenuity of professional philanthropy-seekers, and more and more inclined to agree that there is great need of a system for setting "charity" to work where it is most needed. Dr. Allen's proposal is for nothing less than a nation-wide "clearing house" for appealers and givers, an institution which shall not, however, merely select the most deserving appeals and bring them to the attention of puzzled or indifferent millionaires or local governing bodies. What he has in mind is an institution that shall view the whole field, carry on a campaign of education that will train social workers and persons in general to discriminate between the case of a man needing examination for his sanity and one having an idea that should be realized, and, in a word, enlighten and direct the spirit of generosity. Much has already been accomplished in this direction, but it needs to be better coördinated, and much goes undone and even uninvestigated, perhaps unfelt.

"Penal Philosophy," by the late Gabriel Tarde, jurist and sociologist, translated by Rapelje Howell, is the fifth volume of the American Criminal Science series of translations (Little, Brown). In spite of the diffuseness which arose doubtless from the wealth of the author's learning, experience, and imagination, it is so far the most readable and interesting of the series, besides offering the most comprehensive treatment of the subject of crime. Tarde was an uncompromising opponent of the Lombrosists. In his view, crime is not an anthropological, but a sociological, fact. The criminal is not a madman, nor a savage, nor a degenerate, nor an epileptic. There is, indeed, a criminal type, with a special cast of features, but this is only a professional type, formed, like any other professional type, by the habits acquired in a special occupation. The theory of the book centres in the conception of responsibility. Tarde was too much a naturalist to accept the indeterminism demanded by the traditional retributory theory of punishment, yet too much of a lawyer to reject moral responsibility and treat punishment from a purely utilitarian standpoint, merely as a deterrent. His own theory is that responsibility is a matter of personal identity and social similarity, that is, of similarity within and among individuals. A mental aberration which renders a man irresponsible means that he has ceased to be his normal self; and, as between individuals, we hold an Englishman more clearly responsible for killing an Englishman than for killing a savage. Social similarity, again, is explained by the Tardean principle of imitation, according to which the dominant elements in society tend to transmit their character to the whole. Imitation also explains the origin of crime. In older times the lower classes imitated the higher, but to-day it is truer to say that the country imitates the city.

One can hardly deny that all this is very near to the point. But the formulation in terms of "similarity" and "imitation" is exceedingly crude. The social situation as depicted by Tarde reminds one strongly of the social situation inside of a paper bag where chocolate creams and cream mints are reposing together on a warm day. And when we read that arson is an imitation of the practice of feudal lords of burning their enemy's villages, and that counterfeiting is an imitation of a royal monopoly (334), we feel that imitation has gone mad. The criticism should be obvious. The difference between the relations of individuals in human society and the relations of objects in a paper bag lies in the fact that your human individuals are more or less conscious of themselves and of one another and capable, in the strictly proper sense of the term, of communication. The consequences of this relation are, however, highly complicated and very difficult to describe. It is much easier to set up in your imagination some sort of mechanical figure, or symbol, and then to develop the logic of the symbol rather than the thing symbolized. Fortunately, Tarde was too keen an observer to abide always by the logic of his conceptions. In the matter of imitation, we learn with some surprise that the model for imitation is apt to be "the person with most ideas of a civilizing kind" (329)—which is quite another matter. A man who dines in the evening because "all the best people" do it is clearly an imitator. A man who discovers in the custom a sensible and useful idea for his own use is exercising responsible judgment—but so far he is not an imitator. Again, no special responsibility towards another is imposed by the discovery that he wears the same size of collar as yourself, yet it seems true to say that, in most cases, an Englishman would be more closely bound by responsibility to a fellow-Englishman than to a savage. This, however, is less a matter of similarity than of mutual sympathy and understanding. Through the formation of an understanding a mutual obligation may be created between men of the most widely differing aims, but similarity binds nothing.

Messrs. Charles Eveleigh Woodruff and William Danks, two of the Cathedral Chapter, at Canterbury, have published a portly volume entitled "Memorials of Canterbury Cathedral" (Dutton). The successive stages in the construction of the building, the repairs and restorations, are interestingly described, with considerable attention to the history and internal economy of the priory of Christ Church. The authors have interpreted their subject broadly and have included such biographical and historical data as a true understanding of the history and environment of the building and of its clergy seemed to them to involve. While they have brought forward some fresh material (chiefly of very minor importance), and have adequately used some older material for the first time, the book is, on the whole, a retelling of the story already known to us from the treatises of Willis and the graphic pages of Dean Stanley. One is inclined to feel that for the general reader the volume ought to have been differently proportioned. Fifty pages on the daily life of a Benedictine monastery is too much space devoted to very familiar facts in a book which allots only some thirty pages to Becket's connection with the Cathedral, his murder, and his shrine. The event was clearly the most striking in the Cathedral's history; the shrine incontestably one of the most important in Western Europe during the Middle Ages; the resort of pilgrims one of the most characteristic sights during one-third of the Cathedral's life; the subject intimately connected with one of the enduring masterpieces of the world's literature—yet this great and fascinating topic receives only a meagre notice, and Chaucer is not so much as mentioned. We should also have liked a fuller description of so interesting a subject as the elaborate system of settling tanks and piping instituted in the twelfth century to provide the monks with pure water. Surely these features would

have been more valuable to the ordinary reader than the long technical specifications regarding the bells, the various organs, the subjects past and present of the stained-glass windows, the list of organists and of the books in the library. The numerous excellent illustrations do not illustrate really significant facts. They do not include an adequate ground plan of the Cathedral, the explanatory legends on the one given being so illegible as to render the plan worthless; nor a plan of the Cathedral and adjoining buildings in Becket's day; nor a series of clear plans tracing the gradual growth of the building; nor a map showing the location of the Cathedral in the town and its relation to the numerous buildings so frequently mentioned.

"Karanog, the Meroitic Inscriptions of Shablul and Karanog," by F. L. Griffith, reader in Egyptology in the University of Oxford, is something more than a publication of inscriptions. It forms an important chapter in the progress of the decipherment of a still largely unintelligible system of ancient writing which we term "Meroitic," after the Ethiopian capital city, Meroe, the centre of the southern civilization of the Nile far above Egypt. The progress of research in this little understood region, which has preserved to us the only ancient history of a dark race now in any measure surviving, has been reported from time to time in the pages of the *Nation*. The University of Pennsylvania expedition to northern Nubia has contributed essentially to our limited knowledge of history in this remote region. The results attained have been published by the University Museum in a series of eight volumes, of which the last two have already appeared, the one which has just now appeared being number six. In two cemeteries in Lower Nubia, a large mass of tombstones and other mortuary monuments were found by MacIver. These he turned over to Mr. Griffith, who since 1907 has been devoting himself to deciphering the writing. In the introduction to the volume, Mr. Griffith is able to give the phonetic equivalents of both of the Meroitic alphabets; that is, the hieroglyphic and the more rapid system which, though it may not be called cursive, is termed by Mr. Griffith "demotic." These results required more than four years of special study and they form a monument which will bring lasting credit and honor to their author. They will furnish the basis for future research in the history of this southernmost outpost of ancient civilization.

In spite of republican simplicity a laudable respect for ancestors generally characterizes Americans, and family genealogies and histories bulk large in their historical research. But few have had so magnificent an idea as Alexander W. Hidden, who in his "The Ottoman Dynasty" (New York: Nicholas W. Hidden) has used the whole House of Othman as a background for the life and exploits of his father, and has worked in among the illustrations of his book fourteen family portraits, including three of himself, and various family documents reproduced in fac-simile. Besides these records, duly entered as part of the story of Turkey, there is a connected history of the Osmanli sultans from the birth of the eponymous founder, Osman, in 1258, to November, 1912, and a series of running notes on Turkish religion, law, and customs. The notes are chiefly remarkable as a proof —if any were needed—that a man may live for forty years in the most intimate contact with a foreign people, and yet, for lack of specific studies, remain in ignorance of the bases of their faith and practice. The illustrations are generally good if not novel.

Mr. Askew, whose ideas on a good many interesting matters we get in "Cross Views" (John Lane), through the pen of Mr. Wilfrid Scarborough Jackson, though he professes himself to be one of the serious, is yet, in spite of his name, by no means a person of disagreeable mental angularities. Indeed, aside from a few little vagaries of style, such as the rather persistent treatment of *without* as a conjunction, and an occasional sentence that yields its meaning somewhat reluctantly, Mr. Askew proves himself to be a delightful companion in the sixteen essays that make up the volume. He is not, in fact, excessively serious, and he is certainly not cantankerous; but he is also never smart, flippant, or paradoxical—an achievement, surely, in these days when the essay and, more broadly, the literature of comment in general aims to be so diabolically clever. Possibly the discursiveness seems a trifle forced and overdone in "Also a Garden," and still more so in "A Wet Day"; but in both there are delicious things far more than sufficient to justify their being; and the fault is nowhere repeated. One of the best of the essays is "John Bull." The first three pages of this paper draw a picture of the Englishman as a figure markedly in contrast to all other Europeans. The picture is not meant to be flattering to the Englishman's vanity; but, if one may say it without offence, Mr. Askew is characteristically English in his inability wholly to conceal his pride in the distinguishing temperamental limitations and defects which he confesses for the Englishman. But the book is in the main admirably written and abounds in brilliant things. One would search long for anything better, for example, than the account given on pages 153-154 of "an excellent lady" known to Mr. Askew. This lady's intellectual quality is delightfully suggested by her favorite remark when very hard pressed: "You may be right, but I know you are not."

A readable series of articles contributed a few years ago to a Shanghai newspaper were published there in a volume called "Lights and Shadows of Chinese Life," by John Macgowan. The book now seeks a larger audience under the title of "Men and Manners of Modern China" (Dodd, Mead)—to the confusion of librarians whose painful task it is to beware of old books reappearing under new names. The author's residence of half a century among the Chinese has given him an appreciation of their virtues, their qualities of industry and obedience, their cheerfulness, and their faith in education. Their faults are relentlessly noted in every relation, but despite the provoking nature of many of these—notably their indifference to filth and untruthfulness—there remains an abiding impression of a race likable not only as individuals, but as a people. The changes that are transforming China to-day are widespread and profound, but the currents of common life which Mr. Macgowan describes are not greatly affected by them. Under the republic, for example, state schools are designed to supplant the old voluntary system, "where the Government took no steps for the education of the children of the nation. It must be understood, however, that China, taken as a whole, is still carrying on the system of education that has been in existence during the past ages. It will take long before men trained to teach the new educational methods can be obtained for the countless schools throughout the empire." One of the amenities of the old-fashioned teacher's life here portrayed has never hitherto been revealed to the Western world. A teacher, it appears, is engaged by the year by the group of parents who are desirous of having their boys taught. His reputation as a scholar can only be tested by men of his own class. Now and then a clever scamp who knows his Classics will come along and visit the school:

> If the schoolmaster be a strong man and a good scholar, he has nothing to fear. If, however, he be a man of only moderate abilities and inferior scholarship, he is sure to be fleeced. For example, one of these strollers enters a schoolhouse during the time that the recitations are going on. He sees at a glance that the teacher is a poor fellow and no match for him. He at once assumes a stern and displeased air and says, "You have no right to be the instructor of these boys, for you have not the learning that would qualify you to teach them. I propose to examine you to see if you are fit for your post, and if not, you shall at once vacate it, and I will take charge of the school." It may be confidently affirmed that no such free-and-easy action could take place in any other country except China. The result is characteristic. No exchange is effected, but the poor teacher has to buy off the scoundrel, who usually proceeds to spend his misbegotten gains in riotous living.

There is an amazing chapter in Mr. Macgowan's book on lynch law in China, which the author declares to be an open and recognized power by which the people take cognizance of wrongdoing except offences against the state. Theft seems to be the transgression chiefly capable of "arousing the very worst passions that lie smouldering in the heart of the Chinese," and a confirmed thief, if he continues to prey upon a community that has repeatedly caught him, will ultimately be lynched in open day without interference from the authorities. Some of Mr. Macgowan's stories of torture and death by Chinese mobs are horrible enough, but the reader is struck by the evident eagerness with which he must have hurried to the spot so as to become an eye-witness of the scenes described, as well as by his concluding reflection that "the system of lynch law is more effective in China than hanging is with us."

The supplement-volume of Meyer's "Konversations-Lexikon" for 1911-1912 is a little larger than the previous ones, and is more profusely illustrated, the pictures, plans, diagrams, and maps numbering 1,260. Among the maps is one of the German Empire in colors, showing where each of the nine political parties had the supremacy on December 12, 1912. There is an interesting and suggestive illustrated article showing how the health of the school children in Germany is cared for. Accompanying the article on meteorology are twelve portraits, of which two are of the late Mr. A. Lawrence Rotch and Prof. Cleveland Abbe, of our Weather Bureau.

In his recently published posthumous work on the antecedents of Goethe's "Faust" ("Faust, vom Ursprung bis zur Verklärung durch Goethe," Berlin: Verlag Karl Curtius), Oskar Schade discusses the ultimate sources and general relationship of the Faust legend and traces the two different lines of descent connecting Goethe's drama with the original Faust-book, published in 1587 in Frankfort-on-the-Main. The first of these follows the series of editions of the Faust-book, with their various modifications, down to the miserably printed chap-book which Goethe knew as a boy. The other branches off with the first dramatization of the popular book in Marlowe's "Faustus," which was carried by wandering troups of British actors to Germany, where it was appropriated and translated by German actors, and later adapted and garbled to suit the taste of various troups and audiences. In these corrupted forms the play enjoyed an era of remarkable popularity until the dramatic reformation of Gottsched, when it degenerated into a puppet play, in which form Goethe became acquainted with it. Schade claims for a previous publication of his (an edition of one of the versions of the puppet play) the honor of being the first to prove this second line of descent, though other writers had suggested its probability. Goethe himself was ignorant of the relationship. This work of Schade, who died some seven years ago, presents no new material and no new theory, but is a welcome addition to Faust literature because of its readable presentation of the accepted facts within a compass that will satisfy the student and interest the general reader.

Heinrich Schmidt's new "Goethe-Lexikon" (Leipzig: Alfred Kröner Verlag) is not what its title suggests, but a selection of quotations from Goethe's works, letters, diaries, and conversations, arranged in a quasi-alphabetical order. Each passage is cited, without comment, under the head of one of the words contained in it. In fact, this so-called lexicon is merely a book of quotations arranged conveniently for finding. But the references to sources give only titles of works, or names of persons to whom they are addressed, with the year, and will prove of little help to one wishing to know the context. To use the book as the compiler desires, however, the context is to be ignored. His design is to furnish isolated texts from Goethe upon which the seeker after philosophical help may profitably reflect. But the passages cited under each topic are so few and so superficially grouped that the pious reader will not gain much familiarity with the depths of Goethe's philosophy of life, in spite of the promises of the compiler's preface, which is as inflated as his title. And yet the maxims of the book do contain a world of wisdom, if only one knows their setting and true significance.

Recent volumes of the International Critical Commentary (Scribner) maintain the standard of the series in thorough scholarship and painstaking attention to all questions involved in text and interpretation. In the commentary on "The Epistles of St. Paul to the Thessalonians," Prof. James Everett Frame faces some knotty problems of eschatology, which he handles with ability. The text is submitted to minute analysis, and by translation and comment the meaning is made clear, but the validity of the conceptions involved is not discussed. The authenticity of both epistles is defended. Professor Frame's work was preceded shortly by a treatise on the same subject by the brilliant German critic, Von Dobschütz, but the American work does not suffer by comparison. Of more interest than the usual critical commentary to the non-critical student is the study of the "Johannine Epistles," by Rev. A. E. Brooke, Dean of King's College, Cambridge. The introductory matter on the aim and purpose of the letters is really a chapter in church history, with important bearing on the question of the rise of the episcopate. The explanation of the text is more free than in most volumes of the series, and paragraphs devoted to application and improvement of the text are not wanting. A third and concluding volume on the minor prophets embraces commentaries on Haggai and Zechariah by Prof. Hinckley G. Mitchell, of Tufts College, Malachi by Prof. John Merlin Powis Smith, of the University of Chicago, and Jonah by Prof. Julius A. Bewer, of Union Theological Seminary, New York city.

Many a bookish American will regret to learn of the death of Honoré Champion, a bookseller and publisher of the old school. On the Quai Voltaire and later on the Quai Malaquais he was long a well-known figure.

The death is reported from London of William St. Chad Boscawen, who had long been connected with the department of Oriental antiquities in the British Museum. His successful work, "The First of Empires," was devoted largely to elucidating cuneiform texts of Western Asia. He was born in 1854.

Science

THE AMERICAN PHILOSOPHICAL SOCIETY.

PHILADELPHIA, April 21.

The sessions of the annual general meeting of the Society were held this year in the three days ending April 19. The address of welcome was made by the president, Dr. W. W. Keen, who, with Vice-Presidents W. B. Scott, of Princeton, and E. C. Pickering, of Harvard, presided at the various sessions. The meeting was exceptional in the large number and high quality of the papers presented and in the wide range of subjects treated.

In an earnest paper on "The Treaty Obligations of the United States relating to the Panama Canal," Charlemagne Tower gave a brief history of the various treaties and agreements between the United States and Great Britain relating to any such canal if ever constructed; and he urged that the United States was in honor bound not to do or allow anything which should be in any way inconsistent with the terms of our treaties.

In a suggestive paper on "The Cause and Significance of Fever" Dr. V. C. Vaughn, of Ann Arbor, explained that fever is due to the digestion of proteins in the blood and in the tissues. Bacteria are living proteins. They get into the body and grow, converting the proteins of man's body into bacterial proteins. After a period of incubation the cells of the body pour out a ferment which digests and destroys the bacteria. In this process fever originates. In itself fever is beneficial. It is a manifestation of the attempt on the part of nature to destroy the invading organisms. However, nature may overdo the matter, and fever *per se* becomes dangerous when it goes too high.

Dr. M. P. Ravenel, of the University of Wisconsin, explained how perfectly typhoid fever can be controlled by vaccination. This practice was tried for the first time on a large scale during the Boer War. Since then it has undergone investigation by scientific boards in several countries. In the United States it was recommended by such a board in 1909. The results were so favorable that in 1911 it was made compulsory for all officers and enlisted men under forty-five years of age. The method is an extension of the well-known bacterial vaccination discovered by Pasteur. The practice has proved of great value in checking epidemics and in the cure of "typhoid carriers."

Dr. Charles D. Walcott, secretary of the Smithsonian Institution, gave illustrations of a very remarkable and ancient fossil fauna discovered by him in the mountains of British Columbia 2,000 feet above Field, on the Canadian Pacific Railway. The fossils are most beautifully preserved and include such delicate forms as jelly fishes, fine marine shells, and a large variety of crustaceans. Altogether more than eighty genera of invertebrate fossils have been found in a bed not above five feet thick. They are all of marine origin and lived at a period when there were no vertebrates in existence, such as fishes, reptiles, and mammals.

In a paper entitled "Some Unsolved Problems in Radioactivity," William Duane, late of the Curie Radium Laboratory in Paris, after treating of some of the purely physical aspects of the subject referred at some length to the excellent results that have been obtained abroad in the treatment of small superficial cancers by means of the rays from such radioactive substances as radium and meso-thorium. A number of pictures were presented showing the cases both before and after treatment.

The Saturday afternoon session was devoted to a special symposium on "Wireless Telegraphy and Telephony," Dr. Lewis W. Austin, head of the United States Naval Radio-Telegraph Laboratory at Washington; Prof. G. W.

Pierce, of Harvard; Prof. M. I. Pupin, of Columbia, and Prof. A. G. Webster, of Clark, taking part. The last-named gave an account of his experiences as a member representing the United States at the International Radiotelegraphic Conference of London about a year ago, and described the work of the Conference in its essential features. It is expected that this Conference will meet in Washington four years from the present.

On Friday evening a reception was held at the hall of the Historical Society of Pennsylvania, when Prof. G. G. MacCurdy, of Yale University, gave an illustrated lecture on "The Antiquity of Man in the Light of Recent Discoveries."

On Saturday evening the usual banquet at the Bellevue-Stratford was attended by above one hundred members and guests. The toast to "The Memory of Franklin" was responded to by his Excellency the French Ambassador, M. Jusserand; that to "Our Guests" by Prof. Arthur Schuster, F.A.S.; that to "Our Institutions of Learning" by Prof. A. G. Webster; and that to "The American Philosophical Society" by Mr. Hampton L. Carson.

Thus ended perhaps the most successful series of meetings ever held by "the oldest scientific society in America."

ARTHUR WILLIS GOODSPEED.

The following science books are announced by Dutton: "The Entomologist's Log Book," by Alfred Scorer; "A Dictionary of Botanical Names," by George F. Zimmer, and "The Guild of Garden Lovers," by Constance O'Brien.

Holt is bringing out this week Dr. E. Mather Sill's work, "The Child, Its Care, Diet and Common Ills."

Though not without certain scientific shortcomings, Mary Evans Francis has skilfully brought together in "The Book of Grasses" (Doubleday, Page) all the information that the intellectually inquisitive should need. The formidable nature of the ordinary technical treatment of grasses has been overcome by the substitution of plain English descriptions for each species. But the author has provided a check upon offhand and inaccurate determinations by including also a careful semi-technical description. There are pictures for many of the species, which aid materially in their determination, especially those showing dissections of the flowers. Excellent little illustrations accompanying an introduction on unfamiliar terms, make it relatively easy for any one to acquire knowledge of the parts of the flower—knowledge quite indispensable for the proper determination of grasses. The book gives a short account of the sedges and rushes, neither of which belong to the grass family, but are always popularly so termed. The fact that this is the first work that presents the commoner grasses in a non-technical and attractive manner is sure to make it deservedly popular. There are a number of features that the technical botanist might object to, but the work, on the whole, is admirably conceived and executed. For those interested especially in the grasses of particular locations, such as fields, meadows, sands and salt marshes, woodlands, etc., the author has prepared lists arranged in the order of flowering. A large number of illustrations of grasses *in situ* add to the usefulness of the book, and there are sixteen colored illustrations of the more important species. The color work is not up to the standard previously set by these publishers.

"Trees in Winter: Their Study, Planting, Care, and Identification" (Macmillan), by A. F. Blakeslee and C. D. Jarvis, is the fulfilment of a promise made by the authors, about a year ago, to issue in book form their very successful "New England Trees in Winter," which came out as part of Bulletin 69 of the Storrs Agricultural Experiment Station. They have added about 200 pages of introductory matter relating to the care and planting of trees, in which are considered, among other topics, the structure, life, growth, and propagation of trees. There are chapters on planting, care, injuries, diseases, and remedies. The introduction to the second part discusses such topics as habit, twigs, leaf-scars, buds, fruit, etc. Each of these, and several other aids in the determination of trees in winter, are discussed in detail, always from the point of view of the general reader and lumberman. A key to the genera and individual keys to each genus complete the introductory matter. It may be found that the keys will require more familiarity with such things than the average user of the work will have, but they are excellent and have been drawn with admirable fidelity. The body of this second part contains a detailed description of habit, bark, twigs, leaf-scars, buds, fruits, and wood, together with a discussion of the distribution and a comparison with other trees with which the one under discussion might be confused. Nearly all the native trees are so treated, as well as a number of wild species which are so widely cultivated that they attract as much attention as native kinds. For each species there is a splendid composite photograph showing general habit and character of bark and of the branches and twigs. Frequently, also, the fruits and nuts are shown. There is a comprehensive index and a glossary of botanical terms, which in the text have been avoided wherever consistent with accuracy. After the large crop of the "How to Know" books, and numberless compilations, the jaded tree-lover will turn with avidity to this excellent study, which for a certain thoroughness and freshness of handling is immeasurably in advance of any recent publication on the subject. Some discussion of the altitudinal preferences of the different species would have been welcome, but such a minor shortcoming in a book so generally excellent is of small moment.

In publishing his "Gardening Indoors and Under Glass" (McBride, Nast & Co.), Mr. F. F. Rockwell has put the gardening public under obligations. While it cannot supersede Mr. Rexford's "Indoor Gardening," which, on account of its enthusiasm and practical wisdom, should be on the shelves of every grower of house-plants, the new publication supplements and extends the older. The directions are thorough, taking the beginner from the growing of seedlings and cuttings, through the care of plants of a very wide variety, to the greenhouse or the frames, in order to prepare for outdoor culture. Mr. Rockwell occasionally has new methods (witness his flats and the scheme for watering and draining), and a blunt word of praise or blame where it is needed. The writing is simple and effective, having that conviction which arouses the reader to attempt the unknown, even leading him so far as to consider the possibility of a lean-to greenhouse.

In "A Farmer's Note-Book" (Badger), Mr. C. E. D. Phelps wanders from swimming to Socrates, from poetry to waterspouts, with glimpses at farm practices or events, whether past or present. The book is neither practical, keenly observant, nor deeply penetrative; its flavor is mild. Presumably called into print by the success of David Grayson, Mr. Phelps's book can compete with neither the philosophy nor the humanity of that stimulating writer.

John Mätter, the author of "Once" and "Three Farms" (Holt), is clever, imaginative, often witty, and always self-conscious. Like so many celebrants of the simple life, he does not know how to be simple, though he would very much like to know how. He pursues ingenuousness with a good deal of ingenuity. He calls us back to the farm, and makes his farmers talk like members of a coterie. He professes to own and read very few books, but his style is bookish in the extreme, determined to be literary at all costs. It may be that the doctrine of "back-to-the-farm" needs fresh adornment if it is to get a further hearing—or, rather, if it is to get beyond a hearing. Great numbers of city people now blandly admit that they would be better off in the country, that the real thing to do is to get close to the soil, to live the out-of-door life, to plough and hoe and—and whatever else it amounts to out there. Mr. David Grayson has not conducted his magazine adventures without an admiring audience, nor have the land agencies enounced the joys and the profits of farming to deaf ears. But most city people are pretty well satisfied to listen and assent, and we doubt whether elegant variations on the theme, like Mr. Mätter's, will really convince any citizen that it is time to take the train for Arcadia.

The first of the three farms with which fancy here plays begins and ends in fancy—a farm in the Riviera indolently dreamed of, and never really sought for. Our second is a quarter-section in Saskatchewan. Here a shack is built, twenty acres broken up, and a single crop of flax harvested; when we are transported, suddenly and without explanation, to our third, a family homestead in Indiana. As the farm and its responsibility belong to our father, and there is a resident farmer and wife to do the brunt of the work, we are in clover at last—free to enjoy what is enjoyable in farm life, and to avoid what is unpleasant. Books of this sort are well calculated to charm the city dweller, who takes his agriculture vicariously. The real farm-liver and farm-lover does not need to have the deep and solid satisfactions of his lot decked with an artificial glamour.

Lester Frank Ward, a member of many scientific societies in this country and Eu-

rope, and in 1903 president of the International Institute of Sociology, died Friday in Washington. He was born in Joliet, Ill., in 1841; served in the Civil War, and in 1869 graduated from Columbian (now George Washington) University. He carried on investigations in geology, botany, and sociology. A list of his writings follows: "Guide to Flora of Washington and Vicinity," "Dynamic Sociology," "Sketch of Palæobotany," "Synopsis of the Flora of the Laramie Group," "Types of the Laramie Flora," "Geographical Distribution of Fossil Plants," "Psychic Factors of Civilization," "Psychological Basis of Social Economics," "Political Ethics of Spencer," "Principles of Sociology," "Outlines of Sociology," "Sociology and Economics," and "Pure Sociology."

Drama and Music

The Play of To-day: Studies in Structure. By Elizabeth R. Hunt. New York: John Lane Co. $1.50 net.

This volume bears upon a fly leaf the endorsement of the board of directors of the Drama League of America, commending it as "one of the most valuable among recent publications on the subject"—that is, on structure in modern plays. But it is difficult to determine wherein the special value consists. Such traditional laws of dramatic composition as are quoted are not particularly instructive, while the illustrations are not always authoritative or the opinions founded upon them indisputably sound. But the writer exhibits a wide acquaintance with theatrical literature, chats pleasantly enough upon a large variety of topics, and supplies a number of hints which will be fresh to novices if not to experts.

Altogether too much space is devoted to the analyses—not badly done in themselves—of such plays as "The Servant in the House," "Disraeli," "The Earth," and "Lady Windermere's Fan"; and it is somewhat startling to find "The Admirable Crichton" and "What Every Woman Knows" selected as ideal specimens of dramatic literature, although no one would dream of disputing the freshness, the humor, the whimsicality, or the attractiveness of either of them. What the author has to say about the masterly constructive skill displayed by Ibsen in his social plays is perfectly true, but the notion that there is anything new in the art of giving absorbing dramatic interest to psychological analysis is fantastic. One would suppose that "Othello" and "Macbeth" had never been written. What Ibsen did was to show that absorbing, if not especially attractive or inspiring, drama could be made out of the psychological and physiological peculiarities of ordinary everyday folk, without the aid of romantic accessories. And it should be noted that, with all his naturalistic and professedly logical methods he could, for his purposes, ignore probability like any romanticist. Incidents in real life do not always occur in accordance with physiological or philosophical formulæ. The author has a perception of this truth when, in upholding the cause of realism, she says that "one reason why life in its verity is too much for any but the greatest dramatic artist, is because it is so full of exceptions and aberrations, and so illogical in its workings." Precisely. The fact is, although many modern critics are unwilling to admit it, that imagination, when it does not deal with the supernatural or the frankly impossible, often gets nearer to the essential truth of nature than does the conscientious realist. Elsewhere, on the same theme, the writer argues: "Apparently the old structural forms need not be wholly abandoned. The drama of mental states always has its fundamental 'story,' just as much as 'Ruy Blas' or 'Fedora.' Often where this story is extracted and set in order, it proves quite as entertaining as the mere narrative of many an old romantic tragedy." Of course it does. One story may be as good as another, but the story that contains the most powerful human appeal and the finer intellectual or literary quality is apt to be the better story of the two.

Moffat, Yard & Co. will publish for the Educational Players Mrs. Emma Sheridan Fry's "Educational Dramatics," which is described as a guide for amateur actors.

"Sardou and the Sardou Plays" (Lippincott), by Jerome A. Hart, appeals to readers on the edge of literature with a natural predilection for authors likewise on the edge. The plan has a naïveté that rises almost to originality. One hundred and twenty-nine pages of biography, of interest mainly anecdotic, are followed by two hundred and thirty-six pages of summaries of plots related solely for their worth as narratives. An appendix (not so called) enumerates Sardou productions in the United States. The thirty-seven abstracts of plots suggest the remark that such summaries, if more briefly, ably, and seriously done, might have a value, partly as guides to reading, partly as dispensations from it, in the case of prolific mediocrities of the Sardou and sub-Sardou types. The present author is too considerate of his public to be serious. As journey-work the book has points of respectability; some excellent works have been consulted and catalogued, French spelling and accentuation have been conserved, the author maintains a decency which belies the Parisian subject and setting, and substitutes for the journalist's factitious gusto that diligence in point of task and that apathy in respect of materials which mark the well drilled but phlegmatic stenographer. His indifference to his own performance is its one judicial quality; in such matters one prefers the stoic to the epicurean.

Six more volumes of the Tudor Shakespeare (Macmillan) have come to hand, all but completing this scholarly undertaking. They are: "Julius Cæsar," edited by Robert M. Lovett; "The Merry Wives of Windsor," edited by Fred P. Emery; "Cymbeline," edited by Will D. Howe; "Henry VI," Part iii, edited by Robert Adger Law; "Pericles," edited by C. Alphonso Smith, and "Titus Andronicus," edited by Elmer Edgar Stoll. A hard task fell to the last-named editor. In trying to steer a safe course among the many debatable theories connected with "Titus Andronicus" Mr. Stoll becomes a bit confusing, but not seriously so. He himself adds nothing new to the discussion. On previous occasions we have set forth the aims of this new edition, which is under the general editorship of Profs. W. A. Neilson and A. H. Thorndike, and will only repeat briefly that it has been prepared by the best American scholarship.

The speedy collapse of "The Happy Island" at His Majesty's Theatre, in London, compelled Sir Herbert Tree to make speedy revision of his plans. For the present he has revived "The School for Scandal," with Phyllis Neilson Terry, for the first time, as Lady Teazle. This young actress is having her full share of brilliant opportunities. Matheson Lang has been engaged for Charles, and Sir Herbert, of course, resumes the part of Sir Peter. This revival will be followed in due course by Somerset Maugham's English adaptation of "Le Bourgeois Gentilhomme" and an English version of "L'Homme qui assassina," which had a success some time ago at the Théâtre Antoine in Paris. The piece is taken from the novel of Claude Farrère. In London it will be called "The Right to Kill."

Arthur Bourchier intends to revive Brieux's "The Arm of the Law" at the London Garrick.

"The Typhoon" seems to have met with a favorable reception at the Haymarket Theatre in London. The London *Times* says:

> Mr. Laurence Irving's Takeramo is an extraordinary *tour de force*. He appears more Japanese than the real Japanese who figure here and there in the east; not merely in make-up, but in every trick of speech and gait and gesture, in his persistent suppression of emotion, in the calm, almost saintly dignity of his demeanor.

James Bernard Fagan has to a great extent rewritten and remodelled his play "The Earth," providing it with a new and, as he thinks, highly dramatic ending. He is to experiment with it in the English provinces, and will play one of the principal parts himself. He has had considerable stage experience in the companies of F. R. Benson and Beerbohm Tree.

"Le Secret" of Henri Bernstein, the new play of which Madame Simono has just assumed the chief female part in Paris, appears to be an unrelieved study of feminine treachery. The heroine is a fascinating but malignant creature who cannot endure the spectacle of another's happiness. Therefore, she conspires against her dearest friend, first contriving to separate her from her lover, and afterward, when she has been married to another man, plotting to confront her with the discarded lover under conditions peculiarly disquieting to the husband. Seemingly, there is not a redeeming trait in the character. In the end she makes confession and is forgiven, her husband vowing that he worships her

in spite of everything. Doubtless the part offers varied histrionic opportunities to Madame Simone, but its value must be wholly theatrical.

Recent festivities in Leipzig celebrated the seven hundredth anniversary of the foundation of the St. Thomas School. It was once under the control of the monastery. In 1531 the Protestant magistracy took over the school, which was then much enlarged and improved. Two centuries later, when Bach was the Cantor, an extra story was built. The fabric remained unaltered till about thirty years ago, when it became the central office of the military chaplains, and the school migrated to the suburbs. The statue which four ladies erected to their teacher, J. Adam Hiller, was taken down and built into a new door of St. Thomas's, which is now the Garrison Church. Bach's monument, put up by Mendelssohn, remains on the promenade; in the square, just outside the church, is the great statue of Bach, unveiled in 1908.

From Leipzig comes the news that Berlioz's fifty-year-old opera, "Beatrice and Benedict," has been produced there with great success in a version made by the present Philharmonic conductor, Josef Stransky, and Wilhelm Klefeld. The critics speak of this version as "very clever." It seems that there was need of a good deal of editing to make the opera presentable. The libretto, which is based on Shakespeare's "Much Ado About Nothing," had to be completely worked over, and Mr. Stransky not only transferred the musical numbers to more advantageous places, but interpolated airs from other juvenile works by Berlioz.

The German critics not only do not like Puccini's music in "The Girl of the Golden West," but the story itself strikes them as "a clumsy mixture of brutality and sentimentality." "How exalted in comparison is even the text of 'Tosca,'" exclaims Hugo Rasch in the *Allgemeine Musik-Zeitung*, after hearing the opera in Berlin. Puccini, he thinks, has been steadily going down hill, and the end of the last act represents low tide in his activity, while the action in this scene is "an insult to any even half-cultivated audience."

Art

THE INTERNATIONAL.

LONDON, April 7.

The exhibition of the International Society of Sculptors, Painters, and Gravers is again this spring a disappointment. For a while the Society could be counted upon to show all that was most active and most original and most interesting in the modern art, not only of England, but of the world. It represented every vital phase and movement. It organized the one independent exhibition in London, free of cliques and unshackled by modern conventions, a healthy antidote to the Academy. The tradition it sought to carry on was that not of any particular group, but of good work, wherever produced and wherever found, though it never shrank from honest experiment. I am amused, in the midst of the present excitement over what is called Post-Impressionism, to remember that at the International the artists looked upon as leaders by the Post-Impressionists were first seen in London—Cézanne, Van Gogh, Vuillard, Maurice Denis, Matisse, Flandrin, were all, at various times, exhibited there; but the moment of the "boom" not having arrived, their work created no sensation and remained unnoticed save by the few who knew and understood.

Of late years, however, after a number of brilliant and splendidly promising seasons, the foreign element has been gradually growing less and less, until now it has almost completely disappeared from the International, which the British members of the Society threaten to reduce to a mere annex of the Royal Academy and the New English Art Club. Even the hanging and arrangement have ceased to receive the attention that once made the exhibition, as a whole, the most dignified and beautiful held in London. Moreover, it is inevitable that this year there should be a certain feeling of staleness. The exhibition is given at the new Grosvenor Gallery, which opened last autumn for the first time, with a show of very much the same men, and which has just closed the yearly exhibition of the National Portrait Society, many of whose members belong also to the International. It is extraordinary that artists do not realize there is such a thing as showing too often and too consecutively. A good thing may be overdone. But when the public and the critics become indifferent, the artists seek the cause anywhere save in the monotony of the entertainment they provide. This year we have the Institute—though I must not be understood to include it among the good things—eliminating their press day because the critics have kept on saying the same unpleasant things about the same work they have found on the same walls in show after show. And we have again a society of Post-Impressionists, apparently realizing that Post-Impressionism may pall, challenging the public's curiosity by suppressing the names of the exhibitors, and thus turning the collection of their work into a prize puzzle.

The loss of the foreign element is serious for the International, taking away the chief reason for its existence. There have been years when the work of the president, Rodin, has dominated the exhibition; this year he is represented only by his well-known Young Girl between her Good and Evil Genius, lent by Edmund Davis. But, then, the Society, having chosen a sculptor for their president and having given sculptors the chief place in their titles, have made their headquarters in a gallery where it is impossible to exhibit any but the smallest pieces of sculpture, a fact which strikes the outsider as a curious contradiction. Otherwise few things of note come from France, and nothing from Spain. Professor Sauter and Joseph Pennell, who both spend much of their time in London, represent respectively Germany and America; and James Morrice, Canada. Belgium (save for an Alfred Stevens), Holland, Italy, Austria, Scandinavia might not exist as far as the International is concerned.

If the British exhibitors, having got rid of the foreigner, endeavored to show themselves at their best, there might be some excuse for this change of policy. But they do not. It looks as if men like Lavery, Arpen, Strang, and C. H. Shannon, who have been made Associates of the Royal Academy, were reserving their most important canvases for the show that opens next month at Burlington House. If they are not—one must give them the benefit of the doubt—they have but themselves to thank for the impression they make. Lavery sends no portraits, but instead three small paintings of the Alps in winter; one, The Monk, a clever piece of realism, the great snow-clad slopes dazzling the eye in paint as they would in nature; the other two curiously dwarfed by the little figures, scattered over the vast snowy stretches, which should give the scale; and none of the three suggesting the majesty and beauty of the mountains as successfully as the studies of the Matterhorn, from different points of view and under different atmospheric effects, by Professor Sauter. Many painters, from Turner to the Hudson River School, have painted mountains, but few with success, few with the right appreciation of the subtlety of their color and the dependence of their beauty and their grandeur upon light and atmosphere, and not upon detail. In these studies, as well as others he has already shown of similar subjects, Sauter has revealed such true understanding and sympathetic vision, that it is to be hoped his Alpine series is but at the beginning.

Strang, the vice-president of the International, has only one portrait—the Rev. W. Wilks, Secretary of the Royal Horticultural Society—a full-length seated figure, with a bunch of daffodils on a table to one side, a flat yellow background, and a curtain falling in stiff straight folds behind the flowers; the pose is hard and uncompromising, the modelling crude, the detail harsh and sharp—it is one of the pictures, no doubt, that Strang is said to be painting for posterity, and that might with advantage remain unseen until posterity claims them. Orpen also is content to send one painting, a variation of an old theme—the seashore, a tent, a figure,

strong sunlight making a pattern with the shadows where it falls—a clever study, but little more. And from C. H. Shannon there comes but a single canvas, The Amethyst Necklace, one of the lifeless nudes he has often painted, with the usual accessories, graceful in design, refined, but growing weaker, as every subject, when repeated, will if convention and not nature is relied upon for fresh inspiration. It is the same with men of another group—with Lambert, Nicholson, Kelly. I may be wrong, but I have come away with the conviction that they, too, are holding themselves in reserve, keeping back their most ambitious performances for other galleries.

Indeed, among them all, James Pryde alone seemed to me to have sent of his best. His Death Bed is by no means a great work of art. It shows a gray, quiet interior such as the Dutchmen loved to paint and painted infinitely better, lofty and spacious, with, almost filling it, a huge, high four-poster and purple curtains, the centre of the tragedy of death which Pryde turns into light comedy. The whole has a theatrical air. Not the title, not the agitation of the little figures, one at the foot of the bed, one at the door, can disguise the fact that the painter was not in the least moved by the subject—probably had not decided what that subject was until the painting was finished and a title needed—but found himself immensely amused with his scheme of gray and with his melodramatic composition for the sake of which he carried the four posts of the bed up to a height beyond domestic or constructive possibility.

The unmistakable evidence in paint that the painter has been interested in what he was doing, draws the eye irresistibly to Morrice's three little landscapes. They are not as distinguished as many he has before now sent to the International; the detail here and there tends almost to the grotesque in its simplification; the color is not so pure, but there can be no question of the painter's alert interest in his subjects and the pattern they suggested to him. All three of the pictures are at least full of that observation which is too frequently sacrificed by the modern painter to a successful formula. Formula, not nature, is felt, for instance, in the sombre landscapes of Peppercorn, so seldom do they vary in motive or color scheme, in the pastorals of E. A. Walton, with the same silvery trees under the same cloud-swept sky, or the work of Nicholson, whose small equestrian portrait of a woman this year, like many of his paintings, seems but the decorative balancing of spaces of flat color, far less appropriate to canvas than to the wood block. A formula may last the artist for the time, but it cannot last forever. Repetition takes the life from it sooner or later, sooner when the formula has but a weak foundation, as in the case of many of the men and women who now label themselves Post-Impressionists. There are one or two paintings of the kind in the International that would seem crude even if hung as posters on the hoardings. A first show of Post-Impressionists may give food for thought, as I see has been the case in New York. But a second, in my experience, is as flat and monotonous in one way as the Royal Academy is in another. Formula, under whatever guise, is a pitfall for the artist.

N. N.

On Drawing and Painting. By Denman Waldo Ross, Ph.D. Boston: Houghton Mifflin Co. $2.50 net.

Coming at a time when the interest of the art world is fixed upon an upheaval, Mr Ross's book must, by its dignity, seem tame. There is only one mild observation on the Post-Impressionists and Futurists: "To some of us, and among them I count myself, it is a warning."

The classical atmosphere of Mr. Ross's book is refreshing. The introduction is especially rich in wisdom and deserves to be read by every artist and art student in the country, as well as by the collector and amateur. Yet the book has been excluded from several art schools, because it is thought inadvisable to put a further tax on the student's mind. "The pupil," says Mr. Ross, "is told how very dangerous it is to use his intelligence. He may use his eyes, but must not use his mind. The teacher says, 'Don't think about your performance. Don't talk about it; and don't listen to any talking. Above all things, don't read any books. Go ahead and paint. Paint every day, and all day long. Keep at it, and take the consequences.'" And your reviewer can vouch for it that this is an accurate description of contemporary methods in London, Paris, New York, and Boston. In the next paragraph we find illuminating information about Degas, that god of the present-day careless draughtsmen, the shirkers, and short-cut artists. When Degas was asked to explain his art, which was supposed to be an expression of his instinctive impulses, an expression of "temperament and personality," he said: "No art was ever less spontaneous than mine; what I do is the result of reflection and the study of the great masters. Of inspiration, spontaneity, temperament—temperament is the word—I know nothing."

"Painting is a scientific practice," says Mr. Ross, and thus echoes the teachings of Da Vinci. "It is a way of doings things which must be understood and mastered." What was the deep science of the old masters has gradually become a hit-or-miss, happy-go-lucky form of painting. The modern portrait painter does not insist upon his sitter being each day in precisely the same position, he is satisfied if the pose is approximately the same. Even a master like John Sargent is strangely lax in respect to his model's position. To get the "movement," and "character," and "feeling" is apparently all that the artist of to-day is seeking. It is difficult to envisage that sedate age when handicraft was governed by the rule of thumb, and pride of workmanship went hand in hand with great achievement. Many artists of distinction are suffering from a lack of knowledge in the permanency of pigments, and still more from ignorance in their use. Pictures painted by them, charming in other respects, fail, let us say, in one muddy passage. This fault could not occur if sufficient study were given to Mr. Ross's color theory. The student will have to start from new premises, and with a different choice of painting equipment. He will realize, probably for the first time, that most of our art materials are inadequate or worthless, the colors apt to be coal-tar products and fugitive, the canvas for the most part uncertain, and the secret preparation which covers its surface oftimes deadly to the painting. The oils or mediums are prepared mechanically, and when a good quality is obtained the process is kept secret. One painter recently returning from Italy brought with him what he asserts to be "Tintoretto's vehicle," but instead of giving the recipe freely to his brother artists, he has placed it in the hands of a New York chemist, who prepares and sells it for a price far beyond the means of the majority of students.

Mr. Ross's theory of color will strike readers as unwieldy, just at first. There is a chart so formidable that one is tempted to give it all up or to be witty at its expense. Tones of color are conceived as being as many as the gradations of light. There can be an infinite number of tones between the highest light and the densest black. Colors not being equal in intensity, this scale is most interesting, as it shows the pigment colors placed in their spectroscopic order and their tonal variance. The scale is analogous to the musical scale and must be learned in the same way. From this we advance to drawing and painting, design, pure and applied; representation; modes of representation; representation in forms of design. Order and harmony are considered at length in the chapter on design.

One great principle given on page 125 strikes at the root of the evil now threatening our art schools. Under the heading Drawing from Nature, Mr. Ross fully explains the pictorial plane, and if this theory were adopted by the schools we should not have a room full of embryonic artists all making uniform drawings from a model placed in their

midst. No two persons can see an object the same size unless they are at the same distance from that object and happen to choose the same pictorial plane. Yet go into any art school and you will find all the sheets of charcoal paper filled; the head of the model crowding against the top, the feet exactly at the bottom, except in the case of the rank beginners who have not yet learned to "train the eye," and whose natural tendency is to draw things the size they see them. The instructors insist upon this method, which probably originated at the Ecole des Beaux Arts.

We cannot subscribe to all the statements in this book, for a great many of them depend upon personal taste, but it must be admitted that the precepts given are those of the old masters. Many of the rules are to be found in the Da Vinci notebooks, and many in the teachings of Dürer.

During the work of excavating the foundations of the new Ministry of the Interior in Rome, between the Vie Balbo, Agostino Depretis, and Venezia, a large ancient building has come to light, which is supposed to have been a bath, perhaps that mentioned in the Acta Sanctorum, under the name of Novatus. A marble statue of Venus has been found in the building.

"The Childhood of Art" (Putnam), by H. G. Spearing, treats the art of the cave-dwellers in France and Spain, of early Egypt and Mesopotamia, of Crete and Greece. There are nearly 500 illustrations, of which sixteen are colored. Mr. Spearing justifies his sub-title, "The Ascent of Man," by a resolute attempt to show that the flowering of primitive art depends on political freedom, while the sudden declines of art are one and all attributable to tyranny. In this worthy cause mere hypothesis does valiant service, and the author has prudently refrained from citing parallels in historic times. As a matter of fact, art seems to flourish whenever, with a demand for it, there is general wealth and security. These conditions may be produced either by a wise free state or a benevolent despotism. Oligarchical Venice, boss-ridden Florence, and free Sienna were all simultaneously art centres. About a third of this volume is given up to the art of the French and Spanish cave-dwellers, and there are numerous illustrations of those admirable sketches of animals which these prehistoric artists graved on bones or painted in their caves. Mr. Spearing's lucid review of this art is far the most interesting and valuable portion of his work. In fact, this is the only part of his book in which one feels surely in contact with the childhood of art. The earliest remains of pre-dynastic Egypt, of Chaldea, and Crete seem decadent as compared with the caveman's work. We have to do, not with the vigor of childhood, but with some awkward adolescent stage. Moreover, these later chapters treat fields that are quite familiar and already well covered by popular handbooks. If Mr. Spearing's book fails to make a unitary effect, it may still commend itself for its valuable review of neolithic art, for its abundant illustrations, and its generally cautious scholarship.

Finance

THE "RAILWAY RATE CASES."

Attorney-General McReynolds's intervention on Monday in the suits pending between certain State railway commissions on the one hand, and the railways or the Interstate Commerce Commission on the other, evoked wide comment on the markets, because of the light it cast on the problem of the railways and the Federal Government's relation thereto. It did not, however, represent any actual change in the status of the litigation. It attracts particular attention because the important "Minnesota rate case," which was decided against the State authorities by the United States Circuit Court two years ago and has been before the Supreme Court on appeal for more than a year, was supposed now to be in the way of immediate decision; also because last Monday's action of the Department of Justice emphasized the Administration's position in a Constitutional question of very great importance. But as a matter of fact, the position taken in the Attorney-General's brief is not new.

In the so-called "Shreveport case," the Interstate Commerce Commission ruled in favor of the railways on similar grounds in March last year. In that case the salient question was whether the Texas Railway Commission had the right to require such rates, on traffic between certain points within the State, as should amount to discrimination against traffic originating just across the border, and therefore subject to Federal regulation. The argument was more than usually interesting from the fact that the State Railway Commission of Louisiana was contending that the railways in question should not do what the State Railway Commission of Texas insisted on their doing.

The Interstate Commerce Commission divided 4 to 3 on its ruling, but the majority opinion squarely decided that the Federal Interstate Commerce act not only forbade discrimination as between two interstate hauls, but as between one interstate haul and another entirely within a State, and that such discrimination was involved in the Texas contention. The opinion continued:

> If one State may exercise its power of fixing rates so as to prefer its own communities, all States may do so. There would thus arise a commercial condition more absurd and unbearable than that which obtained prior to the Constitution.

This opinion was written by Commissioner Lane, now in President Wilson's Cabinet, and its reasoning was upheld in the brief of the Attorney-General when the case came before the Commerce Court.

In the more familiar "Minnesota rate case," the same principle came to issue in a somewhat different form. That case concerned the fixing of certain railway rates, within the State, so low as to involve reduction in the interstate rates to an alleged non-remunerative basis, if the arbitrary State law, and the Federal law against discrimination, were both to be observed. The Master in Chancery who first heard that case in 1911 decided that the State Commission's rates were for that reason invalid. Judge Sanborn, in the Circuit Court at St. Paul, confirmed that finding, and the case was appealed by the State of Minnesota to the United States Supreme Court, which has not yet passed upon it. The reason for the Attorney-General's request to be allowed participation as *amicus curiæ* is that, since the suit at St. Paul was between the railways and the State Railway Commission, the Federal authorities were not originally a party. But Mr. McReynolds now defines the position of the Federal Government by filing with the Supreme Court, in relation to the Minnesota case and others, the precise brief which he filed in the Texas litigation.

The brief thus filed sets forth that the real question at issue is whether a State may deliberately shut out interstate commerce by what the Attorney-General calls "adroit manipulation" of rates within that State. It contends that the Federal authority "extends to every act which substantially impedes or affects interstate commerce," that "the means by which such commerce is affected or impeded is immaterial," and that "a rate-fixing order by a State railroad commission, with the intent to discriminate and actually discriminating against interstate commerce in favor of intrastate commerce, is void *per se*."

In each of these contentions, the Attorney-General attacks the argument made last April before the Supreme Court in the "Minnesota rate case" by the Governors of Ohio, Missouri, and Nebraska. The Governors argued that the effect on interstate commerce of the State rate laws in question is "not only incidental and indirect, but also legitimate" under our dual form of government. If the lower rates within the States forced correspondingly lower interstate rates, then "interstate commerce will have been relieved of a burden instead of having one imposed upon it," and any other position would lead "to the logical conclusion that the laws of trade are higher than the Constitution."

Here, then, are the elements for a decision of epoch-making importance by the highest court, and the unexpected request of the Federal Government to be aligned against the above contention, in all the cases to which it would apply, gives a touch of dramatic interest. Not the least part of this arises from the

fact that the action formally disavows for the Wilson Administration the narrower view of the States' rights question. Its important bearing on the railway problem in particular is easily perceived. It brings squarely to issue the consideration which even people who favor drastic regulation of the railways have admitted to be a grievance of those enterprises—the existence of conflicting and mutually irreconcilable requirements, as to rates and service, in the Federal statutes and Interstate Commerce rulings on the one hand, and in the State laws and the State commissioners' requirements on the other.

RUSSELL'S FIRST COURSE IN PHILOSOPHY

By JOHN E. RUSSELL, Professor of Philosophy in Williams College.
viii+302 pp. 12mo. $1.50.

This book, the outgrowth of more than twenty years of teaching, presents in a clear style and with a straightforward and lucid arrangement of material, the problems in philosophy which are now uppermost.

It keeps in mind the needs of American students, and especially of those who are young in the study of philosophy. The analysis of the questions is thorough, but the student is encouraged to philosophize for himself rather than merely to appropriate the product of other men's thinking. There is considerable exposition of the classical systems in connection with various problems, but the whole treatment is up-to-date and takes account of the most recent literature.

Henry James

In His New Autobiographical Volume

A Small Boy and Others

Evokes Countless Little Portraits Out of the Past

The little boy, walking at his father's side in Fifth Avenue, sees General Winfield Scott emerge from a cross street: "We must have been for some moments face to face, while from under the vast amplitude of a dark-blue military cloak with a big velvet collar and loosened silver clasp, which spread about him like a symbol of the tented field, he greeted my parent—so clear is my sense of the time it took me to gape all the way up to where he towered aloft."

Such little vivid touches are the constant accompaniment of the main current of the book and might tempt citation indefinitely.

$2.50 *net; by mail* $2.73.

Maurice Hewlett's

New Book of Fiction

Lore of Proserpine

Carries You into the Dividing Twilight between the Practical World and Fairyland

"I hope," says Mr. Hewlett, "nobody will ask me whether the things in this book are true, for it will then be my humiliating duty to reply that I don't know. They seem to be so to me writing them; they seemed to be so when they occurred, and one of them occurred only two or three years ago."

What matter:—here is a book like no other; and the enchanted reader will not till long after ask the question Mr. Hewlett fears.

$1.25 *net; postage extra.*

Monarchical Socialism in Germany

By Elmer Roberts

Striking Chapters on the Kaiser, the Navy, the Methods of Handling Trust and Labor Problems

Germany, right or wrong, has gripped, and seems now to control, those great forces of capital and labor with which we grapple. Her methods of handling trusts, railroads, labor bodies, and so on, are here set down by a student of them.

$1.35 *net; by mail* $1.46.

The Life and Letters of John Paul Jones

Contains Important Discoveries Relating to Jones's Service in the Russian Navy, the Identity of "Delia," etc.

Made by the Author

Mrs. Reginald de Koven

This biography has resulted from years of research, in which the writer has accumulated considerable significant new material; and this has made possible a far more complete and understandable presentation of Paul Jones's personality and career; one that makes clear many hitherto clouded phases of his life and explains formerly unaccountable actions. The upshot is a definitive life of one of the most picturesque, most brilliant, and most original figures in American history.

2 *vols.* $5.00 *net; postage extra.*

What Is the Truth About Jesus Christ?

By Friedrich Loofs, Ph.D., Th.D

Professor of Church History in the University of Halle, Wittenberg, Germany

After Harnack, the writer is the greatest living German authority on the history of Christian doctrine, and this volume forms a continuous and ordered presentation of the single theme expressed of the controversy concerning what has been called "the central problem of Christian faith": he examines himself the evidence bearing on the Historicity of Jesus with minute care and with a masterly ability—manifestly an inborn ability for sifting, weighing, and, finally, for synthesis.

$1.25 *net; by mail* $1.34.

The Land of the Spirit

Is the First Book of Fiction in Four Years by

Thomas Nelson Page

Expectations rise high at the announcement of a book by Thomas Nelson Page, but never too high and often not high enough. This one contains some of the most refined products of his sentiment and humor. Several of the stories—"The Shepherd Who Watched by Night," "The Stranger's Pew," "The Bigot," and "The Stable of the Inn"—are characterized by a strong spiritual quality. "The Old Planters," "The Trick Doctor," etc., are colorful pictures of Southern life, in whose painting none can equal Mr. Page.

Charmingly illustrated. $1.20 *net; by mail* $1.32.

Plays by Björnstjerne Björnson

Translated by Edwin Björkman

The New System
The Gauntlet
Beyond Our Power

These plays by the famous Norwegian suit the temper of the time; "The Gauntlet" particularly. It is a sharp challenge of the double moral standard of the sexes; will startle a reader into vivid realization, like the blow of a glove upon his cheek. But all three, though restrained and in form almost classic, radiate the spirit of the day.

$1.50 *net; by mail* $1.65.

Max Eastman's Enjoyment of Poetry

Aims to Increase Pleasure

Are You Poetic or Practical?

A delightful inquiry into the nature of poetry, which will intensify the pleasure of those who love it, and may well open the eyes and ears of those insensible to it.

But its prime value lies in the entertainment it gives; for though its intent is serious indeed, the wit, humor, and lightness of the writing make it the reverse of abstruse. It should be read for its own sake.

$1.25 *net; by mail* $1.34.

HISTORY AS PAST ETHICS

An Introduction to the History of Morals

By Philip Van Ness Myers

A Review:

"This book completes a series of historical text-books approved in more than thirty years' use for their balanced judgment and lucid eclecticism. It is designed for advanced classes, but will appeal strongly also to the well-informed reader for the new co-ordination that it supplies to the main facts of world history. The development of ethical ideals is traced from the dawn of consciousness in the kinship group to the evolution of morals under democracy."—*The Churchman, April 12th,* 1913.

The Nation

NEW YORK, THURSDAY, MAY 1, 1913.

The Week

On another page we print a letter by a Columbia professor, about which we must say a few words. We have to note his strange blunder in saying that we had characterized as "faithless and shameless" "what was virtually the action of the last Congress and President Taft." Nothing of the kind. Those words we definitely applied to the proposal to abrogate the Hay-Pauncefote treaty out of hand. That is a wholly different thing from what Congress or Taft did, and a professor of psychology ought not to be blind to the distinction. Further on he blandly remarks that "the history of the negotiations preceding the signing of the Hay-Pauncefote treaty is unrevealed," and then proceeds to make his private guess what the treaty means. But "unrevealed"! Is he not aware that the whole correspondence has been published? Has he never read Secretary Hay's letter stating that it was necessary to make certain agreements and concessions in the Hay-Pauncefote treaty in order to "get rid" of the Clayton-Bulwer treaty?

We are more concerned, however, with Dr. Cattell's general position. This stands apart from his mistakes in fact and his ignorance of the record. He bluntly takes the view that treaties are not binding. "Every great nation has broken its treaties." "We should maintain our will to denounce a treaty at any time." "We should . . . explain in a kindly way . . . our purpose to maintain our right and power to act in every respect and on every occasion as we deem for the advantage of the nation"—this, wholly irrespective of what we have by treaty agreed to do. That all this is shockingly immoral, does not seem to have occurred to the Columbia professor. Certainly the cool disregard of treaty obligations which he advocates goes counter to the moral standards of even uneducated men in the street. On all sides, during the past few months, in the press, in the mouths of farmers and blacksmiths and brokers' clerks, we have been hearing something like this: "Well, it looks as if we had made a bad bargain in that Panama treaty, but there is nothing to do but to live up to it." It was left for the voice of philosophy to indicate the short and easy way of dealing with treaties: "All great nations have broken their treaties; why should we not break ours?"

In Florence, Dr. Cattell's doctrine of treaties was long ago anticipated. It is written in "Il Principe" that a ruler ought not to be bound by his promises when he finds an advantage in breaking them. But at that time Florence and Pisa and Siena and Genoa were watching for a good chance to stab one another in the back. Contempt for treaty obligations is conceivable in a barbarous age, but a jealous regard for international agreements is the very breath of life of the civilized world to-day. Upon treaties is based an important part of international law. The daily intercourse of nations depends upon the faithful observance of treaties. To make light of them, or to pretend that a Samson among nations ought to snap them as so many green withes hampering the play of his muscles, is about as demoralizing and dangerous a thing as a man or a country could attempt. Treaties are not, of course, sempiternal. They often provide for their own amendment or voiding. When they do not, there are regular ways of procuring their modification or abrogating. But while they stand, the nation's honor is tied up in them; and to suggest that we can calmly disown their obligation whenever the impulse seizes us, and still hold up our head among the nations, is very like suggesting that a merchant need not pay his notes or keep his contracts, yet may continue to pose as a good citizen and honest man.

The House has passed the Sundry Civil bill, virtually without opposition, although it contained the proviso exempting labor unions and farmers' organizations from the equal operation of the Anti-Trust law. There is no doubt that the bill will have smooth sailing through the Senate, and the expectation is general that President Wilson will sign it. But this he certainly cannot do in decency, without a full and public statement of his reasons, and of what he thinks the effect of the measure will be. This thing has not been done in a corner. President Taft vetoed the same bill on March 4, and did it in a message which showed with great cogency the mischievous and indefensible nature of such legislation. He pointed out the strong presumption that such an exemption, if enacted as a separate law, would be held unconstitutional. A similar statute was once enacted by Illinois, but was declared invalid by the Supreme Court on the ground that it violated the Constitutional guarantee of the equal protection of the laws. Mr. Taft also indicated with much force the elusive nature of the language used in the rider, which, though fair sounding, might easily be made to justify the most wicked and cruel acts by labor unions. There have been reports that the phraseology was to be changed in the present bill, so as to reserve to the Attorney-General the right to prosecute in his discretion. But in fact the clauses stand exactly in the words used before.

Secretary Bryan's trip to California is one of those steps which, if successful, we describe as masterly, but of which, if they fail, we say that any one could have seen that they were ill-advised. On its face, the President's sending Mr. Bryan to Sacramento is a confession that the pending California legislation threatens to embroil us with Japan. That at once lends an air of gravity to the Secretary's journey. It is disquieting that the Government should feel compelled to resort to such unusual methods in order to prevent a single State from bringing on an international crisis.

Just how menacing is this yellow peril which has driven the proud State of California so mad with apprehension that a solemn plea for moderation by the President of the United States falls seemingly on deaf ears? Are the waves of Mongolian invasion really beating about the foundations of white supremacy to an extent justifying the pitiful shrieks of the negro-baiting Senator from Mississippi? The New York

World, with a mere stickful of figures from official sources, lets loose a flood of common-sense upon what can be described only as a crazy situation. The Japanese in California to-day own a little less than 13,000 acres of land, one-tenth of one per cent. of the agricultural area of the State, and an increase since 1909 of something less than 2,000 acres. The Japanese lease 17,600 acres, a decrease since 1909 of 2,700 acres. In other words, Japanese agricultural activity in California is represented by less than one-third of one per cent. of the entire arable land of the State, and, counting ownership and leaseholds, they cultivate nearly a thousand acres less to-day than they did three years ago. But perhaps the figures of the census never quite reveal the true inwardness of the situation. Here, then, is a specific instance of how the fell hand of Oriental enterprise is grasping at the throat of a white man's California: "The entire strawberry district of Florin, Sacramento," says a California editor who cannot sleep for the yellow peril, "the entire strawberry district of Florin, Sacramento, is now in the hands of the Japanese."

No one will begrudge the Republicans what satisfaction they are able to extract from the disappointment of hungry Democrats in being held off from the pie counter. Representative Hamilton, of Michigan, amusingly commented the other day upon the effect of President Wilson's attitude towards the distribution of spoils. "Leaning down from the heights of altruism," he said, "the new President told his followers in a language that none of them understood that the nation was intending to use them for 'a large and definite purpose.' This gave general satisfaction until it was explained to them that it did not involve their employment in an official capacity." In other words, all the beauty of that "definite" faded. But the Administration can easily afford such fun-making at the expense of some of its supporters. The revolution that has taken place in this respect is seen in the statement of a Philadelphia Democrat to a Southern newspaper. "When I was younger," he confesses, "I would have criticised any Democratic Administration that allowed a Republican to remain in office. But I have broadened in recent years, and I believe that 90 per cent. of the Democrats have broadened. I can see now that the Civil Service law is a good thing. I do not pretend to know much about the tariff, but I thoroughly endorse President Wilson in his attitude toward the office-seekers." The thing for the jeering Michigan Republican to think about is the effect of the Democratic policy respecting appointments upon the spoils policy of the next Republican Administration —when there is one.

Let us not be tempted into assuming too hastily that the Progressive party is the party which preëminently believes in taking things out of politics. At first sight there is sufficient basis for such a definition. Speaking for the Progressive party the other day, Representative Kelly, of Pennsylvania, criticised the Underwood bill and demanded that we should "take the tariff out of politics and place it in the hands of an impartial tariff commission." Mr. Roosevelt himself is, of course, in favor of such a plan. While he was President he took the tariff so completely out of politics that no one would have imagined such a thing as a tariff problem was agitating the public mind. At one moment, to be sure, he was inclined to deal with the subject. But Mr. Cannon persuaded him to the contrary, and so Mr. Roosevelt took the tariff out of politics by taking it out of his Presidential message almost at the last moment. It was he, too, who took foreign affairs out of politics by settling the Panama Canal business on his own hook. As for taking the Trusts out of politics and putting them into the hands of an impartial handful of men dominated by the economic ideas of Mr. Perkins, that is a matter of record.

But, as we have intimated, it would be a mistake to assume that the Progressive creed consists entirely in taking things out of politics. It believes just as firmly in putting other things into politics. There is the Constitution, for instance. The old idea was that the Constitution stood outside of politics in the sense that it stood above party tactics and ambitions and embodied the ripened will of the whole people. Then there are the courts, which were formerly supposed to stand, almost by definition, outside of politics. Also there is the question of wages, which was regarded as an economic rather than a political problem. We look forward with interest to the perfect realization of Progressive principles when questions like the tariff, the Trusts, taxation, and money appropriations for the public services will be taken out of politics and placed in the hands of impartial committees and boards of practical men, while Congress busies itself with social justice, the encouragement of eugenics, the incorporation of academies of art and literature, and the regulation of baseball salaries; something being thus put into politics for everything that is taken out.

The wisdom of the world is about to receive an addition wholly without precedent. All that is necessary is for the House of Representatives to pass a resolution that has been submitted to it. And the cost will be a paltry three or four thousand dollars a year. The secret is revealed in the first paragraph of the resolution, which reads as follows:

> Whereas the very best thought and expression upon all the great questions pertaining to government and economics and to the widest range of subjects affecting human interests, garnered through the research and labor of the ablest and most profound men of the times, lies buried in the *Congressional Record* of the past, almost unavailable, inaccessible, and unfindable for lack of a subject index and general reference.

The resolution goes on to provide for the appointment of an additional clerk in the Speaker's office, who shall be the Subject Indexer of the *Record*, and shall begin his work—with the first Congress? By no means. Having done so long without the "unfindable" thought of the most profound men of our early days, we can do without it a little longer still. Our real danger is in the loss of the priceless gems that are even now falling from the lips of our ablest citizens. So the Indexer is to "begin" with the last Congress, and also to "proceed at once" with the present Congress. Ultimately, if he can get round to it, he is to go back to the beginning of the *Record*.

A proper taxicab system for New York city seems at last to be within sight. The commission appointed by Mayor Gaynor to study the question has drawn up an ordinance, which has been pre-

sented to the Board of Aldermen, and which embodies the same general purposes as those contemplated in the ordinance proposed by Alderman Courtlandt Nicoll. The fundamental feature is the abolition of the private stands, and the substitution for them of public stands the use of which is to be controlled by city regulations designed to serve in the best way the convenience of the public. The matter of rates is of less importance, but the ordinance fixes maximum rates which are distinctly less than those charged in many instances at the present time, though not less than those that are now regarded as reasonable. The ordinance provides that "any hackman may solicit employment by driving through any public street" in conformity with certain conditions, "and may pass and repass before any theatre, hall, hotel," etc.; which, together with the availability of the public stands to all duly licensed hackmen, should both greatly increase the accessibility of cab service to the public, and make the business of running cabs more economical. With these improvements introduced, and with a stringent enforcement of the rules prescribed in the ordinance relating to the qualifications of licensed drivers, the city will have made a forward step in one of the really important features of general metropolitan life.

Social historians are disputing about the year which really marks the centenary of the "top hat." It may be that one reason for the warmth displayed is that the top hat is going so rapidly. Thirty years ago you could not have thrown a brick in lower Broadway without hitting a "stove-pipe" hat. To-day you seldom see one during business hours, and any person wearing one is instinctively set down as being on his way to some ceremonial occasion. The silk hat has, indeed, become something like a wedding-garment. It is kept in reserve for use when needed as a mark, not so much of personal dignity, as of deference to opinion. Thus President Wilson and President Taft felt it incumbent on them to appear at the inauguration in a glistening "tile." But both sought speedily thereafter the relief of the soft hat or modest "bowler." The top hat may have a first centenary, if the authorities are able to agree upon the date, but it seems doubtful if it will be there to see its second.

Mr. Bryce's farewell to America—which all Americans hope will not be final—cannot but leave us all with a heightened admiration of the man and renewed thanks to him for all that he has done for this country. Throughout the six years that he has been Ambassador, he has displayed a friendliness and a tact without a flaw. While loyally serving his own Government, he has been on the best terms with ours; and has rightly interpreted his chief mission as being that of representing one people to the other. The keen interest which he has continued to take in all that makes for our national progress, and the helpfulness and reasoned optimism which have marked many of his addresses on our public affairs—as they marked his speech at the Pilgrims' dinner in his honor last Friday evening—have placed us repeatedly in his debt. People have listened to him gladly all over the country because they have believed him entirely sincere and eminently sagacious. No foreign country ever sent to us a more intelligent observer. His official dispatches, during the period of his being at the British Embassy at Washington, must of course long remain guarded in the archives; but when they finally come to be open to the historian, he will surely find them as instructive and perhaps as racy as those of the Venetian Ambassadors. In voluntarily retiring, Mr. Bryce lays down an office which, as far as the wishes of Americans are concerned, he might have continued to fill as long as he lives. Departing, he must be conscious of being borne away on a mighty volume of gratitude and godspeeds.

The Clerical majority in Belgium, by yielding on the principle of universal suffrage, has submitted to an extraordinary manifestation of the popular will whose meaning was all the more impressive because it was expressed with such complete self-restraint. Apart from the intrinsic justice of their demands, the Belgian workingmen, by their admirable example of determination and discipline, have demonstrated their fitness for an unrestricted franchise. Whether absolute equality will be conceded them even now remains to be seen. The arrangement contemplated is something in the nature of a compromise, and it is not to be supposed that the Clerical leaders will omit any chance to save as much as possible out of the wreck, in the course of the complicated negotiations that will now ensue. On the other hand, a step forward is assured. The general strike began on April 14. Just twenty years ago, on April 12, 1893, a great labor strike broke out upon the refusal of the Belgian Government to make changes in the utterly ridiculous franchise laws then in force. The strike lasted five days, and, unlike the present movement, was accompanied by violence. On April 17, 1893, the Government yielded, and ten days later the Senate passed a bill by which the body of the electorate was increased from 135,000 to an estimated 1,200,000. A proportionate victory to-day should bring the Socialist and Liberal parties pretty close to their objective.

The pressure which is brought to bear upon Montenegro with regard to the surrender of Scutari is enormous. No one can doubt that Europe is desirous of peace. During more than six months the Powers have labored to avoid the outbreak of a general conflict which at times seemed almost unavoidable. It is not to be supposed that now, just when permanent relief seems in sight, the fruits of painful negotiation will be allowed to go by the board without desperate effort to bring Nicholas I to see reason. Nor is that all. On the part of the Balkan allies there must be the keenest desire to avert a collision among the Powers. A general European war would mean the reopening of the issue which to-day seems so completely fought out between the allies and Turkey. Bulgaria, Servia, and Greece have made gains far beyond their expectations. A general war followed by a general European congress would throw the distribution of Turkish territory into outside hands, with inevitable loss for the Balkan nations. In case of victory for the Triple Alliance, Austria would realize her ancient ambitions in Macedonia. In case of victory for Russia and her allies, the Czar's concern for his fellow-Slavs in the Balkans would become quite secondary to his own plans with regard to Constantinople. As a business proposition, Bulgaria and Servia can afford to offer Montenegro compensation for Scutari.

THE INCOME TAX.

In opening the debate on the tariff bill, Mr. Underwood made but slight reference to the income tax, leaving that to Mr. Hull, of Tennessee, who drafted it. On Saturday, Mr. Hull presented the case for this tax, in a long speech, the full report of which has not yet appeared in the *Congressional Record*. So far as can be judged from the press reports of the speech, it will not be found to contain any satisfactory explanation of the curiously involved language and structure of the section; and a plain statement of the methods by which the tax is to be collected, a statement that intelligent persons would have no difficulty in following and no doubt in interpreting, remains an urgent desideratum. Nor is it possible to compliment Mr. Hull on the manner in which he has presented the underlying principles. There are cogent reasons for such a tax, and Mr. Hull has not overlooked them; but he has jumbled them up with arguments which either have little inherent weight or are presented in a manner quite unworthy of the occasion.

A fairly collected income tax is intrinsically one of the most just taxes that can be devised. In our country, the question of levying a Federal tax of this nature has always—apart from any issue of Constitutionality—been complicated by the objection, sincerely regarded by many as very serious, that this source of revenue should be reserved for the separate States. There can be little doubt, however, that public sentiment at this time strongly approves resort to an income tax as part of the machinery for raising the revenue required by the Federal Government. In the present instance, it is expressly resorted to for the purpose of making up the deficiency in that revenue caused by the abolition or reduction of tariff taxes. These latter, when they are in the nature of protectionist duties, impose upon the people a burden far in excess of the amount that they bring into the Treasury; and, if levied on the necessaries of life, even though not protective, they are borne by the masses in a ratio far greater than that which can in any way be regarded as measuring their equitable share in defraying the expenses of government. This is true also of the internal revenue taxes. An income tax, with small incomes exempted and with rates on very large incomes rising according to some duly considered scale, tends to distribute the cost of government in a way that fulfils the requirements of equity.

Both exemption, however, and the graded rate are fraught with danger. That the $4,000 exemption—which the present bill contains, as did the act of 1894—is much too high, we believe to be the sober opinion of competent thinkers. A tax, general in its nature, yet such as to exempt thirty-nine men out of forty, offers a standing temptation to indefinite exploitation, not to speak of indefinite extravagance. No other country has a limit at all comparable with this, even after allowing for the far higher scale of American incomes in general. The principle ought to be that those should be exempt who must exercise great frugality in providing themselves with the necessaries of a simple life, and that all others should pay something, even though it might be very little. The expense of collection is given as a justification for the high exemption, but we cannot regard this as much better than a pretext. The real reason is that the collection of a tax on all incomes above $2,000, say, would involve the risk of great unpopularity for the bill. The expense of collection would, of course, be a much larger percentage of the tax in the case of the lower incomes; but it would still yield a substantial sum, and it would be worth vastly more than it cost in preventing the formation of a dangerous habit—the habit, on the part of almost the entire population of the country, of regarding a small class as the sole bearers of the burden of any fresh governmental expenditure, they themselves being interested only in its benefits.

Like considerations apply to the graduation of rates. As we go up in the scale of incomes, the number of persons upon whom the advancing rates fall rapidly becomes smaller; and once we let go the simple rule of uniformity, there is no automatic check on the temptation to exact a greater and greater percentage. But in spite of this undeniable objection, the propriety of drawing from those who are in the enjoyment of great incomes a larger proportion of their superfluity than is demanded of the man of moderate resources commends itself too strongly to be denied. It does not embody any broad theory of "social justice," any doctrine that goes to the root of our economic institutions, any system the adoption of which would mean a radical change in the status of property rights; but it does appeal to the ordinary man's instinct of what those ought to do towards supporting the Government who are fortunate far above their fellows in their resources. The growth of wealth in this country, in the past few decades, has been enormous beyond all precedent. It is no hardship that the possessors of incomes above the requirements of the most comfortable—or, as it may be, the most luxurious—living should contribute one-fiftieth, or in the extreme cases one-twenty-fifth, of the excess to the public treasury. But it must be frankly confessed that—as we have said—the scheme opens the door to grave possibilities. With the rule of a uniform rate abandoned, there is absolutely no principle that can serve as a guide. Our only reliance against unreasonableness, indeed against the wildest excess, must be in the sound sense and right feeling of the American people. The time may come when the graduated income tax will put these to a severe test.

ABUSE OF PARLIAMENTARY PRIVILEGE.

The merits of the assault by Mr. Glover, the Washington banker, upon Representative Sims, of Tennessee, are to be aired by an official inquiry. Every one, including doubtless Mr. Glover himself, must deplore such a resort to physical violence. Mr. Sims's colleagues will probably manage to find some way of disciplining the technical offender. The incident will have its consolatory side if it brings sharply to public notice an abuse which has reached flagrant proportions in Congress.

The Constitutional provision absolving members of both houses from legal liability for their utterances had two good purposes in view: it was expected to give our lawmakers a sense of entire freedom in denouncing wrongdoing, and also to protect their constituents from being deprived of their services by arrests instigated by persons masking an unworthy design behind a pretended grievance. Parliamentary privilege of this sort is common to all constitutional governments; but nowhere was it in-

tended to license accusations founded on guesswork, or on the mere vagaries of a morbid imagination, and without any honest effort to get at the facts. In not a few cases, nevertheless, which will come readily to mind, not only has confirmatory evidence been lacking, but all the presumptions have been favorable to the innocence of the accused.

Malicious or reckless talkers in Congress have attributed every variety of self-seeking to men whose conduct appeared on the surface to be actuated by public spirit, with sacrifices of money, time, comfort, and health. Men of science have been equally convenient targets, for it is incomprehensible to certain minds that any one of normal capacity would devote himself to mature study or the discovery of the laws of physics, at a modest remuneration, unless a big graft of one kind or another were discernible in the offing. The late Spencer F. Baird, secretary of the Smithsonian Institution and organizer of the Federal Fish Commission, though a man of the most unselfish type, was an object of outrageous attacks from persons in Congress who were not worthy to polish his shoes. We had in this city, only a few days ago, an example of this sort of irresponsible slander, the victim being Professor Townsend, of the Aquarium. His disclaimer of the offences charged brought to the front a group of gentlemen of high standing in the community, who, after a careful investigation of their own, reported the complete collapse of the attempt to besmirch him.

Not all sufferers from unjust assaults by irresponsibles in Congress are so fortunate in finding prominent men to take up their cause in this aggressive fashion. Now and then one broods over his wrongs till his sense of them overcomes his discretion. The great majority, however, realizing that revenge is not rebuttal, hold their natural impulses in restraint, and for their vindication in the esteem of their neighbors trust the good name they have spent a lifetime in building up by honest dealing.

The abuse of parliamentary privilege is as abominable in principle as the abuse of the privilege extended, as a matter of public policy, to certain professions. If a lawyer or a physician or a minister violates his obligation to society by making his special immunity a cloak for malpractice or blackmail, he is no worse than the Congressman who, for the sake of partisan advantage, or to gratify a personal spite, or to acquire a bit of cheap notoriety, directs a battery of defamation at a reputation hitherto better than his own. He deserves the same ostracism as the professional man who betrays the faith of society; and he adds the vice of cowardice. His conduct would be bad enough if it went no further than to undermine public respect for the body to which he belongs—making a whole Congress suffer in the public mind for the misdeeds of a minority of the members. But it does go further, for it tends to introduce confusion into the moral standards of the people generally.

Ordinary citizens who have always regarded a neighbor as an upright man, but find him held up to obloquy by some loose-lipped speechmaker or writer of sensational reports in Congress, would cut that neighbor's acquaintance if they believed the charges against him. They do not; thereby signifying that they have not lost faith in him. Yet, as with the breath on a mirror, the clearing of the cloud does not necessarily efface the memory of it; and the repetition of this sort of thing at frequent intervals presently results in dulling the fine edge of sincere criticism. A public once trained to think that every man who does something out of the common is out hunting for undeserved credit or pecuniary gain, is in a most unwholesome state, and likely to become as sordid of motive and as coarse of fibre as it imagines its most conspicuous members to be. It is well known, also, to all who are familiar with history as made in Washington that some men in Congress who acquired a repute for success in pushing their measures through, actually built this fame upon their capacity for mud-slinging, their associates generally having so little stomach for that sort of warfare as to avoid antagonizing their schemes on the floor. It is a sardonic thought that the education of the public in this sort of thing should often come from men who are severely critical of the press for shortcomings! But newspapers have no privilege. They are legally liable for injuring a private reputation without justification. It is Congressmen who are the chartered libertines.

ANOTHER LABOR DISPUTE SETTLED.

It seems but a short time since the country was confronted with the possibility of serious trouble between the railway firemen and the railway companies. Both sides professed a desire to submit the dispute to arbitration, but the men insisted on having this effected as provided in the Erdman act, while the companies, with apparently equal firmness, objected to that method, which, they contended, virtually places the decision in the hands of a single man, the third arbitrator chosen by the two representing the contending parties. In yielding this point, the railways furnished a fresh instance of the growth of the general sentiment in favor of the settlement of labor disputes by reason, and not by wasteful and demoralizing trials of strength. The questions at issue have been settled, and settled promptly, by unanimous decision of the arbitrators. Every such event is welcome, not only in itself, but as a precedent sure to be powerful in its influence in the future. Good habits grow by use, quite as truly as bad ones; and the arbitration habit has evidently come to stay.

Though neither side got what it asked, probably both got just about what they expected. A substantial increase in pay has been awarded to the firemen, and a number of their demands in the matter of classification and methods have been granted; but these concessions have fallen far short of the demands of the men. The wage advance is estimated at between 10 and 12 per cent., and the award, it is calculated, will add about $4,000,000 to the annual expenses of the railways. The roads involved cover virtually all that part of the United States east of the Mississippi and north of the Ohio and the Potomac. The number of firemen employed by these roads in 1912 was about 31,000, and their wages in that year amounted to about $29,000,000. It may be noted that the increase in the expenses of these railways involved in the present settlement is approximately the same as that estimated to be entailed by the settlement of the engineers' strike last autumn, under an arbitration in which the decision turned on the judgment of five neutral arbitrators. Whether these incidents are to be followed by similar movements

affecting other departments of the railway service is a question for the future; but in any case the idea of a revision of railway rates to correspond to increased expenses, prominently put forward a couple of years ago and checked by the vigorous interposition of Attorney-General Wickersham, can hardly fail to be suggested afresh by these developments.

That the steady growth of the practice of arbitration on the one hand—arbitration taking on, through force of public opinion, something of the character of legal compulsion—and of governmental regulation of rates on the other, removes the conduct of our railway systems more and more from the status of ordinary private enterprise, is an obvious fact. Nothing, therefore, is more natural than the suggestion that government ownership is the logical solution of the whole problem; and to a large class of minds such a solution of any large social or economic problem is extremely attractive. Why bother with demanding this, and conceding that—why have recurring quarrels, based on no recognizable principle and settled by rule-of-thumb compromise—when an all-embracing governmental system could control the whole situation upon the basis of general laws? And what may be said about railways may be said also, with some modification, about the greatest of the industrial interests. But when we look below the surface, the matter assumes quite a different aspect. Indeed, it is precisely because these settlements are of a rule-of-thumb nature that they form a useful and consistent part of the working machinery of the existing order. In spite of all that has come and gone, the competitive and individualistic principle is still overwhelmingly dominant in our economic system; and the adjustments made by the Interstate Commerce Commission, the decisions of courts under the Anti-Trust law, the awards of arbitration boards, are all bottomed on the outstanding facts of the whole industrial and commercial activity of the country. In fields where, under present-day conditions, competition pure and simple is unworkable, the machinery of regulation steps in to produce results approximately the same as are produced by the action of competition in the general field.

The argument for government ownership of railways has, to be sure, a basis in something else, besides the plea that it is logical. Government ownership is a fact, a system in successful operation, in most of the countries of Continental Europe. But the circumstances of this country are, in two vital respects, so different from those that obtain in Europe as to deprive this argument of any weight beyond that of a slight presumption. In the first place, the interests affected by railway questions are incomparably more important, more diverse, and more pervasive in this country than in any other. And secondly, our political institutions, both in their virtues and in their defects, are such that to make railway rates, railway wages, and railway facilities and accommodations purely a matter of governmental determination would be an experiment to whose hazard nothing in European experience affords any parallel. The fact is, that we are getting on, both in the matter of railway regulation and of Trust control, in a way more satisfactory than seemed at all likely, even to the most sanguine, a few years ago. We shall continue along our present lines, it may now be confidently hoped, with greater and greater success. If the method is clumsy and illogical, it shares that quality with pretty much everything that man has thus far done in his progressive grapplings with the rough facts of economic life.

EAST SIDE AND UNDERWORLD.

"A startling story of life in New York's underworld"—thus a Western book reviewer characterizes one of the promising novels of the season. The book in question deals with the fortunes of a Jewish working girl, whose career is drawn against a background of industrial struggle. Her story is one of toilsome labor, of high ideals, of a love that triumphs over adversity. From a mere factory hand she rises to be a leader among her fellow-workers. We read much of garment strikes, of Syndicalists and Industrial Workers of the World, of social reconstruction, of many ideas, in short, which are the staple of present-day thought among people of intelligence and conscience. The end of the story leaves the heroine and her husband happy in their love and in the attempt to keep alive the poverty-stricken little Socialist newspaper through which they work for the emancipation of their class. This is the story, and these are the circumstances, manners, and general outlook upon life which appealed to the Western book reviewer as typical of New York's Underworld. It is notorious, of course, that one need only drop in at any thieves' kitchen on the Bowery or any opium joint in Chinatown to obtain the most illuminative comment on Syndicalism and the position of woman in industry.

One can hardly blame the ingenuous Westerner for his confused impressions of life in New York below Fourteenth Street. The publishers who printed the reviewer's impressions might possibly have known better. But for them, too, there is some excuse. So many of us are caught in the same chaos of physical, sociological, and moral geography. Three main currents in the day's news have joined in a merry whirlpool of bewilderment. New York's graft revelations, beginning with the murder of Herman Rosenthal, gave us the colorful term "underworld." From another direction we touched the underworld through the anti-vice crusades in Pittsburgh and Chicago. Vice, in turn, merged with the question of women's wages, a subject which will remain long at the front both on its own merits and as part of the general movement for wage readjustment throughout the country. The mere juxtaposition of these three questions in the newspaper columns week after week would have wrought a certain amount of confusion. But it was not left to chance. In a wild outbreak of faulty sentiment and faulty reasoning, the three were forcibly welded together, until graft, vice, and wages became, to many not over-careful readers and reasoners, localized in the same class of the population. The factory and the dive have become sub-departments of the underworld. There must be a great many good people who dimly visualize the East Side as populated by gamblers, gunmen, cadets, unfortunate women, and juvenile criminals and defectives.

And the confusion persists, and will persist for some time to come, in spite of the fact that the ridiculous state of affairs needs only to be pointed out to be acknowledged. It seems absurd to enter into a defence of the East Side at

this late day. For twenty years we have thought, and correctly thought, of the East Side as a place where, along with much poverty, much overwork, much congestion, much peril for the children and the young, there has been also much progress. The active intellectual life of the East Side, one would have been tempted to say only a year ago, had become a commonplace. As a matter of fact, the East Side to-day is better off physically and spiritually than it has ever been. Housing conditions, health, recreation, show an immense improvement. The economic situation is better than ever before. There is poverty, of course, but not so much as there was ten years ago. The standard of living leaves much to be desired, but, after all, it is only fair to compare it with the European standards and circumstances from which the great immigrant masses have sought refuge here. The East Side to-day supplements its consumption of English newspapers with a vernacular press that counts a circulation approaching the half-million mark. The busiest branches of the Public Library are mostly below Fourteenth Street.

Is it necessary to exaggerate in order truly to be socially minded? Is it essential to the continuance of honest effort for the improvement of life among the alien elements in this city to picture life on the East Side as dragging itself out in a drab atmosphere of crime, vice, and tuberculosis? If formerly there was a great deal of empty talk about the dignity of labor and the self-respect of the working class, have we improved matters by pitching together into one confused mass the shop-worker and the cadet, the factory-girl and the woman of the streets? Well-meaning social workers might pause to reflect on the ferocious slanders they are guilty of against a class whose interests they have at heart. Presumably it was a socially minded person who professed to quote an East Side mother as saying that if it was a choice between having her young daughter starve or go on the street, she would urge her to the latter course. The mind rejects the vile slander; rejects it because it is inconceivable, because it insults our very conception of motherhood. Tens of thousands of mothers in the tenement districts of New York slave for their children, hundreds of thousands of girls toil in the factories, in whom the monstrous ideas promulgated by loose-tongued agitators could only arouse stupefaction or utter abhorrence. We do the workers of this city no service by taking their lives of fairly normal happiness, based on the ancient duties and the ancient sanctities, and besmearing them with our patronizing decadentisms.

THEATRICAL AND LITERARY REVIVALS.

The more new theatres we get in New York, the more old plays are "revived." An uncommon number of such revivals has marked the theatrical season, last year and this. It is not simply the perennial Shakespeare, but Gilbert and Sullivan, and Pinero, and finally Lester Wallack. After "Rosedale," why should we not have "Hazel Kirke" next restored to the stage? It would give men of fifty a chance to experience again an old enthusiasm—or else to be bitterly disappointed at failing to feel the former thrill. But the movement is not confined to the drama. It is showing itself in literature also. Old novels are reprinted in newspaper supplements. Some of the magazines are regularly publishing again successful or favorite short stories of twenty-five or thirty years ago. Thus we seem to be reviving something or other all round. It might almost be said that, unless we are going back to playing or printing something that delighted a former generation, we are not *dans le mouvement.*

The obvious inference that current production is not what could be wished, is not denied by managers and publishers. They would not be dipping into the archaic if they had just what they desired of the modern. This is eminently true of the stage. Good new plays are rare and seem to be getting rarer. Despite the great prizes to be won by the playwright, the hour, notwithstanding the proverb, does not produce the man. The plight in the literary field is not so sad; yet there is a growing complaint that even in the province of the short story, where American writers have led the world, the quality is falling off. We may be sure that if magazine editors had an ample supply of telling present-day fiction, their fancy would not be lightly turning to the stories of yesteryear.

It remains true, no doubt, that there is a perfectly legitimate reason for these theatrical and literary revivals. Fashions change so rapidly that a reproduction from thirty years since has all the effect of a genuine novelty. If jokes have their cycle, and turn up as good as new after a generation, why should not dramas and stories? It may be, too, that there is a certain artfulness in the appeal which these purveyors are making to the praisers of a past age. You say that there are no such plays to be seen on the stage now as when you were a young man? Very well, we will put on some of your old plays. And we will watch your face while you are listening to "and so do his sisters and his cousins and his aunts." Will that convulse you with laughter as it did when you first heard it, a beardless youth? We trow not. In a similar way, it may be that the publishers have an eye upon the man who prides himself, whenever a new book comes out, on reading an old one again. They will give him an old one and see what he has to say then.

When every allowance is made, however, these forms of tribute to the past cannot be twisted into a compliment to the present. It is not a case of historical or antiquarian interest. Nor is there any pretence that we moderns are to get impulse and models from these revivals. There is no question of anything like the Pre-Raphaelite movement being involved. We hear no cry: "Back to the Elizabethans." The dramatists and novelists to whom we are sent back are sought out, not in the spirit of instruction, but merely in that of amusement. If people nowadays will not be entertained by what is written and acted especially for them, let us see how they will take to what their fathers found enjoyable. That pretty nearly tells the whole story.

We would not deny either the advantage or the graciousness of some of these revivals. Our time is not so noted for respect for an elder day that any manifestation of regard for the good work of those who came before us can be slighted. With all this feeling we sympathize. Yet we cannot afford to shut our eyes to the unpleasing significance of the fact, which stands confessed in all this, that our own dramatic and literary production shows signs of sterility. Each generation must have, with all due reverence for the ones that

preceded it, its own active and living schools of thought and standards of practice; otherwise it will certainly not pass on to the next age anything worthy to be "revived" as typical of this.

BEAUMONT AND FLETCHER.—II.

V.

To P. Aronstein, who has discussed the ethical aspect of Beaumont and Fletcher at considerable length (*Anglia*, Vol. XXXI, 1908), the reason of their degeneracy seems to lie in the narrowing of the drama from a national interest to the flattery of a courtly caste. Such a change no doubt had its effect, and as an offset to the diatribes of the earlier dramatists against the vulgarizing influence of the clamorous popular breath, it is well to remember such a passage as that of "Sejanus" (III, iii), in which Jonson states the corrupting atmosphere of the court:

> He that will thrive in state, he must neglect
> The trodden paths that truth and right respect;
> And prove new, wilder ways: for virtue there
> Is not that narrow thing she is elsewhere.

Something of wanton perversion in the Jacobean plays is no doubt due to the courtier's appetite for new and wilder ways, but such an explanation cannot be pressed too far; after all, it leaves out of account the fact that the seeds of corruption were already planted in the Elizabethan drama when most national in appeal, and it forgets the subtler causes which connect our English literature with the wider movement of the Renaissance.

If we are unable in the proper sense of the word to comprehend many of the persons that speak upon the stage of Beaumont and Fletcher, the same thing is true of the more typical men and women who were playing the actual drama of the age. I defy any one to say that he really understands that strange combination of passions which we call Henry VIII. I do not find that any historian, however patiently he may have studied the documents, has been able to make Mary Stuart stand before us as a comprehensible woman: analyze as we will, we cannot say that this act of hers was virtuous and this criminal, or that this act was expressive of her real nature and this act was forced from her by circumstances; for the reason that we cannot connect them with any central spring of conduct. We should not still be so uncertain of her part in the death of Darnley, if that event, whatever her responsibility or lack of responsibility, had left any definable impression upon any discoverable substance of character. And in like manner, if to a less degree, Mary's son, James I, indeed his whole court, with its Bacon, its Buckingham, its Lady Essex, has never been made comprehensible, and I doubt if it can ever be made to appear anything but a bewildering medley of passions.

There is no need of multiplying examples to show that England in this respect was merely representative of the age. It is futile to say that we can really comprehend Machiavelli's attempt to create a logical consistency of the passions with the element of morality, that is, of character, entirely omitted. We may be fascinated by that scamp artist, Benvenuto Cellini, but who will dare say that he stands forth clearly as a man, subject to censure or praise? Even more significant is a comparison of two supreme artists, Michelangelo and Leonardo da Vinci. Take the statue of Night in the Medici monument and consider its effect by the side of such a picture as the John the Baptist which Leonardo painted (in part at least) in his old age. However the image of Night may in a fashion overwhelm us with its superhuman majesty, it conveys to us a definite meaning which we can express in words, which, indeed, the sculptor himself has expressed in the noble quatrain written in reply to one who said the stone needed only to be roused from sleep to speak:

> Grateful to me is sleep, and more, alas,
> To be of stone while shame and fortune reign;
> To see not, nothing feel, I count for gain;
> Therefore awake me not, speak low, and pass.

On the contrary, the very fascination of the John the Baptist is its utter elusiveness: neither masculine nor feminine, neither content nor discontent with life, it stands smiling with the smile of the senses which have no relation to any definable cause and leave no effect in the heart, pointing skyward with its finger into no paradise of the soul, but into a world of pure music. And as the statue and the picture, so were the men themselves. Michelangelo, notwithstanding his genius, is a personality into whose life we can in a way enter; we know the causes of his profound discontent with the age in which he strove; we can connect his words with a central substance of character. But the more we read of Leonardo, and the more we contemplate his works, the less we really understand the man. In the Milanese court of Ludovico Sforza he moves amidst degradation and cruelty that would shock and dismay into silence any right-minded man of to-day; yet he moves, troubled, no doubt, æsthetically by the ugliness of sin, but morally undismayed, a servant of that bestial life and at the same time evoking the pure and transcendent beauty of The Last Supper.

Now, in this divergence between the two great artists of Italy Leonardo represents the pure spirit of the Renaissance, the same spirit which, lacking the Italian's feeling for refined, self-sufficient beauty, was at work in the English drama. And if we seek for the cause of this new appearance, we must find it, I think, after due reservations are made for the insoluble complexities of history, in the failure of the Catholic Church to supply any central law of character in place of its decaying discipline. The tendency of the Church through the Middle Ages had been, to a certain extent, to discredit reliance on a man's own inner control and to substitute in its place a rule of outer conformity. What other meaning can be given to the emphasis on belief in the Church as the source and revealer of truth and to the belittling of individual responsibility for discovering the truth in its secret hiding-place in the man's own soul? What else is the meaning of regeneration by baptism, of absolution through confession, and of spiritual edification by the eucharist? Greek philosophy as we see it in the drama of Euripides represents the human soul as standing naked and unassisted in the midst of great, buffeting, dæmonic powers, fighting for possession of itself, and happy or miserable in accordance with its ability to choose and control from among the infinite solicitations of the other world. On the contrary, the Middle Ages were to teach man that the conflict had once for all been fought and won and settled, and that henceforth salvation was to be obtained by accepting that decision and surrendering to the victor. I do not say that this was all of the Catholic religion: it had its great mystics who escaped through its meshes without rending them; its discipline made on the whole for right conduct, and, above all, nourished the imagination with infinite treasures of beauty and fed the emotions with celestial raptures. And doubtless there are other virtues to be reckoned to its account. Yet after all is said, it remains true, nevertheless, that when ecclesiastical authority was broken by skepticism and knowledge, the soul was left with all its riches of imagination and emotion, but with the principle of individual responsibility discredited and the fibre of self-government relaxed. The consequences may be seen in the Italy of the sixteenth century.

VI.

The age of the Renaissance was enormously complex. On the one hand, there were many forces at work to nourish the arts; the very release from discipline for a little while acted as a powerful stimulus on the sensuous faculties, and the disintegrating effects of that release were stayed in Italy by the recovery of a marvellous æsthetic tra-

dition. Elsewhere the Reformation was active in restoring, blindly and confusedly no doubt, the very sense of ethical responsibility which the Renaissance largely ignored. In a way, Michelangelo was quite as much the child of the former as of the latter; and so in France the great leaven of Jansenism produced a Pascal and a Racine. And nowhere was the complication of the currents more intricate than in England. In religion the contest soon passed from Catholicism and the Reformation to the compromise of Anglicanism and the extreme individualism of the Puritans. But in the drama, with which we are now concerned, the course was different. The theatre, for various reasons, remained almost purely under the influence of the Renaissance, while the Puritans attacked it with every weapon in their arsenal, and the Anglican Church abandoned it to its fate. Nor was there in England any æsthetic tradition to lend to the stage such unity of beautiful design or self-consistent emotion as took the place of moral unity in the work of a Leonardo. The result is that drama of the court which, besides its frequent actual indecency, is at heart so often non-moral and in the higher artistic sense incomprehensible.

Puritanism was not lovely; its attack on the stage was both brutal and indiscriminating; in every direction its spirit of excess wrought evils from which the English world is still suffering more profoundly than most of us are ready to admit. But it performed one great service for letters in bringing into relief the conception of character, and thus rendering literature again both moral and comprehensible. Possibly the Anglican Church and the temper of mind which produced that Church might have been sufficient in themselves to effect this restoration, and certainly the excesses of Puritanism often defeated its own aim; nevertheless, when we pass from Beaumont and Fletcher to Milton, and even to Bunyan, we are bound to acknowledge that something new and of inestimable value to art has come to the surface. We understand the hero of "The Pilgrim's Progress" as we can in no wise grasp the persons of "The Maid's Tragedy," and for the very reason that Christian has character, whereas the persons of the play have not. And when to this ethical quality, which satisfies the demands of the intelligence, there is added the immediate sense of beauty in itself which Milton enjoyed as a child of the Renaissance, we derive from art that high and full pleasure which is the best thing this world affords us, a prize beyond the computation of those who content themselves with feeling without understanding. Moreover, from Bunyan's and Milton's day almost to ours this feeling for character has been the prime possession of English literature, which makes it, despite deficiencies of external form and frequent poverty of thought, the equal of French literature, if not the superior: and this possession was the undeniable gift of the Puritan conscience.

I remember some years ago reading an article in the *Revue des Deux Mondes* wherein there was an attempt to show that the element of Puritanism in English letters was provincial and straitening in comparison with the moral freedom of modern Paris. The author of the essay I have forgotten, and indeed neither author nor article is of any importance, except as they expressed frankly a sentiment which is beginning to be widely accepted, and even preached, by English and American writers who feel a certain poverty in our present-day literature. As a matter of fact, the shoe is quite on the other foot: historically Puritan ethics, whatever its excess, is in the great tradition, but Parisian non-morality, like that of Beaumont and Fletcher, is the relic of a special age and movement. It may sound paradoxical at first, but it is true nevertheless, that Bunyan, with all his exasperating qualities, was nearer to the tradition of Greek tragedy than were the characteristic dramatists of James's court. The very allegory of "The Holy War," for instance, is not so far removed as one might suppose from the mythology of the "Hippolytus." Bunyan, no doubt, is led by his Puritanism to a sharp division between the powers of good and of evil which falsifies human nature in a way that the more wholesome Greek doctrine of the mean avoided; there is something strained and crabbed in his philosophy which may seem to have carried us across the world from the wisdom of Apollo, but at heart his portrayal of the human soul as a city besieged by devils springs from the same perception of the dualism of character and passion as that which guided Euripides in his treatment of Phædra and Aphrodite.

VII.

I have been dealing, let me admit, with only one aspect of the work of Beaumont and Fletcher, and in thus isolating the problem I desired to solve I may seem to have exaggerated its importance. To give a just criticism of this great mass of plays, to give even a complete notion of their moral qualities, many exceptions would have to be made and many other things accounted for. It would be necessary, for example, to give due weight to such a character as Evanthe in "A Wife for a Month," who, from every point of view, ethical and artistic, is one of the most finely drawn and truest women in the whole range of English drama. Above all, it would be necessary to set forth the inexhaustible treasures of entertainment offered by these plays. They were to the Elizabethan age what the novel is to ours, and I wonder how many readers three centuries from now will go back to our fiction for amusement, as we to-day can go back to Beaumont and Fletcher.

More particularly, Fletcher seems to me a writer of magnificent fecundity, a genius who might have been capable under wiser direction of almost any achievement. Though, as his work stands, he may appear utterly devoid of conscience, a man to whom our human destinies were mere toys, he was by nature of a manlier, sounder fibre, I think, than Beaumont, and in readiness of invention and veracity of expression he far surpassed his other collaborators. His writing was the unforced overflow of an abundant talent, and if we may believe the author of the Prologue to "The Chances," one of his posthumous plays, he was in his person the very embodiment of the wit of the age:

> Being in himself a perfect comedy:
> And some sit here, I doubt not, dare aver,
> Living he made that house a theatre
> Which he pleased to frequent.

At his best he has a strain almost like that of Shakespeare, upon whom he manifestly modelled himself in everything except Shakespeare's serious insight into human motives. I was struck by this quality particularly while reading "The Humorous Lieutenant." That may be rated among his average tragi-comedies. It contains one of those sudden conversions which make us wonder whether in his heart he felt any difference between a satyr-like lust and a chaste love—the conversion of a lecherous old king who tries in every way, even to a love-philtre, to seduce Celia, his son's mistress, and then, without warning, suddenly becomes the admirer and protector of her virtue. But apart from that, and exclusive perhaps of a slight wavering in the outlines of Celia's character towards the end, the play is a delightful romance in dramatic form, stirring with war and the hot braveries of the court, love and lust, the honor of soldiers and strange mocking humors. And one scene (I, ii), the parting of Celia and the prince when he goes off to the army, might almost have come out of "As You Like It."

All these excellences must be counted up when we estimate the full value of the work which passes under the names of Beaumont and Fletcher and is an epitome of the later (so-called) Elizabethan drama. But if we are to criticise honestly, and are to avoid blurring the fine distinctions in artistic enjoyment, we should not forget to weigh against such riches of entertainment the deep-lying fault which prevents this drama from taking a place beside the more fully satisfying productions of art. And, in a longer view, we should remember that, as the wit of our twin

dramatists passed by a slight change into that of the Restoration, so their use of the passions and emotions is one of the important sources of the romantic vein in later English literature.

P. E. M.

INTERNATIONAL CONGRESS OF HISTORICAL STUDIES.

The third meeting of the International Congress of Historical Studies was held in London, April 3 to 9. The idea of such a gathering of the leading historians of the world originated some fifteen or more years ago with a group of French scholars, and it found its first expression in the Hague International Historical Congress of 1898. More substantial proportions were given to the plan at the meetings in Rome in 1903 and in Berlin in 1908, where the progress of historical science in the last quarter of a century received a remarkable demonstration in the variety and scope of the papers presented and subjects discussed. The meeting at London did not fall behind its predecessors.

Though the formal enrolment of members included more than a thousand names, the actual number of those present was less than half that number, and of these about two hundred were from other countries than Great Britain. The time of year was not favorable to a large attendance from America, but some fifteen American scholars were present, including Mr. Charles Francis Adams, Dr. J. Franklin Jameson, Professors Moses, of California; Faust, of Cornell; Haskins, of Harvard, and Andrews, of Yale, and Messrs. Worthington C. Ford, Frederick Bancroft, Albert Cook Myers, and W. G. Leland. From Germany came such scholars as Wilamowitz-Möllendorff, Dietrich Schäfer, Lamprecht, Eduard Meyer, Bernheim, von Gierke, Schiemann, Liebermann, and Keutgen; from France, Bémont, Cordier, Hausser, Petit-Dutaillis, Cartellieri, and de la Roncière; from Russia, Lappo-Danilewski, Rostowzew, Bobrinskoy, and Koulakowsky; from Belgium, Pirenne and de la Vallée Poussin; from Italy, Gino Loria, Riccobono, Davidsohn, and Galante; from Spain, Altamira; from Holland, Blok; and from Hungary, Marczali. There were also present representatives from Greece, Rumania, Norway, Sweden, Denmark, Finland, Bohemia, Warsaw, Brazil, and Chili, and from many of the colonies and dependencies of the British Crown.

The cosmopolitan character of the gathering and the natural inclination of historical scholars to take a wide view of the meaning of history and to look beyond the temporary jealousies and rivalries of race, gave to the meetings a distinctly fraternal aspect. This absence of political sentiment was emphasized by the large attendance of German scholars, notably Schiemann, the historian of Russia and the friend and former tutor of the present Emperor. From the first meeting held in the Great Hall of Lincoln's Inn to the dinners given at Oxford and Cambridge on April 9, stress was laid on the value of the Congresses in enhancing friendship among the nations. The presidential address of Mr. Bryce, read in his absence by Dr. A. W. Ward, the Master of Peterhouse, called attention to the growing oneness of the world and to the interlocking character of present-day world history, "the history no longer of many different races of mankind occasionally affecting one another's fortunes, but the history of mankind as a whole, the fortunes of each branch henceforward bound up with those of others." Lord Morley in his address at Oxford spoke of science as "one of the best and most admirable unifying agents of the time," and Dr. G. W. Prothero, the chairman of the reception committee, in his speech as presiding officer at the subscription dinner, reminded his hearers that in the Congress they had what they might really call to some extent the concert of Europe and a general *entente cordiale* such as seldom manifested itself in the diplomatic and political world.

But the oneness of history was largely lost to sight in the almost kaleidoscopic variety of the papers read, numbering more than two hundred in all. These papers were distributed among nine different sections, sitting in half-a-dozen different parts of London, from Kensington on the west and Gower Street on the north, to Somerset House on the south and Lincoln's Inn on the east. The general meetings were held in Lincoln's Inn, Great Hall, and in Jehangir Hall, London University, South Kensington; and the headquarters of the Congress were at the Grafton Galleries, near Burlington House, where on the morning of April 9 was held the final session, the meeting for business. Under these circumstances, the difficulties encountered by members who desired to hear as many papers as possible were increased by the subdivision of sections and the wide separation of their respective sessions, and by the distribution of subjects whereby closely related topics, because labelled economic, legal, or religious, were presented at the same time, generally so far apart as to render it almost impossible to hear more than one paper, or at most two papers, even with the aid of a taxicab. The Congress was as a whole well managed, but there was some truth in the charge of "muddling" brought against the organization by the daily papers. The time limit for the reading of papers was half an hour, but the rule was not strictly enforced. Discussion was facilitated by the circulation of a printed abstract of each paper at the time of presentation. Papers were read in English, French, German, and Italian, and it was generally, though not always, the case that foreigners read and spoke in their own language, both at the sessions and at the banquets.

Among so large a number of papers it is possible to select but few for mention. Not all were worthy of the occasion. Some were but extempore addresses or off-hand talks, none too carefully prepared. Others had a familiar ring, as but epitomes of matter already printed. As a rule, however, the standard was high, and many papers were notable historical contributions, thoughtful and scholarly. Conspicuous among them were the presidential addresses of those in charge of the sections, such as the papers of Professors Hogarth on Hittite civilization, Tout on mediæval studies, Vinogradoff on legal history, and especially Firth in a severe arraignment of England's disregard of modern historical methods and training in the organization of historical work and the treatment of historical archives. Also noteworthy were the addresses of Sir George Reid on the significance of colonial history for the colonies, and of Prince Henry of Battenberg on the attitude of the Admiralty towards naval history. Naturally, in a congress held in England, stress was laid on colonial, military, and naval history, and the presidential address of Professor Egerton in the colonial section, and the papers of Sir Charles Lucas, Mr. Benians, and Professor Altamira on aspects of British, Dutch, and Spanish policy, were of importance. Likewise in the naval field, Dr. Tanner, Sir John Laughton, Capt. Richmond, R.N., and Mr. Perrin, of the Admiralty library, on the English side, and M. de la Roncière on the French, read papers that were stimulating and suggestive. As a rule, the military historians were more interested in warfare for its own sake than they were in the value of military organization and administration for general history.

On the part of the visitors notable papers were presented by Professor Keutgen on the Hamburg Colonial Institute, to which he has recently been called from Jena; by Professor Marczali, of Budapest, on England and Count Széchenyi; by Professor Schiemann on England and Russia in 1853 and 1854; by Professor Jorga, of Bucharest, on "La survivance Byzantine dans les pays Roumains"; by Professor Pick, of Jena, on "Handelsmünzen im Alterthum"; by Professor Davidsohn, of Florence, on "Die Frühzeit der Florentiner Kultur"; by Dr. Liebermann, of Berlin, on the national assembly in the Anglo-Saxon state; by Professor Pirenne, of Ghent, on the growth of capitalism in the Middle Ages, and by Professor Schäfer on Sound-dues as a source of international

history. Professor Dopsch, of Vienna, by his paper on "Die Geldwirthschaft der Karolingerzeit," aroused a lively discussion, participated in by Lamprecht, Pirenne, and others. For political reasons, the papers of Professor Redlich, of Vienna, on Austrian administrative methods, and of Dr. Nogga, Albanian delegate in England, on some Albanian historical problems, were omitted. American scholars contributed six papers in the following order: Dr. Jameson, on "Typical Phases of American Expansion"; T. Spencer Jerome, of Capri, but representing the University of Michigan, on "The Orgy of Tiberius at Capri"; Professor Haskins, on "The Government of Normandy under Henry II"; Professor Andrews, on "Anglo-French Commercial Rivalry, 1700-1750"; Professor Moses, on "The Relation of the United States to the Philippine Islands," and Dr. F. A. Woods, on "Historiometry." In other respects, also, recognition was accorded to American scholars. Mr. Adams spoke at the general session at Lincoln's Inn, Professor Haskins spoke at the dinner given by the Royal Historical Society, and again at Cambridge. Both of these gentlemen, with Dr. Jameson and Professor Andrews, were named honorary vice-presidents of the Congress, while Professor Haskins was the representative of his section on the executive committee, and Professor Andrews one of the vice-presidents of section six.

British good will, manifested, as the *Times* phrased it, in England's "somewhat reticent insular fashion," found genuine and spontaneous expression in a manifold variety of social entertainments. Every day was so filled with opportunities for sight-seeing, wining, and dining that no one person could possibly enjoy all the pleasures offered.

At the business meeting of the Congress, held on the morning of the 9th, the invitation of the Russian delegates was accepted, and the next International Congress of Historical Studies will be held in 1918 at St. Petersburg.

CHARLES M. ANDREWS.

NEWS FOR BIBLIOPHILES.

Another portion of the great collection of manuscripts brought together by Sir Thomas Phillips (who died in 1872) will be sold by Sotheby, Wilkinson & Hodge, May 19 to 23. The auctioneers have ceased numbering the portions, but the first sale was held in 1891, and some twelve to fifteen portions have since been sold.

Sir Thomas himself told how, by reading accounts of the destruction of old manuscripts, he was led to begin collecting. For many years he bought almost everything, "particularly unpublished manuscripts, whether good or bad," and did not object to paying high prices as one object was "to raise the public estimation of them, so that their value might be generally known, and consequently more manuscripts preserved." He said: "My chief desire for preserving vellum manuscripts arose from witnessing the unceasing destruction of them by gold-beaters; my search for charters and deeds by their destruction in the shops of glue-makers and tailors."

The present selection contains 1,137 lots, but this does not mean the same number of sheets, for many of the lots are bound volumes of several hundred pages. More than five hundred lots relate to American history and topography. Some are of slight interest, but others will bring high prices. The most valuable document in the collection is, without much doubt, the manuscript of Richard Hakluyt's "Particular Discourse concerning the greate necessitie and manifolde comodyties that are like to growe to this Realme by the Westerne Discoveries, lately attempted." This manuscript was written in 1584, "at the request and direction of Mr. Walter Raghly, nowe Knight, before the comynge home of his twoo Barkes." There are twenty-one chapters, filling sixty-five pages, folio. It is in an old contemporary binding, with central ornaments. Hakluyt had already written and published his "Divers Voyages" in 1582, when he prepared this "Discourse" for Raleigh. The manuscript was for two or three years in the possession of Henry Stevens, the American book-hunter in London, who, being unable to find a purchaser for it in America, finally sold it to Sir Thomas Phillips. It remained unprinted until 1877, when it was included by the Maine Historical Society in their Collections. It is probably not in Hakluyt's own handwriting, though that question still seems to be unsettled.

A "Relacion del Peru," written in 1570, 186 pages; a "Descripcion General del Nuebo Orbe de las Indias," by Gonzales de Guemes, written about 1652, 330 pages; a "Noticia del Descubrimiento de la Nueva España," written about 1750, 948 pages folio; a "Noticia do Brazil," seventeenth or eighteenth century, 614 pages, folio; all unpublished, are a few of many interesting manuscripts relating to South America.

A collection of vocabularies, instruction books, prayers, etc., in various native American dialects, mainly Mexican and South American; many manuscripts relating to Jamaica, the Bermudas, the Bahamas, and other West Indian Colonies, mainly official papers; a manuscript relating to Canada, with the title "Dialogue ou Entretien d'un François avec un Sauvage," 187 pages, written before 1700 and containing seventeen interesting drawings of natives, showing their customs; New York documents from the papers of Governors Bellomont, Dongan, and Fletcher; documents or collections of documents relating to most of the colonies, largely from the papers of William Blathwayt, Commissioner for Trade and Plantations (died 1717); and the Entry Books of Evidence and Decisions concerning American Loyalists, 7 vols., folio, in the autograph of Daniel Parker Coke, one of the commissioners, are a suggestion only of the wealth of American manuscript material in the sale.

Among older manuscripts are several Biblical commentaries, St. Augustine's Homilies of the ninth century, Cæsar's Commentaries of the fifteenth century, Seneca's Tragedies, fourteenth century; Ovid, Suetonius, etc. Higden's "Polycronicon," fourteenth century; a "Grammaticorum" of the tenth century; a manuscript of a portion of Bacon's "Sylva Sylvarum," with other papers; and a volume of English poetical homilies and tales of the fifteenth century, are a few other notable lots.

Correspondence

OUTWORN TREATIES.

TO THE EDITOR OF THE NATION:

SIR: The *Nation* struggles bravely against the reactionary tendencies of its kleptocratic and intellectual constituency, and in some directions has been a real leader. But you have been saying many foolish things about treaty obligations. Thus, in the course of a short editorial note, most prominently placed in your issue of April 24, you characterize what was virtually the action of the last Congress and President Taft and will probably be the action of the present Congress and President Wilson with words such as "faithless and shameless," "a pariah among the nations," and "a mad rush into infamy."

It is surely impertinent and futile to make such charges. By the nature of things, every great nation has broken its treaties. Like constitutions, creeds, and laws, all treaties must ultimately be reinterpreted, revised, or abrogated. There is no adequate international machinery for the interpretation, alteration, or denouncement of treaties, and each nation must do the best it can under the circumstances as they arise. The law-abiding citizen either keeps the law or breaks it, and takes the consequences, and the same high moral standard should obtain for the nation. The English suffragettes may be following a policy wise or otherwise in violating the law and suffering the consequences, but their behavior shows fine moral quality. States and cities must abolish perpetual franchises even though they break their promises, and the nation must abrogate treaties when it is for the public welfare to do so. The dead cannot be permitted to rule the living.

It happens that I disapprove of the ship subsidies granted by the last Congress, and of the proposed Californian legislation, but those who favor these measures are not less honest and patriotic than those who oppose them. In my opinion the exemption from tolls of coastwise shipping through the Panama Canal and the discrimination against the Japanese in California break no treaties; but that is not the important point. We should try to come to a cordial agreement with the nations concerned, and we should be ready to pay them money for damages, but we should maintain our will to denounce a treaty at any time.

It is almost incredible that the present radical government of the United Kingdom should wish to hold us to the exact terms based on a previous treaty made sixty years ago under conditions entirely different from those now existing. The ambiguous and illiterate words of the treaty are: "The canal shall be free and open to the vessels of commerce and war of all

nations observing these rules on terms of entire equality." Surely sensible people do not hold that under this clause the United States cannot send its ships of war through the canal free of tolls without granting similar privileges to all nations, that the British Government cannot pay the tolls of its merchant shipping should it see fit, or that it is necessary to remit the tolls for the coastwise shipping of the principality of Monaco. The history of the negotiations preceding the signing of the Hay-Pauncefote treaty is unrevealed, but the natural interpretation of the words is that Great Britain arranged not to be discriminated against among other "customers" of the canal from whom the United States as owner is excluded.

As a matter of fact, the meaning of the words and the intentions of the negotiators are strictly irrelevant. The British Minister of State for Foreign Affairs admits that we can refund the tolls, but maintains the traditions of a stupid diplomacy, doubtless with a view to the effect on Canadian sentiment, by arguing that we cannot under the treaty remit them. In this instance there is no practical difference; but it is well that we shall maintain the right to interpret our treaties, as our Constitution, in accordance with changed conditions and commonsense. Were I a member of the Congress I should introduce a bill remitting for one year only of the tolls on coastwise vessels. If a friendly nation objects, we should not reply in terms of legal sophistry, as did our late Secretary of State, but simply explain in a kindly way the action which we have taken and our purpose to maintain our right and our power to act in every respect and on every occasion as we deem for the advantage of the nation and for the welfare of the world.

J. McKEEN CATTELL.

Garrison-on-Hudson, N. Y., April 26.

AREN'T I?

TO THE EDITOR OF THE NATION:

SIR: Having started in the *Nation* of January 23 a discussion of this phrase, I have held back to watch the sport. You have printed numerous letters from writers of all sorts. *Quot homines tot sententiæ.* One or two of the writers seem to agree with me, but most of them range themselves on the defence.

These apologists may be classified in two groups. One group thinks that in condemning *Aren't I* I miss some of the joy of life. Evidently, it is so much more "comfy" to say *Aren't I* than *Am I not.* Now, to all such pitying critics let me answer that *dialect* is to me a never-failing source of pleasure. When the Tompkins County farmer, in March, declares: "There ain't no roads up our way," I whisper to myself that he speaks from the heart. But *Aren't I* is not dialect; it is merely the sophisticated jargon of the smart set in London, and as such is detestable.

The second group, of which Professor Buck, of Chicago, is the chief, seeks to justify the phrase. The ratiocination—one can scarcely call it argument—runs thus: The Englishman, bent upon the word-order *Am not I,* reduces it in speech to *An't I.* Then, because he emasculates the *r* and pronounces *Aren't we* as *An t we,* therefore he is privileged to spell *Aren't I.* To all this I can merely answer that phonetic explanation is not necessarily grammatical justification. Phonetics have their value, but they are not the whole of language. Our English speech is not a mediæval dialect shuffling into a new skin; it is the mode of utterance of some of the noblest thinkers in the world's history. These writers have consecrated certain forms which it is our duty to respect. Now, for centuries *are* has been a plural form and cannot go with the singular *I;* not even the smart London set can make it go. Besides, Professor Buck assumes too much in his treatment of the emasculated *r* as "standard." It is standard only for Southern English. In the Midlands the *r* is distinctly audible; in Yorkshire there is the burr, and in Scotland the trill. In Ireland the *r* is heard everywhere. In this country only parts of New England swallow the *r* most disagreeably. New York city and Brooklyn do as much, but with a difference. In many parts of the South the *r* is also obliterated. But of the ninety-odd millions of Americans it is safe to assert that 90 per cent. pronounce the *r* and will continue to pronounce it, notwithstanding London and Boston. Now what are the 90 per cent. to think when they read in print *Aren't I?* As for the dear children who prattle *Aren't I,* we should not forget that in every child there is a touch of the simian. If *Aren't we* is right, why not *Aren't I,* or even *I aren't?*

Just about the time I was penning my first note in January, *Life* printed this skit: The mother asks her little daughter to go and fetch the dog. And the child answers, politely: "Please, mamma, I aren't speaking to Fido since he broke my doll." Out of the mouth of babes and sucklings, etc. I conclude, as I began, with Latin: *Requiescat in pace!*

WESTERN HISTORY.

TO THE EDITOR OF THE NATION:

SIR: In a review of Katharine Coman's "Economic Beginnings of the Far West," which appeared in the *Nation* of March 20, you state that as yet too little preliminary work has been done on the sources of Western history for a book of this sort to be possible. Miss Coman does not aim to present an exhaustive study of the economic development of the Far West, but rather to give a general survey of the trend of that development for the reader who wishes to know something of that side of our national history. It is not legitimate to maintain that there is no basis for such a survey, in view of the large body of source material which Miss Coman was able to utilize. For example, such collections as the Trailmakers Series, the publication of the Academy of Pacific Coast History, Thwaites's "Early Western Travels," the various Journals edited by Coues, the numerous reports of Western explorers published by the United States Government, the Early Spanish historians like Palou and Venegas, the Journals of Pacific Coast explorers, such as Cook, Vancouver, La Perousse, Von Langsdorff, Kotzebue, Beechey, Belcher, De Mofras, Simpson. In addition there are the hundreds of contemporaneous accounts of settlers, prospectors, and frontier guides sent "back East" and published at the time. Nor must one ignore the valuable first-hand material contained in contemporary newspapers and unpublished Journals which has been collected by public libraries and local historical societies, notably the Oregon Pioneer Historical Society and the Historian's Office of the Latter-Day Saints.

Nor can it be said that this material has not yet been worked over. Bancroft's "History of the Pacific Coast States" is a veritable encyclopædia of facts and source references. The American Commonwealth Series offers some State histories of good quality, *e. g.,* Garrison's "Texas," Carr's "Missouri," Spring's "Kansas," Royce's "California," Richman's "Iowa." Other State histories of greater importance are Robinson's "Kansas," Gayarre's work on Louisiana, Prince's "New Mexico," Hittell's four volumes on California. Biographies, too, such as Holman's "Dr. McLoughlin" and Blackmar's "Robinson." Furthermore, there are some excellent monographs, as McCaleb's "Aaron Burr," Bourne's "The Whitman Myth," Davidson's "Drake's Anchorage," Elliott's "Peter Skeene Ogden," etc.

Of course only a beginning, although a good one, has been made in digesting the vast amount of source material at hand, but it will be an undertaking of many years to do this exhaustively, and it is unreasonable to ask the reading public to wait indefinitely for the presentation in large outlines of a most important and interesting phase of our history.

ELIZABETH KIMBALL KENDALL.

Wellesley College, April 19.

"THE DISCOVERY OF THE FUTURE."

TO THE EDITOR OF THE NATION:

SIR: In your issue of April 10, Mr. H. W. Van Loon, of Washington, complained that he had been April-fooled a few days before the recognized period and had thus lost sixty cents. It is evident that Mr. Van Loon does not know the previous history of the transaction of which he complains, and it may be worth while to rehearse it.

Mr. Herbert G. Wells has an established reputation as a skilful adept in mixing fact and fiction, science and romance. So far back as January 29, 1902, by invitation of the Royal Society, London, he delivered before it an address on "The Discovery of the Future." This stimulating discourse was promptly published in *Nature,* the London scientific weekly, on February 5. Mr. Wells has published some books since that time, but has not inserted this address in any. However, it was republished in the Annual Report of the Smithsonian Institution for 1902. Yet it did not attract the attention it deserved. Eleven years later Mr. Huebsch, an enterprising publisher, espied this precious object adrift in the flood of literature and deemed it worthy of a better fate. He dressed it in a handsome booklet and offered it to the public at a moderate price. It now caught the eye of the literary editor of the New York *Times,* and he, with Mr. Huebsch's permission, presented the substance of it in his Sunday edition.

Surely, Mr. Huebsch deserves credit for rescuing the address from neglect and exhibiting its merits in an attractive form. Nor is he to be blamed for allowing the newspaper to give it wider circulation, even in an abbreviated form. The whole

affair is, as the *Nation* wisely pronounced it, "a question of publishing."

JOHN P. LAMBERTON.

Philadelphia, April 25.

APROPOS OF SIXTY CENTS.

TO THE EDITOR OF THE NATION:

SIR: I wish to make full reparation. I have to-day received a check from the publishing house of B. W. Huebsch for the full sum of the sixty cents which I had lost by buying the fatal little book of Mr. Wells which simultaneously appeared in the *New York Times* for the price of five cents.

I am greatly pleased. I shall have that check framed, and the next time they tell me that old yarn of Napoleon and Johannes Palm, of Nuremberg, I shall point with pride to the decoration upon my wall and shall say, "My dear sir, they are not all alike." DR. H. W. VAN LOON.

Washington, April 24.

SWIFT'S JOKE ON PARTRIDGE.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of April 10, Mr. Charles St. Clair Wade asks why some student of comparative literature does not give other versions of Swift's jest on Partridge. The matter has been dealt with by Prof. Rudolph Schevill in the following article: "Swift's Hoax on Partridge, the Astrologer, and Similar Jests in Fiction," published in the Transactions of the Connecticut Academy of Arts and Sciences, Vol. XV, July, 1909. Other studies are noted in Vollmöller's Jahresbericht, XII, 11, 40.

MILTON A. BUCHANAN.

Toronto, April 23.

A PLEA FOR THE "NEW ART."

TO THE EDITOR OF THE NATION:

SIR: There are several points of weakness in Mr. Raymond Macdonald Alden's arraignment of the supposed policy of *Poetry*, published in the *Nation* for April 17.

His casual acquaintance with the magazine is indicated in his statement that it has run a twelvemonth, whereas, in fact, only seven numbers have been issued; and his criticism of the magazine is limited to the work of one poet and to an editorial appearing in the April number. The editorial in question was based frankly on the quality of the great majority of *unaccepted* manuscripts, material upon which it was quite impossible for Mr. Alden to pass judgment, and the editorial statement was that the majority of these manuscripts showed unmistakably that tendency towards merely external imitation of classic forms which is academic-death.

There is a very sharp dividing line between a true understanding and application of artistic tradition, and a merely slavish imitation of outward characteristics; but many persons are unable to perceive this distinction unless it is brutally and vociferously forced upon them.

In regard to the "new art," Mr. Alden says that he does not "venture to assume any complete understanding of what the principles in question are"; yet he does indeed "venture" to draw up his own arbitrary conclusions in three deliberate statements, covering all with a vague classification of the "morbid hypertrophy of romanticism."

His authority is his own, but if he had asked an intelligent painter, he might have been told (1) that the most authentic of the "new artists," far from abandoning all standards of form, base their work upon absolutely fundamental and essential elements of form; (2) that this can only be achieved by an *intelligence* which knows how to relate personal emotions to the constructive processes of pictorial or plastic expression; and (3) that a failure to perceive the fundamental principles in the best examples of the "new art" implies a failure to perceive these same fundamentally classic and essential principles in the "old."

It is not against the great poetic tradition that the editorial in question was directed. The tradition represents but the succession of individual poets whose creative power has given us creative form, a form as appropriate to and as indissoluble from the originating impulse as the flesh from the skeleton. But it is against the lifeless embodiment of stuffed manikins, and the parading of modernity in Elizabethan chain-armor, that the editorial in question sets its face.

> Minniver scorned the commonplace,
> And eyed a khaki suit with loathing;
> He missed the mediæval grace
> Of iron clothing.

As an "eligible witness" from the great Middle West, and as a spokesman (authorized or no) "of the plain people and the great mass of the truly cultivated—the readers and teachers of literature," Mr. Alden offers his testimony that the old poetry is still what is wanted by these two great classes. There is nothing to prevent their having it. It is open at all times to their enjoyment, as it is enjoyed and reverenced by the editors of *Poetry*. But *Poetry* does not want rehashed classics; and it does want new poets. If we do not help them to exist, then "the readers and teachers of literature" of the next generation or two will be conducting classes in archæology.

As for Mr. Pound's poetry, it is its own best defence.

ALICE C. HENDERSON.
HARRIET MONROE.

Chicago, April 26.

THE NAVY LEAGUE.

TO THE EDITOR OF THE NATION:

SIR: In an editorial entitled "Business and War," in your issue of April 24, you make the following statement: "Even on this side of the water the interest taken in our blatant Navy League by battleship builders, organizers of Ship Trusts, and producers of nickel steel is well known. It has plenty of money, and maintains offices in Washington, where its recent banquet called forth such salutary anti-militaristic remarks by Congressman Fitzgerald and Secretary Bryan." We wish to make the statement once and for all that the Navy League has not received contributions from battleship builders, from shipbuilding companies, or corporations having financial dealings with the Government for naval supplies of any character. Every dollar received by the treasurer of the Navy League has been given with a purely patriotic, unselfish purpose. Our income is derived, to a large extent, from membership fees, the annual members paying five dollars and one dollar.

Moreover, the Navy League has not got "plenty of money." Our total income from all sources for the year ending March 31, 1912, was $11,864.25. The income for the past fiscal year shows a healthy increase, due to the increased membership and larger contributions received, but I repeat that every dollar received has been given from a purely patriotic, unselfish motive. In fact, although the Navy League shows a constant healthy growth, its growth has been limited because the organization has not pretended to offer any privileges or benefits to its members or to the subscribers to its guarantee fund. It is expected, however, that the League will be able to send to each member a monthly magazine.

The toastmaster at the recent Navy League dinner had full knowledge of the attitude of Secretary Bryan and Congressman Fitzgerald toward new battleships before calling upon them to speak.

I know the *Nation* would not wilfully misrepresent our organization, and I therefore respectfully ask you to publish this letter. A. H. DADMUN, Secretary.

Washington, April 28.

Literature

MODERN PROBLEMS.

Modern Problems. By Sir Oliver Lodge. New York: George H. Doran Co. $2 net.

Socialism from the Christian Standpoint. By Father Bernard Vaughan, S. J. New York: The Macmillan Co. $1.50 net.

Sir Oliver Lodge is interested in as many things as was Goethe himself. He ranges from free will and determinism to the position of women, from the nature of time to the functions of money, from Balfour and Bergson to the smoke nuisance. He discourses as entertainingly on one topic as on another. The present work he describes as "a discussion of debatable subjects," but we are not so much interested in what he says as in the way he says it.

All but two of the twenty-one essays in the volume first saw light on other occasions. The first two, "Free Will and Determinism" and "The Nature of Time," appear to have been written expressly for the purpose of giving the work a send-off. In these, and particularly in the second, we have abundant evidence of Sir Oliver Lodge's fondness for metaphor and the language of sentiment, using the last term in no invidious sense. After stating the hypothesis that time is real and not an hallucinatory process, he says that facts are at hand which suggest that there is a higher kind of existence—an existence already attained by our loftiest work, an

existence appropriate to creations of genius—a kind of existence, or subsistence, or supersistence, which transcends present limitations, "which has been raised or put ashore out of the current of the time-stream into a freer and diviner air, where the past, the present, and the future are united in the transcendental co-existence of a more copious reality."

In "Competition v. Coöperation" the doctrine that competition is a good thing he declares a fallacy. With monopoly an awakened society will make short work; but how can it deal with competition? Suppose the community were not satisfied with the soap that the manufacturers were providing. Why should it not pay a competent chemist, and provide him with suitable appliances, to make experiments and devise a better material? Why should it not, if he succeeded, give him a peerage? Sir Oliver Lodge insists that the power of society to stimulate individuals and get excellent work out of them is stupendous when it chooses to exert itself. What labor and harassings will not be gone through for a simple knighthood? Emulation is not competition. Competition is defined as the wrangling of savages round a table at which they might sit at peace and pass one another victuals; it is the grabbing of the dishes as they are brought on by the waiters of Providence—the laws of nature; it is the filching from the weaker neighbors of their portion, so that one is hungry and another is drunken. Emulation, says Sir Oliver Lodge, is the aspiration of a soldier to lead a forlorn hope (a rather unfortunate metaphor, by the way), the desire of a student to make a discovery, the ambition of a merchant to develop a new country or establish a new route.

Yet Sir Oliver Lodge is wise in his generation. So far the twentieth century has shown itself to be an age of sentiment, a period sedulously engaged in bringing the sciences, and particularly the science of economics, into line with the impulsive life of the ordinary citizen. No longer is it necessary for one to explain with the Psalmist, "Such knowledge is too wonderful for me; it is high, I cannot attain unto it." It is a fact that professional work is hard; and this fact "should silence those who hold that without the stimulus of hunger, and the misery of those dear to you, no work would be got out of mankind." The political economist forgets that there is such a thing as soul, spirit, verve, zest, says Sir Oliver Lodge. The thing most of us would like to know is, how much more mindful of this fact are the capitalists and the labor unions?

Yet, though the author seems at times to think that there is no reason why things should be so unpleasant as they are now and always have been, he leaves us, after all, with a feeling that is far from comfortable. With all his idealism he never appears to lose sight of the fact that, though every other prospect pleases, man is certainly vile. Practical considerations, he tells us, multiply furnaces, and factories, and all manner of manifest hardships; and the singular thing is that the poorest classes, the great bulk of the people, desire this sort of thing, too. Contrast his inspiring phrases in "Competition v. Coöperation" with these in "The Pursuit of Wealth":

> I can only believe that we have an altogether false standard in these matters. We have lost the sense of the real meaning and value of life itself, and have set up some of the artificial and unnecessary appendages of life, as the real things to be pursued, the valuable things for which any sacrifice may be rationally demanded. I believe the people's eyes must be opened by higher education; they must learn to set up an altogether different standard of wealth and value, before the world can grow wiser and better, and before the inexhaustible potentialities of the universe can become to us real and actual possessions.

Sir Oliver Lodge brings us no new message. His is but a twentieth-century utterance of the plaint of Isaiah and Hosea. The son of Amos told his people that their silver had become dross, and twenty-five centuries later Sir Oliver Lodge sounds the same note. Is the present generation less stiff-necked than that of King Uzziah? We look in vain to Sir Oliver Lodge for an affirmative answer. "Wisdom," he cries, "is more to be desired than rubies! Aye truly is it: it is an old saying, but the world does not yet really believe it."

This note of dejection is encountered throughout these essays. In the one on "The Irrationality of War" we are informed that it is the deadly monotony of the ordinary life of the multitude that constitutes a civic national danger. It is this that drives people to drink and unworthy relaxation. It is this that makes people welcome the feverish excitement of a catastrophe or of the imminence of war. Daily life must be made more interesting, work more joyous. But how? Alas! Sir Oliver Lodge does not tell us. He paints a celestial city, but the road thither ends on this side of the river, with no ferryman in sight. Our gloom is increased if we turn to the essay on "The Functions of Money"; for there we read that newspapers are owned, opinion is manufactured, nations are governed, in one interest, the interest of property. The supreme power is the power of the purse. The latest of the functions of money is to rule the world.

Father Vaughan is an admirable disputant. He is not deterred, as a dialectician, by the consideration that facts, as Le Sage says, are stubborn things. He refuses to abandon them for conjecture; he is eminently fair, if sometimes severe; he knows how to command attention. It is only occasionally that the critical and constructive faculties are so equally yoked as in these essays, or "conferences," as Father Vaughan prefers to term them. He is as cognizant of the evils that synchronize with modern industrialism as are the prophets of Socialism, yet he persists in saying that in Christianity lies the hope of democracy, and that in Socialism lies its peril, its ruin. These words embody the theme of which this volume is the elaboration.

Altruism, we are reminded, is no discovery of our day. In early days it was not called altruism, but Christian charity. The time came, however, when people thought that they could find a remedy elsewhere. The Church has discovered a rival physician in the Socialist. He tells us that the cure for all our wrongs is to be found in the transfer to the community of all the instruments of the production and distribution of wealth. But Socialism, says Father Vaughan, is an affair of far deeper significance than a bare question of economics. As an abstract principle of economy, or as a distant coöperative commonwealth, it has little or no interest for him. His inquiry is about Socialism as a living, moving, energizing concern—as a "going concern," to employ his apt phrase. What he desires to know is: Whether, everything considered, it is wiser and more ennobling to join in the Socialist movement, or in a movement for the reëstablishment of Christian principles in the social and industrial life of a people.

A grave dialectical error of the Socialist consists, in Father Vaughan's opinion, in mistaking analogy for identity. The Socialist is much given to comparing the communal life to an organism built of many living cells. Mr. Ramsay MacDonald, for example, declares that there appears to be a cell consciousness different from the consciousness of the organized body with its specialized brain and nervous system, that there is a social consciousness with its sensory and motor system superimposed on the individual consciousness; that both together make up the individual consciousness.

But to accept the biological concept of society as more than a useful analogy, to accept it as a literal fact, is to rob human life of its value, to destroy liberty, and to put an end to human personality itself. At best, man becomes a mere function of the social organism, a muscle or nerve centre in the body politic, with no free or independent soul of his own. In spite of what many Socialists tell us, it is difficult to conceive of the socialist state except in terms bureaucratic. The state, as we now know it, is meddlesome. Under Socialism, into what kind of Oriental despot-

ism would it be perverted? In a House of Bondage, such as it might be, man would have about as much opportunity of realizing himself as a slave in the open market.

According to the Catholic teaching, the right to own property is a natural right. Man has been put upon this earth in order to develop his material, intellectual, and spiritual capacities. With the duty of developing them goes the right of developing them. The possession of property (including capital) is a normal condition of this development. It is not to be denied that the present capitalist régime is reeking with abuses. But the abuses are not inseparable from capitalism itself. They are the growth, like weeds, of neglect, and have arisen from a betrayal of Christian principles. They can be cured by a return to Christian principles. They cannot be cured by Socialism.

There can be no short cut, no simple remedy, no panacea. Legislation and private endeavor and Christian enterprise must unite and combine, each supporting the other. But legislation needs to be rescued from its subordination to mere party interests. And though private initiative has effected much, it is nevertheless a fact that we seem to be nearly as far off from a solution of the industrial problem as when we first started out a hundred years ago.

CURRENT FICTION.

The Isle of Life. By Stephen French Whitman. New York: Charles Scribner's Sons.

Romance is somewhat tempered with realism in this second novel of Mr. Whitman's. The plot is wildly romantic, the method of characterization often realistic. Sebastian Maure, a sort of modern Byron, is saved from the insipidity of romantic heroes by his record of vaguely terrible wickedness. He adds to the usual heroic charms those of the rake and the atheist. But the author has not had the courage to extend this method to his heroine. Even in stories convention is stronger upon women than upon men; and Ghirlaine Bellamy (the outlandishness of whose name proves her an American) is a perfectly ordinary and colorless romantic heroine. An ideally beautiful heiress, travelling with her aunt, she meets Sebastian Maure in Italy, and inspires in him a violent passion. At once attracted and repelled by him, she engages herself to Vincent Pamfort, an excellent young English noble, as a measure of self-defence. Pamfort is called home by the death of his brother, and Ghirlaine sails for England, where the marriage is to take place. But Maure rushes to Sicily, where he boards the steamer. Scribbling a message on the visiting-card of a common friend, he induces Ghirlaine to see him on the deck that evening; and when she indignantly repulses him, he seizes her and leaps into the sea. As he has hoped, they are picked up by a fishing-boat whose lights he has seen from the steamer, and taken to Torregione, the "Isle of Life," which contains a fishing village, a hermit, a deserted villa, and a ruined shrine still haunted by pagan deities. The place is almost ideally adapted to the sinister designs of Maure; yet he is foiled by the simple and well-known methods of the chaste romantic heroine. Now is the time for the god to descend, and he does so in the unusual form of an epidemic of cholera among the fishermen.

Wild as the story is, it is told with a good deal of imaginative vigor and skill. Constructively, it shows a marked advance over the author's first novel, "Predestined," and it is much less unwholesome in substance.

Adnam's Orchard. By Sarah Grand. New York: D. Appleton & Co.

Rural England, if we are to believe this representation, is in a bad way indeed. "Agriculture has fallen into a deplorable state of neglect, . . . land has gone out of cultivation at a perilous rate, . . . agricultural laborers have either been sent or driven away to swell the ranks of the unemployed in the cities." Change and decay in all around we see, and we can only wonder whence was drawn the courage for so lengthy and lugubrious a recital. Perhaps from the duller pages of George Eliot. There is something formidably typical about this countryside, complete in all its social functionaries—local duke, very much the man of taste and pleasure; local duchess, conscientious doll; bulldog squire, with vulgar, scheming wife; rector's patient wife, staggering under burden of a marriageable daughter; yeoman farmer, tenant farmer, innkeeper, too. The failings of this generation are soundly berated, and then the sins of their children are all laid at heredity's door. From an inebriate cousin of the duke is derived a little sister of the Heavenly Twins, half-angel and half-monkey, who is mated with that amiable nonentity, the duke's second son. The duke's daughter, as a lamb to the slaughter, is led to marriage with the squire's profligate heir. Only two young people are exempt from the general blight of degeneracy, as representing in their persons the triumph of eugenic principles. These are Adnam Pratt, who comes of sturdy yeoman stock on his father's side, on his German mother's from a "hochgeboren" line, and Ella Banks, the tenant's girl on the duke's estate, whose superior qualities are attributed by many hints to an illegitimate origin.

The one refreshing feature of the story is that this hero and heroine flatly refuse to fall in love with each other, and tranquilly pursue divergent paths, as exemplars of industrial reforms dear to the author's heart. Adnam demonstrates the feasibility of applying French methods of intensive cultivation to neglected English hillsides, employing thereupon surprising numbers of the "unemployed"; Ella revives an all but extinct branch of the art of lace-making, and opens a profitable shop in London for her rare fabrics, by way of instancing what the modern woman can do for herself financially in a self-respecting way. Thus we leave these experimenters. But the inscription, "End of Prologue," appearing at the close of 623 pages, gives rise to the fear that we may not have heard the last of Adnam and Ella.

The Night-Born. By Jack London. New York: The Century Co.

The title of the sixth of these ten tales, "Bunches of Knuckles," rather than that of the first, should have been chosen to indicate the character of the collection. With the exception of the first story, and of one other, which is silly, these tales are all deliberately brutal, in Jack London's worst and most popular manner. An American goes to a bull-fight, and, driven mad by the scream of a disembowelled horse, runs amuck, killing seven and wounding many others of the bull-fighting race before he is killed himself. A social reformer is "beaten up" by a dive-keeper, fails to get justice in the courts, and avenges himself by beating up a venial judge: both beatings reported in detail. A boy is bitten in two by a shark in full sight of a ship's company, as the result of a woman's whim. With such materials this writer is wont to fascinate his especial public. He has the knack of the short story, and something more; but we begin to despair of his ever escaping his obsession for bunches of knuckles and buckets of blood.

Bunch Grass. By Horace Annesley Vachell. New York: George H. Doran Co.

Thirty years ago Mr. Vachell was a rancher in California—the California of Judge Lynch and the James brothers, where local justice and the gentle rain from heaven were equally uncertain quantities to depend upon, and society as yet provided nothing better. The transition had begun from a land of cattle to a land of growing things, and the old settler and the squatter were at odds. During the seventeen years of Mr. Vachell's stay in California great changes took place; these stories reflect a rapid shifting of conditions. Some of them, the author frankly admits, "are obviously the work of an apprentice, but they have been included because, however faulty in technique, they do

serve to illustrate a past that can never come back." He further anticipates criticism by the remark that "re-reading these chapters, with a more or less critical detachment, and leaving them—good, bad, and indifferent—as they were originally printed, one is forced to the conclusion that sentiment—which would seem to arouse what is most hostile in the cultivated dweller in cities—is an all-pervading essence in primitive communities, coloring and discoloring every phase of life and thought." That is, Bret Harte and all succeeding chroniclers have dealt largely in sentiment, not as a popular commodity, but as a prime ingredient of frontier life. There are tales in this collection as nakedly sentimental as "The Outcasts of Poker Flat." The dying child plays a part, and the defenceless maiden, and the woman who is no better than she should be, yet not so bad as she is painted; and the soft-hearted desperado, and the school-mistress, and many another familiar type. There are adventures with rattlesnakes, and cattle-thieves, and lynching parties; in Chinese opium dens, in the company of outlaws, in matrimony. The range is well covered. And the book has a special appeal as the work of an Englishman in a field which has been hailed—abroad at least—as distinctively "American." Nevertheless, its interest is chiefly documentary. There is not a superlatively well-told tale in the lot: nothing to enhance the repute as an artist in fiction of the author of "The Hill" and "The Face of Clay." We are not sure that he ought not to be congratulated, in this hour of the "short-story" expert, upon his superior fitness for work upon the larger scale.

FURTHER EXPLORATIONS IN THE NORTHWEST HIMALAYAS.

Karakoram and Western Himalaya, 1909: An Account of the Expedition of H. R. H. Prince Luigi Amedeo of Savoy, Duke of the Abruzzi. By Filippo de Filippi, F.R.G.S. With a Preface by H. R. H. the Duke of the Abruzzi. New York: E. P. Dutton & Co. $15 net.

These two handsome volumes contain the records of a remarkable journey, valuable for the new light which it throws on one of the most wonderful mountain regions of the world, a journey undertaken by the Duke of the Abruzzi, whose fame is already known to mountain climbers and explorers by his achievements in other countries. He made the first ascent of Mount St. Elias in Alaska; he reached the highest peak of the Ruwenzori group of mountains in central Africa, which the English party under that famous mountaineer, Mr. Douglas Freshfield, had been prevented by bad weather from attaining several years before; and he made an expedition into the North Polar region in which his courage and perseverance were rewarded by results of scientific importance.

The great mountain mass of the Himalayas (the dwelling of snow) stretches, everybody knows, all the way along the northern frontier of India. Its eastern limit is fixed by the point where the river Tsanpo descends through savage gorges from the great plateau of Tibet into Upper Assam, where it forms the stream of the Brahmaputra. Its western limit is similarly fixed by the point where the river Indus bursts through the forge above Attok. Now in this long mountain region there are two districts where the peaks rise higher than in any other parts. One is on the borders of Nepal, Tibet, and Sikkim, where stands the great summit, the highest yet surveyed on the surface of our globe, which goes by several native names, Lupti Chung, Gauri Sankar, or Deodwuga, and to which the British Indian Government map-makers have attached the name of Everest, an Indian engineer. In this district, besides this great peak, stands Kinchinjunga, till recently supposed to be the loftiest of all Himalayan mountains. The other district is in the far northwest, about longitude 76 degrees, in the region called Baltistan. From the famous Karakoram (black gravel) pass which leads across a lofty ridge into the tableland and inland lake basin of eastern Turkistan toward Yarkand and Kashgar, the mountains of this district, which here form the northern boundary of the Indus Valley, have begun to be called the Karakoram Range. When the Duke of the Abruzzi turned his aspiring thoughts to the Himalaya, his first hope was, it has been stated, to attack the region where Kinchinjunga and the so-called Mount Everest stand. Here, however, political difficulties intervened, for the Tibetans are extremely reluctant to admit any European travellers, nor do the Nepalese welcome such visitors from the outer world. Hence he decided to attack the Karakoram Range, in which there is one peak, marked on the Indian trigonometrical survey as K2, and having no true native name, for it lies in an uninhabited region, which is a little higher than Kinchinjunga, and at present stands second in the list of peaks whose elevation above sea level has been determined. Its height is given at 28,250 feet, less than a hundred feet higher than Kinchinjunga, so subsequent measurements may shift the honor of the second place from it to the last-named summit.

The main object of this expedition was to examine the conditions of ascending to very great heights, and estimate the chances of ultimately reaching the loftiest summits. Since the days, now nearly a century and a half ago, when Saussure attained the top of Mont Blanc, the progress made (8,820 feet) has been steady, though not rapid. It would be tedious to recapitulate the heights reached by successive climbers in the Andes and the Himalaya, so it is enough to observe that, in 1883, Mr. Graham, an Englishman, made a record by getting very nearly to the top of Kabru, in the Sikkim Himalaya, whose measured altitude is 23,900 feet. His achievement was doubted for a time, but is now generally admitted to have been really made, for the same point was reached in 1907 by two Norwegian climbers. The Duke of the Abruzzi and his party passed this record by 700 feet, having attained on the slopes of a mountain named Bride Peak a height of 24,500 feet, the top of the mountain being above 25,000 feet. This performance, all the more remarkable because the party had been living and marching for a long time at heights exceeding 16,000, and had spent nine days above 21,000 feet, and also because the weather was unfavorable, has led the Duke and the chronicler of the expedition to believe it possible under good conditions to reach a height of at least 26,000 feet. Such a height would, however, be still 3,000 feet below the top of Lupti Chung (or Everest), and consequently the possibility of attaining the highest pinnacle on the earth's surface remains still problematical. If there were a summit of 29,000 feet, with tolerably easy snow-slopes leading up to it, and if that summit lay in a region where good weather could be counted on for some days together, the prospects of success would be good. But neither K2 nor Kinchinjunga answers those conditions, for the ridges are in both of them steep and difficult. Of Lupti Chung, or Everest, less is known. No European has got within eighty miles of it. But the distant views, such as those obtainable from the Sikkim side, are not encouraging. Mr. Freshfield, however, who explored the neighborhood of Kinchinjunga, has expressed himself rather more hopefully on the subject than does the Duke of the Abruzzi.

To most readers this investigation of the possibility of getting to the very "top of the world," as in our time men have got to the two "ends of the world," if one may so call the two poles, will be the most interesting part of the present book. But lovers of mountain climbing will peruse every page with pleasure, for there has seldom been a more striking record of daring skill and undaunted resolution in continuing a journey involving so many hardships as well as dangers. The descriptions of the gigantic glaciers, which descend from the upper snows of these Karakoram peaks are full of graphic power. The scenery is as much vaster and more terrible than that of the Alps, as that of the

Alps surpasses that of the Pyrenees or the Sierra Nevada of California. It is not, indeed, nearly so beautiful, for it is all wild and desolate, the valleys below the peaks being bare, stony, and dry, without wood or any of the softer charms of landscape.

Perhaps the most attractive thing in the book is the series of views by that accomplished and incomparable mountain photographer, Cavaliere Vittorio Sella. They give better than any description can an impression of the grandeur and wildness of this Himalayan scenery. It need only be added that the expedition achieved results of considerable scientific value, not only by its meteorological records and by its determination of many points in a region but once before explored, but also by the observations made of the rocks and of the plants of the district.

Luther. Von Hartmann Grisar, S.J. Drei Bände. Freiburg im Breisgau: Herdersche Verlagshandlung.

In three volumes of lexicon-octavo size, containing twenty-six hundred pages and about a million and a half words, a distinguished Catholic historian presents his estimate of the first Protestant. The work has had a popular success and has also excited much discussion among specialists. Professor Kawerau and Dr. A. V. Müller have each written a book in reply to the first volume, while less extended criticisms by leading Protestant scholars, including Harnack, have filled the periodicals. Whereas their judgment has been usually severe, in Roman Catholic and in certain Anglican circles the treatise has been extolled as the very best thing on the subject.

It seems to have conspicuous faults and solid merits. One of the former is its lack of system and proportion in the presentation. It can hardly be called a life at all; it is rather a series of discussions of various sides of the reformer's character, opinions, and influence. Such was the author's purpose; he proclaims that he is composing no "art-biography," for of these there are already too many; he simply wishes to examine Luther as a "religious phenomenon." Except in the first and last chapters, chronology is disregarded, and historical perspective lost. For example, an analysis of the early commentaries on Romans and Galatians takes up more space than is allotted to the whole history of the crowded years 1520-1530. By this method the author is enabled to put tremendous emphasis on what is suitable to his purpose and to pass lightly over all that is not. Notwithstanding the fact that with apparent impartiality he clears Luther from some unfounded charges made against him, and only retains those which are supported by good evidence, he thus produces a one-sided effect. He himself admits that his selection of sources is somewhat arbitrary. In the section on the Table Talk, consisting of an exhaustive treatment of all the worst things Luther ever said, he candidly states that the reported conversations are not entirely composed of such objectionable sayings, but that he purposely omits quoting the better sort because they and they only have already been sufficiently noticed by sympathetic biographers.

Withal, every sentence is carefully documented, and the language is always temperate and courteous. Luther is occasionally praised and the author frequently refrains from drawing the obvious conclusions from the facts as he gives them. This makes his final summary the more effective, as he himself is well aware. "One gets further," he confesses in an unguarded moment, "by the gentle manner of Janssen than by scolding like Denifle." A similar opinion is entertained by one of Grisar's most eminent critics, who complains, almost naïvely, that "the quiet and objective language of the book only makes it the more dangerous."

The most original and valuable portion is the study of Luther's development in the cloister. In a really brilliant analysis of the documents the author reconstructs the history of that important time, showing how intimately the events in the young man's life influenced the growth of his doctrine. It was a quarrel with the strictly "observant" monks that first gave him a low opinion of the value of "good works"; it was his own ineradicable concupiscence that, by convincing him of the hopelessness of man's own efforts, originated his doctrine of the bondage of the will. The way of escape from reprobation that first presented itself to him was not the famous justification by faith only, but mystic self-abandonment or passivity in God's hands. Indeed, the religious experience supposed to be at the head of his career did not, according to Grisar, come until late in 1518 or 1519, and then the great message, which he regarded as a revelation of the Holy Ghost, was vouchsafed to him in the least suitable and most indecorous imaginable place. So far many will follow the Jesuit scholar; probably few will be convinced by his argument that Luther's attack on sacerdotal celibacy was due to a moral breakdown, and even that his supposed excesses brought on a venereal disease.

The second and third volumes, though less startling, contain many valuable discussions, always centring in some moral or religious judgment. Many of Grisar's criticisms are justified. Luther was narrow, intolerant, hot-tempered, unfair, and foul-mouthed in his treatment of enemies, and towards the end of his life he almost completely lost control of himself. The true explanation of this in the reformer's nervous maladies is barely hinted at. Many of Grisar's charges, however, remind one of Voltaire's criticism of Shakespeare, or Herbert Spencer's objections to Homer; they are, from the critic's point of view, unanswerable, and yet, had he been in genial relations with his subject as a whole, he would never have thought they mattered. Many other strictures by the learned Jesuit will not appear damaging in the eyes of a liberal Protestant or rationalist. That Luther started the separation of ecclesiastical and temporal, that his teaching founded modern subjectivism, individualism, and secularism, that he was—unwittingly, to be sure—the first to break the road to undogmatic Christianity and to rationalism, these facts, made articles of impeachment against him, are at the heart of the Reformation! After recent attempts to show that the Protestant revolt was a conservative if not a reactionary movement, and to belittle its leader as "a man no longer worth writing about," Grisar's pages read almost like an apology. Luther is called great—even Titanic—in many things, particularly in his strength to labor and in his gift of expression; it is only his moral and religious standpoint that is condemned. Books should be judged not by their bias, that is, by "the merits of the question," but by what can be learned from them. By this criterion Grisar's work ranks high. It is not a work from which the lay reader can get a fair or even a clear introduction to the subject, but it is one which no scholar can neglect, which deserves to leave, and which will leave, a marked influence on future writers on the period.

Notes

The following additions to Holt's Home University Library may be expected this week: "Writing English Prose," by Prof. W. T. Brewster; "The Literature of the Old Testament," by Prof. George F. Moore, and "From Jefferson to Lincoln," by Prof. William MacDonald.

Mary Caroline Crawford is preparing for Little, Brown & Company "The Romance of the American Theatre." It will be issued in the autumn.

The Century Company will bring out in the near future Jack London's "The Abysmal Brute," a story of the prize-ring, and Miss Bertha Runkle's "The Scarlet Rider," a tale of adventure laid in the Isle of Wight.

E. P. Dutton & Company have removed to No. 681 Fifth Avenue. But for another year at least their present shop on Twenty-third Street will be retained as a branch of their retail business.

In "Mark Twain and the Happy Island," which A. C. McClurg will publish immedi-

ately, Miss Elizabeth Wallace describes Mark Twain's pleasant visit in Bermuda.

Mr. G. M. Trevelyan's "Life of John Bright" is promised this month by Constable.

The same house has in press "The Nation and Empire," a collection of speeches and addresses by Lord Milner, and "Other Days," a volume of reminiscences, by A. G. Bradley.

In the next few weeks Macmillan will publish the following titles: "The Inside of the Cup," by Winston Churchill; "Myself and I," by Fannie Stearns Davis; "The Rural Church," by Gifford Pinchot and Charles Otis Gill, and "Religion as Life," by Henry Churchill King.

The following miscellaneous books are included in the spring list of Sherman, French & Co.: "An Outline History of China, Part I: From the Earliest Times to the Manchu Conquest, A. D. 1644," by Herbert H. Gowen; "Above the Shame of Circumstance," a story by Gertrude Capen Whitney; "To the Lost Friend, a Sonnet Sequence," by Auguste Angellier, translated by Mildred J. Knight and Charles R. Murphy; "The Book of Job, with an Introductory Essay and Explanatory Notes," by Homer B. Sprague; "Problems in Modern Education, Addresses and Essays," by William Seneca Sutton; "Amor Vitaque, a Little Book of Lyrics, Ballads, and Omargrams," by Oliver Opp-Dyke; "The Religious Life of the Anglo-Saxon Race," by M. V. B. Knox; "The Inner Garden," a book of verse by Horace Holley; "The Witch of Golgotha," by B. Pesh-Mal-Yan; "The Dirge of the Sea-Children, and Other Poems," by Kenneth Rand; "Songs of Seven Years," by Sydney Rowe; "A Looking-Glass," by Gertrude Skinner; "Aurora, and Other Poems," by Laura A. Whitmore; "The Former Countess," by Annie Fields Vila; "Wayside Idyls," by Henry C. Graves; "The Garden of Life, and Other Poems," by Anne Richardson Talbot, and "The Sail Which Hath Passed, and Other Poems," by George Klingle.

"The Essentials of the Constitution" is the title chosen by Mr. Elihu Root for the series of Stafford Little lectures delivered this spring at Princeton. The volume will be brought out in the summer by the Princeton University Press.

Of timely interest, certainly, is Miss Elizabeth Robins's "Way Stations" (Dodd, Mead), an account, by a skilled writer of fiction, of the past eight years in the camp of the English suffragists. The inside of the cover is blazoned with a drawing. A robust lady is riding in a two-horse chariot towards the House of Parliament. She stands erect, grasping in her left hand a banner with the no longer strange device, "Votes for Women"; in her right, a pair of scales. A second lady is luckily at hand to do the driving, and a third, with wings, descends from above, proffering a wreath to the standard-bearer, who already wears a spiky crown and affects indifference. No men are in sight, and we feel that it is fortunate.

Eight years ago Miss Robins had little interest in the demand for woman's suffrage. "Prior to 1905 all but a negligible fraction of women (and practically the whole masculine population) shared the belief that the half of the world which had control of public affairs had in addition not only the ability but the will to safeguard the interests of women and children equally with the interests of men." The first paper of this series, printed at that time, takes issue with the assumption that men have deliberately adopted a policy of injustice to women. "The arrangement between the sexes seems to have come about without blame or credit on either side. It was the best working arrangement the uncivilized could devise." Each sex simply followed the line of least resistance, the result being authority for men and obedience for women. This obedience was founded, not on intellectual assent, but on expediency, on woman's inherited conviction that her game was to conceal her own judgment and to pretend that man's judgment is infallible. The paper ends with a mild plea that the few women beginning to give a voice to their sex, attempting to release it from its hypocrisy and its inarticulateness, may receive a hearing—"be listened to with a little of the patience that, for centuries untold, women have bestowed upon masculine utterances."

From this moderate starting-point, Miss Robins has "travelled the road of enlightenment," as she puts it, till in the later speeches and lectures here reprinted she has developed into an apologist of "militaney," in all its ardors, from window-smashing to the "hunger-strike." Because certain women are not permitted to "rush Parliament," she ceases to believe that man means well by woman. Let him look out for himself! The running "time-table" which links the chapters of the book and gives a consecutive history of events among the English suffragists since 1905 is lively reading.

In "Rahel Varnhagen" (Putnam), translated by A. G. Chater, Ellen Key offers an attractive portrait of the remarkable woman, wife of Varnhagen von Ense, who, writing nothing herself, was a centre of literary inspiration in Berlin early in the last century and at the same time embodies her conception of the "soulful" woman. Of course, the longest, though by no means the only, chapter is about love. Unhappily, Rahel is not a perfect example of "love's freedom," having failed to give herself at the critical moment when by so doing she might have won her "great love." This she afterwards regretted as a weakness, and Ellen Key sympathizes in the regret. But the weakness was to some degree atoned for by an indulgent attitude towards others, particularly towards Pauline Wiesel:

> When Pauline left her husband, Councillor Wiesel, Rahel gave her complete approval; her "strong heart was not made to suffer," Rahel wrote. As the mistress of Prince Louis Ferdinand, and of many others, Pauline showed such inconstancy in her love, combined with such innocence, such ease of conscience, and such kindness, that she appeared like a Philine brought to life. The strength and genuineness of her nature inspired in Rahel not only unalterable devotion, but admiration.

Yet all the while "love's freedom" is not "free love." Truly, we may wonder whether the new erotic philosophy has a glimmer of an idea whither its course is set. At any rate, after several volumes upon love's freedom, we may suggest that the time has come for a volume upon the complementary topic of love's justice. Ellen Key should find the subject enlightening, though perhaps also perplexing.

Harry A. Franck's method of travelling is unconventional. He avoids the beaten track of the tourist, the observation car, the fashionable hotel, and it is not surprising to find his book on the Panama Canal coming out with the title "Zone Policeman—No. 88" (Century). It is a small band of constables in khaki, this Zone police force, but it manages to keep order among 60,000 workers of many breeds and colors. Mr. Franck had his share of adventures in running down law-breakers, but his book is chiefly notable for its intimate picture of the men who handle the steam shovels, tamp the dynamite cartridges, build the concrete locks, and run the never-ending procession of earth trains. He has seen them under all conditions, and his observations, tinged as they always are, with genuine humor, strike a human note, especially when he recounts his experiences among the West Indians.

Mr. Franck's first assignment as census enumerator took him to the Government quarters for married men and bachelors, to the pay lines, to the rough walls of Culebra Cut, to the labor camps, where live negro, Spaniard, Portuguese, Greek, Italian, Turk, Hindu, Syrian—a chaos of nationalities—seventy-two in all. Of the three native Americans in the corps of seven enumerators, two spoke only their mother tongue, and Mr. Franck complains that there still hangs over us that old provincial backwoods bogie, "English, is good enough for me."

Mr. Franck has a word to say about Socialism on the Canal Zone. To be sure, it is only a modified variety, but "there are a number of little points in the management of this private Government strip of earth that savors more or less of the Socialist's programme," and there is also a benevolent despot, an omnipotent, omniscient, omnipresent ruler, popularly known as "the Colonel"—Col. Goethals. His machinery runs like clockwork, and Mr. Franck is convinced that "the Canal Zone is the best-governed district in the United States," and that "Americans really can govern." Nevertheless, after having fed regularly at the Canal Commission hotels, where you know exactly what will be served from day to day, he wonders if the "public kitchen of Socialism would not become in time an awful bore."

Those who are familiar with Mr. James Ford Rhodes's "History of the United States from the Compromise of 1850" will not expect to find much that is new in his "Lectures on the American Civil War" (Macmillan). The lectures, three in number, were read at Oxford in May, 1912, as the opening course in the new university lectureship on the history and institutions of the United States. Written as they are for an English audience, and intended to occupy less than three hours in delivery, they are perforce confined to a survey of a few important aspects of the subject. As such they may well serve, for Englishmen, a useful purpose, but American readers will find them disappointing. The whole of the first lecture is given up to a sketch of slavery and sectionalism before March, 1861; while the other two compress to the merest outline the military events of the
